Give it a fair coinage test with a friendly administration, then if it will not stand it will be time for a new ratio. As you change the ratio you pin us down permanently to the low prices that the manipulators of the gold power have fixed upon us. There is no excess of production or cause for a change.

I here submit a table showing the varying quantities of the metals produced from year to year:

Year.	Gold.	Silver.
1851	$67,600,000	$40,000,000
1852	132,750,000	40,600,000
1853	155,450,000	40,600,000
1854	127,450,000	40,600,000
1855	135,075,000	40,600,000
1856	147,600,000	40,650,000
1857	133,275,000	40,650,000
1858	124,650,000	40,650,000
1859	124,850,000	40,750,000
1860	119,250,000	40,800,000
1861	113,800,000	44,700,000
1862	107,750,000	45,200,000
1863	106,950,000	49,200,000
1864	113,000,000	51,700,000
1865	120,200,000	51,950,000
1866	121,100,000	50,750,000
1867	104,025,000	54,225,000
1868	109,725,000	50,225,000
1869	106,225,000	47,500,000
1870	106,850,000	51,575,000
1871	107,000,000	61,050,000
1872	99,600,000	62,250,000
1873	96,200,000	81,800,000
1874	90,750,000	71,500,000
1875	97,500,000	80,500,000
1876	103,700,000	87,600,000
1877	114,000,000	81,000,000
1878	119,000,000	95,000,000
1879	109,000,000	96,000,000
1880	106,500,000	98,700,000
1881	103,000,000	102,000,000
1882	102,000,000	111,800,000
1883	95,400,000	115,300,000
1884	101,700,000	105,500,000
1885	103,400,000	118,500,000
1886	106,000,000	120,600,000
1887	105,775,000	124,281,000
1888	110,197,000	140,796,000
1889	123,439,000	162,159,000
1890	113,149,600	172,234,500
1891	120,518,800	186,733,000
1892	130,816,600	196,695,200

In addition to this our national debt; a great portion of our State, municipal, and private indebtedness was made when silver was money, and common honesty and fairness demand that it should be money when these debts are paid. It is well known that the bonded indebtedness was created through the conduit of greenbackism, costing the bondholder only about 60 cents upon the dollar in gold. These bonds were redeemable in any kind of legal-tender money.

The bondholder cunningly secured a Congressional act in 1869 making his debt payable in coin instead of any legal-tender currency. At this time silver was above par. He very cautiously had a provision incorporated in the funding act of 1870 that these bonds should be paid in coin of the standard values of July, 1870, which is our present gold and silver coin. Encouraged by these successes in an American Congress, he now asks that they be paid in gold.

FALSE LOGIC.

You tell us we are scarce of money and you propose to increase it by cutting off the supply. You tell us your shops have all shut down and your labor is unemployed and you wish to return it to its old position by narrowing the already too limited fields of labor. You will relieve labor, you tell us, by adding 50,000 more tramps to the list. You propose to start up the manufactures of the middle and New England States by destroying their best customer.

Joseph Nimmo, jr., the statistician, is quoted as saying: "The silver States are the best customers of the manufacturers, taking over $50,000,000 per annum of their products, and are worth more to the manufacturers than all of South America and Europe combined." It is now estimated that over $6,000,000 in fall orders have already been countermanded.

Is turning loose 150,000 laborers in the West going to increase your demand for labor in the East? How is the destruction of the greatest demand for railroad iron, cars, machinery, and all kinds of manufactured goods going to start up your manufactories? This new and developing country is your great consumer and a loss of this market will add hundreds of thousands of your laborers to our idle list.

I here submit a table showing the national debts of the world:

Austria-Hungary	$2,642,021,000
Belgium	213,000,000
Denmark	58,467,000
France	4,982,840,000
Germany (entire)	2,695,265,000
England (and dependencies)	5,695,619,000
Greece	13,625,000
Italy	2,250,000,000
Montenegro	1,900,000
Netherlands	540,000,000
Portugal	593,670,000
Roumania	176,000,000
Russia (all)	4,809,768,000
Servia	50,615,000
Spain	1,106,650,000
Sweden	58,000,000
Norway	29,860,000
Switzerland	65,000,000
Turkey	868,500,000
Argentine	148,000,000
Bolivia	19,000,000
Brazil	600,500,000
Canada	273,000,000
Chili	92,800,000
Colombia	15,000,000
Mexico	110,000,000
Peru	342,624,000
United States	915,962,112
Uruguay	79,108,000
Venezuela	63,700,000
Egypt	732,000,000
All other countries (about)	3,500,000,000

This makes a grand total of about $35,100,000,000. It is said the house of the Rothschilds, of Germany, and the Bank of England own $28,000,000,000 of this sum attempted to be made payable in gold. There is but $3,700,000,000 of gold in the world. If the wheels of business should stop to-day and the debtors of the world were required to pay, if they had all the gold in the world they could only pay 10 cents on the dollar if they were limited to these national obligations only.

This fight is indeed between the debtors and the creditors. The creditors are determined that the debtor shall only have money enough to pay the interest on these obligations. They are determined to make these national obligations perpetual that they and their posterity may forever clip coupons and have fixed incomes. The beginning of this fight was for another United States bond issue.

THE PLANS OF THE OPPOSITION.

In every paper from the money center the cry is, issue bonds. The advocates of gold here say, issue bonds.

THE WILL OF THE PEOPLE.

The gentleman from Ohio [Mr. GROSVENOR] and most of the Democrats agree that the Chicago platform declared for and was understood to be for free silver. We know the Populist platform was unmistakably so. President Cleveland received 45.7 per cent and Mr. Weaver 9.23 per cent of the popular vote, making a total of 54.93 per cent of the popular vote for free coinage. However, the Republicans of the West declared and insisted that their platform and party favored free silver.

The President and his followers speak in pathetic tones for the poor laborer. Is it not strange that these horny-handed sons of toil do not know what they want? Is it not strange that those they regard as their oppressors always assume to represent and speak for them? I wish to say to you that this assumption is wholly unauthorized. Mr. Powderly is a vice-president of the American Bimetallic League and one of its strongest advocates. A cardinal principle of the Farmers' Alliance is free silver. You can not longer feed them on sham platitudes.

In the minority report on the silver bill in the Fifty-first Congress, Mr. Bartine exposes this hypocrisy by saying:

From the general tenor of their arguments one might be led to suppose that the millionaire capitalist is in reality the poor man, while the money of the country is

virtually owned by the factory hands and servant girls of New York and New England. And yet it is a fact worthy of the most careful consideration, that these workingmen and women were not represented by a single one of their own number and class upon that side of the question.

Almost every man who appeared in opposition to free coinage was a president or other executive officer of some bank, some great insurance company, or other firm, corporation, or association controlling vast aggregations of capital. About the only exceptions to this rule were college professors and lawyers, who appeared rather in the character of special pleaders.

Upon the other hand, it may not be out of place for us to mention the circumstance, by way of contrast, that at the conclusion of Mr. Atkinson's statement Mr. Dunning, the duly accredited agent of the Knights of Labor and various other kindred organizations comprising nearly 4,000,000 voters, stepped forward and laid on the table the petition of these toiling millions, praying for the free coinage of silver.

In addition to this it is proper for us to call attention to the further fact that the great organization known as the Farmers' Alliance has adopted a demand for the free coinage of silver as the cardinal feature of its creed.

COLORADO.

The gentlemen advocating the gold standard seem to think this fight is only made by a few mining States. If this conclusion was true we would be advocating an American and not an unlimited coinage. No; we are not so narrow-minded or unpatriotic. The gentleman from Massachusetts [Mr. MORSE] complained that a little Western State has as many Senators as the great States of New York or Massachusetts. It is indeed very important as to whose ox is gored.

New York has thirty-five times as many people as Delaware, eighteen times as many as Vermont, and so on down the line, and New York has nearly three times as many inhabitants as the great State the gentleman represents. Under his precise distribution Massachusetts would be entitled to about two-thirds of one Senator.

Let us see if the West has injured the State the gentleman represents. We have always voted for your protection, bought your manufactured goods, and borrowed your money at high rates of interest. I will submit you some figures, the result of the reasoning of Mr. S. S. King, from the census of 1880 and 1890, and let the people judge whether Massachusetts and the North Atlantic States have been imposed on by overrepresentations of the Western States.

The nine Atlantic States and the producing South and West: He shows that Nebraska, Iowa, Illinois, Indiana, Louisiana, Mississippi, Alabama, Georgia, and North Carolina in 1880 had 58 acres of land to Massachusetts' 1; the nine producing States had a population of 7 to Massachusetts' 1; in the assessed valuation the nine States had $2 to Massachusetts' $1, and yet between 1880 and 1890 Massachusetts gained about $10,000,000 more in wealth than these nine great States; or, add to the nine producing States Florida, Kentucky, and Kansas, making twelve great producing States, giving them 14 acres of land to Pennsylvania's 1; the population of the twelve States is about 4 to Pennsylvania's 1; capital in the twelve States is about $2 to Pennsylvania's $1, and yet Pennsylvania from 1880 to 1890 gained in wealth $12,000,000 more than these twelve great States; or, add to the twelve great States Tennessee, Virginia, and West Virginia, making fifteen great producing States, with 16 acres of land to New York's 1; the fifteen States have 4 people to New York's 1; the fifteen States have $1.50 to New York's $1, and yet from 1880 to 1890 New York gained in wealth $6,000,000 more than these great producing States; or, add to the fifteen States Missouri, Ohio, South Carolina, Arkansas, Maryland, and Delaware, making twenty-one great producing States with 6 acres of land to 1 acre in the North Atlantic States of New York, Pennsylvania, Vermont, Maine, New Hampshire, Massachusetts, Connecticut, New Jersey, and Rhode Island.

The twenty-one States have two persons to the nine States' one. The twenty-one States have about the same capital as the nine States, and yet the nine States gained in wealth between 1880 and 1890 $1,356,567,065 more than the twenty-one great producing States. These glaring discrepancies are traced by Mr. Cox to special legislation in favor of the manufacturing and financial center of the nine North Atlantic States.

COSTS OF PRODUCTION.

The assumption that cost of the production of silver affects its value is false, in fact. See report of Senator Stewart's committee on this subject February, 1893, and Prof. Hague's article in Forum.

It is a general economic truth that cost of production affects value but indirectly as a circumstance in determining supply. In its relation to every commodity, demand is the fundamental factor in fixing value; for example, the demand for wheat, iron, cotton, or any other product regulates its price regardless of its cost of production, which must vary at different times and places.

If demand is destroyed prices must fall regardless of cost of production.

Now the chief demand for precious metals arises from their convertibility into money. Destroy that convertibility, the demand is paralyzed and prices fall.

It follows that decline in silver values results from legislative limitation placed on its use as money. Similar treatment of gold will produce similar consequences. Sir David Barbour says:

Gold and silver owe almost the whole of their value to the fact that they can be converted into and used as money.

Robert Barclay says:

Law singles out gold or silver or both to be used as money and gives them special functions which it confers on no other commodity. In virtue of this selection the demand for these metals is greatly increased, and as they are only of limited production their value is increased accordingly.

Mr. Samuel Smith (M. P.) says:

Gold and silver derive their value mainly from their use as money. If all the world passed such laws as England and Germany have done, silver would be almost valueless.

Silver was never below 16 to 1 with gold until the combined German and American legislation of 1873, coupled with the closing of the mints of the Latin Union to it, made a commodity out of it. Ever since then, its market value has approached its mint value or receded from it just in proportion as the prospect of free coinage in the United States has been good or bad.

All political economists, from Adam Smith down (who expressly refers to the precious metals), agree that the commodity or article is a durable and not a transient one. The existing stock or supply bearing a large proportion to its annual supply, the effect of cost of production on its value is slight and indirect and always uncertain.

If the cost of the production of silver was an important factor in fixing its price, the cost and the price would vary together. There have been violent up and down movements in silver in the last few years, varying from 6 per cent to 36 per cent as compared with gold. No sane man will pretend that similar fluctuations have existed in its cost of production.

Another well-established and undisputed economic principle is that cost of production does not affect value when applied to an industry of a highly speculative character. Such is the nature of mining for the precious metals, especially gold, whose occurrence in large quantities is always accidental. The industry is quite analogous to a lottery, where chance is more potent than calculation.

And in any event the cost of the production of silver is beyond human calculation, for it is a commodity which is the joint product of the same process which produces other commodities, and therefore can not have an independent cost of production. The entire silver product of our mines is in the ores blended with gold, copper, lead, zinc, etc.

If cost of production is a factor of importance in determining value, it should affect gold as well as silver; yet the cost of production of gold varies as that of silver, or more, but its value is standard.

If cost of production affected values, the decline in value would limit the amount of production; and per contra increase of value would stimulate production. But, as a fact since 1873, with gold rising in value, its production has fallen off, while the value of silver has steadily fallen while its production has steadily increased. For example, it is a fact that during the decade 1871–1880, with a constantly changing market ratio, production was very close to the ratio in weight of 15½ to 1.

Amount of product independent of or with cost does not affect to any degree the relative values of the two metals if both are money metals. For example, Lord Liverpool admits that fifty-five years after the discovery of the Potosi mines, their silver yield had no visible effect on the valuation of coins at the English mint. On the other hand, during the twenty-five years between the discovery of gold in Australia and California and the demonetization of silver the effect of the enormous product of gold upon current coins was hardly more than appreciable.

If it costs so little to produce silver which sells for so much, why does not capital interest itself more largely and readily in silver mines? We know that capital shuns both classes of mines and because the business is so largely speculative.

I am fully aware that a reversion to the history of this deplorable legislation, when so well known, is tedious and tasteless, but the gentlemen from Ohio [Mr. HARTER, Mr. GROSVENOR, and others] have scouted the idea of a crime. I will here submit the record of this infamy as gathered by Mr. Frewen and published in the Fortnightly Review for June, 1893, and confidently assert that on these indisputable facts that any grand jury would return an accusation of guilt if the perpetrator could be located.

Here is what Mr. Frewen says in his article:

We first find an honorable and respected member, Mr. Kelley, introducing a bill in 1872, to codify for the general convenience, the various mint enactments. When Mr. Kelley reported the bill in the lower chamber, Mr. Potter of New York asked: "Does it make any change in the standard of weight or fineness of the coin?" Mr. Kelley replied: "It does not." Next, Mr. Hooper of Massachusetts appears in charge of Mr. Kelley's bill; so purely formal was the bill considered—this bill which yet contained within it a provision to demonetize silver forever—that in reply to Mr HOLMAN of Indiana, who asked whether the bill, before being voted upon, would be read to the House, Mr. Hooper said: "I hope not; it is a long bill, and those who are interested in it are perfectly familiar with its provisions."

The bill was accordingly passed without being read. Now, since leaving Mr. Kelley's hands, section 16 had been imported as a Senate amendment. Here is section 16, which has probably cost the world of human industry more than all the wars of the century:

"The silver coins of the United States shall be a dollar, a half-dollar, a quarter-dollar, and a dime; and the weight of the dollar shall be 384 grains, the half-dollar, quarter-dollar, and dime shall be, respectively, one-half, one-quarter, and one-tenth of the weight of the said dollar, which coins shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment."

Such is the clause which, without debate or consideration, has effected a revolu-

tionary change in the currency of the United States. Every Senator, without doubt, read the legal-tender limitation as applying not to the standard dollar but only to the subdivisions of the dollar. It was this clause which is, I think, responsible for the closing of the French mints, for the shrinkage of the rupee, for the catastrophic fall of prices, and for the great increase of the burdens of every mortgagor.

It is little wonder then that, in view both of the motives and the consequences, public opinion in America has been educated to denounce this legislation as a crime against mankind.

"If this step was taken without full appreciation of the results that were to follow, it was a piece of delirious folly; if with full consciousness of the consequences, it was, on the part of the creditor classes, nothing less than an act of treason against the human race." (Senator JONES at Brussels.)

Let us see by what means this section 16 was arrived at in the Senate, because the vehement partisanship to-day of Senator STEWART and many others arises from their conviction that they were duped in 1873.

The bill, having passed the House, was now in the hands of the Senate Committee on Finance, Senator SHERMAN, of Ohio, being the chairman. The bill was amended in the Senate, and this is what Senator SHERMAN said of the intention of the amendment:

"This bill proposes a silver coinage exactly the same as the French and what are called the Associated Nations of Europe, who have adopted the international standard of silver coinage; that is, the dollar provided by this bill is the precise equivalent of the 5-franc piece * * * the 5-franc piece of France will be the exact equivalent of a dollar of the United States in our silver coinage; and in order to show this, wherever our silver coin shall float, and we are providing that it shall float all over the world, we propose to stamp upon it, instead of our eagle, the intrinsic fineness and weight of the coin."

Senator CASSERLY:

"We can not have an international coinage on the basis of our silver coin unless our silver coin is up to the standard of all the nations with which we expect to have relations. Now I ask the Senator whether this bill proposes a silver coinage of that character?"

Senator SHERMAN:

"This bill proposes a silver coinage exactly the same as the French and what are called the associated nations of Europe, who have adopted the international standard of silver coinage; that is, the dollar provided by this bill is the precise equivalent of the five-franc piece."

Could language be more explicit? Every Senator who heard this statement must have understood that the bill was a bill to include the United States within the Latin monetary union, and that her silver equally with theirs was to be coined freely into legal-tender money at a ratio of 1 to 15½. Such is the history of the act of 1873. The nation was shortly to awaken to the fact that the bill to make American silver dollars "float all over the world"—which, in the words of the chairman of the Finance Committee, was to arrange for a silver coinage "exactly the same as the French"—which was to promote "international coinage," that this bill had positively deprived silver altogether of free coinage and legal tender!

And yet Senator SHERMAN declares to-day, and with indignation, that he at least understood the provisions and scope of the bill, and that he considered a dollar which was not even to be legal tender at home was yet good enough "to float all over the world."

Let me now point out with what amazement the act of 1873 broke upon the chiefs of both parties in Congress, when they first discovered that the currency had been tampered with before their very eyes. Grant was at that time President; more than eight months after he had signed the act which had forever excluded silver from the mints we find him writing to his friend, Mr. Cowdrey (McPherson's Handbook of Politics):

October 6, 1873.—The panic has brought greenbacks about to a par with silver. I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. When it does come, and I predict that it will soon, we shall have made a rapid stride toward specie payments. The circulation of silver will have other beneficial effects. Silver will become the standard of value, which will be hoarded in a small way. I confess to a desire to see a limited hoarding of money. General (afterwards President) Garfield said, at Springfield, of the act of 1873:

"Perhaps I ought to be ashamed to say so, but the truth is that I, at that time chairman of the Committee on Appropriations, and having my hands overfull during all that time, never read the bill. It was put through as dozens of bills are in Congress, on the faith of the report of the chairman of the committee; therefore I tell you, because it is the truth, that I had no knowledge of it."

Senator BECK, of Kentucky, said:

"What I complain of is that this House never knew what was in the bill. Will any sane man believe that they (Senators) deliberately consented to strike down silver coinage? Mr. SHERMAN says they all did. I do not believe him."

Senator STEWART, of Nevada, said to Senator SHERMAN:

"Whatever may be your construction of their meaning now, the words you used then induced me to vote with you, because you made me believe that you were sending out a bona fide dollar as good as any in the world."

Mr. Kelley, the father of the original measure, who was chairman of the Committee on Coinage, said (CONGRESSIONAL RECORD, Vol. VII, p. 1005):

"In connection with the charge that I advocated the bill which demonetized the standard silver dollar, I say that, though chairman of the Committee on Coinage, I was as ignorant of the fact that it would demonetize the silver dollar or of its dropping the silver dollar from our system of coins, as were those distinguished Senators, Messrs. Blaine and VOORHEES. I do not think that there were three members of this House that knew it. * * * The Committee on Coinage who reported the original bill were faithful and able, and scanned its provisions closely. As their organ I reported it; it contained provision for both the standard gold and silver dollar and the trade dollar.

"Never having heard till long after its enactment of the substitution in this Senate of the section which dropped the standard dollar, I profess to know nothing of its history; but I am prepared to say that in all the legislation of this country there is no mystery equal to the demonetization of the standard dollar of the United States. I have never found a man who could tell how it came about or why. * * * I wish gentlemen to know what the bill was; it was a bill to reorganize the mints, and it was passed without allusion in debate to the question of the retention or abandonment of the standard silver dollar. * * *

"I was the chairman of the committee that reported the original bill, and I aver upon my honor that I did not know that it proposed to drop the standard dollar, and I did not learn that it had done so for eighteen months after the passage of the substitute offered by Mr. Hooper."

Mr. HOLMAN said (RECORD, Vol. VII, p. 193):

"I have before me the record of the proceedings of this House on the passage of that bill—a record which no man can read without being convinced that the measure and the method of its passage through the House was a colossal swindle. I assert that the measure never had the sanction of the House, and does not possess the moral force of law."

Mr. BRIGHT of Tennessee said (RECORD, Vol. VII, p. 584):

"The bill passed by fraud in the House, never having been printed in advance. It was passed under such circumstances that the fraud escaped the attention of some of the most watchful as well as the ablest statesmen in Congress."

Senator ALLISON said (RECORD, Vol. VII, p. 1058):

"When the secret history of this bill comes to be told, it will disclose the fact that the House intended to coin both gold and silver, and intended to place both metals upon the French relation (ratio) instead of our own."

Senator HOWE said (RECORD, Vol. VII, p. 764):

"Mr. President, I do not regard the demonetization of silver as an attempt to wrench from the people more than they agreed to pay. That is not the crime of which I accuse the act of 1873. I charge it with guilt compared with which the robbery of a thousand million dollars is venial."

Senator VOORHEES said (RECORD, Vol. VII, p. 1063):

"I want to ask my friend from Maine whether I may not call him as one more witness to the fact that it was not generally known whether silver was demonetized? Did he know, as Speaker of the House presiding at that time, that the silver dollar was demonetized in the bill?"

Senator BLAINE:

"I did not know anything that was in the bill. And now I should like to exchange questions with the Senator from Indiana, who was then on the floor, and whose business it was far more than mine to know, because by the designation of the House I was to put questions, the Senator from Indiana, with his power as a debator, to unfold them, did he know?"

Senator VOORHEES:

"I very frankly say I did not."

Such were the circumstances attending the "outlawry of silver"—circumstances which are hardly reconciliable with common honesty. If, on the other hand, as is so generally believed in America to-day, a wealthy ring of European speculators for the fall in silver securities were busy with certain draftsmen and officials at Washington, then this covert mutilation of the law is at once accounted for.

If gold and silver were the money of the United States Constitution it would seem that the exclusion of one or the other is a constitutional change, requiring the sanction of a two-thirds majority of the State legislatures.

In addition to this I wish to further submit the report of the Monetary Commission of 1876, showing that while the act of 1873 stopped the coinage of silver, it did not affect the full legal-tender quality of the silver then coined. That in 1874, through the revision of the statutes, the legal-tender quality of silver was not legislated but revised out of existence. (Report of the Monetary Commission, 1876, p. 90.)

"The demonetization of silver, coined and uncoined, was affirmatively completed in June, 1874, by the following section (3586) of the Revised Statutes: 'The silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment.'

"No law was ever passed by Congress of which this language can be considered a revision.

"The Revised Statutes were enacted in bulk. They were intended to be a revision merely of the existing laws, without change or introduction of new matter, and Congress was assured by its committee on revision that no new matter had been introduced into them. It was not possible for the members of the committee to have personally verified the exact accuracy of the revision They must necessarily have relied upon assurances given to them by the persons actually engaged in the work. Whoever may be responsible for this error in the Revised Statutes, the ancient money of the country instead of being intentionally legislated out of existence was revised out of existence.

"Germany and the United States demonetized silver in 1873. At that time it was neither depreciated nor unsteady in value, nor had any change occurred in the relative production, consumption, or distribution of the precious metals to indicate its depreciation in the future, nor was any actual or probable depreciation assigned as a reason for its demonetization. The average flow of silver to India was undisturbed, and the Big Bonanza in the Comstock lode was undiscovered.

Manifestly, the real reason for the demonetization of silver was the apprehension of the creditor classes that the combined production of the two metals would raise prices and cheapen money unless one of them was shorn of the money function. In Europe this reason was distinctly avowed.

The scheme of demonetizing one of the metals throughout the western world originated soon after the discovery of gold in California and Australia, at a time when the yield was at what has since proved to have been its maximum, but which was then expected by many to continue on an ascending scale for an indefinite period. An eminent English writer (DeQuincey) published at that time an elaborate collation of current accounts, from which he arrived at the conclusion that the annual out-turn of gold would soon reach seventy millions sterling, or $350,000,000. On the basis of such expectations, the governments of Europe were invoked by Chevalier and others to prevent the anticipated depreciation in the value of money, or in other words, the anticipated rise in general prices, by the demonetization not of silver, but of gold.

Under these appeals of Chevalier and others, several nations in Europe, notably Germany and Austria, in 1857 demonetized gold. It is probable that the movement in that direction would have become universal in Europe but for the resistance of France. It was changed, at least as early as 1865, into a movement for the demonetization of silver. In the convention of 1865, in which the Latin Union was formed, Belgium, Italy, and Switzerland insisted strenuously upon the adoption of the gold standard, but were overruled by France. But this change, from demonetizing gold to demonetizing silver, was more of form than substance. The object aimed at by both was, through a disuse of one of the money metals, to protect the creditor classes and those having fixed incomes against a fall in the value of money and a rise in general prices. This is the pith and marrow of the monetary discussions of the last twenty-five years.

After this report was made the silver people at once began efforts to restore silver to the place from which, they think, it had been clandestinely and fraudulently taken. The same forces that are now trying to destroy silver, with some additions, forced the Bland act upon us. Here began the Government pawnbrokerage so glowingly and truthfully pictured by the eloquent gentleman from Maryland [Mr. RAYNER]. My friends, it has always been your shop, not ours.

In 1890 our same forces were trying to restore silver to the mints and its enemies forced upon them the Sherman act, as they confess, with a knowledge of its infirmities. Yes; and does not the history of this shady transaction conclusively show that these acts were forced upon us to appease the people until they could renew their hold and consummate the design of 1873. Are you going to condone this crime and help consummate this infamy? Ah, they say, it is immaterial how it was demonetized. I deny it. The subject should not be open for debate on its merits until this right is returned to the people; then if, after full debate and notice, a majority believes it should be repealed, then we should gracefully submit; but we never should condone a pillage of the American Congress.

Then, on motion of Mr. TRACEY (at 11 o'clock p. m.) the House adjourned.

SENATE.

THURSDAY, *August 24, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

ANNIVERSARY OF LAYING OF THE CAPITOL CORNER STONE.

The VICE-PRESIDENT. Under the joint resolution providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793, the Chair appoints as the committee on the part of the Senate the Senator from Indiana [Mr. VOORHEES], the Senator from Ohio [Mr. SHERMAN], the Senator from North Carolina [Mr. RANSOM], the Senator from New Hampshire [Mr. CHANDLER], the Senator from California [Mr. WHITE], the Senator from Washington [Mr. SQUIRE], and the Senator from Kansas [Mr. MARTIN].

CHEROKEE OUTLET LANDS.

Mr. CAREY. I am instructed by the Committee on Public Lands, to whom was referred the joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provides for town-site entries of lands in a portion of what is known as Oklahoma, applicable to the territory known as the "Cherokee Outlet," and to make the provisions of said act applicable to town-sites in the "Cherokee Outlet," to report it with an amendment, and to ask for its present consideration.

Mr. MANDERSON. Let the joint resolution be read at length for information.

The Secretary read the joint resolution.

Mr. BERRY. Let the amendment be read.

The SECRETARY. The committee propose to amend by inserting in line 8, after the word "Oklahoma," the words:

Provided, That the trustees appointed under the provisions of said act shall be bona fide residents of the Territory of Oklahoma at the time of their appointment.

Mr. BERRY. Mr. President, that is the report of a majority of the Committee on Public Lands. I will state that the Senator from Mississippi [Mr. WALTHALL], the Senator from Florida [Mr. PASCO], the Senator from Wisconsin [Mr. VILAS], and myself did not agree to the amendment and are in favor of passing the joint resolution as it came from the House of Representatives. I wish that to appear on the record. I will state to the Senate it is absolutely necessary for the orderly opening of that strip that the joint resolution be passed at as early a day as possible. If it is to be of any benefit it ought to be passed at once. The opening is to take place on the 16th of September. These officers are to be appointed; and it is peculiarly important to a large number of people there that the joint resolution should be passed. I therefore ask unanimous consent that it be considered now and disposed of, because of the exigency of the case.

The VICE-PRESIDENT. Is there objection to the present consideration of the joint resolution?

Mr. MCPHERSON. I should like to inquire if the joint resolution has been reported this morning from the Committee on Public Lands?

Mr. BERRY. It has been.

Mr. MCPHERSON. It seems to me to be a very large subject, and the Senator from Arkansas has already indicated that there was a difference of opinion in the committee respecting it. To take it up in the morning hour, as is now proposed, would certainly lead to a discussion that might last all day. I think it had better go over until some more convenient season and not interfere with the regular order.

Mr. BERRY. Will the Senator from New Jersey permit me one moment?

Mr. MCPHERSON. Certainly.

Mr. BERRY. The only difference in the committee is in regard to the amendment. There is no difference as to the joint resolution, but there is an amendment providing that the officers shall be chosen from certain localities, about which there is a difference. There is no other difference, and it is absolutely important for thousands of people waiting on the border of that strip that the joint resolution should be disposed of one way or the other.

Mr. MCPHERSON. Then I withdraw all objection, but with the right, however, to interpose it at any time if the joint resolution is to lead to any extended debate.

Mr. MANDERSON. I renew the objection. I object to the consideration of the joint resolution this morning.

The VICE-PRESIDENT. Objection being made, the joint resolution will be placed on the Calendar.

BILLS INTRODUCED.

Mr. HUNTON introduced a bill (S. 690) granting a pension to Celestia P. Hartt; which was read twice by its title, and referred to the Committee on Pensions.

Mr. JONES of Arkansas introduced a bill (S. 691) to establish a department of audit; which was read twice by its title, and referred to the Committee on the Organization, Conduct, and Expenditures of the Executive Departments.

Mr. POWER introduced a bill (S. 692) for the relief of James C. McCartney, of Gardiner, Mont.; which was read twice by its title, and referred to the Committee on Territories.

Mr. MARTIN introduced a bill (S. 693) for the relief of Daniel Woodson, and of the estate of Ely Moore; which was read twice by its title, and referred to the Committee on Claims.

Mr. WHITE of Louisiana introduced a bill (S. 694) for the relief of Fanny B. Randolph and Dora L. Stark, for stores and supplies taken by the military forces of the United States for their use during the war for the suppression of the rebellion, as found by the Court of Claims; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 695) for the relief of the estate of Turner Merritt, late of the parish of East Baton Rouge, La.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 696) for the relief of John Rhodes and wife; which was read twice by its title, and referred to the Committee on Claims.

ORDER OF PROCEEDING.

Mr. STEWART. Mr. President, we have come to the forks of the road——

Mr. PEFFER. Mr. President, I think I am entitled to the floor this morning in accordance with the notice I have heretofore given. I gave notice a few days ago that this morning I would ask the Senate to indulge me while I submit some remarks upon the bill reported from the Committee on Finance discontinuing the purchase of silver bullion. Unless the Senate otherwise directs, I think I had better proceed now. I prefer to do so.

The VICE-PRESIDENT. The Chair prefers that this matter of precedence shall be determined by the Senators, as is usually done.

Mr. STEWART. I presume there will be no objection to the Senator from Kansas making a motion to take up the bill he has indicated immediately upon the conclusion of my remarks.

Mr. MCPHERSON. I suggest to the Senator from Kansas that inasmuch as the Senator from Nevada has taken the floor and begun his remarks, there will be no objection to moving to take up his resolution after he has concluded. We should certainly make some disposition of it immediately after the Senator from Nevada concludes.

Mr. PEFFER. That is not my purpose this morning. I have no intention to call up the resolution this morning; I expect to call it up at some other time. But I gave notice that this morning at the conclusion of the morning business I would ask the Senate to indulge me while I submit some remarks on the bill which proposes to discontinue the purchase of silver bullion. It has been understood on the part of many that I should proceed this morning, and, if in order, I will do so.

Mr. MANDERSON. I do not think the matter is understood, perhaps. It appears by the Calendar, which is the only tribunal to which we can refer in disputes of this character, that on the 22d of August the Senator from Kansas gave notice to the Senate that he would this morning call up Senate bill 570 for the purpose of submitting remarks thereon, and August 23d the Senator from Nevada gave notice that he would this morning ask leave to address the Senate on the Senate bill 453. So, if there is any matter of precedence here, it is not a matter of precedence in now taking the floor, but a matter of precedence in having given the notice. The Senator from Kansas gave the first notice that he would address the Senate this morning.

Mr. STEWART. I intended to address the Senate yesterday, when the Senator from Kansas put in a resolution which occupied the time and crowded me out.

Mr. MANDERSON. But the Senator from Nevada yesterday gave notice that he would submit his remarks on Thursday, August 24.

Mr. STEWART. I attempted to occupy the floor yesterday, but I was crowded out, and I renewed my notice that I would speak this morning.

Mr. MANDERSON. It seems to me that the Calendar must decide as to the matter of precedence.

Mr. PEFFER. Under the condition of things, I ask the leave of the Chair that I may proceed with my remarks.

Mr. STEWART. I do not think it is hardly fair for the Senator from Kansas to occupy both mornings. He occupied the time yesterday with his resolution and crowded me out. I took the floor and I think I have a right to go on. I was recognized, and I do not think I can be taken off the floor in this way. With the permission of the Chair I will proceed with my remarks.

The VICE-PRESIDENT. The Senator from Nevada will suspend until the Chair determines the matter.

Mr. FAULKNER. I suggest to the Senators from Nevada and Kansas, and also to the Senator from Nebraska, that there is really no rule that governs a notice for a Senator to address the Senate. It is mere notice that is given and noted, and it is a question of courtesy for the Senate to hear the Senator or not at the time indicated. It strikes me that as the Chair has recognized the Senator from Nevada, that settles the question entirely; that he is entitled to the floor, and there is no way by which he can be taken off the floor except by his consent. I think that is the important point to consider in this matter.

Mr. MANDERSON. Then I submit that the Calendar notice avails nothing, and perhaps the only way out of the difficulty is to let the Senators proceed as a duet. [Laughter.] I do not know any other way.

The VICE-PRESIDENT. While the Chair would prefer that the Senators settle this matter amicably as to the right to the floor, by a reference to the Calendar it appears that on the 22d of August the Senator from Kansas gave notice that on Thursday, August 24, he would call up Senate bill 570, discontinuing the purchase of silver bullion, and on August 23 the Senator from Nevada gave notice that after the routine business this morning he would call up Senate bill 453. The Chair recognized the Senator from Nevada.

Mr. STEWART. And I shall not yield the floor unless I am compelled to do so.

Mr. PEFFER. I ask the Chair to hear me just a moment upon that point.

The VICE-PRESIDENT. The Chair thinks it is not proper to take a Senator from the floor after he has been recognized by the Chair.

Mr. PEFFER. It has been customary on the part of the Senate since I have been here, and I understand it has been the custom from the beginning, that when a Senator gives notice that at a certain time——

Mr. STEWART. I do not yield the floor and decline to be interrupted.

The VICE-PRESIDENT. The Chair has recognized the Senator from Nevada.

Mr. PEFFER. Then I rise to a question of order.

The VICE-PRESIDENT. The Chair is under the painful necessity of determining as to the right of a Senator to the floor, and having recognized the Senator from Nevada he is entitled to proceed.

Mr. PEFFER. I rise to a question of order. I insist that it is the custom of the Senate, which amounts to a rule, and has been from the beginning, that when a Senator gives notice that at a certain time he will ask the Senate to listen to him while he submits remarks the courtesy is invariably granted. So common has that custom become that it amounts to a rule of the Senate. I submit to the Chair for a decision upon that point, whether in view of such case it is not proper for the Chair to recognize the Senator who has given the notice at the proper time.

I submit that the Senator from Nevada interposed his address to the Chair very properly, but the Chair did not understand but that the Senator was going to introduce some morning business, nor did I, for the Senator from Nevada understood very well, as we had a personal conversation about it, that I expected to address the Senate this morning. I supposed when the Senator from Nevada rose that he was going to address the Chair upon some matter pertaining to morning business, and I have no doubt the Chair so expected; but instead of that the Senator immediately began the delivery of an address. I rose immediately upon making that discovery, at the first opportunity that I had, in order to address the Chair; and now I insist, when the attention of the Chair is called to the matter, that I have a right under the custom of the Senate to proceed.

Mr. HARRIS. This question of order is not debatable——

The VICE-PRESIDENT. The debate proceeds, as the Chair understands, by unanimous consent.

Mr. HARRIS. But I should like to make a single suggestion. The fact that a Senator has given notice that he will, on a future day, ask the Senate to hear him upon a given question, gives him no sort of shadow of right to the floor at the hour and on the day named; but, as a matter of courtesy, it is very generally extended to the Senator when the time comes, if he has expressed a desire to address the Senate. He has, however, no more right to the floor at that hour of that day than any other member of this body. The mere fact of his giving notice has secured to him no such right.

It so happens that two Senators have given notice that they would ask leave to address the Senate this morning. The Chair has committed no error in recognizing either one of them, nor would the Chair have committed an error if he had recognized any other Senator who might have addressed the Chair. Having recognized the Senator from Nevada [Mr. STEWART], the Senator from Nevada, in my opinion, has a right to proceed without interruption from myself or any other Senator.

Mr. MILLS. I think it is well settled by parliamentary law that there is no appeal from the decision of the Chair recognizing the right of a member to the floor. The decision of the Chair having been made in favor of the Senator from Nevada, it is final and conclusive.

The VICE-PRESIDENT. The Chair so understands. There being no business before the Senate at that moment, the Chair was addressed by the Senator from Nevada and recognized him, and the Chair thinks the Senator is entitled to the floor.

Mr. STEWART. Now, if the Senator from Kansas desires to take the floor from me, I yield.

Mr. PEFFER. I do not wish to take the floor from the Senator, but I should be very much pleased if I could proceed at this time. [Laughter.]

The VICE-PRESIDENT. The Chair understands the Senator from Nevada [Mr. STEWART] has yielded the floor to the Senator from Kansas [Mr. PEFFER], and the Senator from Kansas is recognized. [Laughter.]

SILVER COINAGE.

Mr. PEFFER. I ask that the bill be laid before the Senate.

The VICE-PRESIDENT. The bill will be read by title.

The SECRETARY. A bill (S. 570) discontinuing the purchase of silver bullion.

[Mr. PEFFER addressed the Senate. See Appendix].

The VICE-PRESIDENT. The Senator from Kansas will please suspend.

Mr. PEFFER. Certainly.

SENATOR FROM MONTANA.

The VICE-PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which is the resolution providing that Lee Mantle be admitted to a seat as a Senator from Montana. The pending motion is that of the Senator from North Carolina [Mr. VANCE] to lay on the table the motion to reconsider made by the Senator from Nebraska [Mr. MANDERSON].

Mr. BUTLER. I ask that the special order be temporarily laid aside, so that the Senator from Kansas may be allowed to conclude his remarks.

Mr. VANCE. I have no objection to the order being laid aside temporarily for the purpose of allowing the Senator from Kansas to finish his remarks, but I wish to make a request, which is, that we fix the hour at 1 o'clock to-morrow for the purpose of taking the vote on the resolution.

Some Senators are perhaps not aware that the question was to come up to-day, owing to the Senator from Kansas having taken the floor in accordance with the courtesy of the Senate, making it uncertain whether there would be a full attendance, and in justice to those who are absent, I suggest that it be understood and agreed that we take the vote at 1 o'clock to-morrow.

The VICE-PRESIDENT. Is there objection to the request?

Mr. VANCE. I give notice that I shall call it up at that hour.

Mr. MANDERSON. I dislike extremely to do anything that may smack of interference in this matter, not being on the Committee on Privileges and Elections, but the dispute that has arisen here as to the matter of pairs rests upon the question as to how the Senator from Alabama [Mr. MORGAN], who is away from the city, as we all understand, on official business, might vote on this question if present. I understand he will be here on Saturday next, and will be in his seat to speak for himself on next Monday.

Now, in the presence of this unpleasant dispute, it seems to me that on this important subject-matter it might be well to postpone until that time the question of the final vote, which, of course, will be upon the motion of the Senator from North Carolina [Mr. VANCE] to table the motion to reconsider. I hope that that may be done.

Mr. VANCE. I do not feel that I would be justified in acceding to the request of the Senator from Nebraska to postpone the consideration of this matter until Monday.

Mr. PUGH. I have expressed the belief that my colleague [Mr. MORGAN], if present, would vote in favor of seating Mr. Mantle on the appointment of the governor. That is the opinion I have formed from conversations with my colleague, but there have been so many changes from last session by Senators, about whose votes I was then equally confident, that it places me in an embarrassing position to undertake to have the Senate act on any statement that I make in reference to the vote of my colleague. I will be relieved very much if the vote can be postponed until he arrives. He will be in this city on Saturday and will be in his seat on Monday.

It is not a matter of very pressing importance, it seems to me,

to have the vote taken to-day or to-morrow at 1 o'clock, or next Monday. It is certainly a very important question, one involving consequences far-reaching in the future, and I think we ought to have a full Senate when the vote is taken.

In view of the certainty of my colleague's being here on Monday, I do not see how the appeal can be resisted, that the vote on the motion to reconsider be taken on Monday, say at 3 or 4 o'clock.

Mr. STEWART. I suggest to the Senator from Alabama to make a motion to that effect.

Mr. MANDERSON. It can be done by unanimous consent.

Mr. STEWART. Very well. If it can be done by unanimous consent, that will be better.

Mr. MANDERSON. It can, without any question.

Mr. VANCE. When the Senator from Alabama [Mr. MORGAN] left the Senate on an errand, of which we are all aware, he left a paper in writing with a brother Senator concerning his pair and his vote on public questions, so that I think with those instructions, which are in the hands of a member of this body and can be produced if necessary, it is a little extraordinary to call upon the Senate to wait upon a privileged matter like this, concerning the admission of a Senator into this body.

Mr. MANDERSON. I should like to ask the Senator whether that written communication to a brother Senator has any reference in it to the vote upon this question?

Mr. VANCE. This question is not mentioned, but the authority given to the brother Senator would include this and all other questions, except those which are specially mentioned.

Mr. MANDERSON. I understand that that letter specifically mentions certain cases on which the Senator from Alabama desires to be paired.

Mr. PUGH. I should like to inquire of the Senator who has the letter of my colleague if he can undertake to say from what he has learned in reference to the wishes of my colleague that he would desire his pair with the Senator from Pennsylvania to apply to the vote on this question?

Mr. FAULKNER. Mr. President, I think it but fair and just to both the Senators from Alabama that I should state the way in which the letter referred to came into my possession.

The letter was addressed to me by the Senator from Alabama [Mr. MORGAN] because I happened at that time to be in control of the pairs of this side of the Senate. In that letter he states that he has a general pair with the Senator from Pennsylvania [Mr. QUAY] upon all questions, except two, on which he says he would vote in the same way as the Senator from Pennsylvania; and he asks that I pair him with the Senator from Indiana [Mr. TURPIE] on one of those questions, and with the Senator from Wisconsin [Mr. VILAS] on the other, neither of those questions being the question now before the Senate.

As to all other questions, he states, he has a general pair with the Senator from Pennsylvania, who, as he says, has kindly consented to pair with him during his absence in France, and that he leaves the question of pairing entirely to myself as to whether the Senator from Pennsylvania upon any question shall vote or not. He also desires that the Senator from Pennsylvania shall not be embarrassed upon any question on which he has a personal desire to vote.

He then asks, if I am to be absent from the Senate, that I shall turn the letter over to his colleague, the Senator from Alabama [Mr. PUGH], who, he states, he knows will carry out the wishes expressed in the letter. He says nothing in reference to the particular matter now pending, and the only reason I objected yesterday to there being a pair with the Senator from Alabama was because I understood that he had on a previous occasion voted in the same way as he is now paired, and, further, because his colleague [Mr. PUGH] could not state to the Senate that if his colleague were present he would vote to seat the gentleman claiming a seat in this body from Montana.

If the Senator from Alabama can now state to the Senate that his colleague, if present, would vote to seat that gentleman, I think that would come within all the rules which govern this body, and would authorize a pair; but if he can not state that as a fact to the Senate, then, under the universal rule which governs and controls the pairing in this body, the general pair between the Senator from Alabama and the Senator from Pennsylvania should stand. I see no reason why we should postpone the vote on the question for that cause, especially as it would not change the result, if the result should be the same on the vote to lay on the table as it was on the original question.

Mr. PUGH. I should like to inquire of the Senator if he can state how my colleague would vote on this question?

Mr. FAULKNER. I can not; and for that reason I would say that the general pair stands, and I should insist upon its standing if the Senator from Pennsylvania were present.

Mr. GRAY. Mr. President, I hope that the request for unanimous consent to take this vote to-morrow will not be withdrawn by the chairman of the committee. It seems to me a most unusual position which has developed itself on this floor, and the proceeding yesterday and to-day is without precedent, so far as I know in my service in this body.

Those who are in favor of the majority report of the Committee on Privileges and Elections have pressed this vote, in season and out of season, upon those who are opposed to that report. It was at the instance of the draftsman of that report, the Senator who has charge of that side of the question on this floor, the Senator from Massachusetts [Mr. HOAR], that the vote was taken when it was, and against the opposition and against the wishes of a good many on this side who desired a longer time for consideration of the questions involved in the reports of the majority and the minority. It was pressed with the full knowledge that the Senator from Alabama [Mr. MORGAN] was absent, with a knowledge of all the facts that are now before the Senate, and it did not occur to anyone, it seems, to raise this question then, or to make it a matter of delay, or of consideration at all, in regard to the time when the vote should be taken.

But, now that the vote has been taken, and the majority has developed itself in favor of the minority report, we find that it is immensely important to have the Senator from Alabama here. It was not important before; it is no more important now; and there is nothing in the practice or the precedents of this body, it seems to me, which compel us to accede to this proposition of the other side to delay action on an important question until a member, who is on the ocean, has arrived to take his seat in this body. As my friend from Florida [Mr. PASCO] says, the vote of the Senator, about whom all this talk is made, would not, according to the vote announced by the Vice-President yesterday, affect the result one way or the other.

Mr. MITCHELL of Oregon. It is hardly fair to interrupt the Senator from Kansas in the middle of his speech. He will conclude in about half an hour, he tells me, and I appeal to the chairman of the Committee on Privileges and Elections to allow this matter to go over temporarily, until the speech of the Senator from Kansas is concluded. Then the question can be resumed.

The VICE-PRESIDENT. Is there objection to the request?

Mr. VANCE. If I yield now to the Senator from Kansas to complete his speech without some agreement, how will the Senators who did not happen to be in the Chamber know when to be here?

Mr. MITCHELL of Oregon. My suggestion was that this matter be resumed immediately on the completion of the remarks of the Senator from Kansas, so that every Senator will have notice.

Mr. MANDERSON. That is the question, whether the vote shall be postponed till to-morrow or Monday.

Mr. MITCHELL of Oregon. Certainly.

Mr. VANCE. I think we can agree upon something now, and the Senator from Kansas can then proceed.

The VICE-PRESIDENT. The Senator from North Carolina asks unanimous consent to have the vote upon his motion to lay upon the table taken to-morrow at 1 o'clock. Is there objection?

Mr. PUGH, Mr. MANDERSON, and others. I object.

Mr. MITCHELL of Oregon. I appeal to the chairman of the committee to allow the matter to go over temporarily until the speech of the Senator from Kansas is concluded.

Mr. VANCE. I did not ask unanimous consent. I have the right to say that I will call the privileged matter up to-morrow at 1 o'clock; which I do.

Mr. MITCHELL of Oregon. That is all right.

The VICE-PRESIDENT. The Senator from Kansas will proceed.

SILVER COINAGE.

The VICE-PRESIDENT. The Senate resumes the consideration of the bill (S. 530) discontinuing the purchase of silver bullion; on which the Senator from Kansas [Mr. PEFFER] is entitled to the floor.

[Mr. PEFFER resumed and concluded his speech. See Appendix.]

Mr. ALLEN. I call for the reading of the amendment offered by me to Senate bill 570.

The PRESIDING OFFICER (Mr. DUBOIS in the chair). The amendment will be read.

The SECRETARY. It is proposed to add after the repealing clause the following proviso:

Provided, That hereafter standard silver shall be coined at the several mints of the United States into dollars, half-dollars, quarter-dollars, and dimes, at the present ratio of 16 grains of standard silver to 1 grain of standard gold, under the same conditions as to mintage and other charges that are now or may hereafter be in force with reference to the coinage of gold. And it shall be the duty of the Secretary of the Treasury, without unnecessary delay, to cause all uncoined silver bullion owned by the Government of the United States to be coined into standard silver dollars. All money coined under the provisions of this act shall be a full legal tender for all debts, public and private.

Mr. ALLEN. Mr. President, the question now before the Senate is of such controlling importance, and is fraught with such deep and abiding consequences, not only to the nation at large, but to the people of the State which I have the honor to represent, that I can not resist the temptation to offer some remarks upon it, although in doing so I may be charged with too early seeking an opportunity to be heard upon this floor.

I have the privilege of representing, in part, nearly one million and a half of American citizens who are interested, not alone in the general welfare and prosperity of the nation, but are vitally interested in the speedy, correct, and permanent solution of this question, to the end that doubt and stagnation in business may be dispelled, and confidence and prosperity restored.

I deem it to be the highest duty of a member of this Chamber, now that the nation is confronted with gloom and threatened with financial and industrial ruin, to lay aside all partisan tactics and prejudice and give to the proper solution of this important question his most enlightened and profound judgment and fervent devotion; and I must confess that I was somewhat surprised and pained on the second day of this session to witness a fruitless and partisan discussion, somewhat acrimonious, and in my judgment entirely unprovoked, precipitated upon the Senate, which consumed valuable time to no useful purpose.

When witnessing such scenes I am not surprised that the American people are losing confidence, if they have not already lost it, in the ability and purpose of Congress to legislate in their interest.

I spring from the ranks of a people who feel and realize keenly the effects of evil legislation, and while they do not profess to have found a panacea for our national evils, or to have explored the depths and ramifications of economic learning, they are possessed of enough intelligence to know when they are evilly or beneficially affected by legislation, and have a sufficient amount of old-time and old-fashioned patriotism to speak out entirely regardless of who may condemn or who may praise.

Mr. President, I am an humble member of a new political party that has recently come into existence and public notice, made necessary by the constant drifting of the nation from its original constitutional moorings into the shallow and treacherous waters of unchecked power. The people—and I speak of the masses—have so frequently appealed to the General Government for wise and humane monetary legislation, only to have their appeals fall on deaf or unsympathetic ears, that it became necessary as a matter of self-preservation for them to create a new political party, founded upon Jeffersonian simplicity, and imperatively demanding a return of the nation to first principles of government; and I am pleased to say that this party, full of hope and confidence, is hourly growing in numbers, in courage, intelligence, and discipline, and will, sooner or later, force the two old parties of the nation into administering the affairs of the Government in the interest of the people, or into political disintegration and death.

In the memorable campaign of 1892, both the Republican and Democratic parties told the people of this country that the crowning issue was the issue of tariff taxation; the Republican party asserting strongly in its platform that a high protective tariff was essential to the prosperity and welfare of the nation, and the Democratic party asserting, with equal emphasis, that a low tariff is the remedy for all our evils.

It is true that each of these parties claimed to be committed to the doctrine of bimetallism, but it was well understood by the country at the time that both Mr. Cleveland and Mr. Harrison, their respective candidates for the Presidency, were committed in the fullest manner to gold monometallism, and either would, if elected, endeavor to carry out such policy, regardless of whether it promoted the general welfare or not.

The People's party of America, while taking strong grounds on the subject of national taxation, asserted in the most positive terms that the crowning question of this country and this age was the question of money; and in less than five months from the close of the election in November last the nation was confronted with an industrial and financial depression such as has not been witnessed in this country for fifty years, if indeed its equal has ever been known.

To-day the Democratic and Republican parties are brought face to face with a condition of public affairs that was foretold by the common people months before it happened.

When an evil confronts us and we desire to remedy it, the first step in the line of curing such evil is to determine its cause, and I propose to devote a short time in inquiring into the cause of the present panic, with a view of determining what measure will be necessary to remove it. The President in his message has told us that the present depression is due "to Congressional legislation touching the purchase and coinage of silver by the General Government," under what is commonly known as the Sherman act, passed July 14, 1890; and he concludes that the remedy is to be found in a prompt and unconditional repeal of that act.

Is the President correct in his conclusion that the Sherman act is the cause of our trouble? In my judgment, Mr. President, the Sherman act has nothing to do in the slightest degree with the evil that confronts us.

No one has become frightened at the ability of this Government to redeem every pledge it has made, as fast as its pledges shall become due.

Possessed as we are of almost boundless capacity to produce wealth, and to turn that wealth into money with which to promptly discharge our obligations, as well as our known high character amongst the people of the nations of the earth for prompt, full, and honest payment, it is idle to assert that foreign or domestic holders of our securities have, in consequence of the Sherman act, lost confidence in our disposition or ability to pay, and are therefore converting their securities into gold and exporting it to safer countries.

The few who desire to believe such a statement will doubtless believe it, but the great mass of the toiling millions of our countrymen can not and will not be thus imposed upon.

That gold has been rapidly leaving the country for the last few months and is being taken to other countries for investment, all well understand, but it is being taken there because it can be invested to better advantage and at higher rates of interest, in Austria-Hungary and other foreign lands, than it can be here. And we are informed that that nation is paying a tremendous premium on the gold that is being exported from this country, and, as a consequence, gold has appreciated beyond the line of its proper purchasing power in the industrial and commercial world.

In the report of the Director of the Mint, in February of this year, on page 42, it is said:

> The amount of the exports (speaking of gold) is unusual, and is accounted for, in the face of the prevailing rates of exchange, by the continued efforts of the Austrian and other European governments to enlarge their stock of gold. It is said that inducements have been given by the Bank of France to obtain gold to replace some of its reserves that have been withdrawn.

The International Gold Trust, having its headquarters in London and its American representatives in Wall street, officered and conducted by men a majority of whom, I am informed, are not even citizens of this country, and owe it no allegiance or duty whatever, and who control the metropolitan press of the nation, to some extent at least, and by that means endeavor to mislead our countrymen to their everlasting injury, have, within the last few months, forced some of the inferior nations of the earth to a gold basis, and by that means created an abnormal demand for American gold abroad; and it is this demand thus created, coupled with other causes, and not the Sherman act, that has, in a large measure, produced the present panic.

Another important factor in the production of this panic is to be found in the fact that early last winter this same International Gold Trust thought to industrially enslave the farmers, planters, mechanics, and laborers of the nation, now and for generations to come, by striking down and dishonoring one-half of the money of the country and driving it and its paper representatives out of circulation, thus increasing a hundredfold the purchasing power of gold, shrinking the value of all property and labor, and producing throughout the nation distress and dependence; and to that end they produced a financial and industrial crisis, and told the people that it was the work of the Sherman act, and that the only way to call back easier times and comparative prosperity was for the country to demand at the hands of Congress a prompt and unconditional repeal of that act.

But the people of this country, ever wise and patriotic, saw through this flimsy pretext, and, knowing it to be a mere trick, a sham and fraud, refused to become frightened or demand that Congress strike down silver, and those who created the panic have themselves become its victims, and are now appealing to Congress to assist in their unhallowed attempt to enslave the race.

But, Mr. President, the truth of this matter is so well understood throughout the length and breadth of this land that I need not refer to it at any greater length.

Mr. President, of late we have heard it boldly asserted, here and elsewhere, that silver is not the money of the Constitution; and from the expression of the President in his message that "gold and silver must here part company," we have a right to believe that he, too, entertains this view of the question. I must confess my utter astonishment at this assertion, in view of the language and purpose of the Constitution, the history of the time when it was framed and adopted by our ancestors, the treatment of the question by Congress in our coinage legislation, the voice of the judiciary when speaking on the subject, and the treatment of the matter by the various political parties in their respective platforms. All these, when impartially considered, demonstrate

that silver is, and ever has been, the money of the Constitution, and it can not now be abandoned by Congress without a flagrant and inexcusable refusal on our part to, in good faith, enforce, in the interest of the nation at large, a power expressly enjoined upon us for the general welfare.

We know as well as anything can be known by history, as well for instance as we know that George Washington was the first President of the United States, that when the Union was formed and the Constitution was framed and adopted, coined silver, more than gold, was the money of final payment of our ancestors; and it was silver as well as gold that was referred to when the Constitution conferred on Congress the power to "coin money."

At that time money had not been coined in this country to any considerable extent, but the coins of other nations, principally Spanish silver coins, were in circulation amongst the people, and it was in anticipation of the coinage by this country of similar metal and money that the power to coin money was conferred on Congress.

Mr. Webster understood this quite well when, in a speech delivered in this Chamber in 1836, he said:

Most unquestionably there is no legal tender in this country, under the authority of this Government or any other, but gold and silver, either the coinage of our own mints or foreign coins regulated by Congress. (See Webster's Works, volume 4, page 271.)

Subdivision 5, section 8, Article I, of the Constitution, is in this language:

The Congress shall have power to coin money, regulate the value thereof, and of foreign coins, and fix the standard of weights and measures.

While silver is not here mentioned in express terms, yet it was with reference to the coinage of both gold and silver that this power was conferred on Congress; and the Supreme Court of the United States, in the United States *vs.* Marigold, 9 Howard, 567, considering this very clause of the Constitution, says:

Whatever functions Congress are, by the Constitution, authorized to perform they are, when the public good requires it, bound to perform.

So that it is seen that it is the duty of Congress to carry into execution this power by appropriate legislation. To leave no doubt as to where the duty rests, and to prevent confusion and injury in consequence of an exercise of this power by the several States, the Constitution, section 10, Article I, declares that "No State shall make anything but gold and silver coins a tender in payment of debts," thus again recognizing in the strongest possible terms the fact that silver is the money of the Constitution, and in the most positive terms recognizing it to be the duty of Congress to provide for its coinage.

From the earliest moment of our national existence to the present time it has been a rule of construction of our courts, State and national, everywhere acted upon and acquiesced in by those concerned in the administration of the law, that when a power is conferred by the Constitution on a given department of Government, the practical construction of such power by the long and continued usage of the department charged with its execution is to have great if not controlling weight in its interpretation, and following out and applying this rule of construction to the power of Congress to coin money, I have to observe that in the passage of sixty-one different statutes and resolutions by Congress, extending from April 2, 1792, to March 3, 1893, silver has been recognized by the legislative department of this Government as the money of the Constitution.

If legislative usage is of any force whatever in the consideration of the question now before us, every party that has administered the affairs of this nation is estopped to deny silver a place in the Constitution; and for eighty-one years, almost from the origin of the Government, to February 12, 1873, we have recognized silver as the money of the Constitution.

But, Mr. President, the ultimate power of interpreting and applying the principles of the Constitution to the practical affairs of our political life, under our form of government, rests with the courts, and to their decisions the people are accustomed to bow without serious question, and to look for authoritative interpretation of all statutes and constitutions; and to this interpretation, as made by the courts, I desire to direct the attention of the Senate.

On the 8th day of February, 1892, there were presented to the supreme court of the District of Columbia, the application of the United States on the relation of George J. Merrick and others *vs.* Charles Foster, Secretary of the Treasury, to compel the respondent "to receive certain bars of silver which had been presented first at the Mint, and afterwards to the Secretary, for coinage into silver dollars." In deciding this case, on the 8th day of February, 1892, the court, by Mr. Justice James, said:

An elaborate argument was presented, both in print and orally, to demonstrate that the power of Congress to coin money meant the power to coin gold and silver coins, on the ground that the meaning of the word "money," at the time when the Constitution was adopted, was gold and silver coins. Without going into that argument, I have to say that we at once concede that the power to coin money related to gold and silver, as it was understood to be the money when the colonies, which afterwards came to constitute the States, under the British Crown, and that at common law money meant gold and silver coins.

Mr. President, both the Republican and the Democratic parties are committed, in the strongest possible terms, to the doctrine of bimetallism.

In January, 1836, the Democratic party in the State of New York, speaking for the Democracy of the Union, adopted a platform containing these words:

We declare unqualified hostility to bank notes and paper money, because gold and silver are the only safe and constitutional currency.

In the national Democratic platform of 1880 it is said:

Home rule—the strict maintenance of the public faith—money consisting of gold and silver, and paper convertible into coin on demand.

The national convention of the same party in 1884 adopted in its platform this expression:

We believe in honest money, the gold and silver of the Constitution, and a circulating medium convertible into such money without loss.

In 1892 the Democratic party used in its platform this language:

We hold to the use of both gold and silver as the standard money of the country, and for the coinage of both gold and silver without discrimination against either metal, or charge for mintage.

In 1888 the Republican party, in its national platform, declared as follows:

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

And in 1892 it declared that:

The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of a parity of values of the two metals, so that the purchasing and debt-paying power of a dollar, whether of gold, silver, or paper, shall be at all times equal.

In 1892 the Democratic party in the States of Arkansas, California, Colorado, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nevada, Oregon, South Carolina, Tennessee, Texas, and Washington declared in unequivocal terms in favor of the free coinage of silver, thereby committing the national Democratic party, as far as within their power, to the traditional doctrine of silver being the money of the Constitution.

In 1892 the Republican party of California, Colorado, Indiana, Kansas, Montana, Nevada, Oregon, South Dakota, and Tennessee committed itself to the doctrine of bimetallism. The free and unlimited coinage of silver, at the ratio of 16 parts of silver to 1 of gold, is one of the chief corner stones of the People's party of America, and it is useless for me at this time to quote from its platform, promulgated at Omaha, July 4, 1892.

If anything can be said to be settled in this country, in a political sense, it is that both the Republican and Democratic parties are committed, throughout their history, to the doctrine of bimetallism.

Under such circumstances, if political platforms are to count for anything, and to be taken as expressing the views of their framers, and the parties promulgating them, these parties must be held to be committed to silver as money of the Constitution.

Mr. President, we who believe that silver should be rehabilitated and reëstablished to its rightful position in the coinage of the country are constantly told that money can not be created by law, and that silver at the ratio of 16 to 1, not possessing full intrinsic value, should not be coined and put into circulation at that ratio. That I am not mistaken in this statement, I quote from a speech delivered by the Senator from Oregon in this Chamber on the third day of the present session, who, I suppose, voices the sentiment of gold monometallists on this subject. He says:

The Government stamp can not create good money. All money must possess intrinsic value.—CONGRESSIONAL RECORD, first session Fifty-third Congress, volume 25, page 39.

I propose to show that these gentlemen have departed from the Constitution of our fathers. I call the attention of the Senate again to subdivision 5, section 8, Article I, of the Constitution, which is in this language:

The Congress shall have power to coin money, regulate the value thereof, and of foreign coins, and fix the standard of weights and measures.

What is meant by the "power to regulate the value of money"? If its value is regulated by nature and not by law; if it is the creation of natural law and not of man, then it was an entirely useless ceremony for the framers of the Constitution to confer on Congress this power. When our ancestors conferred on Congress the power to coin money and regulate its value, they understood that the value of gold and silver as articles of commerce could not be controlled by statutes and constitution.

I think we must do them the credit of understanding this great fundamental truth, and therefore I assume it to be true that, when they declared that Congress should have this power, they

did not intend that Congress should undertake the impossible task of regulating the commercial value of the disks of gold and silver, upon which money is stamped.

What, then, did they mean by this declaration? They must have meant, if anything, that Congress should be possessed of the power and charged with the duty of regulating value of money as money, thus distinguishing clearly between money and the metal upon which it is stamped. They did not say that Congress should have the power to regulate gold and silver, or to fix its weight and fineness, but they did declare that the value of the thing to be regulated is money. Up to the time when the Constitution was adopted it had not entered into the political mind that the time would ever come when either gold or silver would be demonetized, but our ancestors proceeded upon the supposition that, having been regarded for ages as precious and money metals, they would continue to be so regarded in the future.

Mr. President, there is nothing natural in our standard of weights and measures. Under the power conferred upon Congress to fix the standard of weights and measures it would be perfectly competent for Congress, by a proper statute, to declare that 13 inches should constitute a foot, or 39 inches a yard. It could declare that any number of pounds of wheat, oats, or corn should constitute a bushel. The discretion was vested in Congress to fix the standard of weights and measures at whatever point it might see fit, and this power, in its very nature, is arbitrary. Is it not true, then, that in declaring that "Congress shall have power to regulate the value of money," it was the intention of the framers of the Constitution that Congress should fix, arbitrarily, a unit or money value just as the power is conferred on it to arbitrarily fix a standard of weights and measures.

It was well understood that the purchasing power of the dollar would not always be the same, and that whenever money was scarce its command over the products of labor would be greater than when it was plentiful. It was by no means intended that Congress should attempt to fix the commercial value of any article bought with money any more than it was intended that they should at any time attempt the impossible task of regulating the commercial value of articles weighed on the scales or measured by the yardstick. The Constitution either means that Congress shall have power to create and give value to a thing called money or it must be held to mean that our ancestors undertook to regulate the commercial value of the substance upon which money is impressed, which would be as absurd as the Pope's bull against the comet.

It would seem that this question ought to be put at rest by the language of the Constitution itself; but the courts of last resort of many of the States, as well as the Supreme Court of the United States, have spoken so emphatically in the premises that I can not refrain from quoting somewhat liberally from their opinions.

In the case of Warnibold *vs.* Schlieting, 16 Iowa, 243, the plaintiff had given the defendant a promissory note payable in "United States gold." After the note was given, and before it became due, the act of Congress of February 25, 1862, became a law, and under it legal-tender notes were issued. When the note became due the plaintiff tendered the defendant United States Treasury notes, which were refused, and thereupon the plaintiff brought an action to cancel the note and the trust deed given to secure its payment.

In holding the tender good and granting the relief prayed, the supreme court of Iowa, by Wright, chief justice, a distinguished jurist, and for many years a member of this body, on page 251 of the report, uses this language:

Gold may fluctuate in the market; there may be a demand for it for the most legitimate purpose; gamblers may speculate in it at the risk of sacrificing the financial, if not the dearer, interests and life of the nation, and yet, when the legal test is applied, each dollar of every mode or form of currency declared to be a legal tender has the same value without reference to the material of which it is composed. And we can not resist the remark that the sooner that this is known, accepted, and acted upon, the better it will be for national, monetary, and political integrity, as well as for individual and general morality, prosperity, and success.

Mr. MCPHERSON. I should like to ask the Senator from Nebraska a single question, if it will not interfere with him.

Mr. ALLEN. Certainly.

Mr. MCPHERSON. Does the power granted in the Constitution to Congress to coin money and regulate the value thereof mean such a regulation of the value of money as provided by the Constitution that one coin may be made worth 100 cents and another coin 60 cents, and they shall circulate harmoniously together as money? Was it in contemplation that, instead of carrying out the decrees of nature, Congress may arbitrarily make a decree which is against it?

Mr. ALLEN. My speech as I proceed will answer the Senator's question.

The court of appeals of New York in 1863, in the case of The Metropolitan Bank *vs.* Van Dyck, and in the case of Meyer *vs.* Roosefelt, 27 New York, page 400, passed upon the constitutionality of the act of Congress, February 25, 1862, creating legal-tender Treasury notes.

In that case a State bank had issued a note, payable in lawful money of the United States. This note was presented for payment, and legal-tender Treasury notes were tendered by the bank to the holder and they were refused.

In an action brought to recover the court of appeals held that the tender was good, and directly passed upon the constitutional power of Congress to coin money and regulate its value.

On page 425 Davies, J., says:

We thus see that Congress, since the organization of the Government, commencing in the Presidency of Washington, has exercised plenary power and control over the subject of currency and legal-tender laws. It has established the value of certain foreign coins at one time and changed it at another; has made them a legal tender in payment of all debts, now by weight and then again by tale; repealed such laws and enacted them again, sometimes making such coins a legal tender in payment of all debts, and at other times limiting them to payment for public lands or for taxes and debts; also making evidences of public debt or stock of the United States a legal tender in payment for public lands.

We also see that Congress has changed, from time to time, the standard of value of coins struck by our own Mint, debased them by altering the fineness and weight and the relative value of gold and silver, and making the debased coins, as well as those of a greater value not debased, equally a legal tender for the payment of all debts, public and private, at their respective nominal values.

Again, Davies, J., says on page 430:

If Congress can coin any metallic substance, under the power to coin money, and stamp it with an arbitrary value, as it is conceded it may, then it follows, from the practice of the Government and the rules and principles enunciated, that it can make such stamped metal a legal tender at any designated value.

Intrinsic value of a thing stamped or coined has nothing to do with the question of power. Such metals so stamped are not issued or put in circulation on the faith or credit of the United States Government, no pledges made to redeem them, and they may possess little or no intrinsic value; yet it is not denied that such pieces of metal so stamped or coined may be lawfully issued and made a legal tender and thus become lawful money of the United States.

Again he says, on page 459:

It is the lawful money of the United States, made such by its authority, that can only be effectually used in payment of debts without reference to the intrinsic value of the thing tendered or paid.

In the same case, Balcom, J., speaking of the same subject, on page 466, says:

The fair inference from these facts is that the States were prohibited by the Constitution from emitting bills of credit or making anything but gold and silver coin a tender in payment of debts, and from coining money, in order to rid the country of other circulating medium or currency which had no intrinsic or legal value beyond the lines of the States that authorized it, and so Congress would provide a money or currency that would be of value throughout the Union. And to enable Congress to provide such a circulating medium for all ordinary purposes, the power was expressly conferred "to coin money, regulate the value thereof and of foreign coins."

Again he says, on page, 472, in speaking of the legal-tender notes authorized by act of Congress:

Each five-dollar note issued under this act is precisely of the same value in legal contemplation as a piece of gold of the denomination of $5. And if all citizens would strictly observe this law as they should, any person could obtain $5 in gold coin for one of these notes at any place where such coin is to be had.

Wright, J., in the same case, and on page 482, uses this language:

A Treasury note of the denomination of $10 is legally as valuable for the purpose of money as a coined eagle; the value of each is fixed at $10, money of account.

Mr. Justice Emmet, in this case, and on page 487, also says:

Gold and silver coin and money are not necessarily convertible terms. The latter word is used in various senses and has various shades of meaning, according to its employment or connection. It is generally the representative of values and the instrument of exchange. But it is no part of the contract of debt made at one time for the repayment of money at another that this representative instrument should possess the same exchangeable value or the same purchasing power at the time of payment as at the time of incurring the debt. All that the debtor contracts to do is to return to his creditor, in dollars and cents, as much as he receives. And the advance and repayment are alike to be made, in that each, by competent and valid authority, is made the medium of account and payment.

Mr. Justice Marvin, on page 519, says:

It is not, however, denied that Congress may reconstruct the dollar, and make it, though nominally the same, of far less value as compared with the coined quantity of the precious metals.

The precious metals, it is said, possess a real intrinsic value in the estimation of all civilized nations, and that they are generally used as the representative of values as money. And all this is true. Still, the precious metals are a mere article of commerce between nations and among the people or subjects of such nations, in that the nations by an act of legislation, give to them a different character by taking certain portions and impressing upon them the stamp of the government, and giving them names which the people may use in their contracts; and also declaring that the damage for the breach of all contracts shall be estimated in the stamped precious metals, according to their denominations, and shall be satisfied by them.

And again, on page 520:

Although a nation has once established a system of money composed of the precious metals as an aid to commerce, it does not follow that it may not change that system, or, indeed, wholly abrogate it and substitute something else as the representative of values, classifying it by numerals, and giving them names.

The nation may, and ought to do so, if in its judgment it has discovered

a better system for the development of its industry and the encouragement and protection of commerce.

In the legal-tender cases in 52 Pennsylvania State Reports the supreme court of Pennsylvania, on page 68, says:

The State may not enact that anything but gold and silver shall be legal tender, but Congress may coin money; that is, say the opponents of the constitutionality of this act, give the character of money to pieces of metal. It has made money out of copper and declared it a legal tender for small amounts. Its power to do this has not been questioned. Nor is there any provision that a piece of metal which Congress may coin as money shall have a legal value corresponding at all to the intrinsic value of the metal in the market. Upon this subject the Constitution is silent. The regulation of value may be changed from time to time. It has been more than once, without denial of the power of Congress to change it. Our coins have been debased and a smaller weight of pure gold or silver is now required than was formerly required.

It seems, therefore, to have been left to Congress to determine how far the statutory value of coined metal shall correspond with the market value of the same metal as bullion. It is not claimed that the expression "to coin money and regulate the value thereof" expresses or implies any other restriction than that the substance of which it is coined shall be metallic. But it is possible for gold or silver to be formed into a leaf no thicker than bank-note paper. If upon such a leaf, stamped in any way, a value be affixed by Congress of $100 dollars, why is it not money, even in the view of those who insist that coining money is applicable only to metallic substances? There is no prescription of any form for the pieces of money that may be coined.

The courts of last resort of at least fifteen other States have held, in substance, the same doctrine. But, Mr. President, the Supreme Court of the United States has frequently spoken to the same effect.

In Knox *vs.* Lee and Barker *vs.* Davis, 12 Wallace, page 457, in what are commonly known as the Legal-tender cases, the Supreme Court has, in my judgment, put an end to this question.

Mr. Justice Strong, who there delivers the opinion of the court, on page 547, says:

Undoubtedly the power to regulate the value of money coined, and of foreign coins, is not exhausted by the first regulation.

More than once in our history has the regulation been changed without any denial of the power of Congress to change it. And it seems to have been left to Congress to determine alike what metal shall be coined, its purity, and how far its statutory value as money shall correspond, from time to time, with the market value of the same metal as bullion.

Speaking further, on page 553, he says:

It is hardly correct to speak of a standard of value. The Constitution does not speak of it. It contemplates a standard for that which has gravity or extension.

But value is an ideal thing. The coinage acts fix its unit as a dollar; but the gold or silver thing we call a dollar is in no sense a standard of a dollar. It is a representative of it. There might never have been a piece of money of the denomination of a dollar. There never was a pound sterling coined until 1815, if we except a few coins struck in the reign of Henry VIII, almost immediately debased, yet it has been the unit of British currency for many generations.

He further says, on page 547:

The Constitution does not ordain what metals may be coined, or prescribe that the legal value of the metals when coined shall correspond at all with their intrinsic value in the market.

And on page 548 he says:

No one ever doubted that a debt of $1,000, contracted before 1834, could be paid by 100 eagles coined after that year, though they contained no more gold that 94 eagles, such as were coined when the contract was made, and this, not because of the intrinsic value of the coin, but because of its legal value. The eagles coined after 1834 were not money until they were authorized by law, and had they been coined before without a law fixing their legal value they could no more have paid a debt than uncoined bullion or cotton or wheat.

Bradley, J., in the same case, on page 562, says:

Uniformity of money was one of the objects of the Constitution. The coinage of money, and regulation of its value, is conferred upon the General Government exclusively. That Government has also the power to issue bills.

These decisions, Mr. President, have been reaffirmed by the Supreme Court of the United States in Duly *vs.* Smith, 13 Wallace, 604; Bigler *vs.* Waller, 14th Wallace, 297, and Railroad Company *vs.* Johnson, 15 Wallace, 195, and may be said to settle for all time the doctrine that, under the Constitution of this country, the power rests in Congress to create and regulate the value of money.

I think I have now shown conclusively these two propositions:

First, that silver is the money of the Constitution, and,

Second, that the power to create and regulate the value of money is a political power conferred upon Congress under the Constitution of this Union.

Mr. President, this is the teaching of our fathers as they have spoken to us through the Constitution. Can we doubt it? Can we hesitate to enforce it when commerce, industry, and labor lie prostrate and bleeding at every pore throughout the length and breadth of the nation?

It is an elementary rule of construction applicable to constitutions and statutes alike, wherever our language is spoken and the common law is in force, that where a power is conferred for the public welfare it becomes the duty of the officer or body upon whom it is conferred to execute it in the fullness of its gift.

Power and duty are under such circumstances synonymous words. Can we then refuse to discharge the duty of coining the silver of the Constitution? I believe this duty will be fulfilled to the lasting benefit of our country unless we have reached that period in the world's history when the day that ushered out of existence the reign of the feudal lord also ushered into existence the reign of the money lord whose golden argument is to break down constitutions, topple over and destroy government, if not efface civilization and enslave the race.

Mr. President, for seven hundred years before the Christian era silver was used as money and has been continuously used from that time until the present time throughout the civilized world.

Silver was current with the merchants in Abraham's time. For two thousand seven hundred years gold and silver, as money, have not varied to exceed three points, and yet the gold monometallists tell us that silver is becoming so plentiful that the only safety in our monetary system is to abandon it and cling to the gold standard.

I have no caprice to serve in this matter, none whatever, and if I can be convinced that there is a sufficient amount of gold in the world to do the money work of the world with, and that we do not need the aid of silver, I would be perfectly willing to take gold as the single standard. The People's party is not clamoring for silver because they prefer it to gold, but simply because they are thoroughly convinced that there is not enough gold in the world to do the money work of the world with, and that we must have more money to bring to the homes of this nation that degree of prosperity to which they are entitled, and which they so much need.

Let us look at this question of the supply of gold for a moment. In round numbers the world has, in gold coin, $3,750,000,000. Of this sum it is said that there is hoarded in Asia, in various forms, $1,250,000,000, leaving to the balance of the world something like $2,500,000,000.

Early in the current year the distribution of gold stood something like this:

Bank of France	$340,000,000
Imperial Bank of Germany	215,000,000
Russian War Chest	500,000,000
Bank of England	125,000,000
Other banks in England	95,000,000
Austria-Hungary	150,000,000
Spain, Netherlands, Italy, and Turkey	125,000,000
United States Treasury, May 1, 1893, including that covered by certificates	202,000,000
Banks of the United States	198,000,000
	1,950,000,000
Leaving for the rest of the world perhaps	550,000,000

Thus showing conclusively that the great bulk of the coined gold of the world is controlled by European and other foreign powers.

By the report of the Director of the Mint in 1892, page 1, we are informed that the total gold output of this nation in 1892 was approximately $33,000,000. Of this sum, on page 49 of the report, we are informed that $19,329,000 were consumed in the arts. Add to this $1,500,000 to make good lost and abraded coins, and there is left of the gold output of 1892 $12,171,000. Estimating the population of this country at 66,500,000 souls, which is below the estimate given by the Treasury Department, and we find that of the gold subject to coinage, of the output of our mines in 1892, there are 18.3 cents per capita.

It is current history that the population of this country is increasing at the rate of over 2,000,000 per annum, and if we take the per capita circulation, as given by the Director of the Mint, at $25, it will be seen that we need annually to add to our current money $50,000,000 to stand still.

Where is the gold to come from if this volume is to be supplied by gold? It is evident that we do not mine it, and if we obtain in at all it must be by purchasing it by the issuance of Government bonds. And this is the resort, in my judgment, to which the gold monometallists are attempting now to drive the country.

I give it as my deliberate judgment that any Administration which authorizes the issuance of Government bonds to-day, removed as we are thirty years from the close of the war, and with our wonderful wealth which should be converted into money, will be turned out of power speedily at the close of its tenure of office.

The mines of this country can not supply us in the next year with to exceed one-half of the gold output of 1892; for it is well known that the most of our gold is found with silver, and the closing of the silver mines will have the effect of shortening the output of gold; so I am safe in saying that in 1893 there will be no American gold to add to our coinage.

We have, then, one of three remedies open to us.

First. We can issue bonds and purchase gold, and by that means saddle upon the industries and people of this country an endless national debt; or,

Second. We can resort to overexpanded bank credits in the future as we have been doing in the past; or,

Third. We can tap the silver mines of the Rocky Mountains and cause to flow into our volume of currency a stream of silver equal to the demands of our people.

Which will we do?

We have been constantly told by the Republican party for years past that the only safety to this nation was in becoming a self-reliant people; that we should build up our industries, set our laborers to work, giving them remunerative wages for their labor, and live within ourselves and independent of Europe and European interests; and yet we are told to-day by some of the leaders of this party that this Government can not commercially breathe except as it breathes through the lungs of England. We are told that we must protect our people against the evils of tariff taxation, but when it comes to the value fixed on European money we are to suffer them to be robbed at will.

If we adopt the first course offered to us by gold monometallists, we have no assurance that the gold which we purchase and put in the Treasury to-morrow will remain there twenty-four hours. The same means by which the Treasury has been depleted and looted in the past of its gold may be resorted to in the future, and we will be compelled to issue more bonds to buy more gold, and by this means a perpetual national debt will be created and will rest upon our people for years to come. There is no end—there can be none—to a system of this kind.

If we resort, on the other hand, to bank credits, we resort, in my judgment, to an infinitely worse scheme. I am not prepared, so far as I am concerned, to have this Government abandon the constitutional power of coining and controlling money. The power to coin and regulate the value of money, and control its volume, is a vital sovereign power devolved by the Constitution on Congress. I am not prepared for the time when this Government shall abandon this sovereign power, which should be exercised in the interest of the masses of the people, and farm it out to bankers, brokers, and gamblers in stocks and bonds, that they may tax the industries and energies of this country *ad libitum*.

Mr. President, in my judgment, the nation is to-day suffering more from a contracted volume of money than from all other causes combined.

The junior Senator from Massachusetts [Mr. LODGE] told us the other day that the mills of New England are closed, and that at this time, with the exception of two mills, there is not a spindle turning in the city of Lawrence; that there is only one mill running in the city of Lowell, and that there are over 30,000 people out of employment in two other cities in the Commonwealth of Massachusetts.

The Senator said:

> Multiply it by 10 and you get some idea of the distress that rests upon the State of Massachusetts. Multiply it by 100 and you get some idea of the distress pervading the Northern States, and when there is such a blight resting upon the industries of my own State, and of all the other great industrial States of the North, for one I have no mind for party politics or for delay. I ask simply for action. I believe it is the highest duty that the Senate can perform to take the quickest possible action.

If to this the Senator had added that hundreds of thousands of people are out of employment in many of the great agricultural and mining States of the Union in consequence of the closing of the mines and the stagnation of productive industry; that prices of farm produce have fallen almost 40 per cent in the South and West, and that there is a universal cry going up from all of the great agricultural, mining, and manufacturing States of the Union, caused by this panic precipitated upon the country by the money-changers of Lombard street, aided and abetted by their allies of Wall street, he would have drawn a mild picture indeed.

And what is causing all this distress? Certainly it is not because the people are frightened at the Sherman act, but rather because there is a universal scarcity of money, and business and industries of all kinds are at a standstill in consequence.

That this is true may be found in the fact that all over the country we hear of a financial famine; not enough money, it is said, with which to do the business of the country.

I have watched the daily press, for many months, very carefully, to ascertain the cause of so many bank failures, and in almost every instance the dispatch announcing the failure of a bank is accompanied with a statement that the bank had ample resources and was perfectly solvent, but could not obtain the money to pay its debts.

When the volume of money is so small that it will not supply the ordinary and daily demands of legitimate banking, what is to be thought of the chance of the farmer and laborer in the struggle for an existence?

Another prolific source of evil contributing, in my judgment, in a large measure to produce the distress we are now experiencing, lies in overexpanded bank credits, making money panics probable, or at least possible, by sudden and extreme inflation or contraction of the volume of money.

We have too much credit—too much confidence and not enough of actual money, and there must be some means invented for a speedy return to a sounder and more scientific basis.

The history of the world fails to produce an instance of a nation evilly affected in consequence of an oversupply of sound money, although it is replete with instances of nations whose civilization has been lost or turned back for centuries in consequence of a shrinking volume of money.

The evils resulting from a contracted volume of money are so vividly portrayed by the senior Senator from Ohio [Mr. SHERMAN], in a speech delivered in this Chamber, February 27, 1868, to be found in the Congressional Globe, part 5 and Appendix, second session Fortieth Congress, pages 180–192, that I can not refrain from quoting from it. It is as follows:

> The appreciation of the currency is a far more distressing operation than Senators suppose. Our own and other nations have gone through that operation before. * * *
>
> It is not possible to take this voyage without the sorest distress. To every person except a capitalist out of debt or a salaried officer or annuitant it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. * * * It means the ruin of all dealers whose debts are twice their capital, though one-third less than their actual property. It means the fall of agricultural productions, without any great reduction of taxes. * * *
>
> When that day comes every man, as the sailor says, will be close-reefed, all enterprise will be suspended, every bank will have contracted its currency to the lowest limit; and the debtor, compelled to meet in coin a debt contracted in currency, will find the coin hoarded in the Treasury, no representative of coin in circulation, his property shrunk not only to the extent of the appreciation of the currency, but still more by the artificial scarcity made by the hoarders of gold. To attempt this task by a surprise upon our people, by arresting them in the midst of their lawful business and applying a new standard of values to their property, without any reduction of their debts, or giving them an opportunity to compound with their creditors, or to distribute the losses, would be an act of folly without an example in evil in modern times.

In a well considered article in the Manufacturer, volume 6, page 2, published at Philadelphia, August 12, 1893, there occurs this significant language, bearing upon the decline in the price of wheat:

> The decline of the price of wheat is not caused by the stringency in the money market. It has continued for nearly twenty years through a period of high prosperity. It will be likely to continue further. Unless the price of silver shall be advanced, wheat may be expected to fall to 50 cents a bushel, and it may go lower. The decline is due, not at all to overproduction, if there is any overproduction, but to the constant appreciation of the value of gold.
>
> While gold goes up wheat will go down, and there can be no hope of stopping their movement until a civilized world refuses longer to conduct its business upon the basis of a single metal. It will be hard for the persons who have been fighting against silver remonetization, and ridiculing the men who upheld it, to admit the truth, but the facts are all against them; the evidence, day by day, is all upon the side of the theory that gold appreciation is destroying the wealth producers of the country. It was declared a year ago that prices had reached "bottom," but they have been going down ever since, and "bottom" has not been reached.

In the same journal and page is a table showing the decline in the price and quantity of exported wheat from 1892 to 1893. It is as follows:

Wheat exports, fiscal years 1892 and 1893.

	Bushels.	Value.
1892	157,280,351	$161,399,132
1893	117,121,109	93,534,970

Forty million less bushels, sixty-seven million less dollars.

Quantity declined 25 per cent. Value declined 42 per cent.

And thus, owing to the steady falling of prices, 42 per cent less of debt are paid at only 25 per cent less of wheat.

In a more or less marked degree, the prices of all farm products is falling, and unless something is speedily done to raise fallen prices farming will be the least productive of all our industries.

Mr. President, it is idle to talk at this time of international bimetallism. The people have no faith that it will be accomplished, and many of them believe that it is a mere subterfuge resorted to for the purpose of delay, to the end that the money power may gain time to reduce the masses to subjection and stifle their protests against this great wrong.

Four times in a third of a century we have had an international monetary conference to consider the question of international bimetallism, and each conference has resulted in bringing about nothing, nor have we any assurance that any steps are being taken in good faith to bring about international bimetallism.

While we all understand that the purchasing clause of the Sherman act is a miserable makeshift resorted to and enacted to avoid the blessing of the free and unlimited coinage of silver, as has been confessed in this Chamber, yet it is wiser by far to retain it until something better is offered in its place, than to surrender to an enemy who has been constant in season and out of season for twenty years to strike down silver and deprive the people of one-half of their constitutional money; thus increasing in enormous proportion the debts of the people, shrinking the value of their property and labor, and making the rich richer and the poor poorer.

Sir, the Sherman act is the last feeble barrier that stands between the patriotic and industrious masses of our people and that horde of insolent, aggressive, and ravenous money-changers and gamblers of Lombard street and Wall street, who for private

gain would, through a shrinking and contracted volume of money, turn the world back into the gloom of the Dark Ages with all its attendant evil and misery. We can not suffer this to be done; we must stand like a wall of fire against its accomplishment, and only when the measure that is to succeed the present law is shown to us and enacted into a law can we with safety repeal the Sherman act.

No mere high-sounding and empty declaration about an intended return to bimetallism, such as is attached to the bill under consideration, should be permitted to betray us into an unconditional repeal of the act of July 14, 1890. Such declaration has only added evidence of a fixed and settled purpose on the part of the Administration to forever drive silver from the field as a money metal.

It may quiet the fears of the weak and lull the thoughtless into an attitude of fancied security, but it is merely the song of the siren calling the nation to destruction. No, sir; base, ignoble, and cowardly as the Sherman act is and ever has been, it is infinitely better than this limp, meaningless, and useless declaration of an intention to return to bimetallism. We have it in our power to force better terms, and we would be unworthy if we fail to do so.

Mr. President, I have listened to and read many of the speeches delivered upon the subject of money. I have read much of the literature pertaining to the subject, and, although I do not profess by any means to have exhausted the question, I must say that I have never yet heard a reason offered for the establishment of a single gold standard, or read one, that was not, to my mind at least, capable of a ready and conclusive answer.

If this question could be divested of the selfishness that surrounds it—the selfishness of the silver miner on the one hand, and the gold miner, the advocate of a limited and shrinking volume of money, and the holder of securities, on the other hand—it would be comparatively easy of solution.

But it is clothed with so much selfishness, and therefore is so much mystified on the part of those directly interested, that it will doubtless prove difficult of solution. Monometallists assault silver with many bitter epithets; they declare in strong terms that a silver dollar is a dishonest dollar, "a 54-cent dollar," and "a fiat dollar," and they apply to it many of the bitterest expressions that can be invented. There is no argument in expressions like these. We all well understand that when a subject under discussion elicits from its opponents nothing but epithets, it is reasonably safe in the domain of logic. It is only when its opponents have no reason to offer against it that they resort to denunciation, sarcasm, and ridicule. Now, why is a silver dollar a dishonest dollar? I have never heard any other reason given than that its commercial value is not, at present, equivalent to the bullion value of the gold dollar, and this, in my judgment, is the only reason, if it can be called a reason, that can be offered against it.

How is it expected to institute a comparison between two unequal things—two things that are, according to an imperative law of nature, considered as articles of commerce—traveling in opposite directions? Gold daily growing more scarce and in greater demand throughout the civilized world, and silver crippled by being denied equal coinage privileges at the mints, growing more plentiful, with lessened money use, it must be expected that their commercial value will radically differ. But put both metals upon an equality before the law, and they will stand equal in the commercial and monetary world. I do not doubt that the very moment silver is permitted free access at the mints its price will go up throughout the civilized world. Only last week the London silver market advanced in anticipation of the action of Congress retaining the present Sherman act.

Mr. President, how can it be expected that silver will advance in price, or even remain at a given point, when we have joined with Europe to discredit it? It seems to me that it would be unwise for us to join with Europe in depressing the price of cotton, corn, and other products of our fields. The Senator from Oregon told us in his speech the other day that the price of Indian wheat and cotton was fixed in the Liverpool market by the gold standard. I deny this. I assert that every bushel of Indian wheat and every pound of Indian cotton that has been sold in the Liverpool market for the last eighteen years has been bought with debased silver or discounted Indian council bills payable in silver, thrown on the market by the English Government, very frequently at a large discount, and in competition with American silver; so that American silver, to be sold in the Indian market or in the London market for India, has been compelled to meet and undersell Indian council drafts. And what has been the effect of this course of business?

It has been an increase of the wheat and cotton industries of India, and, to an enormous extent, Indian wheat and cotton are now, in consequence, sold in the Liverpool market in strong competition with the productions of our own farmers and planters, and the price of American farm products has been driven down in consequence thereof to an almost inconceivable point. I am entirely unable to understand why the people of this country should join England in destroying one of the great industries of America and one of the strongest metals, and raising up in consequence thereof strong competition upon the part of the people of India, that destroys much of the profit of American farming.

Mr. President, I desire to direct the attention of the Senate for a short time to a little further inquiry into the subject of money and its characteristics. Money, in my judgment, may be defined to be a medium of exchange. In fact, I know of no office or function performed by money that is not clearly embraced within that definition. There are found in this country and elsewhere two schools of thought, one holding that the value of money resides in the material upon which it is impressed, or of which it is made, and the other holding that the money value is given it by law, bounded and circumscribed by its volume: in other words, that the value of money is a value in use rather than a value in the material of which it is composed. Money differs from all other things known to man in the following respects:

First. Its value consists in a value in use, or the office or function it performs.

Second. It differs from all other things in that it possesses no value except as it is being used. It is the office of money, like the Wandering Jew, to keep constantly in motion, and it is valuable and serviceable to the race only when it is in motion.

Third. It differs from all other things known to man in the fact that it is counted by units. No one ever thinks of looking at the size of the piece or of ascertaining its weight; but we look at the number of dollars or cents it represents and take it in consequence thereof, and not in consequence of the commercial value of the material of which it is composed. There is nothing like this except, perhaps, the unit in a mathematical calculation.

Fourth. It differs from all other things known to man, because all of it is, at all times, for sale; its very office is a medium of exchange, and it is useless except when used in exchange for other articles. Gold monometallists hold to the theory promulgated by the merchant mariner early in the world's existence. I have not been able as yet to ascertain the time when the legal-tender quality was attached to money, although I think I am safe in saying that it is of comparatively recent origin.

Early in the history of the world's commerce the merchant was a mariner, and loading his ship at the beginning of the trading season, he sailed from land to land selling his wares and receiving in exchange the precious metals, unstamped and uncoined, and at the close of the trading season the nation which had the greatest amount of the world's precious metals was counted the most fortunate.

As a result of this, business was stimulated in the nation having the "balance of trade," so that the nation against whom the balance of trade existed, to turn that trade in its favor the next year, was compelled to labor cheaper and produce more cheaply than the other nations, that it might undersell them in the markets of the world. That is the origin of the so-called automatic or self-regulating system that was taught in the early history of the world, and it is that doctrine that is being advocated by the gold monometallists in this country to-day. It is readily seen in examining this doctrine that no value was given to the precious metals by the ancients in consequence of coinage or legal enactments, but the entire value resided in them as articles of commerce.

In the struggle for the precious metals by the ancients, that nation receiving the greatest amount at the end of the trading season did so in consequence of debasing or enslaving its labor and destroying its civilization, and doubtless it is true that civilization was retarded for many centuries in consequence of this struggle for gold and silver.

If the Constitution is correct, as expounded by the courts of this country, that the power to regulate the value of money as money is a political power existing in the Government, and the value of money is its value in use, or its exchangeable value, then the theory of the gold monometallists, that commercial value must reside in the material of which money is made, is unsound; and the argument that there should be an increased ratio of silver and gold is likewise unsound.

We are told, however, that if we reëstablish silver as money of final payment in this country at the old ratio of 16 to 1 we will be flooded with foreign silver, and gold will go out of the country, and we will be driven to a silver basis or to silver monometallism. Certainly no well-informed person can be in fear of such a consequence. This country produces more than 40 per cent of the total silver output of the world.

It is well known that of the 1,200,000,000 of people upon the face of the earth at least 900,000,000 of them are exclusively sil-

ver-using people, and there is a struggle now going on to obtain silver enough annually for the use of these people.

If we rehabilitate silver and give it its proper office in our volume of currency I have every reason to believe that at that moment silver throughout the world will reëstablish itself as it stood at the time of demonetization.

The civilized nations of Europe who are using silver as money, and must continue to use it, can not spare their stock of silver for the purpose of dumping it upon us. I am told, and I believe it to be true, that the total amount of silver money in use amongst the civilized nations, independent of this Government, is $1,100,000,000, the most of which is used at a ratio of 15½ of silver to 1 of gold. Is it possible that, with the pressure on European nations for money material, which is daily growing stronger, the owners of this volume of silver money, will consent to pay the expense of its transportation to this country, and here add one-half grain to its coinage, for the purpose of injuring the industries of our nation?

Money goes where the least quantity of it will buy the most, and it is idle to say that the stock of silver in Europe, which is now being used at a ratio of 15½ to 1, will be brought here for recoinage at the ratio of 16 to 1, for the purpose of affecting our commerce. But, however this may be, certain it is that whoever brings his silver to this country for the purpose of coinage, under the law for the free and unlimited coinage of silver, will be compelled to purchase American products with his dollar or it will be valueless to him.

It is repeatedly asserted that law can not create or give value, but we have only to look at the effect of legislation in this country for the past thirty years to learn that through the exception clause placed upon the legal-tender notes, the creation of the national bank system, the contraction of the volume of money, the credit-strengthening act, the demonetization of silver, the resumption act, and other monetary legislation, millions of dollars of value have been created for the holders of our securities, and millionaires, not by the dozens, but by the hundreds, have been made; and all this in consequence of legislation that has transferred to the holders of these securities the money and property of the masses of our people.

Among the many absurdities indulged in regarding this question of finance is the so-called parity between gold and silver.

We are given to understand by some that at a certain ratio of gold to silver a natural parity can be found and established; but the advocates of this doctrine should remember that parity is the relation of equality between two or more things, created by law or by the common consent of those concerned in their use. Natural parity can only be found in things of equal production, service, demand, durability, and indestructibility, and it would be difficult now for anyone to name any two things in the entire domain of nature between which a natural parity exists. Parity, then, is and must be a creation of law.

Mr. President, we have been told that the nation in whose favor the "balance of trade" exists at the close of the trading season is to be considered the most fortunate nation, and that we must so order the affairs of this country as to annually obtain this balance of trade. A balance of trade is only a national blessing when it represents some profit to our people. If it is bought by the sale of our products far below their cost, and at a sacrifice of our civilization, it is a curse rather than a blessing. Of what benefit can it be to the people of this country if they should obtain the entire stock of European gold by a sacrifice of their property and labor, while Europe may be enjoying their products as well as profits? If the balance of trade is to be purchased at a sacrifice, we have only to indulge in such luxury for a few years to completely pauperize our labor and destroy our national wealth. It would be better for our people, better for our aggregate wealth, if the balance of trade should be annually against us than to purchase it at too great a sacrifice.

But, Mr. President, I had no intention at the outset of my remarks to discuss this question at any considerable length.

I only intended to discuss some of its legal features which I have frequently heard denied by gold monometallists. I will leave to older, abler, and more experienced Senators the duty of discussing money as a science. In all the advancement made by the race in the generations of time that have preceded us, less advancement has been made in the science of finance than in any other department of human research. We have been enabled by the cultivated brain of man in the domain of the sciences to make wonderful progress. We have created the electric light, the telephone, the telegraph, the railroad and all attendant blessings as well as evils, and, wherever man has applied himself, the result has been the production of something designed in its use for the benefit of the race; and yet, in the science of money, we lag behind; and amongst our people are those who tell us that we can not invent any means which will prevent the recurrence of financial panics and depressions and the transferring of the money and property of the many into the hands of the few.

I believe the mind of man, when rightly and honestly applied to the solution of this question, will eventually be able to settle it upon a wise, humane, and scientific basis; and to this end, it occurs to me, our energies should be honestly directed.

Mr. President, I think the time has gone by when the prosperity of our country should be left to the mere luck and chance of gold and silver mining. I believe the cultivated and scientific mind of man, that has given to the world such wonderful progress in every department of life, will, when honestly and patriotically applied to the task, be able to give to us a money based upon wise, humane, and scientific principles, which will afford to every man, woman, and child beneath the folds of our flag a full measure of justice.

I began this discussion with reluctance and I close it with reluctance; for, scattered over the great plains of our country, in its woodlands, on its mountain sides, and in its valleys, are millions of our countrymen who are suffering ineffable misery in consequence of this unholy warfare waged upon their rights.

Their eyes are turned toward this city, and they are now earnestly looking and listening for the decree that is to go forth from this Chamber, enslaving them and their children for generations to come, or that is to strike from them the chains of financial bondage and set them free.

If we act wisely and patriotically, and give to the people of our country a sufficient volume of sound and scientific money to enable them to set all the energies of nature and man at work producing wealth, once more the sunlight of prosperity, like the natural sun that dispels the mist and the dew, will kiss away the clouds of doubt and fear, and we will witness an era of prosperity more wonderful than the world has ever known.

CHEROKEE OUTLET LANDS.

Mr. BERRY. I move to take up for consideration the House joint resolution with regard to the Cherokee Outlet, which was reported by the Committee on Public Lands this morning.

Mr. PLATT. I wish the Senator would not call that joint resolution up this afternoon. There have been, as I know, a great many remonstrances sent by telegraph during the day from the Indian Territory; and the Senator from Wyoming [Mr. CAREY], who is also on the Committee on Public Lands, has a brief made of these telegrams, showing who the gentlemen are who telegraph. I do not think that the joint resolution ought to be called up in a thin Senate. I have no desire to delay the consideration of it unreasonably.

Mr. BERRY. If I can obtain unanimous consent for the consideration of the joint resolution to-morrow morning, at the conclusion of the morning business, I will consent to the request, but if it is to be passed at all, to be of any benefit, it must be passed speedily.

The Secretary of the Interior and the Commissioner of the General Land Office say that it is absolutely necessary that the joint resolution should be passed in order that they may have an orderly settlement of the outlet; that large interests are depending upon it; and that, unless the question can be speedily acted upon, it will be of no value to them.

I asked to have the resolution taken up this morning, but that was objected to. If I can obtain unanimous consent of the Senate to have it considered to-morrow morning, at the conclusion of the morning business, it will answer the purpose.

I do not wish to take advantage of the absence of the Senator from Wyoming. There is but one solitary question between the Senator from Wyoming and myself, and that is in regard to the amendment as to whether the Secretary of the Interior shall be directed to select certain officers from Oklahoma or whether he shall be allowed to use his discretion and select them where he desires. That is all the contest there is about the matter, and I do hope the Senate will give unanimous consent that the joint resolution may be considered at the conclusion of the morning business to-morrow morning. If I can get that consent, it will be satisfactory, and I now ask it.

Mr. McPHERSON. Does the Senator think the joint resolution can be concluded in the morning hour?

Mr. BERRY. Yes, I think it can be concluded in the morning hour.

Mr. McPHERSON. With the understanding that it shall not interfere with the regular order before the Senate, I shall not object.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas?

Mr. PEFFER. I have received a number of communications from people in Kansas living near the border, who are very anxious that this matter shall be carefully considered before being acted upon. I have been so much engaged in the preparation of my speech, which was delivered to-day, that I have not had time

even to consider this resolution. I will do the very best I can, I will say to the Senator from Arkansas, to be ready, in case the measure is taken up in the morning, to express my views upon it; but I am not willing now to say that I shall be willing to consent at that time to take the measure up until I can have an opportunity to confer with friends who are directly interested in the matter to be considered.

The PRESIDING OFFICER. There is objection to the request of the Senator from Arkansas.

Mr. BERRY. Then I move that the Senate take up the joint resolution for consideration.

I hope the Senator from Kansas will withdraw his objection. The Committee on Public Lands have had the joint resolution under consideration. The colleague of the Senator from Kansas [Mr. MARTIN] is thoroughly informed in regard to it, as is the Senator from Wyoming [Mr. CAREY] and the Senator from South Dakota [Mr. PETTIGREW]. It has been thoroughly considered by the committee for several days, and it can be considered by the Senate to-morrow morning as well as at any other time.

As I have before stated, it is necessary that the question be determined one way or the other, so that the Secretary of the Interior may proceed with the orders he wishes to make with reference to the opening of the Outlet. Why we can not consider it to-morrow as well as on any other day I am unable to understand. I sincerely hope the Senator from Kansas will give his consent that the measure be taken up to-morrow morning.

Mr. PEFFER. I am a hard-working man, and I will do the very best I can to inform myself between this time and the time suggested by the Senator.

Mr. BERRY. Then I ask unanimous consent for the consideration of the joint resolution to-morrow at the conclusion of the routine morning business.

Mr. PEFFER. But I am not willing to give my consent to that.

Mr. BERRY. Then I move that the joint resolution be taken up for consideration.

The PRESIDING OFFICER. The Chair will state to the Senator from Arkansas that the joint resolution was reported from the Committee on Public Lands this morning, and that it has been sent to the Public Printer, and has not yet been returned printed.

Mr. BERRY. Then, I give notice that to-morrow morning, after the conclusion of the routine business, I shall move that the Senate proceed to the consideration of the joint resolution.

I wish to state that if we can get the joint resolution passed within a day or two, it will be effective, but if we fail to do that, there will be no necessity for passing it. As I before said, the Committee on Public Lands have had it under consideration; the Senator from Wyoming thoroughly and fully understands it; and I can not see why the Senator from Kansas should desire to delay the passage of the joint resolution, unless his object be to defeat legislation upon the subject and prevent the orderly opening of the Cherokee Outlet.

EXECUTIVE SESSION.

Mr. VEST. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After ten minutes spent in executive session the doors were reopened and (at 5 o'clock and 20 minutes p. m.) the Senate adjourned until to-morrow, Friday, August 25, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 23, 1893.

ASSISTANT ATTORNEY-GENERAL.

Joshua E. Dodge, of Wisconsin, to be Assistant Attorney-General, vice William A. Maury, resigned, to take effect September 1, 1893.

COLLECTORS OF CUSTOMS.

Thomas M. Crocker, of Michigan, to be collector of customs for the district of Huron, in the State of Michigan, to succeed Harrison Geer, removed.

Theodore R. Lore, of New Jersey, to be collector of customs for the district of Bridgeton, in the State of New Jersey, to succeed Alexander R. Fithian, resigned.

Harry A. McNeally, of Maine, to be collector of customs for the district of Saco, in the State of Maine, to succeed Freeland H. Oaks, resigned.

Theodore S. Wilkinson, of Louisiana, to be collector of customs for the district of New Orleans, in the State of Louisiana, to succeed Henry C. Warmoth, removed.

REGISTERS OF LAND OFFICES.

G. McD. Brumby, of Delhi, La., to be register of the land office at New Orleans, La., vice Charles C. Palfrey, to be removed.

William D. O'Toole, of Hamilton, Wash., to be register of the land office at Seattle, Wash., vice Thomas M. Reed, jr., resigned.

RECEIVER OF PUBLIC MONEYS.

Charles P. Johnston, of New Orleans, La., to be receiver of public moneys at New Orleans, La., vice Alexander S. Jackson, to be removed.

INDIAN AGENT.

Isaac J. Wootten, of Laurel, Del., to be agent for the Indians of the Nevada Agency in Nevada, vice Charles C. Warner, to be removed.

POSTMASTERS.

Thomas B. Garrett, to be postmaster at Fort Smith, in the county of Sebastian and State of Arkansas, in the place of James K. Barnes, removed.

James Bride, jr., to be postmaster at East Haddam, in the county of Middlesex and State of Connecticut, in the place of Marshall Emmons, resigned.

Samuel Bassett, to be postmaster at New Britain, in the county of Hartford and State of Connecticut, in the place of Ira E. Hicks, whose commission expired April 1, 1893.

Julius Deming, to be postmaster at Litchfield, in the county of Litchfield and State of Connecticut, in the place of Seth Pratt, whose commission expired March 23, 1893.

Benjamin F. Drew, to be postmaster at Colebrook, in the county of Coos and State of New Hampshire, in the place of Walter E. Churchill, resigned.

Adrian Norman, to be postmaster at Passaic, in the county of Passaic and State of New Jersey, in the place of Benjamin E. McGrew, resigned.

Japhia Van Dyke, to be postmaster at Long Branch, in the county of Monmouth and State of New Jersey, in the place of Lewis R. Williams, whose commission expired April 1, 1893.

Hanson A. Littlefield, to be postmaster at West Acton, in the county of Middlesex and State of Massachusetts, the appointment of a postmaster for the said office having, by law, become vested in the President on and after April 1, 1893.

John J. Love, to be postmaster at Webster, in the county of Worcester and State of Massachusetts, in the place of James Bracken, resigned.

Patrick W. Reardon, to be postmaster at Winchester, in the county of Middlesex and State of Massachusetts, in the place of William F. Fitch, whose commission expired March 21, 1893.

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 22, 1893.

ASSISTANT SOLICITOR OF THE TREASURY.

Norborne T. N. Robinson, of Louisiana, to be Assistant Solicitor of the Treasury.

PROBATE JUDGE OF UTAH.

Jefferson A. Huff, of Utah Territory, to be judge of probate in the county of Grand, in the Territory of Utah.

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY.

George William Caruth, of Little Rock, Ark., to be envoy extraordinary and minister plenipotentiary of the United States to Portugal.

SECRETARIES OF LEGATION.

George B. Anderson, of the District of Columbia, to be secretary of the legation of the United States at Rio de Janeiro, Brazil.

Stephen Bonsal, of Baltimore, Md., to be secretary of the legation of the United States to China.

MEMBER OF BOARD OF REGISTRATION AND ELECTION IN UTAH.

Henry C. Lett, of Salt Lake City, Utah, to be a member of the board of registration and election in the Territory of Utah.

GOVERNOR OF OKLAHOMA.

William C. Renfrow, of Norman, Okla., to be governor of the Territory of Oklahoma.

GOVERNOR OF ALASKA.

James Sheakley, of Wrangel, Alaska, to be governor of Alaska.

SURVEYOR-GENERAL OF UTAH.

George W. Snow, of Salt Lake City, Utah, to be surveyor-general of Utah.

SECRETARY OF ARIZONA.

Charles M. Bruce, of Benson, Ariz., to be secretary of Arizona.

SECRETARY OF UTAH.

Charles C. Richards, of Ogden, Utah, to be secretary of Utah.

ASSISTANT ATTORNEYS-GENERAL.

Charles B. Howry, of Mississippi, to be assistant attorney-general.

Holmes Conrad, of Virginia, to be assistant attorney-general.

UNITED STATES ATTORNEYS.

Joseph N. Miller, of Alabama, to be attorney of the United States for the southern district of Alabama.

Cornelius C. Watts, of West Virginia, to be attorney of the United States for the district of West Virginia.

A. J. Montague, of Virginia, to be attorney of the United States for the western district of Virginia.

Robert B. Glenn, of North Carolina, to be attorney of the United States for the western district of North Carolina.

Harry Alvan Hall, of Pennsylvania, to be attorney of the United States for the western district of Pennsylvania.

Charles E. Gorman, of Rhode Island, to be attorney of the United States for the district of Rhode Island.

Charles W. Seals, of Louisiana, to be atttorney of the United States for the western district of Louisiana.

Sherman Hoar, of Massachusetts, to be attorney of the United States for the district of Massachusetts.

Andrew Fuller Fox, of Mississippi, to be attorney of the United States for the northern district of Mississippi.

Emmet O'Neal, of Alabama, to be attorney of the United States for the northern district of Alabama.

Henry D. Clayton, of Alabama, to be attorney of the United States for the middle district of Alabama.

William E. Shutt, of Illinois, to be attorney of the United States for the southern district of Illinois.

UNITED STATES MARSHALS.

Samuel C. Dunlap, of Georgia, to be marshal of the United States for the northern district of Georgia.

William B. Brinton, of Illinois, to be marshal of the United States for the southern district of Illinois.

Robert L. Luckett, of Louisiana, to be marshal of the United States for the western district of Louisiana.

Judge C. Musgrove, of Alabama, to be marshal of the United States for the northern district of Alabama.

Edward R. Morrissette, of Alabama, to be marshal of the United States for the southern district of Alabama.

William H. Tisdale, of Alabama, to be marshal of the United States for the middle district of Alabama.

Otto Peemiller, of South Dakota, to be marshal of the United States for the district of South Dakota.

Evitt D. Nix, of Oklahoma Territory, to be marshal of the United States for the Territory of Oklahoma.

John S. McNeily, of Mississippi, to be marshal of the United States for the southern district of Mississippi.

Samuel S. Vinson, of West Virginia, to be marshal of the United States for the district of West Virginia.

Richard C. Ware, of Texas, to be marshal of the United States for the western district of Texas.

Stephen P. Condon, of Tennessee, to be marshal of the United States for the eastern district of Tennessee.

RECEIVERS OF PUBLIC MONEYS.

John W. Jones, of Blackfoot, Idaho, to be receiver of public moneys at Blackfoot, Idaho.

Clarence Dennis, of Ashland, Wis., to be receiver of public moneys at Ashland, Wis.

Pedro Delgado, of Santa Fe, N. Mex., to be receiver of public moneys at Santa Fe, N. Mex.

Robert W. Banks, of Meridian, Miss., to be receiver of public moneys at Jackson, Miss.

Eugene B. Thayer, of Wausau, Wis., to be receiver of public moneys at Wausau, Wis.

Jacob H. Robbins, of Pendleton, Oregon, to be receiver of public moneys at La Grande, Oregon.

Enoch Knight, of Los Angeles, Cal., to be receiver of public moneys at Los Angeles, Cal.

REGISTERS OF THE LAND OFFICE.

John G. Brown, of Pocatello, Idaho, to be register of the land office at Blackfoot, Idaho.

John J. Beavers, of Benton, Ark., to be register of the land office at Little Rock, Ark.

George E. Kuntz, of Ashland, Wis., to be register of the land office of Ashland, Wis.

Joseph W. Jamison, of Versailles, Mo., to be register of the land office at Boonville, Mo.

Byron Groo, of Salt Lake City, Utah, to be register of the land office at Salt Lake City, Utah.

Andrew J. Taylor, of Duluth, Minn., to be register of the land office at Duluth, Minn.

Robert A. Miller, of Jacksonville, Oregon, to be register of the land office at Oregon City, Oregon.

Louis Marchetti, of Wausau, Wis., to be register of the land office at Wausau, Wis.

George R. Young, of White Oaks, N. Mex., to be register of the land office at Roswell, N. Mex.

Benjamin F. Wilson, of Union, Oregon, to be register of the land office at La Grande, Oregon.

James H. Walker, of Raton, N. Mex., to be register of the land office at Santa Fe, N. Mex.

HOUSE OF REPRESENTATIVES.

THURSDAY, *August 24, 1893.*

The House met at 10 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

DISTINCTIVE BANK-NOTE PAPER.

The SPEAKER laid before the House a letter from the Secretary of the Treasury, transmitting a communication from the Comptroller of the Currency relating to a deficiency in the amount of distinctive paper provided for national-bank currency during the current fiscal year; which was referred to the Committee on Appropriations.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its secretaries, announced that the Vice-President had appointed, in compliance with the provisions of the joint resolution entitled "A joint resolution providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1893," approved August 17, 1893, Mr. VOORHEES, Mr. SHERMAN, Mr. RANSOM, Mr. CHANDLER, Mr. WHITE of California, Mr. SQUIRE, and Mr. MARTIN as the members of the committee on the part of the Senate to take order in the matter of arranging for the ceremonies at the Capitol in commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol.

DIGEST OF WAR CLAIMS DECISIONS.

Mr. BELTZHOOVER. Mr. Speaker, I ask unanimous consent to submit at this time a resolution to authorize some printing to be done, on which it is important that action should be taken at once. It will occupy but a very few moments.

The SPEAKER. The resolution will be read, after which the Chair will ask for objections.

The Clerk read as follows:

Resolved, That there be printed and bound a digest of the laws and decisions of the courts relating to claims growing out of the late war for the suppression of the rebellion, for the use of the Committee on War Claims.

The SPEAKER. Is there objection to the present consideration of the resolution?

Mr. BYNUM. I would like some information as to the cost of this printing.

Mr. BELTZHOOVER. With permission of the House, Mr. Speaker, I will state that during the last session of the last Congress a number of gentlemen on the Committee on Appropriations, and others, desired that the resident clerk of the Committee on War Claims should prepare a digest of all of the decisions of the courts relating to war claims, for the information and use of the House. This has been done, during the interval since the adjournment of the last Congress, by the clerk of the committee, who informs me that the cost of printing will not exceed $100, or about that. It will be a useful and a very essential document in the consideration of these claims.

Mr. COBB of Alabama. Is that the entire cost?

Mr. BELTZHOOVER. I so understand.

Mr. GROSVENOR. How many copies are proposed to be printed under the resolution?

Mr. BELTZHOOVER. I understand that that is fixed by the rules of the House unless otherwise provided.

Mr. GROSVENOR. What will be the number provided under the rules of the House?

Mr. BELTZHOOVER. I will state to the gentleman——

The SPEAKER. The Chair would suggest to the gentleman from Pennsylvania that this provides only for the printing for the use of the committee.

Mr. GROSVENOR. That was my understanding. Now, I am in favor of the printing and think it ought to be done, but that at the same time there should be a sufficient number of copies printed to enable each member of the House to secure at least one copy, because of the importance of the subject with which it deals.

Mr. WILSON of West Virginia. Mr. Speaker, I think that resolution should be sent to the Committee on Printing. The House is not prepared to pass on it at this time—other business is pressing, and I ask that it take that course.

Mr. BELTZHOOVER. If this digest is to be of any use at all it must be furnished promptly, and in order to secure its printing the order should be made before the Printing Office is filled up with bills and other matters, which will necessarily delay this work.

Mr. WILSON of West Virginia. But the Committee on Printing, under its privileges, can report at any time, either Tuesday next or soon after. I shall have to object for the present, and request that the resolution take that course.

The SPEAKER. Objection is made to its present consideration, and the resolution will be sent to the Committee on Printing in the absence of objection.

Mr. WILSON of West Virginia. I now demand the regular order.

SILVER.

The SPEAKER. The regular order is to proceed under what is known as the five-minute rule to the consideration of the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, "An act directing the purchase of silver bullion, and the issue of Treasury notes thereon, and for other purposes."

[Mr. WAUGH adressed the House. He withholds his remarks for revision. See Appendix.]

Mr. JOHNSON of North Dakota. Mr. Speaker, among the representatives on this floor, and among the people of this country, there are two kinds of monometallists. On one extreme we have the very few who really believe that gold alone is worthy of use and confidence as a money metal. On the other extreme, we have the free silverites, some of them avowed monometallists, and all of them supporting a doctrine which, if enacted into law, would as surely as night follows day drive gold out of circulation as money and bring about silver monometallism.

Neither of these policies can command the approval of my judgment. I believe that for the transaction of the business of this country we not only need to use all our silver and all our gold and all our paper, and in addition thereto such expansion of each as shall keep pace with the growth of population and business, but more than anything else we need such an expression and execution of the legislative power of the nation as shall guarantee not only the stability but also the parity of all our nine differing kinds of money at all times and in all places, utterly regardless of the ever-fluctuating values of the materials out of which the money is made.

I do not know what Pickwickian meaning the gentleman from Missouri [Mr. BLAND] may attach to such expressions as "struck-down silver," "demonetized silver," "destroyed one-half of the money metal of the country," etc., but I do know that such expressions, constantly reiterated in speech and in print, have created the very erroneous impression in the public mind that the silver legislation of the last twenty years has had a tendency to diminish the use of silver money in this country.

The first so-called and falsely called "demonetization of silver act" was passed in 1853. It applied only to the subsidiary coins—half-dollars, quarters, dimes, and half-dimes.

On account of a slight undervaluation of silver between 1834 and 1853—2 or 3 per cent—it was almost impossible with free coinage to get enough of these coins into circulation to do the business of the country. Up to that time the subsidiary coins contained as much metal proportionally as the dollar piece.

It was profitable to export them or to melt them at home and use the bullion in the arts.

To meet this difficulty three radical changes as to these coins were enacted in the act of 1853:

First. The amount of silver put into a dollar's worth of these small coins was reduced from 412½ to 384 grains.

Second. Free coinage on private account was stopped, and unlimited coinage on Government account was substituted therefor.

Third. The legal-tender character of these coins was limited to amounts of $5. (In 1878 the limit was raised to $10.) The intention and purpose of Congress in making these changes was to preserve and increase that kind of silver money. The effect was magical. The result fully justified the hopes and expectations of Congress. The law has worked so satisfactorily that from that day to this no man in Congress, or out of Congress, has ever seriously proposed to go back to the old method of free-coinage as applied to these coins.

Where free coinage was a failure, unlimited coinage has proven a success. For forty years the Government has not only furnished the people an abundance of small change by always standing ready to manufacture it in unlimited quantities for any person who wanted it and was willing to give an equivalent for it, but has also maintained its parity with our best money by always standing ready to redeem it in any other kind of money, at the option of the holder.

The free coinage of silver dollars continued for twenty years longer, and came to an end in 1873. Then for five years we coined the trade dollar of 420 grains on Government account only, and in limited quantities.

In 1878 we restored the legal-tender character of the silver dollar to any amount and resumed its coinage, but on Government account and in an amount limited to $2,000,000 worth per month, instead of the former practice of free coinage on private account.

In one respect the abandonment of free coinage had the same effect upon the silver dollars as it had formerly produced on the subsidiary coin, namely, to enormously increase the use of silver as money. There were only 8,045,838 silver dollars coined at our mints during all the eighty-one years that free coinage was the law of the land, and the bulk of these eight millions went, not into circulation, but straight into the melting pots of the silversmiths.

Since that time, since silver was "demonetized," "destroyed," and "struck down," as these men tell us, we have poured into the circulation of the country 427,390,637 of silver dollars, and about $150,000,000 worth of silver bullion, not a dollar of which has been melted, except by accident, and every dollar of which, either bodily or by its paper representative, has actually entered into the channels of trade. The "dollar of the daddies," for the return to which we are now so lustily called upon, never entered as a practical factor into our coinage or our commerce.

There were only a very few of them in circulation at any time. I would like very much to know how many members of this House ever saw a silver dollar of a date earlier than 1873. Many of you have been in business for fifty years, and several of you were members of Congress more than ten years before the free coinage of those dollars ceased, and yet I very much doubt if there are three men in this House who can stand up here and state from memory whether the eagle on that dollar was represented with wings pointing up or down, or whether the image of Liberty was represented by a head or by a full figure. If there is a man here who can do that simple thing I shall be very happy to yield him time to do so from the few moments allotted to me in this debate. [After a pause.] There are 356 members of this House, and not a man of you has a clear and distinct recollection of what a free-coinage silver dollar looked like.

I venture the assertion that there is not a public school in the land where half the scholars could not without previous notice go right to the blackboard and draw from memory a fairly good representation of the buzzard eagle on the Bland silver dollar with which the people have become so familiar since we "destroyed," "demonetized," and "struck down" silver. You may by some mental reservation attach in your own minds incomprehensible meanings to these words, but you shall not forever deceive the people by coining and sounding phrases.

I inquired of the Acting Director of the Mint the other day if he could give me an estimate as to how many of the eight million silver dollars coined prior to 1873 were in circulation at that date. He could not. There were no official figures; probably less than half a million.

When the people once understand that the effect of the silver legislation since 1873 has been to increase the amount of silver money in circulation among them a thousandfold, then you can talk at them till the end of time about the "crime of 1873," "destroying half the money of the people," "contracting the currency," "doubling the purchasing power of money," and "demonetizing silver," or even yell "gold bug," "Wall street," and "plutocrats," and thoughtful men will never wink an eye. Not only have we by this legislation increased the amount of silver money a thousandfold, but we have throughout all the mutations and fluctuations of these eventful years kept that money steadily at par with gold and all our other money, while silver bullion has fallen in value over 40 per cent.

We were often threatened in the last Congress, as we have been twice in this Congress, by the gentleman from Missouri [Mr. BLAND], the chairman of the Committee on Coinage, that if we voted against his judgment of what was for the public welfare we would be overtaken by the vengeance of the people at home, and not one would ever be honored with a return. It is not necessary to withhold approval from such methods as ideals of statesmanship or to draw inferences of unsoundness in a cause that needs to be bolstered up by such substitutes for argument; but the survivors might be pardoned now for calling attention to the fact that that prophecy has proven untrue in at least eighty-seven individual instances. I observe many familiar names and faces of men in the Fifty-third Congress who stood up and were counted against the Missouri idea on the famous tie vote of March 24, 1892. The only Democrats returned from the great agricultural States of Iowa and Minnesota [Messrs.

HAYES and HALL] voted with us. Fidelity and ability in the cause of free coinage of silver did not save either the two Republicans from Colorado and Nevada or the Democrat from Montan .

The only party that made the campaign on a free-coinage platform, and voted solidly for it in Congress, cast 9 votes for Mr. Watson for Speaker of the Fifty-second Congress, but could only muster 7 votes for Mr. SIMPSON for Speaker of the Fifty-third. The Republican party, nine-tenths of whose Representatives were opposed to free coinage in the Fifty-second Congress, has gained forty additional seats in the Fifty-third.

In my own great agricultural district, a district that produces one-tenth of the entire wheat crop of the United States, equal in value to the entire annual silver product of the United States, the free-coinage candidate got only 7,434 votes out of a total of 36,150.

These results call not for more terrifying threats, but for more convincing arguments from the gentleman from Missouri.

The SPEAKER. The time of the gentleman from North Dakota has expired.

On motion of Mr. PICKLER and Mr. TRACEY, the time of Mr. JOHNSON of North Dakota was extended.

Mr. JOHNSON of North Dakota. These sturdy, level-headed wheat-raisers want every cent of good money they can possibly get. But they draw the line at good money. They are not tempted by the offer to revolutionize our financial system in such a way as to give them 58-cent dollars, even if they are offered a few more of them. They know that in every country in the world where there is free coinage of silver there is no gold money in circulation, and the silver money is worth exactly the same per pound as the bullion, and fluctuates with it. They do not want any such money, and do not believe in any kind of monometallism, least of all silver monometallism. There is not a country in Europe to-day whose mints are open to the free coinage of silver.

Germany demonetized silver in 1871–1873, contains people	42,000,000
France stopped silver coinage in 1874 and has filled up with gold, people	38,000,000
Italy stopped silver coinage in 1874 and has filled up with gold, people	30,000 000
Belgium adopted gold standard ten years ago, people	6,000,000
Switzerland and Greece adopted gold standard ten years ago, people	4,000,000
Scandinavia demonetized silver in 1872, people	10,000,000
Holland demonetized silver in 1875, people	4,000,000
Austria-Hungary demonetized silver in 1879, filling up with gold, people	38,000,000
Roumania adopted gold standard in 1890, people	5,000,000
Russia stopped silver coinage in 1876 and is filling up with gold, people	100,000,000
British India stopped silver coinage in 1893, people	280,000,000
Great Britain demonetized silver in 1816 and all its colonies have followed the example, people	50,000,000

Total, 606,000,000 of people, besides those in the United States. The late action by British India leaves the United States and Mexico as the only countries in the world which continue to purchase silver and coin it into legal-tender money, and Mexican silver coinage really cuts no figure, because those coins are largely melted down by persons who use them at their bullion value.

I use the term "demonetized" here to designate a method of coining, circulating, and sustaining silver as money, other than by free coinage on private account.

A glance at the following table, taken from the evidence given by the Director of the Mint before the Coinage Committee of the last Congress, shows conclusively that free coinage means monometallism, and that coinage of silver on Government account only, limited or unlimited, means bimetallism. In Europe and the United States we find enormous amounts of silver and also gold money, while in India and China there is no gold in circulation, and in Mexico not enough to be worth taking into account.

Table exhibiting approximately the stock of gold and silver in the principal countries of the world.

[Furnished the Committee on Coinage, Weights, and Measures by E. O. Leech, Director of the Mint.]

Countries.	Stock of gold.	Stock of silver.		
		Full legal tender.	Limited tender.	Total.
United States	*$686,845,000	†$465,512,000	$76,566,000	$542,078,000

Total	3,711,845,000	3,395,412,000	544,166,000	3,939,578,000

*Includes $82,212,000 in gold bars. †Includes $53,969,000 in silver bars.

The advocates of free coinage state that wheat and silver are both cheaper now than in 1873, which is true; that the fall of silver has caused the fall of wheat, which has not been proven and may be true or false; and that the fall has been simultaneous, like the mercury in two thermometers placed side by side, which is false. I have raised wheat on my farm in North Dakota for the past nine years, and always marketed it at the same place, Petersburg, to the same buyer, John H. Terrett, direct from the thrashing machine, in the fall. In 1884 I got 52 cents a bushel for my No. 1 hard wheat. Some of my neighbors who held their wheat until winter had to sell for 42 cents. Silver was then worth about $1 an ounce. In 1888 I sold my No. 2 northern for $1 a bushel. My neighbors who had No. 1 hard got $1.10. Silver went down about 18 per cent, while wheat went up over 100 per cent in those four years.

Silver is now worth 72 cents and wheat on my place 44 cents, but can be contracted for October delivery (our usual thrashing time) for 50 cents, only 2 cents less than in October, 1884. In 1873 we exported no wheat from North Dakota. Now we raise from forty to sixty million bushels annually. May not the law of supply and demand have something to do with prices? In 1884 I paid $250 for a Plano binder. This year I bought a Buckeye, a better machine, for $150 (both sales on time payments). In 1884 I paid 22 cents a pound for my twine; this year I bought it for 11½ cents. In 1884 I paid my harvest hands $2 a day; now I pay $1.50, and at Casselton and Valley City, N. Dak., I see by my home papers that going harvest wages are from $1.25 to $1.

The cheapening and improvement of machinery and the fall of 50 per cent in wages and in the price of binding-twine are ample causes to account for the result, if indeed the slight decline of from 2 to 7 cents a bushel in nine years calls for any explanation at all.

The tables published by the free silverites to prove that wheat has gone steadily down in sympathy with silver must be manufactured to fit a theory. The report of the statistician of the Agricultural Department for 1892, page 59, gives the following as the average farm price of wheat in North Dakota from 1884 to 1891: 1884, $0.46; 1885, $0.63; 1886, $0.52; 1887, $0.52; 1888, $0.91; 1889, $0.60; 1890, $0.70; 1891, $0.72.

Wheat was, as every farmer in North Dakota knows, higher in 1888, 1890, and 1891 than in 1884, 1885, 1886, and 1887. The price of silver, as reported by the Director of the Mint, for the same years is as follows: 1884, $1.11; 1885, $1.06; 1886, $0.99; 1887, $0.97; 1888, $0.93; 1889, $0.93; 1890, $1.04; 1891, $0.98.

The prices of the two commodities show little sympathy, much less the relation of cause and effect.

The existing debts in North Dakota were all contracted since 1873 for dollars as good as gold. I know of no man there who wishes to pay back a poorer dollar than he received, and a bushel of wheat will go just as far now in paying debts as it would in 1884. Nearly all the mortgages made in North Dakota in recent years are made payable "in gold coin," while the $5,000,000,000 due the depositors from the banks of this country are all payable "in current funds."

The liabilities of the life-insurance companies, amounting to $8,000,000,000, and all similar obligations of the great, rich debtors due to the "poor" creditors are all payable in current funds. I am not yet ready to cast my vote in favor of a legalized robbery that will enable the banks and insurance companies to swindle the poor people who have trusted them out of $5,000,000,000 by coining for them, free of charge, 58 cents' worth of silver bullion into a legal-tender dollar to take the place of the 100-cent gold dollar, or its equivalent, which they have received as deposits and premiums.

The purchasing clause of the Sherman law is designated by the Republicans as a "temporary expedient," and by the Democrats as a "cowardly makeshift." It has disappointed the hopes

of its friends, and fulfilled the evil prophecies of its enemies. Nobody thinks that we could go on forever buying 154 tons of silver every month and piling it up in the Treasury vaults. We have reached and passed the danger point. It is time to call a halt.

That part of the Sherman law which authorizes the coining of the silver bullion in the Treasury it is not proposed to repeal in the pending bill. Let us sustain every dollar of our silver money at par, and coin every pound of our bullion. It will take the mints several years to do that. In the meantime there would be no harm and a vast expansion of the currency in allowing national banks to issue bills up to the par value of their bonds.

I also have great hopes of the pending so-called Johnson bill, which authorizes any holder of Government bonds to deposit the same in the Treasury and receive Treasury notes in exchange, with right to return the same and recover the bonds at will. Such a law, coupled with a law for unlimited coinage of silver dollars on Government account, like the law that has worked so admirably for the last forty years in relation to dimes, quarters, and halves, would give us not only a sound and stable money system, but a flexible currency capable of almost instantaneous and indefinite expansion or contraction, according to the needs of commerce as registered in the pulsating arteries of trade.

It is unreasonable to expect to sustain all our paper and silver on a gold reserve of only a hundred millions, when that reserve is subject to encroachments, as has actually taken place this summer. I am in favor of authorizing the Secretary of the Treasury to sell bonds at his discretion whenever necessary to redeem any of our outstanding obligations and to keep our gold, silver, and paper currency at par. Nothing that we can do will go farther to restore confidence. We are the richest nation in the world and can afford the best and safest currency. Let us serve notice on all the world that we mean to have our full share of the gold. That would bring England to time, and open the way for international bimetallism and a free coinage that would be safe.

It should be borne in mind, also, that our present unhappy lot is not due to a scarcity of money, but to a stoppage of its circulation: not to any lack of confidence in the quality of the money itself, but to a fear of losing it, whether invested in business or deposited in banks. To remove the latter fear and give the same absolute confidence in a certificate of deposit as in a national bank note, I am in favor of Government guaranty of certificates of deposit, the same as of bills with a national bank tax on deposits sufficient to pay all depositors in failed banks promptly. Probably a tax of one-fourth of one per cent per annum on deposits would be ample.

To remove the fear that money invested in industrial enterprise will be lost requires time and patience to remove the cause that threatens our industrial life. An economic system, under which we have increased our national wealth from sixteen billions in 1860 to sixty-three billions in 1890, has been declared by the party now for the first time in thirty-three years in full control of the Government to be a "robbery," a "fraud," "unconstitutional," and a "culminating atrocity," which they are solemnly pledged to repeal. That pledge will never be redeemed; but for another year it will remain a standing menace, intimidating capital and paralyzing labor.

Until there is a chance to reverse all this by the election of a Republican Congress in the fall of 1894 there is an inviting field in which to train the noble virtues of pious humility and philosophic fortitude while we endure temporary tribulation in the severe school of adversity. [Applause.]

Under the general leave to print I shall take the liberty to insert a few extracts and tables.

It has often been said that free coinage would make the United States the dumping ground for the silver that foreign countries wish to get rid of.

As an illustration of the extremes to which fanaticism will lead men in the support of a wicked cause, and to show how utterly unscrupulous these men have become in presuming upon the ignorance and child-like faith of those who have trusted to their leadership in the wilderness, I call attention to the method employed by the Populists to answer the "dumping-ground" argument north of latitude forty-six.

In a manifesto, dated "Attorney-General's Office, Bismarck, July 26, 1893," and published in the columns of some of the leading dailies, and as a supplement to scores of the weekly papers of the State, the Populist attorney-general of the State of North Dakota, a man by the name of Wm. H. Standish, deliberately states that it was the free-coinage law of this country prior to 1873, the practice of the mints, and also the provisions of the Bland free-coinage bills pending in recent years, for the Government to take out one-tenth of the pure silver or gold bullion brought to the mints for coinage as Government toll and substitute therefor a like weight of cheap alloy. The least investigation of the law and the practice of the mints will show that there is not a word of truth in the attorney-general's statement of law or fact.

THE FABLE ABOUT ERNEST SEYD.

Ernest Seyd was one of the ablest champions of silver and bimetallism produced in Europe during this century. In fact he laid down his life on the altar of silver and for the cause of silver by rising from a sick bed, when he was unfit to be up, and going to attend the Paris Monetary Conference of 1881, where he died in harness, fighting for the cause of silver.

When he had been many years in his grave a lot of unscrupulous men in this country, ignorant of his works and heedless of his honor, invented and circulated a cunningly devised fable to the effect that Ernest Seyd had come to this country in 1873 with $500,000 in English gold, and by bribing the American Congress had caused silver to be secretly demonetized.

In support of this story they published what pretended to be an extract from the Banker's Magazine of August, 1873, to the effect that Ernest Seyd had been successful in his mission to demonetize silver in America by bribing Congress with $500,000. This story, supported with such *prima facie* evidence, was used with great effect throughout the West in the campaign of 1892.

The Populist leaders were perfectly safe in assuming that no farmer in North Dakota could reach up on the top shelf of his library and take down the back numbers of the Banker's Magazine of twenty years ago and for himself verify the truth or expose the falsity of their brazen fabrication until after the votes were counted and they had made off with the spoils of office secured as the fruits of falsehood and fraud.

The back numbers of the Bankers' Magazine for 1873 were not accessible to me at the time in the West, so I cut out the pretended extract as it appeared in the official organ of the Populist party in North Dakota and sent it to Mr. Spofford, the Librarian of Congress, and requested him to make the examination for me. His reply was that nothing of the kind was to be found either in the Banker's Magazine of New York or of London for August, 1873.

I did the best I could to stem the tide and meet falsehood with truth, by reading Mr. Spofford's letter to my audiences, but I am sure that the fake cost us hundreds of votes. How long can a political party stand built upon such sand?

In order to show that the dropping of the silver dollar from the coinage act of 1873 was neither secret nor accidental, but deliberate, and in order to show how earnestly and eloquently Mr. Ernest Seyd pleaded for the retention of the silver dollar, I will give an extract from a letter written by him to Mr. Samuel Hooper, chairman of the Committee on Banking and Currency, in charge of the bill.

The bill was before Congress for three years and printed for the information of Congress and the country thirteen times. Copies of the bill were sent to hundreds of the leading financiers and economic writers of this country and Europe, asking them to examine it and send in their criticisms and suggestions, among them Ernest Seyd.

Mr. Seyd in reply wrote a long letter, covering nine columns of fine print in the CONGRESSIONAL RECORD, making many important suggestions.

The writer of the letter discusses, as a master of the subject, various practical questions, among them the question of the proper size of gold pieces, their value and denomination, questions relating to mintage, the question of mint charge, the question whether the coin should be milled or should be surrounded by a rim cast separately, all of which are very instructive.

But Mr. Seyd then goes on to say that the fifteenth section of the bill is the part which after all is of the greatest importance. He says it is a matter of gigantic importance; that it is the great question of the century. He avows himself earnestly in favor of the free coinage of silver at the ratio of 14 to 1—a little less than the rate then existing in the United States.

He implores Mr. Hooper to reconsider the subject, and says the great fault of Mr. Hooper's bill is that it abolishes the coinage of the silver dollar with the full legal-tender quality; and he says that America, being a producer of both metals, is the nation upon whom the world must depend to resist the enormous danger which menaces mankind by the threat of adopting a single gold standard. He says that, although many of the English writers are monometallists, several English and continental writers whom he names have recently, he thinks, come around to his own views.

No advocate of the doctrine of bimetallism, if that doctrine means the coinage of both metals on an equality freely at the old rate, could express more earnestly, more powerfully, more persuasively the importance of that doctrine.

I will here insert so much of the letter as relates to the dropping of the silver dollar out of our coinage:

LA PRINCESS STREET BANK, *London, February 17, 1872.*

DEAR SIR: You were kind enough to forward to Mr. Alfred Latham a copy of your coinage bill for the United States, to be sent to me, and you expressed a wish to receive criticisms on its provisions.

* * * * * * *

SEC. 15. I now come to the most important part of the bill—that of the val-

uation—which, according to section 15, omits the coinage of the silver dollar, and confirms the debased silver coinage of half dollars and below, under the tender limit of $5. I am aware, of course, that through the amendment of 1853 the same debased coinage was already established; but, although the actual coinage of the silver dollar had practically ceased, still that piece was not abolished by law. As this new bill presumably repeals all previous enactments, I suppose that the total abolition of the silver dollar is contemplated.

In my book (Suggestions) I enter fully into the discussion of this matter and show the gigantic consequences to international as well as national trade through the demonetization of silver, to which the United States would thus lend a helping hand, and for a number of years this subject of the abolition of silver as tender coin has occupied the attention of European economists. It is the question of the age and takes precedence of every other matter involved in monetary science.

Unfortunately the subject requires not only a thoroughly practical knowledge of exchange matters, the principles of valuation, for which very few people have inclination, and so it happens that even the framers of mint bills do not grasp its importance, as I have found before. You yourself, in your letter to Mr. Latham, referring to my book, made the remark, "As to the theory of the double valuation, I do not understand it." I infer from this that you have remained a stranger to the controversy; that you have not as yet formed an opinion as to the merits of it, and that you have framed your bill in favor of the absolute gold valuation according to that which has been of late the practice in the United States, if not the law.

Permit me to beg that you will first investigate the question of double vs. single valuation. Chapter 3 of my book, "Suggestions, etc.," opens the question; appendix, notes 8 (page 201), the consequences of the gold valuation, and 9 (page 212), the injustice of the gold valuation. Treat the matter in their international and national aspects, and they may furnish you sufficient materials for reflection.

Other writers, such as Mr. Wolowski, in France, and several other French, Dutch, and German authorities, defend the double valuation on the same ground.

The great portion of English economists defend the gold valuation, but several of them have lately come over to my views; and one of them, the most important and a staunch defender of English institutions, to whom I shall presently allude, has agreed with me as to the advisability of modifying the English gold valuation, which is even less strict than that adopted by your bill for America. These pages do not afford room for the whole discussion of the subject, therefore I beg you will read the parts of the books quoted, so as to form an opinion of it.

Apart from the theory, why should America have given up her silver dollar? The cause of its disappearance from circulation is due to the original error of there being too much silver in the piece (see page 52 of Suggestions); that cause would have been removed if the dollar weighed 400 grains, that being the true proportion of 1 to 15½ gold to silver, instead of 412½ grains, as by the old law.

Why should it not be reintroduced at its true full weight of 400 grains and become again one of the active agents of commerce? The charge of weight as against the individual piece does not hold good when two half-dollars are of nearly equal weight and same value. Railways and steam transport large masses with great facility when compared with previous times.

Do you fear its undue exportation? If so exported, America will get its equivalent for it, and the rich silver mines of the country can give any fresh supply of it; therefore, the more it is exported the better it is for America.

I think that the United States, with both her gold and silver mines, is in the eminently favorable position of upholding the full use of both gold and silver, and that the double valuation (as it existed before) would be of great benefit to the country; but you may, nevertheless, giving way to the one-sided arguments of English economists, incline to the gold valuation and express the fear "that if America adopts the silver dollar and lays itself open to the coining of these pieces for the public to whatever quantity of silver may be sent in for coinage from abroad, and if full legal-tender value is given to such pieces, it may be placed in danger of losing gold and obtaining too much silver currency."

That is the only fear to be apprehended, and certainly as long as England and other countries are in conflict as to the systems of valuation this may be the case.

France, however, by her system of double valuation, accumulated more gold bullion than any nation has ever had; having within the last twenty years coined two and a half times as much as England, and if the universal valuation was the double one, *i. e.*, both metals in equal use, these fluctuations would altogether cease.

Against this danger of too much silver America can guard itself without the total abolition of the full valued silver dollar. It is but necessary so to modify the severity of the gold valuation as to admit of a reasonable use of silver dollars. Supposing that a certain amount of silver dollars of full value (400 grains) were issued, coined for the owner at a charge of, say, 1 per cent mintage, and that the limit of tender for such pieces were fixed at, say, fifty to one hundred dollars, would this in any way interefere with the supremacy of the gold valuation? I contend that the gold valuation would remain supreme with either of these restrictions, viz, either a certain limited issue and giving full tender weights to the coin, or with unrestricted issue limiting the tender value.

Both restrictions combined will undoubtedly prevent any excess, and if under them certain amounts were so issued and used the issue of more might be made dependent thereon; so that while for the present the gold valuations were maintained in full force the door would not be shut abruptly and forever on silver, and pending the future international settlement of a universal system of valuation the pure double valuation might be found not only practicable, but necessary. I urge this upon you not only on cosmopolitan grounds, but also in the interests of American silver mines; for if America, so important a part of the world, rushes blindly and irrevocably into the gold valuation, and thus contributes to the general terrible error, the value of silver must fall greatly (see appendix, note 8, the consequence of the gold valuation), and all the arrangements made even with the debased silver coinage fail to pieces.

America, then, should hesitate to enter upon this course without a full previous investigation of the immensely important considerations appertaining thereto.

The proper issue of silver dollars might be provided for in the bill by the introduction between sections 14 and 15 of some such—

SECTION —. "That of the silver coin the weight of the one-dollar piece shall be 400 grains, which coin shall be legal tender at its denominational value to any amount not exceeding one hundred (or fifty) dollars," and this would have to be followed between sections 21 and 22 by—

SECTION —. "That the charge for converting standard silver into silver dollars whenever the mint is ready, according to section —, to coin such silver dollars shall be 1 per cent."

The object of these clauses will be apparent to you. The Secretary of the Treasury may commence, for instance, by authorizing the coining of one million of silver dollars. The holders of the silver bullion would gladly pay the 1 per cent charge rather than send the bars to Europe. What risk would the holders of these dollars run? Even supposing that the public positively refused to take these coins, the holders could sell them as silver to Europe; but I believe that they would be welcomed, even without the law of tender. And if you succeed by the force of legal tender in compelling people to take in payment coins debased by 4 to 5 per cent to the amount of $5, why should not you succeed in placing coins of full and honest value into healthy circulation?

So, if the first million succeeded, the Secretary then might authorize more, encouraging it even, while at any time, by ceasing his advertisement, he could foreclose the mint against an excessive importation of silver from abroad.

You will also perceive that the reintroduction of the silver dollar is a necessity, seeing that the one-dollar gold piece is an unsuitable coin, and that it can take place without disturbing clauses 14 and 15, the latter providing for the issue of debased half dollars, quarters, and dimes, as they are now.

Indeed, I must wish also that the half dollar should be of full value, so that the issue of those pieces should not be guided by the more or less faulty human judgment of the Secretary of the Treasury, but by the pure action between supply and demand. I put the "supply" first as the active "demand-creating" element in all matters of commercial intercourse. But as the debased half dollar is already in use it may be best not to disturb it now, whilst the whole silver dollar can be introduced again without any disturbance in the other coinage.

* * * * * * *

I am, dear sir, yours, very obediently,

ERNEST SEYD.

TO SAMUEL HOOPER, Esq., M. C.

P. S.—I have sent to you in parcels by book post, addressed "Samuel Hooper, Esq., M. C.," Bullion and Foreign Exchanges, Suggestions on American Coinage, Demonetization of Silver, several pamphlets, reference to which is made in this letter.

This letter not only proves that there was nothing secret about omitting the silver dollar from the act of 1873, but how vigorously Mr. Seyd argued with the committee about it.

From the action of Congress in 1834 in purposely undervaluing silver, and in 1853 overvaluing our subsidiary coins, we are driven to the conclusion that our fathers purposely adopted the gold standard in 1834. That we were upon that standard from that time until the suspension of specie payments during the war there can be no controversy. The silver dollar, about which we have heard so much, was practically no part of our circulation up to 1873. From the time we first opened the Mint to 1873 there was coined but 8,031,000 silver dollars, while there was coined $137,000,000 of minor coins and $852,214,507 in gold.

When the question of a change of ratio was under consideration in the Senate Mr. Benton said:

He did not think it necessary to descant and expatiate upon the merits and advantages of a gold currency. These advantages had been too well known from the earliest ages of the world to be a subject of discussion in the nineteenth century; but, as it was the policy of the paper system to disparage that metal, and as that system in its forty years' reign over the American people had nearly destroyed a knowledge of that currency, he would briefly enumerate its leading and prominent advantages.

1. It had an intrinsic value, which gave it currency all over the world, to the full amount of that value, without regard to laws or circumstances.
2. It had a uniformity of value, which made it the safest standard of value of property which the wisdom of man had ever yet discovered.
3. Its portability, which made it easy for the traveler to carry it about with him.
4. Its indestructibility, which made it the safest money the people could keep in the houses.
5. Its inherent purity, which made it the hardest money to be counterfeited and the easiest to be detected, and, therefore, the safest money for the people to handle.
6. Its superiority over all other money, which gave to its possessor the choice and command of all other money.
7. Its power over exchanges; gold being the currency which contributes most to the equalization of exchange, and keeping down the rate of exchange to the lowest and most uniform point.
8. Its power over the paper money; gold being the natural enemy of that system, and, with fair play, able to hold it in check.
9. It is a constitutional currency, and the people have a right to demand it for their currency as long as the present Constitution is permitted to exist.

Not only was gold recognized as the standard from 1834 to 1860, but it was so recognized after the war and even after the act of 1873, about which so much has been said. On the 11th of February, 1874, Senator STEWART of Nevada said:

I want the standard gold, and no paper money not redeemable in gold; no paper money the value of which is not ascertained; no paper money that will organize a gold board to speculate in it.

On the 20th of the same month, on a resolution to instruct the Committee on Finance to report a bill providing for the convertibility of the Treasury notes into gold coin or bonds, he said:

By this process we shall come to a specie basis, and when the laboring man receives a dollar it will have the purchasing power of a dollar, and he will not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York, but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

On the 1st of April of the same year, Senator JONES, of the same State, said:

Does this Congress mean now to leave entirely out of view and discard forever a standard of value? Did any country ever accumulate wealth, achieve greatness, or attain a high civilization without such a standard? And what but gold can be that standard? What other thing on earth possesses the requisite qualities? Gold is the articulation of commerce. It is the most potent agent of civilization. It is gold that has lifted the nations from barbarism. So exact a measure is it of human effort that when it is exclusively used as a money it teaches the very habit of honesty. It neither deals in nor tolerates false pretenses. It can not lie. It keeps its promises to the rich and poor alike.

These two Senators are still in the Senate from the State of Nevada. They both voted for the act of 1873. Then they wanted gold monometallism. Now they want silver monometallism. Then gold was the cheaper metal at 16 to 1. Now silver is the cheaper metal.

Then they wanted Congress to favor their gold mines. Now they want us to make laws for the benefit of their silver mines. Then they urged upon Congress the adoption of a gold standard. Now they are tireless in talking about the crime of 1873, when silver was secretly demonetized.

This STEWART of Nevada who voted for the act of 1873, and who so eloquently praised the gold standard in the United States Senate on the 11th of February, 1874, is the same Senator STEWART who told the constitutional convention at Bismarck, N. Dak., on the 5th of August, 1889, that "In 1873 a bill was smuggled through Congress demonetizing silver in this country." (Debates, page 403.)

Our country produced last year 58,000,000 ounces of silver, worth at present about $42,000,000. One million ounces of this was produced in small lots by several States. All the rest was produced in seven States and Territories, as follows:

Table showing the States and Territories, with their population, which produced the silver for the year 1892.

States and Territories.	Ounces of silver.	Population.
Arizona	1,062,220	59,620
Colorado	24,347,017	412,198
Idaho	3,164,269	84,385
Montana	17,405,003	132,159
Nevada	2,244,000	45,761
New Mexico	1,075,000	153,593
Utah	7,762,257	207,905
Totals	57,059,856	1,095,621

Here we have the remarkable and unprecedented situation of 1,000,000 of people, with a total annual production worth at market price $42,000,000, demanding free-coinage privileges which will enable them at the present prices to get for their product 40 per cent more than its present market value, while 64,000,000 of their countrymen must drink the dregs of misfortune and bear the burdens of hard times in order that 1,000,000 may be prosperous and grow rich.

Statement showing the amounts of gold and silver coins and certificates, United States notes, and national-bank notes in circulation July 1, 1893.

	General stock, coined or issued.	In Treasury.	Amount in circulation July 1, 1893.	Amount in circulation July 1, 1892.
Gold coin	$513,743,623	$110,109,923	$403,633,700	$408,767,740
Standard silver dollars	419,332,450	362,302,707	57,029,743	56,799,484
Subsidiary silver	77,256,212	11,855,944	65,400,268	62,386,518
Gold certificates	94,041,189	1,071,170	92,970,019	141,235,339
Silver certificates	330,957,504	4,468,339	326,489,165	326,880,803
Treasury notes, act July 14, 1890	147,190,227	6,528,533	140,661,694	98,051,657
United States notes	346,681,016	25,805,333	320,875,683	311,814,840
Currency certificates, act June 8, 1872	12,365,000	430,000	11,935,000	29,830,000
National-bank notes	178,713,872	3,982,733	174,731,139	167,306,957
Total	2,120,281,093	526,554,682	1,593,726,411	1,603,073,338

Cost of recoining the standard silver dollars to change the ratio from 1 to 16 to 1 to 20.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 19, 1893.

SIR: Referring to our conversation relative to the probable cost incident to the change from the present coining ratio between gold and silver (1 to 16 for the standard silver dollars, and 1 to 14.95 for subsidiary silver) to a ratio of 1 to 20, you are respectfully informed that the number of silver dollars coined since 1878 aggregate 419,332,450.

Without any allowance for abrasion and loss incident to melting the same, the coinage value of these dollars at a ratio of 1 to 20 would be $33,222,162, or $84,110,228 less than their present face value.

To recoin these dollars at a ratio of 1 to 20 would require the addition of 81,376,700 ounces of new bullion, which, at the average price paid for silver under the act of July 14, 1890 ($0.93¼), would cost $75,883,700.

In addition to this I estimate that there would be a loss from abrasion and in the melting of these dollars of at least $3,000,000, which amount, together with the difference in the face value of the coins ($84,110,228), would have to be reimbursed to the Treasury by an appropriation for that purpose.

From the fact that the silver dollars are distributed throughout the country it would be necessary, as they are redeemed at the several subtreasuries, to transport them to the mints, and the expense of transportation for $300,000,000, the amount outside of the stock on hand at the subtreasuries and mints at Philadelphia, San Francisco, and New Orleans, would average at least 1½ per cent, or $4,500,000.

I therefore estimate the cost of recoining the silver dollars already coined as follows:

New bullion to be added	$75,883,700
Loss by abrasion and melting	3,000,000
Cost of the coinage (labor, materials, etc.)	6,290,000
Copper for alloy	68,200
Transportation of dollars to mints	4,500,000
Total	89,741,900

The stock of subsidiary silver coin in the country is estimated at $77,000,000, which at full weight would contain 55,699,875 ounces of fine silver. This amount at a ratio of 1 to 20 would coin $55,843,802, or $21,156,197 less than the present face value.

To recoin $77,000,000 of subsidiary silver into an equal amount of fractional coin at a ratio of 1 to 20 would require the addition of 18,797,625 fine ounces, which, at 93½ cents per fine ounce, the average price paid for silver under the act of July 14, 1890, would cost $17,528,785.

There would be a loss of about 2½ per cent by abrasion from the face value, or about $1,925,000.

I would, therefore, estimate the cost of recoining the subsidiary silver in the country, at a ratio of 1 to 20, as follows:

New bullion	$17,528,785
Loss by abrasion	1,925,000
Cost of coinage (labor, material, etc.)	2,500,000
Copper for alloy	15,636
Cost of transportation	1,155,000
Total	23,124,421

RECAPITULATION.

Estimated cost of recoining silver dollars	$89,741,900
Estimated cost of recoining subsidiary silver	23,124,421
Total	112,866,321

Very respectfully,

J. G. CARLISLE, *Secretary.*

Hon. DANIEL W. VOORHEES,
United States Senate.

SILVER IN INDIA.

[Extract from speech of Senator Dolph.]

India, one of the countries until recently having free coinage of silver or coining silver on private account, has hitherto been a great consumer of silver bullion for ornaments and coinage, and has been pointed to by the advocates of free coinage as an example of prosperity with free coinage of silver. The amount coined has been large, but not uniform, some years being a hundred per cent more than others. The following table shows the amount, expressed in dollars, of silver annually minted during the period of sixteen years, and shows the consumption of silver in India for coin:

1875	$23,830,686	1885	$48,487,114
1876	12,410,626	1886	27,121,414
1877	30,518,415	1887	44,142,013
1878	78,741,556	1888	36,297,132
1879	28,122,004	1889	37,927,814
1880	40,002,173	1890	57,931,323
1881	20,682,625	1891	32,670,498
1882	29,386,322		
1883	24,927,400	Total 17 years	590,562,659
1884	17,353,531	Annual average	34,150,744

The amount coined in 1890 is estimated at $30,000,000. The silver rupee of India contains 186 grains of pure silver; the half, quarter, and eighth rupees are of corresponding weights. The coinage of both metals until the recent action of the India government was practically free, provided the amount presented was equal to 50 tolos of gold or a thousand tolos in silver. There was a duty of 1 per cent upon all gold and silver brought to the mints. Gold was not coined in any considerable amount, and the business of the country was conducted upon a silver standard. The stoppage of the coinage of silver on private account in India is not an abandonment of the silver standard. Silver is still the standard, and will continue to be whether the government coins silver on its own account or not.

It is said this action of the government of India is intended to have the effect to prevent the further decline of the value of the rupee, but upon what this expectation is based is not stated. The value of the rupee will be fixed hereafter, as heretofore, by its value as silver bullion in the London market. It will still be measured in all London and in all foreign transactions by gold, and the discontinuance of free coinage by throwing the silver bullion heretofore coined in India on private account on the world's markets has depreciated, and will continue to depreciate, the intrinsic value of the rupee.

The claim sometimes made that silver has not fallen in value in India, and that the silver rupee in the interior of India will purchase as much wheat or as much of the other products of labor is absurd; it is incredible. The price of wheat in London is fixed in gold by the world's supply and demand. It is impossible that there could be to the exporter of wheat from India a profit equal to the fall in the price of silver since 1873. Such a state of things could not exist ten days in any country under the sun. Competition among English wheat-buyers would speedily raise the price of wheat in India to an approximation of its gold price in London.

Mr. SOMERS. Mr. Speaker, it may seem presumption in one so inexperienced in legislative matters to venture any remarks upon the proposition pending before this House, but I merely rise to say a word in explanation of my position on this question, one of the most important, perhaps, that has come before the Congress of the United States.

I stand for gold and silver as the money of the United States. I believe that the silver dollar should be of equal intrinsic value with and possess the same purchasing power in this country and in all countries as the dollar in gold. This result can be attained, in my opinion, through international agreement. All the great commercial nations require silver as a circulating medium, and if you repeal the purchasing clause of the Sherman law they will soon see the necessity of establishing a uniform ratio between gold and silver.

I was pleased and encouraged by the remarks of the distinguished gentleman from Kentucky [Mr. McCREARY], who is a member of the International Monetary Commission, when he stated so confidently his belief in the consummation of an international agreement whereby the parity of the two metals at all times shall be maintained, and I desire, as he expressed it, "to travel the road which will, through international agreement, give us free coinage of silver and free coinage of gold at a fixed ratio common among the nations of the earth."

Mr. Speaker, I have the honor to represent a people as patriotic and high-minded as any the sun ever shone upon. They have been sorely tried and oppressed by the financial stringency, and they ask for relief. They ask for the repeal of the purchasing clause of the Sherman law. The people of my State have forwarded to this House a petition signed by 125,000 citizens asking for such repeal. I mention this circumstance now, as the House has as yet made no order for the printing of petitions.

Nearly every speaker upon this floor, I believe, has denounced the purchasing clause of the Sherman law. Then why retain it upon the statute books? You know it is ruinous to this country. Is it proposed to use it to coerce members into voting for free coinage before we are satisfied as to the proper ratio between gold and silver? The advocates of free coinage of silver at the present time in this House are not agreed as to the proper ratio.

Under the rule we are to consider five different propositions for establishing a ratio, and the chances are about four to one that an improper ratio would be adopted now. There can be only one proper ratio established, and that can not and ought not to be determined in a hurry. So far as I have been able to observe in this debate, but few have attempted to demonstrate what would be the proper ratio, and to my mind no good reason has been given why the present ratio should be changed.

It is my purpose at the present time to vote against all ratios proposed, and to vote for the unconditional repeal of the purchasing clause of the Sherman act, not because I am an enemy of silver money, for I am not, but because, in my opinion, repeal of that clause will greatly restore confidence in our monetary sytem, which is now lacking, and repeal is the only thing that will restore that confidence. Cut out the ulcer while there is still strength for recuperation in the patient. The condition of the country to-day is alarming, and unless we act, and act quickly, no tongue can describe the disasters that may overtake us. The time for argument has nearly passed, and it is to be hoped that the hour of deliverance is near at hand, and that the sun may soon again shine on happy, contented, and prosperous American homes. Mr. Speaker, I merely desired to explain my vote, and I thank the House for its attention. [Applause.]

Mr. PICKLER. Mr. Speaker, I ask unanimous consent that on the consideration of the bill on Monday this amendment may be considered.

The SPEAKER. The gentleman will send the amendment up.

Mr. BYNUM. Mr. Speaker, this time has been set apart for debate, and I do not think it is proper that any unanimous consent should be asked for at this time.

Mr. WILSON of West Virginia. I object to any change in the order.

Mr. PICKLER. I would like to have the resolution read.

The SPEAKER. It can be read as a part of the gentleman's remarks.

Mr. PICKLER. Who is it objects, Mr. Speaker?

The SPEAKER. The gentleman from West Virginia.

The Clerk read as follows:

Amend H. R. 2, being "A bill for the free coinage of silver, and for other purposes," by inserting after the words "silver bullion," in the second line of section 1 the following words: "the product of mines of the United States," so that said section when amended shall read as follows:

"SECTION 1. *Be it enacted, etc.*, That from and after the passage of this act all holders of silver bullion, the product of the mines of the United States, to the amount of $100 or more of standard weight and fineness, shall be entitled to have the same coined at the mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act."

Mr. PICKLER. Then, Mr. Speaker, I desire to ask unanimous consent to offer the following on Monday, to which it seems to me no one can object.

I ask it be read in my time, Mr. Speaker.

The SPEAKER. Let it be read as a part of the gentleman's remarks.

The Clerk read as follows:

That upon Monday, August 28, if the substitute to H. R. 1 and all amendments shall be voted down in the House, and if H. R. 1, known as the Wilson bill, shall pass, that immediately thereafter, without debate or intervening motions, the House shall vote upon H. R. 2, "A bill for the free coinage of silver, and for other purposes," amended as follows: Inserting after the words "silver bullion," in the second line of section 1, the following words: "the product of mines of the United States;" the bill as so amended being for the coinage of the silver bullion product of the mines of the United States at the present ratio.

If this bill fail to carry, the bill as so amended shall be voted on at the ratio of 18 to 1, and if this fail, it shall then, as so amended, be voted on at the ratio of 20 to 1.

Mr. PICKLER. Mr. Speaker, that simply provides that if all the substitutes proposed by the gentleman from Missouri [Mr. BLAND] fail, and if, after that, the bill for the repeal of the Sherman act shall pass without amendment, the House shall then proceed to vote upon the substitute previously rejected, so amended as to confine it to the coinage of the product of the American mines, first at the present ratio of 16 to 1; if that fail, at the ratio of 18 to 1, and if that fail, at the ratio of 20 to 1; each of these propositions to apply only to the product of the American mines.

It seems to me, sir, that assuming, as my proposition does, that the bill for the repeal of the Sherman act will have passed the House without amendment, there should be no objection upon the part of any gentleman to vote upon the proposition to coin the product of the American mines.

Mr. TRACEY. Mr. Speaker, the gentleman has asked unanimous consent for the reception of that proposition; I must object to any change being made in the order that has been agreed upon.

Mr. PICKLER. This makes no change in the order. It simply proposes that after the gold men shall have carried the measure which they have advocated on this floor, carried it without amendment, we shall then have a chance to vote upon the question of coining the product of the American silver mines; that after these gentlemen shall have conquered the field, after they shall have got what they want, the repeal of the Sherman act, then we may have an opportunity to have this proposition voted upon.

Mr. TRACEY. I feel that it is my duty to object to that proposition at this time, Mr. Speaker. The gentleman can bring it up later if he desires to. I must object to any change in the order.

The SPEAKER. Objection is made.

Mr. PICKLER. Mr. Speaker, I ask unanimous consent to address the House for fifteen minutes if I shall so desire.

Mr. TRACEY. If the gentleman will be content with ten minutes I shall have no objection.

Several MEMBERS. Let him have fifteen.

The SPEAKER. The gentleman from South Dakota asks unanimous consent to address the House for fifteen minutes. Is there objection?

There was no objection.

Mr. PICKLER. I think, Mr. Speaker, I am entitled to five minutes on each of these amendments under the order. Perhaps we may as well have that question settled right here. The order is that for the last three days of this debate, to-day, to-morrow, and the next day (though the order has been since changed as to Saturday), the House shall consider the bill and amendments as in Committee of the Whole under the five-minute rule. Now, as I understand the rule of the House in Committee of the Whole, a member is entitled to five minutes on any amendment.

The SPEAKER. The Chair will look into that question. The gentleman is entitled to fifteen minutes by unanimous consent.

Mr. PICKLER. I thank the Chair and the House. I must say, gentlemen, as to the request I have just made, and which has been objected to by the gentleman from New York [Mr. TRACEY], that I am somewhat surprised, and yet I am not surprised.

FAVORS BIMETALLISM.

I expect to vote for some of the ratios proposed by the gentleman from Missouri [Mr. BLAND], although I should prefer to vote for the coinage of the American product, but as that is refused us, the only way to escape monometallism is to vote for the amendments. My constituents believe in the use of silver as well as gold, and after the arguments we have heard here from the gold men upon this floor, and after the protestations they have made of their eventual friendship for silver, that after the repeal of the McKinley act—not that that will never be repealed. [Laughter.]

I was about to say, Mr. Speaker, that it is strange that my proposition should be objected to by the advocates of gold upon this floor after they repeal the Sherman law. I should think that after the repeal of the Sherman act they would be swift to propose an opportunity to vote upon a proposition for the coinage of silver, in order that we might have relief as far as silver is concerned.

But what is the spectacle presented here this morning? In the proposition I have submitted it is conceded that the Bland substitute shall first have been voted down; it is conceded that we who are bimetallists in the House will have been routed horse, foot, and dragoon; it is conceded that the President's bill for pure and simple repeal, as advised by him, will have been adopted; and yet when we ask that after all that we shall be allowed to vote upon the proposition to coin the American product of silver, giving the House the choice of ratios, 16 to 1, 18 to 1, or 20 to 1, these gentlemen who profess so much love for silver object, and the gentleman from New York [Mr. TRACEY], true to his instincts, comes up and objects to any consideration of the silver question.

It reminds me very much of the time when we stood here in the Fifty-first Congress, and were trying to get some show for silver, and when the Sherman act was proposed as a compromise. And let me say right here, parenthetically, that that bill was thought then to be a good measure, and in fact it has had a beneficent influence, and has added much good money to our circulation. I remember how it was regarded at that time by a good many gentlemen who have taken part in this debate, and when I contrast their utterances then with their speeches now, I must say that their hind-sight is very different from their fore-sight. [Laughter.]

There have been great changes, Mr. Speaker, and so far as the Democratic side of the House is concerned the conversion of the silver heathen Democracy to orthodox monometallism shows that President Cleveland outranks any missionary of this century. [Laughter.]

The fact has been stated here by gentlemen on the other side—and I think with so much force that there must be truth in it—that the President is supported in his work by the London foreign missionary society.

SHERMAN LAW—AMERICAN PRODUCT.

I was about to say, Mr. Speaker, that when the proposition was before the Fifty-first Congress for the passage of the Sherman bill, the friends of silver then proposed to the gold men in this House as a compromise that we have free coinage of the American product. The argument of those men was then the same as their argument is now. They always have the same argument. When the Bland-Allison act was under consideration the gold men were just as great "calamity howlers" as to what would befall the Government as they are now.

As "calamity howlers" they outstrip all other men, whenever the people want an expansion of the currency. When we had the Sherman bill under consideration they came forward and in the same tone as now preached calamity. They said that the nation would go to destruction if we adopted any of those propositions. Yet the Bland-Allison act became a law; the Sherman act became a law; and this Government prospered under both those measures. Yet we still have the same argument presented here to-day.

GOLD MEN OBJECT TO SILVER AS MONEY METAL.

We understood then—we understand now—the contention of the gold men, that if we have free coinage even of the American product there will be so much silver in circulation that it will become the cheaper money and will drive gold out of circulation. It was well known when we had the Sherman act under consideration that under that act we would just about coin the American product.

The proposition that we were to have a great oversupply of silver in the United States fell to the ground, because it was conceded when we were debating the Sherman bill that under it we would simply coin about the amount of silver that was the product of the mines of the United States, and hence free coinage of the American product would have put no more in circulation than the Sherman law. Yet, notwithstanding this proposition was squarely made, notwithstanding the gold men never sought to answer it, they steadily refused to consider the proposition to coin the American product, yet did agree to the Sherman law that used an equal amount of silver. And why? There was but one reason then and there is but one reason now for opposing the proposition.

The free coinage of the American product would recognize silver as a money metal; it would recognize it as one of the coin metals upon which our paper currency would be based. It would place silver to that extent alongside of gold as a money metal. And the gold men of the United States are eternally against the recognition of silver in any form as a money metal in this country. They want it treated as a commodity, as they have treated it under the Sherman act. They are determined to keep it in the position of a commodity to be measured by gold. And that, in my opinion, is the only reason they objected to the free coinage of the American product, and it is the only reason the gentleman from New York objects to my amendment to that effect to-day.

What is to become of the silver now? Have we not an indication this morning of the intention of the majority of the gold men not to give silver any chance? On what ground could there be any objection to the proposition I have submitted? The country is in trouble, and I simply proposed that after the passage of the Wilson bill, providing for the unconditional repeal of the Sherman act, there should then immediately be taken, without debate, a vote on the amendment which was read. Why not take a vote on the coinage of the American product at these different ratios? Are we to be told by the gold men in this House that they will not consent to the coinage of the American product at the ratio of 20 to 1, which is one of the propositions embraced in the amendment?

SILVER STATES.

Where is the love of the gentleman from New York for the silver miners in the West? I want to know if you gentlemen propose to wipe out all the interests of the silver States, as well as ruin the agricultural States by lowering further the present low prices of products? The people in mining States and Territories are in great trouble; and certainly it seems to me there should be some consideration given to their product. This House can not too swiftly come to the question of aiding the Western people and keeping open if possible the American mines. It is ruin to those States to oppose it.

WESTERN REPUBLICAN.

As a Western Republican obeying the summons of the President, I came here with no expectation of engaging in any discussion concerning the financial situation.

I had supposed that the gravity of the situation had so impressed the President and his advisers that definite measures would have been devised and laid before Congress upon its assembling for the relief of the country. Measures, too, which the party elevating the President to power would accept, seize upon, and quickly enact into law.

But all these surmises proved incorrect, the sole negative proposition to repeal the Sherman law without any affirmative legislation being the sum total of the President's message.

DEMOCRATS DISAGREE IN NATION'S TROUBLE.

But even this recommendation is more than his party is able to agree upon.

And although every member of this House was fully advised and as ready on the second day of this session to have voted upon any of the propositions as he will ever be, and although the country trembles upon the brink of ruin; although fortunes are being wasted every day, and the cries of unemployed men are going up all over this broad land, and the voices of all lines of business are loud in the cry for relief; although the fires of furnaces have ceased to burn; although spindles have ceased to turn; though looms are still, and the hum of manufacturing machinery is not heard; although all over this land is heard the lamentations of men and women and children asking employment whereby they may earn food; although riots and mob violence are endangering life and property in our large cities; although this great nation, which was prosperous and happy and proud in its greatness at the incoming of the present Administration six months ago, is now in the throes of a great financial panic, and experiencing the greatest overshadowing trouble known to this generation, yet, notwithstanding this condition, the Administration wing and the anti-Administration wing consume three long weeks of precious time, each faction seeking to prove that it is standing on the last Democratic platform and that the other fellows are off—all this, I repeat, before even a vote can be had upon any proposition of relief to the country.

It is about the usual gait at which the Democratic party has ever traveled when the country was in danger.

PATRIOTIC ADVICE.

And where has the Democratic majority, or in what way has it carried out the advice of the Democratic press of the land for this Congress to assemble as brethren, and especially enjoining Republicans to forget their party and work with the patriot Democrats; what, I inquire, has this majority done to carry out this programme?

One would have thought, Mr. Speaker, from the extreme unction of the advice administered to the Republican members, that immediately upon the organization of the House the gentleman from Illinois, late chairman of the Committee on Ways and Means, would have moved that the House resolve itself into the Committee of the Whole on the state of the Union, and that this motion having unanimously carried, the Speaker would have designated as chairman of the committee the Hon. THOMAS B. REED, of Maine, and that the remaining 354 members, after the former Czar had taken his place, would together repeat, "Behold how good and how pleasant it is for brethren to dwell together in unity," and that the deliberations of this House would more resemble the action of a Methodist class meeting than those of a legislative body. And in this frame of mind to act, and to act at once and without any desire to arouse partisan spirit, and with a sincere desire to join the majority in the speedy enactment of such legislation as might seem best to bring relief to the country, was, I believe, and is the feeling of every Republican upon this floor.

And such is still our desire. True, our confidence was somewhat shaken in the good faith of the brethren of the majority, when, under an ironclad rule, without regard for or consultation with the minority, a few propositions were offered upon which, and upon which alone, under the rules, the House can vote. And, while we were encouraged, and our hearts were touched by the urbane and cordial apologies of the gentleman from Ohio [Mr. HARTER] for even mentioning anything that savored of partisanship, our feelings were lacerated when the gentleman from Missouri [Mr. HALL] charged the Republican party with the heinous offense of permitting the virtue of farmers' daughters to be commended on the stage, and the gentleman from Georgia [Mr. MOSES] alleged that the Republican party had stolen everything, from the Presidency down, it sounded wonderfully like the old slogan, and we realized that we were to be regarded as patriots for voting, and Republicans for vituperation. And this the example that the majority set for patriotic action in this hour of the nation's peril. I repeat, Mr. Speaker, three weeks' debate to allow Administrationists and anti-Administrationists to prove that they stand on the Chicago Democratic platform.

So, Mr. Speaker, from the propositions presented by the majority the Republican members are compelled to choose *nolens volens*.

BIMETALLISTS.

My State is chiefly engaged in agriculture, stock-raising, and mining, agriculture predominating.

My constituents are almost unanimously, without regard to party, bimetallists; and desiring to represent them, it is my desire to so vote as will best promote the use of both gold and silver.

My constituents are not, as I believe, wedded to free coinage of silver as a theory or proposition, except as it shall insure practical bimetallism—the use of both metals.

I have listened with interest to this entire discussion, and I have been highly pleased to hear well-nigh a unanimous declaration from all parties favoring bimetallism; and I have listened with unprejudiced interest to the arguments of those upon this floor who contend with so much earnestness that bimetallism will be more certainly attained by the unconditional repeal of the Sherman law. I should much prefer to provide for silver in the same bill.

TRAMPLING ON SILVER.

It is beyond my comprehension to understand how you elevate an object by depressing it. You say silver is now traveling upon a halting limb, but to enable it to run swiftly you amputate the leg, and so you vote against coinage at any ratio. You find silver upon the first floor, and in order to get it to the garret you hurl it into the cellar.

You find the silver craft leaking, damaged, and scarcely able to keep afloat, and you, in order to convert it into a sea-worthy vessel, sink it to the bottom.

Pretending to be the friend of silver, you thrust a dagger into its heart.

You pretend to desire to sustain silver and vote it up, and so you vote it down.

You find silver in a dying condition and pretend you wish to restore it and make it strong, and your first act is to bury it.

A convert seeking the way to Heaven, you send him to hades to start.

You pretend to be the friend to silver, you act like its bitter enemy.

Your acts are strongly inconsistent with your words.

Were you an avowed enemy of silver, your hostility could be no greater.

While you sing hallelujahs to it, you also breathe curses.

Your plan to restore silver as a money metal is in direct conflict with the plan and at variance with the opinion of every recognized leader in the contest for silver in the nation.

You consort with avowed enemies of the white metal, and yet pretend to be its friend.

This contest is too serious for temporizing.

It means monometallism or bimetallism. The unconditional repeal of the Sherman law means a single gold standard. A vote against the amendments proposed for the coinage of silver is a vote for the single standard of gold.

It is a vote for monometallism. How can any bimetallist claim that he is truly in favor of silver and vote against its coinage as provided by these amendments? I am opposed to monometallism, and hence shall vote for some of these ratios. As before stated, my State is largely agricultural, and adapted to stock-raising.

In the western portion, known as the Black Hills, we have rich mines of gold, silver, and tin. My State produced in the year 1892, as estimated by the Director of the Mint, gold, $3,700,000; silver, $77,576.

Our people believe that to strike down silver and go to the gold standard must inevitably lower the already ruinous prices of our wheat, and reduce still lower the already low price we shall receive for our horses, cattle, and wool.

We find that it is simply history, that as the price of silver goes up or down so the price of our products rise or fall.

And yet I am asked to vote against these amendments, to vote down the price of my constituents' wheat, flax, barley, horses, cattle, and wool, at the dictation of the gold men.

MONOMETALLISM.

No one as I have yet heard in this debate, and I have attentively listened to the whole of it, has denied that placing this country upon the single gold standard, which the voting down of these free-coinage amendments do, will reduce every article in price that the farmer has to sell, as well as ruin the silver-mining States.

It can not be denied; it is the eternal truth.

DEBTORS.

No gold man can deny, moreover, that it will largely increase our indebtedness in the West and South.

We are a debtor people; we are improving our lands, building houses and barns, and stocking our farms; building towns, schoolhouses, and churches, and developing new industries; and we need a great deal of money, and so we are borrowers. Now, you propose to double, and do double, our indebtedness by refusing longer to recognize silver as a money metal.

More than this, you not only largely increase our indebtedness, but you also reduce the value of our land, which is largely the security for this indebtedness; you impoverish us by increasing the debt, in the lowering the price of products with which we must pay the debt, and make us doubly poor by decreasing the value of our land, which secures the indebtedness.

DUMPING GROUND THEORY.

The gentleman from Massachusetts [Mr. MORSE] also asserted what so many of his followers have reiterated, to wit, that if we had free coinage in this country the world would bring to us all its old junk pots, kettles, and spoons, as well as bullion, making this country the dumping ground for the silver of the world. This, I claim, is wholly untenable. It is well known that all articles manufactured from silver take on so great a value by reason of the labor value being added to the bullion value that the owner can not afford, nor does he sell for coinage at bullion values.

Neither, Mr. Speaker, can I understand how other nations will pour their bullion in upon us if we adopt free coinage. I believe, Mr. Speaker, that it is a proposition that can not be disproved, that if the United States by any legislation whatever can cause the price of silver bullion to advance in New York, it will the same day advance in London, Paris, and Berlin.

Silver can not be one price in New York and another in London. Why should it be?

There can be no difference in the prices of silver bullion, sales of which can be by wire made in a few minutes, except perhaps the mere cost of exchange. Then if there could be no appreciable difference in price, certainly foreign bullion would not pour in upon us, and foreign silver would not drive our gold out of circulation; if worth no more here than in Europe it would not come here. But what nation has the silver to spare?

Where is the silver coming from? I think it is admitted by all parties to this debate that all the great nations are seeking a greater volume of money; they can spare nothing to exchange for our gold. And it being impossible that there be more than exchangeable difference in the price of silver bullion in the United States and its price in other countries, we are in no danger of being made a dumping ground for other nations. Neither could they get our gold unless they offered us something we wanted more than we wanted our gold.

WHY GOVERNMENT BUYS SILVER.

Several gentlemen in this debate, as did the gentleman from Florida [Mr. COOPER], with much emphasis argue that the Government should furnish them a market for their wheat and cotton if it furnish the silver-miner a market for his silver, and also indulge in the jocular demand for $1 for 57 cents' worth of wheat.

The Government affords no market for silver except as far as its necessity goes.

The Constitution gives Congress the power "to coin money, and regulate the value thereof," and prohibits the States coining money, or from making anything but gold and silver a legal tender in payment of debts.

The duty is thus thrust by the Constitution upon the Government to provide a currency. Gold and silver are the money metals of the Constitution. The Government must supply a currency; it must have a gold and silver currency; it must therefore necessarily provide a market for silver in order to supply the people, as required by the Constitution, with money. For this reason, and this reason alone, the Government may purchase silver bullion as it does under the Sherman law. If it would adopt free coinage it would need to purchase none. There is no reason for the Government buying wheat or cotton; there is no constitutional obligation to so do, as there is to supply silver. Silver purchases are a constitutional necessity in the absence of free coinage, while there is no authority nor warrant of authority for purchasing farm or other products.

The Government purchased silver forty years ago; it is no new thing. Likewise, the frequent assumption that the people are being defrauded by the purchase of silver under the Sherman law is wholly untrue. The Government purchases at the lowest possible price in gold of the miner and pays in Treasury notes, and when it coins the silver the people get the benefit of the difference between the commercial and coinage value, and not the miners.

RATIOS.

I am constrained to vote for some of the ratios or the reënactment of the Bland-Allison act, because it seems to me to be the only vote that favors bimetallism which the Republican party has ever advocated in national and State platforms. The Republican party has ever been in favor of bimetallism and the full monetization of silver, and it is to-day. I am a Republican, and believe that to vote for a ratio of coinage or for the Bland-Allison act, if ratios fail, are the most consistent Republican votes, the National Republican platform declaring for silver, and the Republican party has ever been a bi-metallic party.

I submit the platforms of the National Republican party during the last three Presidential campaigns:

PLATFORMS.

1884.

We have always recommended the best money known to the civilized world; and we urge that efforts should be made to unite all commercial nations in the establishment of an international standard, which shall fix for all the relative value of gold and silver coinage.

1888.

The Republican party is in favor of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver, as standard money, with such restrictions and under such provisions to be determined by legislation as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver or gold or paper, shall be at all times equal.

The interests of the producers of the country—its farmers and its workingmen—demand that every dollar, paper or coin, issued by the Government shall be as good as any other.

We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

The Republican party of my State has declared in favor of the remonetization of silver, as follows:

PLATFORM OF 1890.

We favor such expansion of our currency as will meet the growing demand of our increasing population and wants, and offset the contraction resulting from the withdrawal of national-bank circulation. To this end we favor such legislation as will utilize the entire product of our silver mines as money.

1891. We heartily endorse the action of the late Republican Congress in passing the silver bill, by which $50,000,000 of currency is yearly added to the amount in circulation, and we favor such further increase in the coinage of silver as is consistent with a sound financial policy, and we favor the complete remonetization of silver.

1892. We favor the use of both gold and silver as standard money, under such legislative regulations as will secure the parity of values of the two metals, and we commend the steps already taken by our Government to insure this important object by an international monetary conference.

Believing in the platforms of my party, I can not vote for monometallism.

PROTECTION.

And how do Republicans, who are in favor of protection of home industries and the protection of American labor refuse any protection to the great silver-mining industry in this country and refuse protection to the labor in the mines also? And not only refuse protection, but actually join in legislation that ruins the industry?

FAIR WEATHER PLATFORMS.

Gentlemen of both parties seem to think that their platforms as to bimetallism are fair weather platforms, and not to be carried out in a storm panic; especially is this true of the Democratic party at this time. They seem to regard the platform as a dress-parade declaration and not for active service. The people of this country believe in the use of both gold and silver, and although gentlemen may under the shadow of this great panic for a time obscure their vision, they will very soon emerge into the broad sunlight of their settled convictions for a permanent bimetallism.

Gentlemen representing the gold side of this question theorize in regard to what will occur, but the only way to know the result is to test it. There was not a member, I think, of either branch of the Fifty-first Congress who did not predict and believe that the passage of the Sherman law would permanently advance the price of silver bullion. In this all were mistaken.

No finer illustration of the failure of theorists and doctrinaires in finance can be adduced than the history of the Sherman law.

WHEAT—INDIA.

It has been conclusively, as it seems to me, shown in these debates that the low price of silver bullion which has obtained in this country has enabled India to compete with us in wheat-raising, and lost to this country a vast amount of money, and has been a terrible drawback to the wheat-raisers of this country. We desire the advance of silver bullion in the markets of the world, believing it will advance the price of our wheat and all products we have to sell. Low silver bullion has enabled England to buy Indian wheat low to compete with our wheat producers.

PARITY.

There has been no answer to the argument upon this floor that France for seventy years maintained the parity of the two metals, and no answer to the conclusion that this nation could not now do the same.

And if, upon trial, it should prove that the parity could not be restored, this Congress in its regular December session could repeal or change the law.

Why should we not give silver the opportunity it ever had in this country during its whole history until the year 1873, during all of which time it was equal to and much of the time at a premium over gold?

57-CENT DOLLAR.

It has seemed to me very unfair in this debate that the monometallists persistently talk of a 57-cent dollar when they know that the theory of the bimetallist, the theory of the free-coinage advocate, is that with free coinage, with an equal chance for silver bullion at the mints that gold bullion now has, there will be

no longer a 57-cent dollar; that the silver bullion in a dollar will then advance in price and be worth 100 cents, and that the commercial value and coinage value of silver bullion will come together, and that the bullion in a silver dollar will then actually be worth the bullion in a gold dollar.

This must be or bimetallism or free coinage is a failure. No one advocates any such measure as is here persistently talked by gold men, that the nation will continue to issue a dollar of 100 cents legal-tender value and 57 cents commercial value as bullion.

No one favors short or cheap or depreciated dollars, of which the gold men unfairly and for the purpose of prejudicing the cause of silver and its use continually talk. Every dollar of whatever kind must be equal to every other dollar, and their value must be an interchangeable value.

Our gold friends say we can not have a parity of gold and silver without an international agreement for bimetallism. Gladstone opposes it because, he says, the world owes England $10,000,000,000, and they want gold in payment. When will we have international agreement under these conditions?

BANKS AND THE PANIC.

Have you gentlemen read the RECORD this morning of what occurred yesterday in the United States Senate? Have you seen that a Senator of the United States introduced a resolution to ascertain whether the national banks of the cities of New York, Boston, and Philadelphia were violating the banking laws of the United States; and have you also seen that the East—the gold men in the Senate regardless of politics (because I want to say to you gentlemen of the West and South that when you get east of the Allegheny Mountains there are no politics so far as the money question is concerned; there was none yesterday in the Senate on the measure of which I am now speaking)—have you seen that on a simple resolution of inquiry addressed to the Treasurer of the United States, the Senate debated an hour and a half as to whether that inquiry should be answered or whether the resolution should be referred to the Finance Committee.

It was conceded by the senior Senator from Massachusetts, it was conceded by the senior Senator from Maryland that there had been violations of the law. It was conceded, as you will see by reading the debate, that the banks of New York City are charging their depositors as high as 3 per cent for their own money, and yet the Senate refused a resolution for a report of any violation of law by these banks. And yet these gentlemen from the East—the gentlemen from New York City—come here and cry out against the dishonesty of the farmers from the West and against the bad character of the loans which have been placed there.

WEST HONEST.

I want to say to you gentlemen that you never had as good securities as the landed securities of the West. You have never lost money by loaning to the West. We have paid you your interest. And now, simply because we do not want you to make a dollar worth $1.50—because we want you to accept payment in the dollar in which your contract was made, to wit, silver equal to gold and at a ratio of 16 to 1—you talk about dishonesty and "cheap money" and all that sort of thing. That has been your cry for a generation. That was the cry when you brought up the question of the payment of the bonds, the bonds you purchased at low rates during the war.

RESUMPTION.

Mr. Speaker, I have always been a Republican. After our flag was triumphant in the late war—after the Union had been saved, after the nation had had a little breathing spell, after the matters of reconstruction had had some consideration—the Republican party took the position that every promise to pay a dollar, although that promise had been depreciated during the terrible war, should be worth 100 cents on the dollar.

And, Mr. Speaker, we were a patriotic people. We as Republicans insisted all the time for a system which would give not only a proper currency in the land, but put all of the obligations of the Government upon an equality. It was a patriotic purpose, a purpose which was right and which I indorsed then and indorse now. Under that law the bondholders got the money and the bonds were payable in lawful money of the United States; afterwards they were made payable in coin. I am not complaining. I repeat, the efforts of the Republican party to keep these bonds and their payment as a sacred obligation upon the people was a wise, honest, and honorable policy.

But in 1873 there was by legislative enactment stricken down one of the coins of the country—silver—and the bonds theretofore payable in coin were made payable in gold. And while it was right and patriotic, as far as that is concerned, to bring up the bonds of the Government and make them all alike payable in the best money of the Government, and while I do not indorse the demonetization act of 1873, but condemn it as absolutely bad, the action that was taken before for the purpose of bringing the credit of the United States up to where every dollar was equal to every other dollar was a right and praiseworthy duty of a patriotic people. But while we were doing that there was standing alongside of the patriotic mass of the people of the country the bondholders, crying aloud and sparing not for this legislation.

I repeat, sir, while it was right and patriotic to bring up the credit of the United States we incidentally voted multiplied millions of dollars into the pockets of the bondholders by increasing the value of their bonds. And yet, notwithstanding all this, they are not satisfied. They come here now and resist every intelligent action on the part of the Western people. Because we simply desire to pay off our mortgages, which they hold, in the money which was contracted for at the time the obligation was created, and resist them doubling our debts and reducing the price of our products one-half by adopting a single gold standard, they cry out against us and talk about "cheap money."

SOUND MONEY.

Mr. Speaker, that is the veriest claptrap. There has not been a man of any standing on this floor or elsewhere who has advocated any kind of dollar which is not equal to every other dollar issued by the Government.

I am a Republican, and this is a proposition on which the Republican party has stood firm and unchanged, as immutable as the eternal rocks, at all times in its history. It has stood always for good and honest money in this country. We have pledged ourselves to it in all of our platforms, State and national (although it seems that some of our friends forget that our platforms have declared for bimetallism), and we are still declaring for it.

But I desire to read what was said in the debate in the Senate, no longer ago than yesterday, upon this subject of the action of the banks of New York, the remarks of the senior Senator from Iowa [Mr. ALLISON], and I commend them to the gentlemen from New York and West Virginia, who lay all the trouble now prevailing to the existence of the purchasing clause of the Sherman law. I ask these gentlemen and others to consider this language of Senator ALLISON. He said:

> Those of us who were here some years ago remember very well that the national banks of the city of New York refused to take upon deposit silver certificates issued by the Government, and in 1882, now eleven years ago, we were compelled by law to say that no national bank should be a member of any clearing-house association which did not receive on deposit silver certificates; and it is a matter of fact well known—at least, very well known in this body and elsewhere—that those national banks from that hour to this have, wherever they could, discriminated against silver certificates.
>
> They have pushed them out and out into the remote regions of our country and held, where they could, the greenbacks and the gold certificates.

Mr. Speaker, I call attention of the two gentlemen especially to this language:

> Much of the currency famine that has recently existed in the city of New York arises from the fact that the banks have not held in their vaults as a part of their reserve the silver certificates issued under the authority of the United States, nor have they held there any silver dollars. The silver certificates and silver dollars have been pushed out into the remoter regions of our country.

This is what the distinguished Senator from Iowa [Mr. ALLISON] says in regard to what has brought on the panic and where the responsibility rests for our present condition.

More than this, Mr. Speaker, in an article in that great Democratic organ, the New York Sun, of April 29, it is boldly charged that the New York banks and the Administration were working together and understandingly to compel an extra session of Congress to repeal the Sherman law, even at the expense of a panic. An extract is as follows:

> The conference yesterday between Secretary Carlisle and a number of the bankers of this city was of great value in that it resulted in a definite understanding of the financial policy of the Administration, as indicated in this column last Tuesday. That policy is to interpose no obstacle to the natural operations and logical results of the Sherman law. In a word, the Administration proposes to allow the people to reap the rewards of their own folly.
>
> The statement of Mr. Carlisle to the New York bankers makes it clear that, while Mr. Cleveland works in Congress, the bankers will be expected to work, not in New York only, but throughout the country, doing their utmost to pinch business everywhere in the expectation of causing a money crisis that will affect Congress powerfully from every quarter. There is an explicitness in these declarations and a boldness in making them that would be astounding were not the country too familiar with Mr. Cleveland and his methods to be astonished by anything from him.

The SPEAKER. The time of the gentleman from South Dakota has expired.

Mr. PICKLER. Mr. Speaker, I asked to be recognized on the next amendment.

The SPEAKER. The Chair will state to the gentleman from South Dakota that it has looked at the order, and while, perhaps, it is a little ambiguous, still the Chair is inclined to think, and will put that construction upon it unless the House otherwise directs, that it was designed to limit the members to five or ten minutes as under the ordinary five-minute rule in the

House, and as to all of the amendments, and not on each amendment.

The Chair believes that the order was so understood by the House to permit, under the five-minutes' rule, the discussion of all of the amendments at once, as has been done under the general debate up to this time, and to construe the order otherwise would, as the gentleman himself must see, make the debate to-day or to-morrow for each member who gets the floor just as long as it was under the rule for general debate.

Mr. PICKLER. I do not wish to discuss the construction of the rule with the Chair, and will yield to the decision without comment, simply asking the privilege of continuing for five minutes longer.

The SPEAKER. If there be no objection, the gentleman from South Dakota will be recognized for five minutes longer.

There was no objection.

Mr. PICKLER. It is most remarkable that in either branch of the United States Congress, when a simple proposition of inquiry to one of the great Departments as to the operations of our national banks—the agents in one respect of the Government of the United States—as to whether they are violating the law, and when it is even conceded on the floor of the Senate that they have been violating the law, should find opposition and fail of adoption—I say I do not understand why objection can be made to the information being laid before Congress. It will not do to argue that any acts of Government officers or agents shall be concealed from the people's representatives in Congress.

Mr. Speaker, what must it lead to? If you can cover up the transactions of the banks by an action of this character, what may you not be able to cover up? It is a dangerous position, and will do more to create a fear in the minds of the people that the money power has undue influence in national legislation and Government than can be readily imagined.

VOLUME OF CURRENCY.

It has been argued here, Mr. Speaker, by the gentleman from Ohio [Mr. HARTER], justifying the demonetization of silver, that the narrowing of the volume of currency does not interfere with business. That is the most dangerous proposition to the people of the West that has been suggested on this floor. We are a new country. We have lands that we desire to sell. We desire new railroad enterprises. We desire money to build factories in cities and towns, and schoolhouses and court-houses, and to develop our new country in a hundred ways.

We have a great need for money, and we know that if money is scarce, if there is but little money, the East will consume all of it before we even hear of it in the West. Certainly there never have been better times in this country than under a large volume of currency, during the war and immediately following. It appears to me, gentlemen, that it is a proposition that can not be denied, that so long as every dollar is as good as every other dollar there can not be too much good money in circulation. Who has ever known a country to have too much good money in circulation? Who has ever known times to be good when you have too little money in circulation? I believe the volume of the money has much to do with the prosperity of the country.

CHECKS AND DRAFTS.

Much has been said here about business being done with checks and drafts. Now, I confess that while I know a large per cent of business is done on credit with small cash basis, it is my impression that in order to have a check or draft to amount to anything in business a man must have money back of it. The gentleman from Mississippi [Mr. CATCHINGS] supposed a case the other day in this wise: He said, "Suppose a man brings in a load of cotton and sells it for $100, and that the merchant instead of paying him $100 in cash gives him a check on the bank for $100, and with that check he goes and buys goods of the dry goods merchant, and the merchant sends it to some other man whom he owes, and so it goes around;" the gentleman argues, and the gentleman from Ohio [Mr. HARTER] argues that the use of the check does away with the use of or requires less money.

Now, how can it be? The man who gave a check on the bank had a hundred dollars in that bank, or he could not have drawn his check. So all the office that the check performed was that in place of the man going and getting the money out of the bank and carrying it to the next man, and he to the next, they simply passed the check around from one to the other, and it did not take a dollar less to do business with the check than if the actual money had been used.

Mr. BYNUM. Will the gentleman permit a question?

Mr. PICKLER. Yes, if my time can be extended. [Laughter.]

Mr. BYNUM. Will you tell me why it is, then, that the deposits in the banks exceed the entire circulation in the country about three times?

Mr. PICKLER. What has that to do with my proposition?

Mr. BYNUM. It simply has got this to do, that the deposits are three times as great as the entire circulation, and therefore the checks represent three times as much money as there is in circulation.

Mr. PICKLER. If the gentleman means three one hundred dollar checks are drawn against the same one hundred dollars, that is not legitimate banking, and is a dangerous inflation of credit. It is not that the bank has three times as much cash deposits as its circulation; it may have three times as much credits. This does not interfere with my statement as to checks and drafts. Can a man draw a check unless he has money to draw against?

Mr. BYNUM. No, but the money is deposited by different persons. The deposits are three times the amount of circulation.

Mr. DINGLEY. If my friend will pardon me, his check may be drawn against a credit given him by the bank.

Mr. PICKLER. Yes, but when the check is presented it takes actual cash to meet it; credit will not. I want my time extended if I am to be interrupted. The gentleman says that a man may draw his check against a credit that is given him. If he draws it against a credit, he had deposited money to obtain that credit. No bank honors a check unless it is drawn against cash or a cash credit, and the bank must have the money to pay the check, so that it is only the representative of money actually existing in the bank. Of course credit, as suggested by the gentleman from Indiana, may largely exceed the actual cash. A may deposit $100, against which he may check; the bank may loan it to B, and he may deposit it in same bank, and he may check against it, but when either A or B checks the bank must have the actual cash—somebody's cash to pass over to the holder of the check; just as to obtain a draft you must have actual cash to the amount of the draft, so that the use of a check or draft is only a convenience, and does not lessen the amount of actual money required to do the business.

The SPEAKER. The time of the gentleman has expired.

Mr. PICKLER. One moment and I will be through.

Mr. PAYNE. I ask that the gentleman from South Dakota [Mr. PICKLER] have a minute longer.

The SPEAKER. Without objection the gentleman will have one minute more.

LONG TIME CHECK.

Mr. PICKLER. It seems to me that the proposition of the gentleman from Ohio [Mr. HARTER] that the use of a draft or a check lessens the necessity of actual money must be based on about the financial theory of a certain young Israelite of whom I have heard. An old Israelitish banker of whom I heard a few days ago had become rich in the business. His nephew Isaac had been associated with him in the business, and he was desirous to have his wealth go to Isaac at his death; so he brought Isaac to his bedside, and he said, "The physicians tell me I am only to live a short time. You have been a good and faithful friend and relative to me. You have been loyal to my interests and I desire to turn over to you my entire wealth except $500 in cash that I began business with. That I wish buried with me. "Now, I want you to deposit $500 in cash in the coffin with me, because I want to take it along with me." Isaac, tenderly regretting the sad event, said, "All right, I will do so." But the old Israelite was a little fearful that Isaac might be tempted by the glittering $500, so he made known to the rabbi what his request was, and asked the rabbi to see that Isaac carried out this promise. So the venerable Jew in time died and the rabbi went to the funeral.

[Here the hammer fell].

Mr. PICKLER. Will my colleague yield me a half minute?

Mr. LUCAS. I will.

The SPEAKER. How much time does the gentleman yield to his colleague?

Mr. LUCAS. Half a minute.

Mr. PICKLER. So the rabbi examined the body and could not find the money. He called Isaac and said to him, "Did not you promise to bury with our old friend the $500, the amount he commenced business with?" Isaac said, "Yes, I did." The rabbi said, "You did not do it." "Oh, yes I did," said Isaac, "you will find my sheck in his vest pocket." [Laughter.]

I believe there is no danger whatever of silver monometallism. Silver dollars have been at a premium the last few days in New York City, and the Secretary of the Treasury of the United States declares that he has not had sufficient silver to redeem Treasury notes presented. There is not a man in all this country who does not believe silver a sound currency. The ratio of 16 to 1 is the money in which our debts have been contracted and in which it is fair, right, honest, and just to pay them. Other ratios are compromises. If all the amendments for silver shall be voted down I shall vote against the repeal of the Sherman law; shall vote

AGAINST REPEAL OF THE SHERMAN LAW

Because it is all that is left in any way favoring silver coinage.

Because its unconditional repeal places this country on a single gold standard.

Because it now adds to our circulation from three to four million dollars per month, and if repealed it contracts our currency in that amount, and will compel the sale of Government bonds to buy gold to take the place of silver, thus imposing a tax on the people.

Because its repeal absolutely stops the coinage of silver in this country, and further reduces the price of silver bullion, and likewise the prices of our products.

Because I do not believe it responsible for the present panic to any appreciable extent, but that it has been seized upon by the present Administration to drive the country to a single gold standard, at the dictation of the money interests of the country.

Because the people of the country want more good money in circulation, while this repeal lessens it by fifty millions per year.

Mr. LUCAS. Mr. Speaker, I represent a constituency of diversified industries. Sixty-five per cent of the people are engaged in agriculture and stock-raising, 25 per cent are engaged in mining, the net proceeds of whose labor is an output of $500,000 each month in the year in gold, besides a small percentage of silver. Strange as it may seem to the gentlemen who advocate the gold standard, more than 80 per cent of the men who dig, smelt, and prepare six millions, or more, of gold each year for the money market of the world believe in the silver dollar. They will not consent that silver shall be demonetized and driven out from the marts of trade and business in this country.

The farmers are even more decided in their opinions; they love the jingle of the dollar of the daddies.

It has been repeatedly said from this floor that to enact free coinage, to utilize the products of one of our great industries, will bring us in conflict with England and drive all the gold out of our country and into the coffers of other nations, and especially that of England. Indeed, it seems to me there is quite as much solicitude about what England will not do for us as there is as to what we shall do for ourselves.

I belong to that large class of Americans who do not care what England will or will not do. If we have reached a period in our history when we must consider what England will do before we provide relief for our own suffering countrymen, it is time another Jefferson shall rise up and draft a second Declaration of Independence. If we maintain the double standard, as does France, a near neighbor to England, suppose we do, for a time, lose some trade with England. We will make it up and more, too, by increased trade with nations who are friendly to silver. This fact was clearly and ably stated by the gentleman from Missouri [Mr. CLARK] a few days ago.

This matter is solely a business one. There is no sentiment in it. England has no love for this nation, as has been demonstrated more than once, and as we grow in numbers and wealth her jealousy is more manifest. She never lets an occasion pass by to embarrass or retard our progress without exhibiting a desire to subjugate and rule our people. The time has gone by when this can be done in any other manner except through the power of money, and so sure as we accept gold as the only standard of money for a time we shall be at her mercy. My home is near the base of Harney Peak, where the earth is full of rich tin ore. A syndicate of lords, dukes, and capitalists of the English Government own a majority of the stock of those mines.

The mines have been developed sufficiently to prove beyond a doubt the wealth and inexhaustible quantities of the ore. For years a contest has been going on between American pluck, energy, and progress on the one hand and English capital, selfishness, and bullyism on the other. Our own citizens are anxious, solicitous, and determined to set the ponderous machinery, that is all in place, to going, and thus open up one of the greatest industries of the age, but because the product will come in competition with mines in Wales, owned by the same men and operated by cheap labor, they refuse to give consent; the result is, paralysis rests upon the industry. If we ever succeed in breaking the iron grip they hold upon the mines, in less than a year it will be impossible to find a Democrat who will not say, "I always knew there was plenty of tin in the Black Hills."

Now, what these English capitalists are doing with the Harney Peak tin industry the Government of Great Britain is attempting to do in our national finances, and it seems to me they have some able and faithful allies in this body.

I do not believe that silver or the Sherman law is responsible for the present crisis in our business affairs. The quantity and quality of the money in circulation is not different from what it was a year ago. The people have faith in the money. A year ago the country was in a high state of prosperity; labor was sought after at remunerative prices. The price of a day's labor would purchase more of the necessaries of the family than ever before in our history as a nation, and I call the attention of the Democratic side of this body to the fact that the McKinley tariff law was in full force then, as it is now.

But now the people expect that the declarations of the Chicago platform will be executed, that a resolution in the protection laws will occur, and added to that will be the repeal of the 10 per cent. tax now provided for on State bank issue of money.

They expect a wild-cat period to visit the nation as it did in 1858, and for this reason every dollar of good money is being hoarded as far as possible.

I shall not vote to destroy silver, but will vote to retain it in our monetary system, and under no consideration will I vote to repeal the Sherman law unconditionally. [Applause.]

Mr. HARTMAN. Mr. Speaker, my justification in asking unanimous consent of this House to proceed for ten minutes rests in the fact that I represent a State which produces more gold and silver combined than any other State in this Union.

The SPEAKER. The gentleman asks unanimous consent to proceed for ten minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. HARTMAN Mr. Speaker, in this time I can not hope to discuss at any great length the pending question upon its merits; but I desire, with the permission of the Republican members of the House, to discuss the result of the vote upon the pending question upon the politics of the country.

Mr. Speaker, there is a custom which prevails in this House, which has almost ripened into a rule, that a new member is not expected to consume the time of the House until he has been here at least some months, but the State from which I hail is a State which but a few months ago had as bright an industrial future before it as any one of the United States, but whose industrial system to-day partakes at least of its full share of the depression and financial fear which pervades the entire country.

The present deplorable condition of the business of the country should invite a full and free discussion of all propositions for its relief, for each day adds to the already enormous record of business disaster and distrust another chapter of bank suspensions, of assignments and business failures, of mills and factories closed, of mining operations suspended, and of thousands and tens of thousands of employés thereby deprived of the means of obtaining the very necessaries of life. Each State has its full quota of idle men, and the disaster is national. Commercial paralysis seems to have afflicted our people, and financial distrust has degraded the exchange of our country into mere paper collections of a doubtful character.

Up to two months ago the exchange issued by our banks was received as cash and placed to the credit of the depositor, while now it is treated to the same scrutiny and sent through the same channel as a draft upon a private individual, with the chances that it will not be honored when presented. In the last three months real estate values in the entire country have decreased; the values of stocks, of farm products, of the products of our mines, indeed, of almost every commodity, have declined, in many instances have reached the lowest point in history, and we are told that all this disastrous record is the direct and immediate result of the purchasing clause of the Sherman law: but as I have read and reread that assertion, and looked and listened for the reasons assigned in support of it, I find that the principal argument used to sustain it is that the purchasing clause is driving our gold from the country, and the fear of our reaching an exclusively silver basis naturally follows.

But if this be true it would indeed be interesting to learn why it is that under the same law that drives gold out in May and June it is permitted to return in August, and, further, I should like to know why it is, if when gold returns in August, that our commercial ills are not, at least in some slight degree, alleviated?

If it is vitally essential to the nation's welfare that our supply of gold be maintained or increased (if you please), I submit that the desired end can be attained by our Government adopting these two policies:

First. Provide that all custom duties must be paid in gold.

Second. So adjust your schedule of import duties as to leave the balance of trade in favor of this nation. When this is done you have not only maintained but have increased your supply of gold, and the argument that the honor of our nation in its dealings with other nations must be maintained is answered.

If that purchasing clause of the Sherman law is in itself so fruitful of bad results, why is it that the crash of two months ago did not come three years ago when the law was first enacted? Why is it that our country continued to prosper during all the period of time that the Sherman law was in existence, from the 14th day of July, 1890, until two months ago, when crisis in our financial history came, if the Sherman law is responsible for the condition of the country? Why is it so?

The Sherman law does not in the least degree contribute to the general unrest, uncertainty, and lack of confidence which

pervades every section of the United States. It has simply been made a scapegoat of by two classes of people, first, the monometallists, the single gold-standard men, who seek every opportunity to degrade silver; second, by the Administration, for the double purpose of aiding the gold-standard men in their crusade against silver and at the same time to have some bugaboo to hold up to the public gaze and lampoon as a public foe to divert attention from the true cause of existing conditions.

I do not believe that these conditions are traceable to any single cause, but to a combination of many causes, and I do believe that the two causes above all others is the apprehension of the business interests of the country that the existing tariff legislation is to be uprooted and the free-trade policies of the Democratic party enacted in its stead, and the further fear of adverse legislation to silver under the recommendation of the Administration. Men whose capital is invested in those industries toward which it has been the policy of the Government to extend the fostering hand of protection are fearful that the party now in power may keep the pledges they have made in their national platform, and by so doing the bars are let down and competition with those who are engaged in like industries in other countries where labor is cheap must follow.

All such industries must be rearranged to fit a new basis; reduction of expense in all lines and in all departments must be made to enable our people to successfully carry on such competition. From this fear, and with the decline of silver by reason of the relentless crusade against it, almost every class of property has largely decreased in value, until at last the Democratic dreams of cheapness have been realized. We have cheap wheat, cheap wool, cheap silver, cheap men, everything cheap but gold; and those who agree with the Administration, and who support the bill introduced by the gentleman from West Virginia, are going to assist in intensifying and perpetuating this magnificent era of cheapness in the products and labor of this country, and in making still dearer the money of the country in which our debts and obligations must be paid.

Debts have been contracted on the faith of existing laws; upon the faith of the continued issuance of certificates upon the bullion deposited in the Treasury and the consequent replenishment of the currency, and by the unconditional repeal of the Sherman law the volume of the currency will be no longer increased, the value of money will continue to grow with the increase of business, and the debtor will find himself paying his debt in much dearer money than he received when his debt was contracted.

With a free-coinage bill at the established ratio of 16 to 1, the demand for gold will be lessened and of silver increased. The increased use and value of silver will decrease the necessity for gold and the two metals will meet half way. But it is urged by the gold-standard advocates that the parity between the two metals can not be maintained, and that the parity between the metals would be destroyed if the Treasury notes should be redeemed in silver.

But the experience of France proves that this proposition is not correct, for France maintains more than $200,000,000—more of silver money than we have—at parity with her gold money by electing to redeem her $700,000,000 of legal-tender notes as frequently in silver as in gold.

But when the Administration sees fit, as it has done, by electing to pay "gold coin" exclusively for Treasury notes to administer the life out of the law, and when it sees fit, as it has done, to partially suspend the operation of the law which the President tacitly admits in his message is mandatory, it is not difficult to see that the Administration hopes to maintain the parity between the two metals at the ratio of one of gold to none of silver.

But they say it is a dishonest dollar. That it is a 60-cent dollar. It is despised and spat upon by the gold-standard men, and yet it will buy just as much merchandise as their gold dollar. And this same dishonest dollar, this fraud and cheat in the financial world, as well as the Treasury notes, no longer ago than the 22d of August, in this year of grace, were selling at a premium of 2½ per cent, while gold coin in transit from Europe was selling at a premium over clearing-house checks of only three-fourths of 1 per cent.

Gentlemen may assert and reassert the dishonesty of silver money, but they can not overturn these facts.

Mr. William P. St. John, president of the Mercantile National Bank of New York, expressed these views upon the President's message, which are worthy of the consideration of the members of this House:

According to the message, the assembling of Congress is in order that "present evils may be mitigated and dangers threatening the future may be averted."

The present evils are attributed by the President to the operation of the so-called Sherman law. The evils to be averted are not even hinted at, unless we are to believe them every one involved in this same law.

The President confirms the impression that the Secretary of the Treasury is commanded to purchase monthly 4,500,000 ounces of silver bullion. How then, does his Administration presume to purchase only 2,225,000 ounces during July? And why is there so little present promise of his purchasing 4,500,000 ounces during August?

MINT DIRECTOR'S ANSWER.

The Mint Director's answer is that silver is not offered him at the market price; in other words, that what is offered him is offered above the market price. But observe that silver offered him is for delivery in Philadelphia for cash next day. The silver offered him and rejected at the price has, on every steamer day during all July, elected to go to London and elsewhere through London, although distant by nine days, with freight, insurance, and interest to be taken into the adverse account.

The President proclaims that all but a very small quantity of this silver bullion remains uncoined and without usefulness in the Treasury.

To this I answer—

First. That the silver bullion served when purchased to create the Treasury notes that are circulating as our money.

Second. It is the fault of the administration of the law that the bullion remains uncoined. It seems to me eggregious folly to let it so remain when at this very moment an official circular announces that silver certificates can not now be issued for deposits of gold because there are no silver dollars on hand with which to redeem the silver certificates if issued. The law requires the outstanding issue of silver certificates to be identical in amount with the silver dollars in the Treasury.

Third. In a voice which every hamlet hears before the sun set, this very moment would have seemed to be propitious to allay alarm instead of instigating it. The practical conditions existing at this moment are that while gold coin in transit from Europe commands a premium over checks payable in the clearing house of three-fourths of 1 per cent, these Treasury notes automatically created by this Sherman law, and silver certificates, as well as the stigmatized 56-cent coin itself for which these silver certificates can be obtained, are selling indiscriminately at a premium of 2½ per cent in Wall street.

The President bemoans our recent exodus of gold. That exodus had ceased already several weeks ago. Subsequently and right up to an engagement in London this very day more than $15,000,000 of gold have chosen to return to us. I doubt not more and more will follow during the many months in which the Sherman law will still be unrepealed.

But it has been urged upon this floor that the basis of the value of the metals that are produced in this country depends upon the cost of production of that metal, and that because there has been a great reduction in the cost of production of silver since 1873 as compared to the present time, that therefore the price of silver has been reduced in proportion to the cost of production of the same.

In the first place, the statements that have been made here that the cost of production now is about one-third of what it was in 1873 are erroneous; but admitting for the sake of argument that they are true, and that the cost of production of silver has been reduced as stated by those who have announced the fact, by reason of improved machinery and the skill of inventive genius, and let us see where it leads to.

There has been the same improvement in the machinery necessary to mill and save gold as there has been in the machinery used in the reduction, milling, and saving of silver; and therefore, to strictly apply the arguments of the gentlemen who have been making these statements upon this floor, the price of gold has been proportionately reduced, and if their figures are correct, then gold is only worth one-third as much now as it was in 1873.

There is another very important question, which those who by their votes propose to put us on a single gold standard seem to forget when they assert that there is sufficient gold at the present time to maintain the volume of business, and that there will be sufficient increase in the supply of gold to maintain the increased volume of business, and that fact is this: that one-third of the gold produced in the United States to-day is produced at the same time and from the same mines as silver and in conjunction with silver. And further, this gold is produced from mines which are not sufficiently valuable for gold alone to justify their being worked, and therefore if we are forced upon a single gold standard, and silver mining is made impossible by reason of adverse legislation or otherwise, the future product of gold in the United States will be decreased one-third.

I am willing to admit that there are some gentlemen on this floor who are perfectly willing to take the step, with the knowledge that the supply of gold will be reduced one-third. It is only natural that those who possess the supply of gold now in the United States should be perfectly willing that no more should be produced, for in that way the value of their possessions would be greatly enhanced.

It is with much hesitation and with every deference to the other members of the House that I say I can not understand why any Republican member of this House should deem it his duty to support the Administration in the furtherance of its proposed silver policy. On the contrary, every reason is against such a course. The declarations of the party in the past justify me in this statement. In the national platform of 1888 our party declared, "The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic administration in its efforts to demonetize silver." This itself should be sufficient.

It seems to me that no Republican should hesitate a moment in his choice between standing by the declaration of his party or indorsing the policy of the Administration of the opposition

party. The silver Republicans of the United States had a right to rely upon that declaration of the national platform. We considered that it was made in good faith, and we still so consider. We stood by the declaration of the platform in all its issues. We stood shoulder to shoulder with you upon the tariff policies of the party. You wanted us, you needed us, and we gave you all we had to give.

Now, the crucial test has come. We believe in reciprocity. You have asked for our support and votes upon the policies of the Republican party, which, while affecting the entire country, are more directly felt by the manufacturing districts in the East, and we gave them to you, and now we ask your support for that part of the declared policy of the party which, while it is a matter of general interest throughout the United States, has a direct effect upon the interests of the people of the Mississippi and Western States, and I have a right to ask you as Republicans here, what are you going to do about it?

Silver was good enough to indorse in the national platforms of 1888 and 1892, and you indorsed it, and we accepted that indorsement in good faith. Are you going to make it good? I am jointly interested with other gentlemen upon this floor in maintaining the parity between the two metals, and I am also jointly interested in maintaining the parity between the declarations of the Republican party upon its tariff plank and upon the silver plank. We ask that if the tariff declaration is to be worth 100 cents on the dollar that the silver declaration of the party shall be equally valuable here to-day.

Are you going to say to us, "Go back to your people and tell them that the Republican party has juggled with them upon the silver question: it has made dupes of them; it has obtained the votes of their Senators and Representatives upon its great tariff policies, directly benefiting the great manufacturing centers of the East, and therefore, having obtained all the East wants, we repudiate the declarations of the party in favor of silver and abandon it to its fate"? Do you want us to go back to our districts and inform the Republicans there that the Republicans of the East were so anxious and eager to disavow the silver pledges of the party that they have even allied themselves to the Democratic Administration in its relentless war against silver?

Send us back with such a message as that, and—I do not speak in any words of threat—send us back with such a message as that, and hereafter Republicans in those districts will be as scarce as money or solvent institutions under the present Administration. [Laughter.] I can not believe, I will not believe until the stern truth is thrust upon me, that the Republicans of this House are willing to say to the silver Republicans: "We care more for the Democratic party than we do for the declarations of our own party. We are willing henceforth that the standard of Republicanism shall be lowered in every district represented by a silver Republican. We have all the legislation we want. Our tariff legislation is complete. We are secure."

I can not believe this, gentlemen, for two reasons: First, the Republican party has given to the West all of its most beneficial legislation. It is the party of growth, of progress, of prosperity. Its policies have made it possible for great States to be builded in a Territory which, but a few decades ago, was practically unknown. On the faith of its legislation and its declared policies millions and millions of dollars are to-day invested in silver mines, in silver properties, in equipments necessary to operate silver properties which the unconditional repeal of the Sherman law will render absolutely valueless; and remember, gentlemen, a great majority of that property was sold, in the shape of machinery, by your people to ours, yet now you propose, by this pending act of legislation, by your votes in support of it, to strike down and render all that property utterly valueless.

Let me tell you that there are scattered throughout the Rocky Mountains, through its ranges and its valleys, thousands and thousands of men, women, and children, citizens of the United States, not aliens, humble and honest, who have accepted the invitation of the Government to make homes in the rugged fastnesses of those mountains and to dig and delve in those hills to increase the wealth of the United States in the production of gold and silver. There their accumulated earnings of years are invested, and I say to you that the President's policy and your policy, if you make it yours, will render those earnings absolutely valueless.

Are you willing to do this thing? Are you willing to aid in doing it? I can not and will not believe it. I am one of those who believe, equally with other gentlemen here, in maintaining the honor and the integrity of this nation in its dealings with other nations, but I do not consider that obligation to be more sacred or binding than the obligation of the Government to keep faith with its own citizens.

We of the silver States are charged with selfishness because, forsooth, we object to having one of our chiefest industries destroyed. But let me put this question to you gentlemen: Suppose there were a bill introduded in this House which would, in its operation, wipe out the manufacturing industries of the great State of New York and of the New England States, which would destroy the wool industry of the great State of Ohio, which would put out the fires in all the furnaces of the great State of Pennsylvania, what would be the result?

Why, a wail would go up in this House in comparison with which the feeble protests of the silver men would sink into utter insignificance. But you say that our protest is founded in sordid selfishness, while yours would be, of course, the echo and the impulse of the most generous and most patriotic purposes of the human heart. [Laughter.] Let me say to you, gentlemen, the same impulses move us as would move you. Again, you may think you are secure in your tariff legislation, but you are not. And I want to say right here, Mr. Speaker, that I am in favor of the protective tariff of the Republican party. The McKinley law is the wisest law of its kind that was ever placed upon the statute books of this country, and I want to help maintain it by vote and by my voice wherever I may be.

But if the national Democratic platform means anything, it means that at some time before this Administration closes there will be made such an onslaught on the existing tariff legislation as will shake it to its very foundations. And when that time comes the gentlemen from the New England and other manufacturing States, who in the face of the declarations of the Republican platform intend to vote silver out of our monetary system, will come to us who represent silver districts and shower upon us a wealth of fraternal love, and we shall be expected and invited to help withstand that onslaught for the reason "that the platform declares for protection," because "we must keep faith with the party."

I will not undertake to say what response will be given to that appeal, but we are human, moved by the same impulses that move you, possessed of the same hopes, the same desires, the same ambitions with which you are possessed, and we would indeed be unworthy of citizenship under the flag if in the face of this cruel wrong, if in the face of the utter annihilation of our greatest industry by the aid of the Republican party, we should then come to you meekly and humbly, and cringe and crawl at the feet of power, and kiss the hand that smites us.

[Here the hammer fell.]

Mr. PENCE. I ask unanimous consent that the time of the gentleman from Montana [Mr. HARTMAN] be extended for five minutes.

There was no objection.

Mr. HARTMAN. I thank the House very much for its courtesy.

Mr. Speaker, I appeal to the Reed Republicans of the Fifty-first Congress, to the leaders of the party on this floor, to every loyal Republican here to-day, by his vote on this question not to put obstacles in the way of Republican success in those Western States. We have fought long and hard to plant the standard of Republicanism upon the crest of the Rocky Mountains in those States; and you, by your votes to-day on this question, by voting in support of the unconditional repeal of the Sherman law will make our task doubly, yes, ten times as hard as it has been in the past.

I want to say to you, speaking of my own State, that I am here by the small plurality of 172 out of 49,000 votes. I want to say, furthermore, that this is not a selfish appeal I am making for the Republican party in these respective States. It is an appeal to the Republican party of the nation—why? Because I submit to you, gentlemen who are so much abler and better politicians than I am, that you can never hope to regain control of this Government unless you have the silver States with you. Why? This is not a wild declaration, a chimerical declaration of mine.

I put it to you, where will you go for the support you require? Go to the South, and what is your encouragement? None whatever; yet that is all that is left. Yet how can you expect to gain control of the United States Senate unless you have two Republican Senators from Montana, two from Idaho, two from Nevada, two from Colorado, two from Wyoming? At least three out of them, you must have; and three of them it is absolutely impossible for you to gain if you wipe out the Republican party in those States.

I put it to you simply as a question affecting Republican success, not simply as a question whether or not some of us boys can be returned to Congress. That cuts no figure. The question is, For what can the Republican party of the nation hope? Please do not, because this suggestion proceeds from one of the humblest members of this body, reject it. Let it stand on its merits. The suggestion is either good or bad; I leave it to you to decide.

I make no appeal to that class of political being that dates its existence from the year 1884. At that time that fragile, ethereal,

wavering creature commonly known as the "mugwump" was hatched from the chrysalis of its self-conceit and fluttered out upon the political horizon to be admired of mankind. [Laughter.]

But soon becoming exhausted by its intense admiration of itself it lay down by the wayside and fell into a deep sleep; and during its slumbers the juice of that magic flower of "civil-service reform" was sprinkled upon its eyes, and, like Titania in the Midsummer Night's Dream, it became deeply enamored of the first object upon which its eyes fell on awakening. It is needless for me to say to this House that that object was the present President of the United States. [Laughter.] Let me indulge in the hope, before I close, that by the vote on the pending question it will be conclusively demonstrated to this House and to the world that that species is extinct on this floor. [Laughter and applause.] I thank you, gentlemen, for your attention.

Mr. BARTHOLDT. Mr. Speaker, when I entered this House it was my firm determination to merely vote and not to speak upon this question, not only because I am a new member, but because older and wiser heads would, I knew, state in abler arguments and more eloquent terms what I conceive to be the immediate needs of the country and our duty resulting therefrom. When I take the floor, after all, it is because under the method of procedure which the majority party has laid down for this House, no time will be saved by remaining silent; and second, because from the remarks of those of my distinguished colleagues from Missouri who have already spoken, wrong impressions might be gained as to the attitude of the people of our grand old State on this most important question.

It might be inferred from the speeches of my colleagues on the other side of this Chamber that the same sound sentiment which at one time successfully resisted Missouri's surrender to the Confederacy, was now advising a unanimous and unconditional surrender to the silver barons instead; that, in other words, the people of Missouri were a unit in favor of the free and unlimited coinage of silver at the present or some other ratio. This, Mr. Speaker, is not true. It is a reflection upon the sound judgment, upon the intelligence of our people. I readily understand how this false impression might have been created. Our State has fifteen Representatives upon the floor of this House. By an artful gerrymander 266,909 voters were entitled to send thirteen Representatives, while 227,480, or, counting the entire anti-Democratic vote, 265,740 votes, could only send two. Our side of Missouri has not been heard from, and I now propose that it shall. It is the progressive new Missouri that I shall speak for, not the one of ante bellum days, but the grandest State of the Union, with its great manufacturing and commercial interest and its three millions of people, whose welfare and very existence depend upon a sound and stable currency.

I am speaking for the great metropolis of the Mississippi Valley, St. Louis, and her extensive territory of gardens and farms, and her manifold commercial, industrial, agricultural, and railroad interests. These interests have spoken with no uncertain tone of voice as to what they expect us to do in the present emergency, but to the gentlemen on the other side who have thus far represented my State upon this floor they seem to have appealed in vain. These distinguished gentlemen continue to fiddle while Rome is burning.

Yes, we say, Rome is burning; when banks, factories, and business houses are closing, and thousands of laboring men are being locked out and deprived of their daily bread. But it is not a question as to the origin of the conflagration—we are all fairly familiar with the chain of causes and effects—the duty of the hour is to extinguish the flames. How shall we revive the hopes and restore the confidence of our people? That is the problem we are called upon to solve. To review from the standpoint of science and philosophy the monetary systems of the world will not solve it. To discuss, academically, the niceties and intricacies of the financial problem will not solve it. To make unpatriotic distinctions between the East and the West, and to draw undemocratic lines between the interests of one class and those of another class, will not facilitate, but render more difficult the final solution.

What is needed is action, immediate and decisive action. The suffering people pray for and demand a certain medicine. Shall we stubbornly withhold it? There is not a member on this floor who is not morally convinced that a proposition to repeal the silver-purchasing clause of the so-called Sherman law, if submitted to a popular vote, would be carried by an overwhelming majority. I for one shall vote according to that conviction. It matters little, Mr. Speaker, whether this provision of the law is the only, the main, or any cause whatsoever of our financial and economic difficulties, whether or not its repeal will cause the immediate return of business prosperity, sunshine, and hope. If not financial experts we are, as public men, students of human nature, and as such we know that imagination is as powerful a factor to counteract panics as it is to cause them. If, at a cry of "fire" in a theater, the actor upon the stage succeeds in making the audience believe that there is no danger every person might probably be saved, while in cases where there really is no danger the most appalling calamity might result, when the fears of the spectators could not be allayed.

It is one of the saddest spectacles of history to witness the American people, the greatest, noblest, most self-made, and most courageous of all nations, lie prostrate, shivering from causeless fear, and thereby depriving thousands of work, of home, of happiness—and this in the midst of plenty, with abundant crops of wheat, and cotton, and corn, and with the natural resources of our great country barely scratched; with riches that will prove ample for millions to come—for ten times the present number of inhabitants. What will the future historian call this sudden fright, this unaccountable loss of heart, and hope, and courage, when manifested by a people that has twice conquered a continent, once from its oppressors and again by subjugating nature?

Has this same people been vanquished by the power of money, has the "almighty dollar" wiped out our virtues and manly qualities, and wound around our limbs the chains of abject slavery? It is time for the American people to disprove such imputations. Yes, after all, the people themselves will prove their best doctor. A dollar changes hands ten and twenty times a day, and when the dollar is withheld from circulation, as is the case now, results as we now see are inevitable, no matter what the total volume of money is. If that volume were twice as much as at present, then $2 would be withheld where one is now, and the result would be the same.

But, Mr. Speaker, this hoarding of money is, I claim, as unpatriotic, aye, as disloyal an act as to engage in active hostility against the Government. Each citizen, it is true, has an abstract right to do what he pleases with his money, but he enjoys this right only by sufferance of all other citizens and of the Government. This state of civilized society, disputed by none and recognized by all, imposes certain duties, and the very first of these duties is faith in and loyalty towards the Government. Now, I ask, are those who are permitting themselves to be haunted by groundless fears, and who keep, terror stricken, what they possess in the firm grasp of their hands, are they fulfilling this most sacred duty? Do they not rather ignore and violate it by their fear and distrust?

Let us never forget that the possession of worldly goods is, after all, only a trust which changes hands from generation to generation, and whose administration must be characterized by an absolute faith in the ability of the Government to protect it. If, then, the people will help themselves, by taking new heart and hope, they will not only fulfill a duty toward their country and Government, but they will thereby obtain more efficient and more substantial relief than could be afforded by any action of ours. However, we have to deal with human nature as it is, and not as it should be, consequently a start, an impetus, seems to be necessary to revive the hopes and restore the confidence of our people. Because of the almost child-like faith of the masses in what they consider the marvelous effects of legislation, I believe the repeal of the silver-purchasing act to be the means of such an impetus. This we are being told almost daily by merchants, manufacturers, and business men from all over the country. Are their opinions entitled to respectful consideration, or do we understand better than they what is their own business? The President, I am free to admit, has given the proper answer to these questions.

St. Louis justly enjoys the reputation of being, in a financial sense, one of the soundest and most solid cities in the country, and for this reason, Mr. Speaker, her people and the people of my district, which comprises two of the greatest and most well-to-do counties of the United States, have probably suffered less from the present crisis than other parts of the country; but since our common interests can not be injured in any one part without jeopardizing them generally, our business men, our farmers and laboring men, join in the general demand for relief and ask for the speedy repeal of the law which compels the Secretary of the Treasury to take in silver with one hand and pay out gold for it with the other. They ask, furthermore, as a measure of temporary relief, permission for the national banks to issue currency up to the full value of the United States bonds deposited by them with the Government.

Such a proposition, I think, can safely be enacted into law. It occupies neutral ground, as far as the gold and silver forces are concerned, and it would somewhat relieve the money stringency by adding about $20,000,000 to the volume of circulation. Up to this moment I have not yet heard one valid reason why the circulation secured by our bonds should be confined to 90 per cent of their value. But in this case, too, the old proverb quoted by the President holds good, that "he gives twice who gives quickly." Congress alone stands in the way of the relief indi-

cated, and for every hour of delay its majority is responsible. To save time I would suggest that the Wilson bill be amended by incorporating in it the proposition above referred to.

After the repeal of the Sherman act the question of a thorough revision of our financial system will be in order, and it should be met with a truly national spirit and a sense of patriotism, of fairness towards all. No pets or hobbies should interfere with a candid discussion and with such a disposition of the question as will serve the best interests of all parts of our common country. To comfort our friends on the other side we are even willing to say with the President that "this matter rises above the plane of party politics," but we must insist that the weapon of sectionalism shall not be used in this friendly combat. It has already been used, with moderation here, but with the most fanatical zeal outside of this Hall. The governor of Colorado has amended his harangue, but even in Kansas they talk of a movement "to bring the people of the West and South into such united action as will protect and foster interests naturally allied."

This talk is sacrilege, pure and simple. Not only the people of the West and South, but of the whole country, should be united to foster the common interests of the Republic, for every part of the country is certain to be affected by the misfortunes and to share in the prosperity of any particular section. In spite of all this talk, I venture the prediction that the issue of secession is decided for all time to come; that over Wall street as well as over the silver mines will forever float the Stars and Stripes, and those who touch the sword will perish by the sword.

Our friends from the silver States, to whose speeches I have carefully listened for a full week, seem to be comprehensive mainly of one thing—the demonetization of silver as a result of the repeal of the law of 1890.

But in face of the fact that we now have more silver than gold in this country, namely, $615,000,000 as against $604,000,000, every dollar of which will, even after the repeal of the Sherman act, be kept at par with gold, these fears seem, for the present at least, groundless. And this silver will not, like gold, leave the country, it will stay right with us. Experts teach us that the friends of silver have more to hope and to expect when our present policy of silver purchases is stopped than even from free coinage; for such coinage would not last long under the circumstances. We can not defy the world. Free coinage would, instead of establishing bimetallism, inevitably result in monometallism, but on a silver basis, while a change in front on our part now would eventually compel Europe to again open negotiations with us and to make concessions in the direction of the establishment of an international ratio between gold and silver.

Upon this event alone our bimetallists must rest their hopes. Without disaster to ourselves we can not defy the world by dictating and maintaining a financial policy which is at variance with the monetary system of all other great nations, with the sole exception of France. And France it is that is constantly being referred to by the gentlemen on the other side as furnishing a shining example of financial wisdom. They do not mention the fact, however, that the French silver is kept at par with gold by the powerful aid of the Bank of France, the stock of gold in the bank being so large that the people are satisfied the silver will not be allowed to lose its artificial value. Then bear in mind that silver coinage was stopped in France eighteen years ago.

According to a report of the condition of the Bank of France it has in its vaults 259,000,000 of 5-franc coins. That leaves outstanding in the hands of the people only $458,000,000 worth. The notes of the bank, which are liable to be presented at any time for redemption, amount to $642,000,000. Therefore the total amount of notes and silver to be looked after amounts in round numbers to $1,100,000,000. To protect that sum the bank had a gold reserve of $317,000,000, or nearly 29 per cent. The United States, on the other hand, has to protect its eight hundred and twenty-seven million of notes and silver with a gold reserve of only about 12 per cent. It is easy to see the greater safety of French methods. As for the silver in the vaults of the French bank, it is no more a reserve than is that in the vaults of our Treasury; for when notes are presented for redemption, if the bank were to insist on forcing silver on the holders they would be alarmed, just as they would be here.

But, Mr. Speaker, even a change of ratio, if resorted to to revive free coinage, appears to be impracticable. An estimate of the Secretary of the Treasury shows that such a change (from the present ratio of 16 to 1 to 20 to 1) would cost the Government exactly $112,866,321. This is the expense for the new bullion for the enlargement of the dollar, for abrasion and melting, for recoinage, for copper and transportation. Are the people ready to expend this tremendous amount for what is at best an experiment which can not succeed without the coöperation of the rest of the world? I should think not. But the true relation between gold and silver is now even 28 to 1, and with the adoption of this ratio the loss to the people would be correspondingly higher, namely about $250,000,000.

So far as the legislation of the United States was regarded as a means of supporting the value of silver, it must be admitted to be a failure. In February, 1878, the market ratio was 17.38 to 1; in July, 1890, it was 19.16 to 1; and since then it has fallen to 28 and 30 to 1. In face of these facts, further attempts of this kind are unworthy the common sense and dignity of a great nation. These facts show better than words the impotence of legislation by one State to control the value of the metal affected by the action of the rest of the world. This fall in silver, moreover, without any corresponding fall in the prices of commodities and staple goods, makes clear what may have been before doubtful, the departure of silver from a position where it can influence general prices. Also, neither in 1876 nor in 1890, when silver fluctuated so greatly, did prices follow silver. In short, it has become evident that the world's prices of to-day are not quoted in silver, nor are they dependent upon the value of silver—a situation which has been brought about slowly but steadily in the last twenty years.

Prices can not be regulated by legislative action, and they can never be fixed by the mere quantity of metallic money in the country. They depend much more upon conditions of credit and banking, a fact which will be better understood when we remember that about 95 per cent of all the commercial transactions in the United States are effected without the exchange of actual coin.

If by free coinage a single cent would be added to the price of wheat or a single dime to the weekly wages of our workingmen, I would vote for free silver; but this not being the case, I shall support that measure which will secure to each citizen the full value of what he has—the bill to repeal the silver-purchase act. It is the first necessary step to secure honest money, a sound currency, the stability of trade, and the employment of labor, and to restore the faith and confidence of our people. [Applause.]

During the delivery of the foregoing remarks, when five minutes had expired,

Mr. DOCKERY said: I ask that the time of my colleague [Mr. BARTHOLDT] be extended ten minutes.

There was no objection.

Mr. MORSE. I send to the Clerk's desk to be read resolutions of the Boston Iron and Hardware Club.

The Clerk read as follows:

Hon. ELIJAH A. MORSE, *Canton, Mass.:*

DEAR SIR: At a regular meeting of the Boston Iron and Hardware Club held on August 8, the following resolutions were unanimously adopted:

Whereas the remedy for the present depression in business and finance rests wholly with Congress, now in session, and believing that repealing the purchasing clause in the Sherman silver bill will tend to establish confidence,

Resolved, That the purchasing clause of the Sherman silver bill should be repealed and that no legislation should be enacted as a substitute at the present session of Congress.

Resolved, That an expert commission should be appointed to submit to Congress at its regular session in December a comprehensive plan for the readjustment of our currency based on a gold standard.

Resolved, That the special session of Congress should adjourn after repealing the purchasing clause and appointing a commission for the readjustment of the currency.

S. A. BIGELOW, *President.*
F. H. BUTTS, *Secretary.*
A. J. CHASE,
E. L. HALEY,
C. H. BRECK,
Committee.

Mr. PENCE. Mr. Speaker, I ask that the Clerk read the preamble and resolutions which I send to the desk.

The Clerk read as follows:

To the Senate and House of Representatives of the United States of America:

The undersigned, Pioneer Ladies' Aid Society, composed of the pioneer women of the State of Colorado, this day unanimously adopted the following preamble and resolutions:

Whereas we have resided in Colorado since it was first organized as a Territory by Congress, and in common with our husbands and brothers and friends have noticed the growth and prosperity of the State, and endured the privations and hardships consequent upon pioneer life while performing our part in advancing it to its present condition of wealth and importance; and

Whereas we have not failed to notice that agriculture, manufacturing, and commerce are very largely incidental to the great industry of silver mining, and are convinced that with its destruction or serious impairment every other form of industry in the State must languish; and

Whereas we are forced to daily witness great stagnation in business, an alarming depreciation in the value of every class of property, and thousands of idle men and women, but lately thrown out of employment, all consequent upon the sudden stoppage of mining, caused by the low price of silver; and

Whereas we are convinced, both from the facts as history and the exercise of our reasoning faculties, that Congress should at once restore to the statute books of coinage the free coinage of silver, as is clearly contemplated in the Constitution of our country, and that such restoration would at once inspire trade, and commerce, and every other form of business and industry, with prosperous activity; and

Whereas a continuance of the present deplorable condition and an exaggeration of the same through the unconditional repeal of what is known as the Sherman act, must inevitably depopulate the mining section of our common country, destroy or hopelessly break up our homes, and will turn

the pioneers and those who succeed them to poverty and privations of the early days of the State: Therefore,

Be it resolved by the pioneer ladies, That we most earnestly implore Congress to restore confidence, retain or save what is here from destruction, and bring gladness and prosperity to every section of the land, by the prompt enactment of a law restoring free coinage to silver at the ratio between it and gold that existed for more than forty years before its secret demonetization in 1873; and

Be it further resolved, That a copy of these preambles and resolutions be forwarded to the Congress of the United States.

In accordance with the instructions contained in the above resolution we herewith transmit to the Senators and Representatives of the Congress of the United States our action in the matter, and we can not but hope that you will listen to the appeal of the pioneer women of this vast section of our common country.

MRS. N. S. HURD,
President Pioneer Ladies' Aid Society.
FANNIE D. WALTHALL HARDIN,
Secretary.

DENVER, COLO., *August 9, 1893.*

Mr. HOUK of Ohio. Mr. Speaker, I have been content to remain hitherto a quiet listener, without participating in this interesting and important debate. It is my only purpose now to ask the very brief attention of the House to a few words I wish to say in explanation of the votes I intend to give on the various propositions now pending.

First. I am inflexibly opposed to any legislative measure that will result, in my judgment, in the establishment of the monometallic basis of value and currency in this country, either silver or gold.

Second. I regard it as the settled policy of the Government of the United States, plainly indicated by the terms and in accordance with the purpose of the Federal Constitution; a policy established by uniform Federal legislation from the foundation of the Government up to the present time, with the single exception of the act of 1873; a policy declared by the authentic utterances of all political parties and supported by a vast preponderance of the intelligent public opinion of the American people, that gold and silver coins together, upon a proper ratio to be fixed by law, shall constitute the standard money of the United States; that both metals shall be coined at the public mints without discriminating against either, and that a parity of the two on the legal ratio, as well as of all paper money based thereon, shall be maintained by the Government at all times unimpaired.

Third. I regard the bill introduced by Mr. WILSON of West Virginia, to repeal the purchasing clause of the so-called Sherman law, as in accordance with these views, and I will therefore vote for it unconditionally as it stands. [Applause.]

Fourth. The material issue involved in the various amendments proposed to the bill has reference to the ratio upon which the two metals are to be coined. As the disparity at present existing in their bullion market value has been brought about clearly, in my judgment, by artificial and abnormal causes, I regard it as unwise for Congress, at this time of monetary disturbance at home and abroad, to attempt definitely to establish by law the ratio upon which further coinage is to be made.

Fifth. I regard the two precious metals of gold and silver as alike necessary and adapted, under an irrepealable law of Providence, to the uses of mankind as an instrumentality of trade and commerce; that in such use they are as indispensable to the progress of civilization as the fibers and foods, animal and vegetable, and other natural products are necessary to the support, comfort, and shelter of man in civilized life; and that in despite of all efforts of the selfish or avaricious in our own or other countries, to aggrandize themselves at the expense of common humanity, silver and gold will continue to be inseparable in their joint beneficent influence upon human developments in all the indefinite future, as they have been in all the indefinite past.

Sixth. I am in favor of affording the speediest relief possible, by specific legislative measures, to the suffering business interests of the country, and of deferring until the reassembling of Congress at its regular session in December the consideration of such permanent legislation respecting finance and taxation as the welfare of the country shall then seem to require. [Applause.]

During the delivery of the foregoing remarks, when five minutes had expired—

Mr. TRACEY. I ask unanimous consent that the time of the gentleman from Ohio [Mr. HOUK] be extended for five minutes.

There was no objection.

Mr. HOUK of Ohio resumed and concluded his remarks.

Mr. HEARD. Mr. Speaker, it was not my purpose before coming to the House this morning to attempt any discussion of the silver question at this time; but by the indulgence of the House I will now submit a few observations upon one point in this controversy.

While the Sherman bill, or it was then called "the Conger bill," was pending in this House in 1890, I had the honor to present to the House, at some length, my views in opposition to the measure. My observation and the experience of the country, as it has impressed me since that time, give me no ground for desire to change anything that I then said against the propositions contained in that bill. And I have but little that I now desire to add in the way of general discussion of those propositions.

I wish to say, Mr. Speaker, that I shall vote against the unconditional repeal of the Sherman law. While there is no man on this floor who more utterly detests the main principles involved in that bill than I do, I shall in conformity with the wishes of my people refuse to vote for its unconditional repeal, because they believe, as I believe, that there should be given to us some assurance, in connection with such repeal, that its place shall be taken upon the statute book by some law which will recognize the principle for which we contend, the right of free coinage of silver in our mints; in other words, the equality of the two money metals of this country in the mints of the country.

Mr. Speaker, I have no ear for the clamor raised in some quarters, and from which proceeds this demand for the unconditional repeal of the Sherman law, because of the effect of its operation upon the business interests of the country. I can not believe that the monthly addition of over $3,000,000 of currency, as good as gold, to our volume of money makes money scarcer. I do not believe, Mr. Speaker, that the operation of the Sherman law has contributed in any material way, or even in the slightest degree, to produce the condition of affairs which to-day afflicts this country. The trouble is not a want of confidence in the quality of the money of the country; it is not a want of confidence among the people as to the ability of this Government to make, or rather to keep—for the different kinds of dollars of our currency are now equally good—to keep every dollar afloat in the circulation of this country as sound in quality as any other dollar.

Mr. Speaker, I think recent experience in the commercial centers, as well as elsewhere throughout the country, establishes the soundness of the proposition that the people have as much confidence in, and as much desire for, the silver money of the country as they have for the gold.

In evidence of that, Mr. Speaker, I have only to refer to the fact that within the last few days, and to-day, these silver dollars, these derided dollars, and, as the enemies of silver say, these "dishonest dollars," are not only sought for everywhere equally with gold, but that there has been a premium paid for them in gold. We find that a premium is actually paid in gold in the cities of New York, Philadelphia, and elsewhere.

Why? It is not because the silver dollar possesses any intrinsic value greater than the gold dollar, but because the silver dollar is needed for the money uses of the people, to which they desire to apply it. And I contend that the experience of all of the commercial nations of the world demonstrates the fact that within the limits to which the silver money is applicable and for which it is needed it is as good money as gold, and our experience in this country, recent as well as remote, tends to show that it is just as good at the present ratio of 16 to 1 as it would be if we fixed it at 20 to 1, or 25 to 1, or at any other ratio.

We find that not only in the commercial centers has a premium been paid for silver for uses to which the twenty-dollar gold piece can not be put, but we find here at the Treasury of the nation, according to the report made to the Senate by our excellent Secretary of the Treasury, Mr. Carlisle, a few days ago, that within the first eighteen days of the present month nearly three-quarters of a million of dollars was paid out over the counter of the Treasury in silver dollars for the Treasury notes issued for the purchase of silver bullion, and which notes command gold at the Treasury, and have done so ever since the issue of the very first one.

We also find that the silver dollars not only command a premium in New York and other financial centers, but are demanded from the Secretary of the Treasury here in preference to gold; and we are told by the Secretary himself, if I read his report correctly, that applications have been made to the Treasury for the exchange of silver for gold, which applications could not be granted. And that is nothing new. Mr. Speaker, for the records of the Treasury Department will show that in times past many millions of gold have there been exchanged for silver to serve the convenience of the people.

[Here the hammer fell.]

Mr. CLARK of Missouri. Mr. Speaker, I ask unanimous consent that my colleague may be permitted to proceed for five minutes longer.

There was no objection.

Mr. HEARD. Mr. Speaker, I am greatly obliged to my colleague for his courtesy and to the House for its indulgence. I will probably not consume the entire five minutes allotted to me.

Now, sir, if these circumstances prove anything to my mind as to the quality of our money they tend to prove that for the uses to which silver money is applicable and to the extent that silver money is needed in this country, it is not only the equal of gold, but manifestly for some purposes is superior. I believe, therefore, that we should stand by the ratio now fixed in the

law. I am in favor of retaining the present ratio and not going to another.

As I said before, Mr. Speaker, if the silver dollar as at present fixed, on the ratio of 16 to 1, is good enough to command a premium over gold in the money markets of this country, if it is so good that it is preferred by the holders of Treasury notes—which command gold or silver at the option of the holder—to the gold at the Treasury, there is no reason whatever why we should undertake to improve its quality, if it could be done by the increase of the ratio and the consequent addition of more silver.

Now, sir, suppose that we propose to increase the ratio, where will you fix it? Some of our friends say, "Why, your Democratic platform, on which you carried the country at the last election, pledges you to the making of all of the dollars of the Government equally good." The experience to which I have referred, Mr. Speaker, I insist, shows that right now the silver dollar is as good as the gold dollar, and that it would be no better for the money uses of the people, if the ratio were made 20 to 1, or even higher. But suppose, to please these gentlemen who insist on strict conformity with the exact letter of our pledges according to their own interpretation, that we shall, in order to put ourselves in harmony with the declarations of the Chicago platform as they construe it, add to the present intrinsic value of the silver dollar, where are we to draw the line?

I ask my Democratic friends who propose now in order to meet that demand which comes from those opposed to the present legal dollar, if we shall add more silver to the dollar, where are you going to draw the line? Why, if you propose 20 to 1 these gentlemen will say, "You have already confessed away your case; you have admitted that the 16 to 1 dollar is a dishonest dollar; you have admitted that the dollar is short and that it must be made good, and, having found that there is a deficiency in the weight of your dollar, yet you propose to go only one-third of the way marked out in the right direction." They say, "The commercial difference between the value of the two metals requires more than 20 to 1—that it requires 28 to 1—and therefore, if you give, as you propose, only 20 to 1, you have gone but one-third of the proper distance, according to your own admission, in the right direction."

Now, Mr. Speaker, it may be that our people are wrong in demanding the unlimited coinage of silver. I do not believe it, however, but I would sooner yield something from that demand than consent that the ratio should be changed. I do not believe, sir, that any harm would come to this country from the unlimited coinage of silver at the present ratio, at least for many years to come; and until, in case harm should be discovered in the operation of the law, the people will have had ample opportunity for electing another Congress charged with the duty of repairing any wrong we may have done, or of rectifying any errors we have committed, by following now what we know to be their wishes, for that is the will of my people.

I would sooner stand by the present ratio and accept a reasonable limitation on the amount to be coined, and trust to future legislation to remove such limit, than to accept unlimited coinage at an increased and a probably increasing ratio. We know, Mr. Speaker, that in this country, with our five hundred and odd million dollars of silver and silver certificates in circulation, the silver dollar is as good as a gold dollar. Then the first thing we want to do, Mr. Speaker, and the point we want most sacredly to guard, is to preserve the debt-paying power of the dollar. We want to guard against the curtailment of the power of the dollar to discharge business obligations in this country, and next, to guard against making it a more expensive dollar.

Now, Mr. Speaker, if we can float the silver we do to-day, on an equality with gold, and as we see the European nations floating $1,500,000,000 more of silver on a parity with gold, when the quality of their's is intrinsically poorer than our own, I say that the man who has want of faith in our country being able to keep our silver at a parity with gold, even at a largely increased coinage above what we now have, I think really lacks appreciation of what our people are capable of doing.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. DOCKERY. I ask that he be allowed to proceed for five minutes.

Mr. BRETZ. Indefinitely.

The SPEAKER *pro tempore*. Without objection, the request of the gentleman from Missouri [Mr. DOCKERY] will be granted.

Mr. HEARD. Mr. Speaker, we are told by the Secretary of the Treasury—and there is no man filling a public position in this country in the accuracy of whose statements we have more confidence, and for whom officially and personally I have greater respect—that to increase the value of the dollar as suggested and to recoin our present volume of silver money at the increased ratio of 20 to 1 would cost this country not less than $112,000,000 to $120,000,000.

Now, I ask you, Mr. Speaker, how can I go before my people, who are perfectly content with the quality of the silver money which we have to-day, who see it applied for at our Treasury in exchange for gold, and who see it exactly equal with gold everywhere in the country, how am I to satisfy those people when I stand before them, having voluntarily consented and agreed to add $120,000,000 to the debts and burdens of the people, not for the increase of the volume of their currency, but to supply a supposed defect in the quality of the money we now have afloat, which, as every man here is bound to admit, is meeting all the requirements of gold or paper in this country to-day? Why should we impose an additional burden upon our people amounting to $120,000,000 to make good that which we now have and which, as my friend from Texas [Mr. BAILEY] says, is now as good as gold? To supply this additional value to our present silver coinage we must either issue bonds, and thus increase our interest-bearing debt, or raise the amount by increased taxation. I am unwilling to do either.

Mr. Speaker, more than that, the gentlemen who, upon this floor and elsewhere in this country, have always opposed and who to-day oppose the extension of the coinage of silver, have a great deal of confidence in the regulations to be hereafter made by some imaginary or possible international monetary conference. Whenever the people of this country have shown a determination to put silver on an equality with gold, and have had a prospect of being able to do it, those who are opposed to silver coinage at all, or except as subsidiary coin only, those who stand for gold monometallism, try to divert the attention of the public from the issue by promising some possible relief to come from the operation of a phantom international monetary conference.

Now, Mr. Speaker, suppose we are to pin our faith to the action of such international monetary conference, how will we stand before such body with our increased ratio? I admit that international action would be very valuable. It may be necessary, but I do not believe it. But, Mr. Speaker, how are we to get to that? That increase in ratio would make an increased burden upon the people you ask to go with us in the opening of the mints of the world to the coinage of silver. Why shall we so greatly increase to them the burden of accomplishing what we ask them to do?

Why, Mr. Speaker, France has $700,000,000 of silver. It is in circulation to-day side by side with gold, as ours is in this country, and as ours always has been for over one hundred years; but if we should establish a new ratio of 20 to 1, and ask France to come with us on that ratio, we would virtually ask her to add $160,000,000 or $170,000,000 to the value of her present money circulation, and to put that burden upon her people when they have not asked for it, when the people do not want it, when France's silver is as good as her gold.

And so, Mr. Speaker, it would be with the other nations who own the balance of the $1,500,000,000 of silver circulation. In the different commercial nations of the earth to-day this silver is engaged in performing all the offices of good, sound money. No, Mr. Speaker, the experiences of our people here at home show that we do not need it so far as the quality of our money is concerned. We can not expect by so doing to encourage these other nations of the earth to join us in an international monetary arrangement. They certainly would not accept such ratio if we offered it. As my friend from Texas [Mr. CULBERSON] says, we have tried it, and they have refused to accept any such proposition.

The fact is, Mr. Speaker, that those who are opposed to the free coinage at the present ratio would oppose it if it was proposed to make the dollar on a basis of 28 to 1. They are not opposing the quality of the money, because it is just as good as any other, but they are opposed to an extension of silver coinage on any condition; and that, Mr. Speaker, is where this clamor against the Sherman law comes up. It is opposed not because of the quality of the money by which it increases our volume of money, but simply because it does increase it. That it is a vicious law, being founded upon the "subtreasury" principle advocated by our Populist friends, can not be denied; but that is not the ground of the present opposition. It establishes the pawnbroking system of depositing a commodity and issuing pawn tickets, or Treasury notes, in lieu of it.

But, Mr. Speaker, it not only adopts the subtreasury principle referred to, but applies it to one of the money metals of the country, making it a commodity only, and virtually destroying its money quality.

Mr. Speaker, for that reason, if for no others, we should all be in favor of the repeal of the law on general principles; and if it did not recognize the right of silver coinage, and was not the only remaining law on our statute books that does, I should say repeal it.

Now, one word further. It not only recognizes the right of silver coinage under some conditions (though I believe that provision in the bill was intended as a cheat and a fraud), but the conditions have so changed as to surprise its authors; and the fact is that the Secretary of the Treasury has been compelled within the last month under the provisions of the law to increase our silver coinage nearly three-quarters of a million of dollars, because he is obliged to coin a sufficient amount of the silver bullion purchased to provide for the redemption of Treasury notes returned for redemption in silver coin, and the report shows that for this month there has been a redemption of Treasury notes in silver to the amount of over $700,000. Then the proper enforcement of this law not only gives us recognition of silver coinage, but an actual increase in circulation by reason of some silver coinage.

Mr. Speaker, I do not desire to enter into a general discussion of this subject, which has already been discussed so thoroughly; but I want to say, in one moment, by the indulgence of the House, that I will vote for the free coinage of silver, as my people desire me to do, at the ratio of 16 to 1. I do not say that I will not accept some other, for I believe it to be my duty to go as far as I can within the limits of my conscience and judgment to try and accomplish what they need and desire, and that is an increased coinage, if I can not get unlimited coinage at the ratio we desire; but my candid judgment is that we should adhere to the present ratio. [Applause.]

Mr. CARUTH. Detained, Mr. Speaker, by the hand of sickness and restrained also by the demands of duty, I stayed long at the nation's capital after the fall of the gavel that marked the death of the Fifty-second Congress. When at last, sir, I returned to my home, among the people I represent, instead of seeing the signs of prosperity I was accustomed there to see, I beheld the evidence of disaster. Instead of finding the feelings of hopeful confidence that ever pervaded that people, I saw signs of despair.

The air was laden with dismay. A man meeting his brother man upon the street exchanged not cheerful greetings, but indulged in foreboding prophecy. Merchants looked ahead and beheld only impending ruin. Wherever I went, at my home, in my office, on the public streets, or in the cars, I was met everywhere by the anxious inquiry, "When will the Congress of the United States be convened?" and on all hands I was asked to use what little influence I might possess with the President of the United States to get him to convene this body in extraordinary session in order that the evils of legislation might be righted and relief extended to our distressed people.

The call, Mr. Speaker, came none too soon, but at as early an hour as the wisdom of the President thought the representatives of the people would heed their demands. The call which convened us here vividly set forth our financial situation, which had, in the language of the President—

> Already caused great loss and damage to our people, threatening to cripple our merchants, stop the wheels of manufactures, bring disaster and privation to our farmers, and withhold from our workingmen the wage of labor.

In obedience to the call which convened us here, I came. At that desk I took the oath of office, determined that I could best serve those who sent me here, not by speeches, not by set phrases, but by my vote.

Never since the time when the life of the nation was imperiled has the Congress of the United States been gathered together under graver or gloomier auspices; and in the message the President sent he in strong and patriotic language set forth the common need of the hour. I came at his behest and at the command of my people to do my duty as their Representative. I am not here, Mr. Speaker, at this time to discuss the merits of either of the metals that enter into the money of this country. I hold to the views of the wise and patriotic President of the United States as stated in his message to this Congress, that—

> The people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world. Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

I asked the banker, I asked the merchant, I asked the rich man, and the poor man what was causing this widespread desolation, what was causing the suspension of the banks, what was causing these disasters to our mercantile interests, and from every one came the answer, "It is the purchasing clause of the Sherman act."

Mr. SNODGRASS. Will the gentleman point out the way in which that act has brought about this condition of things?

Mr. CARUTH. I have but five minutes, and I hope that my friend from Tennessee will make his speech in his own time and not in mine. He knows my time is very limited and he is using it up, and he is also breaking the thread of my discourse. [Laughter.]

The SPEAKER. The time of the gentleman from Kentucky has expired.

Mr. CARUTH. See that! [Laughter.]

Mr. MCCREARY of Kentucky. Mr. Speaker, I ask unanimous consent that my colleague [Mr. CARUTH] may be allowed ten minutes more to complete his argument.

There was no objection, and it was so ordered.

Mr. SNODGRASS. I want to apologize to the gentleman if I have interfered with the course of his argument, but his discourse was so extraordinary that I could hardly help it.

Mr. CARUTH. Mr. Speaker, I was saying that from all sides the answer came that the cause of this widespread and impending disaster was the purchasing clause of the Sherman act. The people who suffer ought to know that from which they suffer. The President of the United States, who so keenly feels the responsibility of this hour, ought to know the cause of the disturbance. The great Secretary of the Treasury, who hails from the State of my birth, and who is in contact with the ablest financiers of this country, ought to know the cause of the trouble that has come upon us.

I repeat, Mr. Speaker, from the banker, from the merchant, from the President of the United States, and from the Secretary of the Treasury comes to the same answer, that it is caused by the purchasing clause of the Sherman act. Nay, more, the people know it. They can not be led astray by the false argument that this depression is caused by a fear that the Congress of the United States will tamper with the tariff laws of this land. I will read to the House a letter which I received a few days ago, written by a manufacturing firm in my own city, none of the members of which are in accord with the political views that I hold. Listen and heed.

LOUISVILLE, KY., *August 12, 1893.*

DEAR SIR:-We are manufacturers of brass and iron goods in the city which you represent in Congress. Four weeks ago we employed over four hundred men. When the prevailing financial panic struck this city about two weeks ago, we were compelled to discharge three hundred of our employés. To-day we have discharged the balance, and have shut down both our iron and brass works completely. Our reason for not being able to keep running is that our banks here are not in a position to afford us the accommodations which heretofore they have always been glad to extend to us.

We believe with the majority of our fellow-citizens that the great cause of all this trouble lies in the so-called Sherman silver bill. We appeal to you, therefore, in the name of ourselves and other manufacturers of this city, to use all your influence and energy toward an unconditional repeal of this bill at as early a date as possible. It is our firm belief that if the present strain under which we are laboring is not relieved in a very short time this country will see the greatest panic it has ever witnessed.

Hoping you will give this letter your favorable consideration, we remain, very truly yours,

THE AHRENS & OTT MANUFACTURING COMPANY,
THEO. AHRENS, JR., *General Manager.*

Hon. ASHER G CARUTH,
Member of Congress, Washington, D. C.

Mr. Speaker, the President of the United States has discharged his duty. He has convened us here. He has convened together a Congress which for the first time in a generation has a Democratic majority in both the Senate and the House, with Democratic control of the Executive Departments and which for the first time in that period can make or unmake laws. The responsibility of legislation rests upon us, and I, for one, do not desire to shun that responsibility. I am ready to meet the trouble that confronts us, prepared to share in the fruits of victory or to suffer my portion of the mortification of defeat. [Applause.]

I stand here now in compliance with the advice of the President of the United States, in compliance with the wishes of the people who have honored me by sending me here; I stand ready here and now to cast my vote without limitation, restrictions, or conditions for the repeal of the purchasing clause of the Sherman act. [Applause.] Let others talk as they may, I do not fear for the future of my party. The great Democracy is founded upon the principle of "equal rights for all, and exclusive privileges to none," and in the application of that principle it matters not whether the suppliant for the nation's favor comes from the manufacturing East or the mine-owning West. The law is the same for all. I feel that when the time comes to appeal to the people they will rush to the front, and seize and carry to triumphant victory the banner of Democracy, on which is inscribed "Honest money and tariff reform." [Applause.]

Mr. DINGLEY obtained the floor.

Mr. PAYNE. I understand that the gentleman from Maine [Mr. DINGLEY] desires to occupy considerably more time than the five minutes allowed under the rule. I will therefore, before he begins, ask unanimous consent that he be allowed to proceed for thirty minutes.

There being no objection, leave was granted.

Mr. DINGLEY. Mr. Speaker, no one can have failed to notice that in the debate here and the discussions elsewhere on the pending proposition to discontinue the silver-purchasing policy, there has been a studious effort to create the impression that this policy was inaugurated by the so-called Sherman act of 1890. The object is obvious

It is to fasten upon the Republicans who supported that act whatever responsibility the country may place on the silver-purchasing policy for the existing industrial and financial distress.

There is not a gentleman within the sound of my voice who does not know that the silver-purchasing policy was inaugurated in 1878 over the veto of President Hayes and by the vote of a Democratic House and a Republican Senate, three-fourths of the Democratic Senators and Representatives voting to override the veto. The act of 1890, styled the Sherman act, simply modified this policy, which could not then be repealed, so as to diminish some of its perils. Its passage, too, warded off a free-coinage measure which had already passed the Senate by nearly a solid Democratic vote. Very few of the Republicans who supported the act of 1890 would have voted for any original measure inaugurating the silver-purchasing policy.

The vote on the pending repeal bill, however, will bring to the test the question of responsibility for the further continuance of the silver-purchasing policy, now that its actual workings are known; and the country can then accurately determine on what party and what Senators and Representatives the real responsibility rests.

In common with a majority of Republicans on this floor, I shall vote for the discontinuance of the silver-purchasing policy inaugurated in 1878, and never intended to be permanent, not because I believe it "principally" responsible for the existing industrial and financial depression, although I believe that it has secondarily contributed to increase difficulties originated by another cause, but because I am convinced that this policy obstructs an international agreement on a coinage ratio, which I hold is the only way in which silver can be given free coinage without driving gold out of circulation and bringing us to a silver basis, and because I regard it wasteful and perilous in the near future. My desire for a prompt discontinuance of this policy is properly intensified by the fact that in view of the widespread belief that it is a potent factor in promoting the distrust which has caused our troubles, repeal will be much more influential for good than it otherwise would be, because of its influence on men's imaginations.

INFLUENCE OF SILVER-PURCHASING POLICY.

The discussions already had indicate a wide difference of opinion here and elsewhere as to how much, if any, influence our silver-purchasing policy has had in bringing about our present difficulties.

The President and that wing of the Democratic party which adopts his views on the currency question, hold that the silver-purchasing policy is the "principal" cause of our troubles. On the other hand, that wing of the Democratic party which believes in free silver coinage at the ratio of 16 to 1 by this country alone—hitherto the head and body of the party—hold that this purchasing policy has had nothing to do with bringing about the situation. They even assert that the last Democratic platform which declared that "the Sherman act of 1890 is a cowardly makeshift," and which demanded its "speedy repeal," was explained to them as meaning that the act of 1890 was a "cowardly makeshift" for the free coinage which would otherwise have been approved by both Houses of Congress, and that the platform was interpreted as a free-coinage declaration, in free-coinage States.

While I think nothing is clearer than that the silver-purchasing policy did not cause the industrial distrust and consequent depression which began to disclose itself near the beginning of the present year, and increased from month to month, paving the way for and even originating the financial depression which followed later, yet there is strong reason to believe that this purchasing policy, or rather the alarm abroad in consequence of the failure to maintain the gold-redemption fund which had been drawn, by the substitution of silver certificates and Treasury notes for gold in customs payments, below the hundred million mark that the law and public opinion regarded as the danger line, did render the situation more serious by largely withdrawing foreign capital from this country, thus so reducing loanable funds as to increase distrust, wreck credit, promote hoarding, and bring about a money famine of unparalleled proportions. At the same time I am confident that the contributory share the silver situation has had in the present difficulties is very much less than is generally supposed.

HOW SILVER CERTIFICATES IMPAIR THE GOLD REDEMPTION FUND.

I heard a statement made this morning that the trouble was that under the Sherman law we were using the silver as a basis for money at the bullion value rather than at its coinage value, and that redeemable in gold, and that under the act of 1878 we used it at its coinage value rather than at its bullion value, and provided simply for redemption in silver dollars; and that if we had continued that policy we should have had no run on the Treasury for gold.

Now look at the matter a moment—because it is no use to blind ourselves—look at a silver certificate issued on deposit of silver dollars. You say it is redeemable only in silver dollars; but if, as a matter of fact, it was not redeemable indirectly in something else than that it would have fallen to its bullion value within a short time after the amount of the issue had increased beyond what the people required for constant use. What has maintained the parity with gold of the silver certificate and the silver dollar from 1878 to the present time? Why, it was the fact that the Treasury of the United States has received those certificates and dollars in lieu of gold in the payment of duties.

Now, what difference does it make whether you directly redeem your silver certificates in gold or accept them in lieu of gold for duties? It is gold redemption in either case, with this difference, that the redemption by receiving them for gold duties is only good as long as the amount of those silver dollars and silver certificates do not bear too great a proportion to the amount that can be readily used in payment of duties and the amount constantly needed in exchange. As a matter of fact we have been drawing on our gold redemption fund at both ends. The silver certificate has been preventing gold from going into the Treasury, and the redemption of the Treasury note has been taking gold out at the other end; and it makes no difference, so far as its effect on the fund is concerned, which form of redemption is employed; in both forms it depletes the gold redemption fund.

Gentlemen ask what has been the trouble. Go and look at the percentage of silver certificates and Treasury notes that have been received into the Treasury from 1885 down to the present time in the payment of gold duties. At first there were almost none received, because the volume of outstanding certificates was small, and the contraction of national bank currency made a place for them. As the volume swelled the number presented for redemption in payment of duties increased rapidly, until recently, when the currency famine has obliged our importers to send to England for gold. They have now nothing but gold to pay duties with, because they can not get hold of currency; but that is only a temporary situation.

For the last three or four years the importers have been paying a very large proportion of all the duties in either silver certificates or Treasury notes based on silver. That is how the silver purchasing policy—not the Sherman act, but the purchasing policy, for the Sherman act is better than the one which it supplanted—has been keeping gold out of and draining gold from the Treasury and affecting our financial situation. I think we had no trouble at all from this purchasing law until last spring, but if you continue it in force there is bound to be trouble in the future. We can not go on buying silver and practically paying for it in gold without coming to disaster.

IMPORTANCE OF MAINTAINING GOLD REDEMPTION FUND.

I was in London, as it happened, last spring at the very time a New York telegram appeared in the London papers that our gold redemption fund had fallen below the one hundred million limit, which, in the minds of the people of this country and of others, seems to mark the dividing line between safety and danger, and I had an opportunity of seeing exactly how that affected men there who were dealing in American securities, and who had English money invested in this country.

Mr. SIMPSON. Mr. Speaker, I am very much interested in the gentleman's discussion. He said, as I understood him, that the Government receives these certificates in lieu of gold.

Mr. DINGLEY. Yes, sir.

Mr. SIMPSON. Now, can not the Government use the same certificates in lieu of gold to pay its debts?

Mr. DINGLEY. Well, that would bring us to the discussion of the question as to whether when we have refused to pay our debt and interest in gold it would not greatly injure our credit and oblige us to pay a higher rate of interest whenever we should want to borrow again, and whether it would not also tend to bring us to a silver basis.

Mr. SIMPSON. The gentleman does not seem to understand my question. If the Government receives those certificates in lieu of gold——

Mr. DINGLEY. Mr. Speaker, as I am now trespassing on the patience of the House, I must ask the gentleman to wait until I get through.

Now, I observed that while up to that time there had been very little talk about American securities, though some had been sent back, but probably for other reasons, yet on the very day that announcement was made that no steps would be taken to make that redemption fund good, and the suggestion even went out that we might resort to silver payments, as my friend from Kansas has suggested, there was at once a panic among dealers in American securities; and by the very next steamers there was sent to this country and sold in our markets a very large amount of such securities. As the gold received for the same was withdrawn from this country and returned to London the practical effect of allowing our gold redemption fund to fall below the hundred million mark was to take so much money from our loanable capital, contract credits, and start a money famine.

Gentlemen have said, Is not the fact that a silver certificate is at par with the gold dollar to-day evidence that there is no special distrust in this country as yet as to the future of our currency? Certainly it is; although if we do not maintain our gold redemption fund, no one can tell how soon distrust of the currency will arise here; but English investors did take alarm last spring, and may do so again.

THE ORIGINAL CAUSE OF DISTRUST.

The industrial distrust which began to show itself near the beginning of the year was evidently caused solely by the belief of those engaged in manufacturing industries that the result of the elections in November, which had placed the entire legislative, as well as executive, power in the hands of the Democratic party, portended an early overthrow of the policy of protection, in accordance with the Democratic platform. Manufacturers and merchants, therefore, at once began to prepare for what they believed would be radical changes that would supplant domestic with foreign goods. Enlargements contemplated were given up. Dealers' orders for goods for another autumn were given slowly and guardedly. Raw materials for goods to be delivered another season were bought sparingly, and prices gradually forced down near to the point where it was supposed they would be when the goods went into consumption. For example, Michigan washed wool, which sold last October for 28 cents, was gradually forced down to 20 cents, because manufacturers expected to have to sell their goods on the basis of the contemplated free wool tariff. Looms were stopped to reduce production, in view of the diminished demand.

No actual change in the tariff has as yet been made, but manufacturers and merchants have been preparing in advance for the revolutionary changes which the Democratic platform portended, and have been discounting in part the new tariff to come. When apprehension of coming evil seizes upon men oftentimes the apprehension is worse than the realization. My friend from Missouri [Mr. BARTHOLDT] made a most admirable analysis of that trait of the human mind which looks forward to what is thought to be coming. The distrust in manufacturing circles which began in December and January, late in the winter, extended to financial circles. There can be no mistaking the fact that this industrial distrust and consequent depression was caused entirely by the proposed revolution in the tariff; although after this had gone on for some months, the silver situation in the way I have suggested came in to aid in intensifying the distrust, and convert industrial depression into a financial panic and money famine.

It is not possible to have a national election, conducted on the issue of the overthrow of an economic policy that has prevailed for thirty years, and given great prosperity to the country, result in the complete triumph of a party pledged to such a revolutionary change, without arresting production, stopping machinery, injuring credit, and paralyzing business.

[Here the hammer fell.]

The SPEAKER *pro tempore* (Mr. RICHARDSON of Tennessee, in the chair). The time of the gentleman has expired.

Mr. GEAR. I ask that the time of the gentleman be extended for twenty minutes.

Mr. HULICK. Mr. Speaker, I would suggest that the time of the gentleman be continued indefinitely so that the words of wisdom he is giving us can be heard by every member of this House.

The SPEAKER *pro tempore*. The gentleman asks unanimous consent that the gentleman from Maine be allowed to conclude his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. DINGLEY. Mr. Speaker, I am very much obliged to the gentlemen and to the House, and will endeavor not to weary your patience.

WHAT WRECKS CREDIT.

It must be borne in mind that modern business, especially business in a new country rich in resources like ours, inviting development, is conducted largely, perhaps 90 per cent of it, on credit, and that confidence of men in each other, confidence in the continuance of the conditions under which industries have prospered is the basis of credit, essential to induce men to invest capital, and the inspiration of production, exchange, the employment of labor, good wages, and business prosperity. Whatever impairs this confidence and promotes distrust arrests investment, wrecks credit, stops looms, puts out the fires of forges, locks up money, deprives laborers of employment, reduces wages and brings the whole machinery of business to almost a standstill, involving millions in financial ruin and misfortune.

This was exactly what the elections last November did in placing in complete power a party pledged to overthrow our protective policy; and while the present senseless, panicky condition of the public mind and the money famine caused by fright can not long hold their present intensity, yet we shall continue to feel industrial distrust and depression, at least until it shall be definitely known what kind of a tariff the Democratic party will enact, and wages and business shall adapt themselves to the changed conditions.

SOME OTHER EXPLANATIONS CONSIDERED.

All other explanations of the cause of the sad change from the prosperity of one year ago to the adversity of to-day fail to explain.

The gentleman from Missouri [Mr. BLAND] and the gentleman from Nebraska [Mr. BRYAN], representing that element in the House which demands that this country alone shall undertake the free coinage of silver at the ratio of 16 to 1 of gold as the only remedy that will cure, insist that the general distrust which has produced so much mischief is the result of a conspiracy of bankers, notably Wall street or New York bankers, under the dictation of what they denominate the gold bugs of England, who are seeking to overturn silver, increase the value of gold, and make money out of the ruin of the people.

The difficulty with the "conspiracy" theory is, first, that the distrust which prevails with such intensity is as deep in the ranks of those who, like my friends from Missouri and Nebraska, make a point of depreciating and ridiculing the views of the bankers of New York and the country, as it is in Wall street; and secondly, that no class in our community have so much to lose by the prevalence of distrust as bankers. It must be remembered that bankers do business and make their profits mainly by loaning deposits, and that it is essential to the banker that confidence in the future should be preserved, because this maintains and increases the deposits, which are the source of his prosperity and profits, and that distrust brings disaster to him in greater degree, if possible, than to anyone else.

I have before me the New York weekly bank statement of August 5, 1893, and that of August 6, 1892; and as the New York bankers are selected by our free-silver friends as the chief culprits in this bank "conspiracy" to get up a panic to increase their profits, this exposition of exactly how distrust has affected the New York banks ought to serve to enlighten our understanding and dispel some of our prejudices.

On August 6, 1892, the New York banks had deposits amounting to $528,462,300, and mainly because of these were able to loan to the business men of that city $488,777,100. On the 5th of August, 1893, these deposits had been reduced to $372,945,200, a reduction of $155,517,100, mainly in the last five months, by the distrust which had seized upon depositors. This large reduction of the deposits, on which banks do business, compelled a reduction of the loans of the banks to the extent of $80,024,600, and consequently a large reduction of their profits. In other words, the prevailing distrust has caused a loss to the New York banks of nearly five millions in interest on deposits loaned, to say nothing of losses by failures of persons to whom money had been loaned, losses directly brought about by the prevailing distrust.

This shows that the only reason the New York banks were forced to cut down their loans $80,000,000 was because the private citizens who were accustomed to make deposits had withdrawn $155,000,000 of their deposits and put it away in their trunks and stockings.

I submit to my free-coinage friends that a decent regard to what has been called "common sense" calls for a relegation of the "conspiracy" theory to the tomb which sooner or later claims theories born of prejudice.

To the same tomb should be consigned the theory of the gentleman from Mississippi [Mr. HOOKER], reaffirmed by the chairman of the Finance Committee of the Senate [Mr. VOORHEES], that the banks have deliberately locked up the money of the country and accumulated a big reserve in order to bring about a pressure for such legislation as they desire.

It is suggestive that almost at the same time that the banks were being arraigned here for locking up money the Senator from Kansas [Mr. PEFFER] was arraigning them in the Senate for not locking up as much as the law requires as a reserve.

If these gentlemen will but look at the New York bank reports to which I have referred—for it is the New York banks which seem to be regarded as the chief sinners—they will find that these banks had about one hundred and fifty-one millions reserve on hand August 6, 1892, and only seventy-nine millions August 5, 1893, fourteen millions less than the law requires; so that as a matter of fact their available funds were loaned much more closely at the latter date than the former, when there was no difficulty in obtaining loans, probably because they can not now further reduce their loans for the reason that their customers can not pay their notes at maturity.

THE CURRENCY CONTRACTION THEORY.

The late Presidential candidate of the Populists in a recent address affirmed that the distrust was caused by a contraction of the outstanding currency through "the persistent war on silver;" and several gentlemen in the course of this debate have reiterated substantially the same view.

The difficulty with this theory is that when this distrust began and during its progress, the outstanding volume of currency in this country was the largest absolutely and per capita ever known in our history—nearly twice that of the five-year period before the war. The volume of currency outside of the Treasury on the 1st of August was over $1,600,000,000, or $24 per inhabitant, against a volume of $10.23 in 1862, $18 in 1872, $22 in 1886, $23.45 in 1891, and $24.32 on the first of January of the present year.

Since distrust was inaugurated in the face of such a large volume of currency, the active circulation in use has been daily diminished by the want of confidence, which has caused hoarding by the great mass of the people, thus demonstrating that our trouble is not contraction of the outstanding volume of currency, but contraction of the confidence which leads to the use of the abundant money in the hands of the people.

This situation affords an object lesson which ought to be instructive to those gentlemen who assume that volume of outstanding money necessarily measures prices and prosperity, and who are always clamoring for a larger issue of money regardless of quality or methods, and make it clear that it is money and its substitutes, in-

cluding credits, used, and not money outstanding and hoarded, which is the life-blood of business; and that the extent to which money and its substitutes will be used in production and exchange depends first on its good quality and stability, and secondly, on the public confidence in the industrial and financial future. Any amount of currency beyond what is to be used in exchanges simply lies idle, and is so much waste.

Inasmuch as we have to-day in our stock of currency six hundred and fifteen millions in silver money, of which five hundred and thirty-eight millions is full legal tender, purchased and used since what is erroneously denounced as the demonetization of silver in 1873, against only six hundred and four millions of gold (the amount of gold coin in the Treasury being one hundred and three millions), an amount several times as large as all the silver, including fractional silver, coined in the eighty-one years from 1792 to 1873 (the coinage of silver dollars having been only eight millions during this period), it must be confessed that when gentlemen undertake to claim that we have contracted our currency in the last twenty years by declining to make a larger use of silver, they indulge in a license of speech hardly consistent with the facts. At no time in our history did we ever have so much silver per capita as a basis for money as we have now.

THE OHIO DEMOCRATIC CONVENTION.

The gentleman from Alabama [Mr. WHEELER], and several other gentlemen on the Democratic side, have put forth still another theory of the cause of the distrust which commenced near the beginning of the present year and has been growing in intensity ever since. A theory, by the way, on which I notice by the resolution adopted by that body, which was read the other day by my friend from Ohio [Gen. GROSVENOR], the Ohio Democratic State convention has taken out a patent. This theory affirms that the present situation "is the unfortunate legacy of Republican administration, and the natural result of the McKinley tariff," etc.

When it is remembered that confidence and unexampled prosperity had existed under Republican policy for years and prevailed as never before under the McKinley tariff till after it became known that the elections of last November had resulted, for the first time in thirty-two years, in the capture of the complete legislative as well as executive power by the Democratic party, which had declared during the campaign that they intended to overthrow our protective policy and substitute a tariff for revenue only; and that immediately after, the distrust which has caused our troubles began, increasing in intensity as the Democratic administration has gathered up the reins of Government and the time approached for the actual application of Democratic theories to our tariff and finances, it must require a large stock of what plain people call "gall" to enable them to put forth in convention the theory that our protective policy is the cause of the prevailing distrust.

No, Mr. Speaker, none of these alleged causes, which the imaginations of our free-silver friends have conjured up, have had anything to do in bringing about the profound distrust, degenerating into a senseless panic, which has brought about first the industrial and then the added financial depression and currency famine which is upon us. Even the silver-purchasing policy, inaugurated in 1878, illogical, unwise, and dangerous as I have always regarded it, had nothing to do with the inauguration of the industrial distrust which prepared the way for financial distrust, and only came in as a secondary and contributory adverse influence just at the time it did, because distrust was already in the air, and the gold redemption fund was suffered to fall below the hundred million mark without any official announcement that it would be maintained.

I firmly believe that if the late House, in the closing days of the last session, had concurred with the Senate in reaffirming the authority given by the act of 1875, to sell bonds to maintain the gold redemption fund, and the Secretary of the Treasury had announced to the world that the fund would be maintained at all hazards, there would have been no distrust of our securities in Europe, and we should have been saved from the money panic which has caused so many losses, although the industrial depression caused by the threatened tariff revolution would have remained. And I also believe that the announcement of this policy would have made it unnecessary to sell a bond.

THE BLAND AMENDMENTS.

Mr. Speaker, injurious and even dangerous as I regard a further continuance of the silver-purchasing policy under which the Government has purchased since 1878 448,057,000 ounces of silver, equal to the entire product of the world from 1860 to 1870, paying therefor $140,000,000 more than it can be bought for now; and under which in payment for silver $334,274,236 in silver certificates, $57,000,000 of silver dollars, and $147,000,000 Treasury notes, which must be maintained at par, the first by indirect redemption through their acceptance in lieu of gold for duties, and the latter by direct redemption also, a process which saps the gold redemption fund at both ends and is immensely increasing the difficulties of maintaining our currency at par; yet either of the amendments proposed by the gentleman from Missouri [Mr. BLAND] to the pending bill—the only amendments in order—if adopted, would make the measure far worse than the existing law.

The amendment to substitute the Bland act of 1878 for the act of 1890, would leave the purchasing policy to stand without the additional protection afforded by the Sherman act. The act of 1878 provided for the use of silver at its overvalued coinage value. The act of 1890 provided for its use at its market value in gold. The act of 1878 provided no means of maintaining the parity with gold coin and certificates issued, except its acceptance for duties and taxes, which would be insufficient when the amount outstanding should be too large. The act of 1890 made it the duty of the Government to maintain its parity by redemption in gold if necessary. If we must continue the silver-purchasing policy then the act of 1890 is far preferable to the act of 1878.

The several amendments establishing free coinage at a changed ratio—the highest 20 to 1—are unsound and unwise from any point of view. If the theory of the friends of free coinage, that this Government alone can maintain any ratio it desires, without regard to the market ratio, is sound, then assuredly there is no excuse in departing from the ratio of 16 to 1 and adopting the ratio of 20 to 1, and thus wasting an immense amount of silver. Indeed, the proposition itself is practically a surrender, by those who vote for it, of the pet theory on which free coinage at the ratio of 16 to 1 has always been advocated.

On the other hand, if the theory of those who believe that free coinage must be near the market ratio of silver, and can be secured only by an international agreement, is sound, then the ratio of 20 to 1, when the market value of the bullion is 28¼ to 1, would be as fatal as 16 to 1.

The adoption by us alone of a changed ratio of 20 to 1 would present a new obstacle in the way of an international agreement, for it can hardly be supposed that other nations would take kindly to our attempt to fix a ratio alone. Obviously, if we are to endeavor to secure an international agreement, we should not undertake to fix any ratio alone.

Again, the proposition to alone change our ratio to 20 to 1 would instantly demonetize the $419,334,450 in silver coin and silver certificates which we have coined or issued, and thus result in such an instantaneous contraction as would work ruin until we could recoin these dollars at the increased ratio at a cost of nearly $90,000,000.

Surely no one, on reflection, should favor such a proposition.

FREE COINAGE AT 16 TO 1.

Mr. Speaker, the first, and I presume only serious substitute which the gentleman from Missouri [Mr. BLAND] proposes to ask a vote on, is the proposition for this Government, single-handed, to immediately undertake the free coinage of the world's silver at the ratio of 16 to 1 of gold, when the market value of the bullion to be coined into the proposed full legal-tender dollar is only 28¼ to 1.

He, and the other gentlemen who have favored this free coinage substitute, insist that if we should do this, it would immediately result in permanently advancing by this simple act of legislation all the world's existing silver and all that may be mined hereafter from its present price of 72½ cents per ounce to $1.29 per ounce, and thus make 16 ounces of silver equal in value everywhere to one ounce of gold.

Now, if this would bring about such a permanent result so easily, and give us our due share of gold as well as silver in our currency—all floating at a parity—it would indeed be a great consummation, which would be welcomed with thanksgiving, for the reason that this is what I, what most of the people of this country are seeking, what both the Republican and Democratic national conventions declared for in 1892, viz, the full legal tender coinage of both silver and gold in such a manner as will make the intrinsic value (*i. e.*, the bullion value) of the coins of each metal equal, and will permanently preserve the parity of all our money and make all as good as gold.

I have said that this is what both political parties in 1892 declared to be their silver platform—the significant difference, however, being that the Republican declaration was in accordance with a majority of the Republican votes in each House of Congress since 1878, and the Democratic declaration exactly the reverse of the record of a majority of their votes. The gentleman from Missouri [Mr. BLAND] alleges that he was assured the Democratic platform did not mean this; but nevertheless the natural construction of the words is against him, unless we assume, as is too often the case, that the language of Democratic platforms is intended, as Talleyrand said of the language of diplomacy, to conceal rather than express ideas. I have learned for myself that the acts of a party are always more reliable indications of their purposes than their platform professions. I hope that in this case, however, that will not eventually prove true.

So we are all bimetallists, in that we desire to leave the free coinage of both silver and gold at such a ratio that will permanently maintain the intrinsic value of the coins of both metals equal, and thus give us both metals in our currency.

The difference between us is that you think that we can do this alone by establishing free coinage at a ratio of 16 to 1, when the market value is 28 to 1; and we think that this course would rapidly carry us to silver monometallism, give us a single silver standard, and drive out our gold, and that the only way to secure bimetallism is through an international agreement.

The burden is certainly on you who propose, under present conditions, to take the great leap into the dark proposed by the gentleman from Missouri, to give us not assertions, but absolute proof from experience and the conclusions of intelligent research, that this important step will result as you assert it will.

It is a very serious fact against you that none of the great authorities in bimetallism in Europe like Cernuschi, or in this country like Horton, almost none of the great financiers, few of the men who have made the subject a study for a lifetime, few of the men who are regarded as successful business men believe that the United States alone can do this. It will not answer to reply that they are gold bugs, whatever that may mean. It seems to them as it seems to me that unless some new alchemy has been discovered which sets aside known laws of production, distribution, and exchange, this free-coinage proposition proposes a fearful leap into the dark in the face of reason and experience, and that if adopted it would result in overwhelming disaster.

THE EXAMPLE OF FRANCE.

So far as I have heard or read, the sole support from experience presented by those who take this view, is that France, single-handed, from 1803 to 1865, and the Latin Union (France, Belgium, Switzerland, Italy, and Greece) from 1865 to 1874, maintained free coinage of silver at the ratio of 15½ to 1 of gold in weight, without driving out gold.

Even assuming that they did this, which is not strictly correct, we must know what was the state of silver production and the silver market during this period before we can accept this as a case parallel to what our own would be under existing conditions.

We find that during the period from 1800 to 1860 the production of silver in the world did not increase. It was about 28,000,000 ounces per annum in 1800 and only 29,000,000 per annum in 1860 and the previous five years, reaching 35,000,000 in 1865, showing that there was no sufficient reduction in the cost of production to make the profits of silver mining large enough to increase the supply; and that for these reasons silver bullion was steady and unchanged at very near the French ratio established in 1803, at what was then the actual market ratio of silver and gold.

But when the production increased to only 63,000,000 ounces in 1874, and Germany ceased to coin silver for anything more than subsidiary coins, and even began to sell as bullion her discarded silver coins, France and the other states of the Latin Union found so much silver coming to their mints to be coined that they were obliged to discontinue the unlimited free coinage of silver, and in 1878 to close their mints altogether to the coinage of full legal-tender silver, and not a dollar of new full legal-tender silver has been coined since.

Now when the five countries of the Latin Union were forced to discontinue free coinage in order to prevent going to a depreciated silver standard, the world's annual production of silver was only 65,000,000 ounces, and silver was worth but little less than $1.29 per ounce in the markets of the world. Yet this small difference was turning silver to the mints of the Latin Union, and France and the other states gave up the fight to maintain silver by free coinage. It is the almost universal testimony of French statesmen and financiers that five years more of unlimited free coinage of silver, even with the production of 1875–1880, would have depreciated the French currency, driven out gold, and made France a monometallic nation, and that silver.

I submit that the example of France conclusively shows that the United States alone can not maintain the free coinage of silver at a ratio of 16 to 1, under present conditions, without going to a silver standard and driving out gold. France and the Latin states gave up the experiment when the production of silver in the world had reached 65,000,000 ounces, and silver had declined only to $1.20. Inasmuch as in the last fifteen years the annual silver production has steadily increased from sixty-five to one hundred and fifty-two millions ounces last year—more than doubled—in the face of a decline of silver from $1.20 per ounce in 1878 to $1.09 in 1885, 93¼ cents in 1889, and 85 cents in 1892, surely there is nothing in France's trial and final failure to maintain free coinage under the slight increase of production before 1878, to justify the conclusion that we can now support free coinage alone.

It must be borne in mind, too, that France is a country which uses coin mainly for the transaction of her business; that she has few banks of discount and deposit, and no savings banks, and hence she uses more actual money per capita than other commercial nations that employ checks and other substitutes for money; yet she maintains her seven hundred millions silver only with a gold support of eight hundred millions in precisely the same way as we should maintain our six hundred and fifteen millions of silver (five hundred and thirty-eight millions of it legal tender) with only six hundred and four millions of gold, if we should to-day discontinue silver purchases and stop the further coinage of silver dollars and wait for other nations to coöperate with us.

CAN WE BUY THE WORLD'S SILVER?

But let us test the soundness of the free-coinage plan to have the United States buy all the silver of the world that comes to us and pay $1.29 per ounce in merchandise or gold,—for that is practically what the free-coinage proposition is so long as we are able to maintain silver and gold at a parity.

We are told that when we offer this price for the world's silver then the market price of that metal the world over will at once rise to $1.29 and no foreign silver will come to us. We shall have, it is said, only the domestic product (58,000,000 ounces last year) to buy.

Even if this were true, what do you suppose the domestic product of silver would be in five years on an offer of $1.29 per ounce, when it has increased from 24,000,000 ounces in 1875 to 58,000,000 ounces in 1893, on a falling market going as low as 85 cents per ounce? Will anyone confidently tell me that it will not double in three years and quadruple in five years?

But there must be silver to come here from abroad for the reason that foreign countries now, at the present low price, produce more than the rest of the world wants, and are constantly increasing their product. With the increased price offered, production would rapidly increase in Mexico, South America, and other silver countries, and we should find an enormous quantity of silver dumped upon us.

Then where else could the 38,000,000 ounces per annum that India has coined go next year, than to our mints, now that India has stopped free silver coinage?

I notice that there was imported last year $17,000,000 of foreign discarded silver coins. How much discarded foreign coinage would come here next year at an offer of $1.29 per ounce?

It seems to me surprising that, in view of such facts, anyone should entertain the belief that we could enter single-handed upon free silver coinage at 16 to 1 and not soon find it impossible to maintain at par with gold the immense amount of silver that would be poured upon us; and as soon as we could not do so then our gold would leave us and we should go to a depreciated silver standard and become a silver country like Mexico, China, and the States of South America.

If that is the object, if the purpose is to drive this country to silver monometallism and a silver basis, then I can understand the scheme.

THE OLD "FIAT" IDEA.

When I heard the gentleman from Nebraska [Mr. BRYAN] announce that this Government can select any coinage ratio that it desires and maintain the two metals at parity by its fiat I saw at once that the same old greenback delusion which prevailed fifteen years ago,—that the Government stamp is all that is necessary to make money and maintain it at par with gold, without any direct or indirect redemption or intrinsic value,—is really at the bottom of the free silver crusade now going on.

I could not help thinking that if this theory be true then it is a pity to use 412½ grains of standard silver to make a dollar when half that weight, a quarter, and even less silver, or a bit of paper costing a tenth of a cent, will answer just as well.

It is the fallacious idea that the Government can make anything good money by simply stamping it—the idea that a Treasury note or greenback is money of final payment, which does not need to be redeemable in full value coin, instead of simply a promise to pay money of full intrinsic value—that is at the bottom of the denunciatory rhetoric which we hear so much of whenever the currency question is discussed. When we hear men denouncing the Government for paying its bonds in gold instead of depreciated greenbacks in 1868, we know that they have got it into their heads that the greenback is money of final payment, and that the Government is not under obligations to redeem it in gold; otherwise nothing could be saved by destroying our credit. When it is fully understood that both bond and greenback are simply promises of the Government to pay money of intrinsic value, promises that must be redeemed,—then all the crude ideas and wild talk about the currency will cease.

WHY NOT A RATIO OF 16 TO 1.

The only reason that we can't have free coinage of silver at a ratio of 16 to 1 of gold, as our fathers once had, is that when our fathers did this, 16 ounces of silver would buy 1 ounce of gold in the markets of the world, and that is why they fixed that ratio. Now 16 ounces will not buy 1 ounce of gold. In process of time there have been such improvements in silver mining and in separating the bullion from the ore that it costs less to produce silver than formerly, and it requires more than 16 ounces of silver to buy 1 ounce of gold. So long as it does, so long as the market price of silver for any cause is considerably less than this ratio to gold, especially where the difference is so much as it is now, it is useless to talk about this country alone maintaining gold and silver at a parity on a ratio of 16 to 1 by free coinage.

I am a bimetallist because I think I see an advantage in that system; but I see no other way of reaching bimetallism and securing the unlimited use of both metals under free coinage than by an international agreement on a coinage ratio (which must be near the actual market ratio) among enough commercial nations to exercise a strong influence on the market and hold the price steady; for there is no doubt that a combination of several strong commercial nations can do this, at least until there are important changes in cost of production of either money metal, by first making a common coinage ratio that is substantially the market ratio of bullion.

HAS SILVER DECLINED?

We are told that silver has not declined, but that gold has advanced 40 or 50 per cent in the last twenty years; and to prove this the fact that prices of merchandise have declined, estimated in gold, is presented as a demonstration of the operation. It is even said that prices estimated in silver have changed but little since 1873, when our currency was depreciated.

Now, everybody knows that the cost of production of most merchandise has been reduced by labor-saving devices and greater concentration of industries, and therefore that prices ought to be lower; and if it be true that prices, estimated in silver, have not declined, it is clear that since 1870 silver must have fallen because of a decline in cost of production.

Mr. MARSH. Will the gentleman yield for a question?

Mr. DINGLEY. I will yield for a question, although I prefer not to do so, as I am using the time of the House.

Mr. MARSH. Has not the nonuse of silver during that period of time had something to do with its depreciation in price? Let that go with your statement, because it is important to be considered.

Mr. DINGLEY. Even if it were true that less silver is used now than when silver commanded $1.30 per ounce (which is not the fact), that would have no effect on the cost of production.

The simple fact that the production of silver, after having been substantially stationary at about 28,000,000 ounces annually from 1800 to 1865, with the market price about $1.30 per ounce, has since 1878 more than doubled in the face of a constant decline to 85 cents per ounce, proves beyond question that the cost of production has been greatly reduced, for surely the production would have increased if the lower price had not afforded the mine-owners as great or greater profit than the old price did twenty years ago. I may also call attention to the fact that in 1892 the world used a much larger amount of silver per capita than in 1860 or 1875. In 1860 there was used in the arts and for money only 29,000,000 ounces of silver, for that was the entire production, while in 1892 the world used more than 140,000,000 ounces of silver. Even for money purposes the United States and India alone used 102,000,000 ounces of silver, which was nearly two and a half times the entire production (43,000,000 ounces) and use of silver for both money and in the arts in 1870.

Let me again call attention to the enormous increase of production of silver in the face of a declining price—the stern fact with which we have to deal—as shown by the tables of Dr. Adolph Soetbeer, than whom there is no higher authority on the production of gold and silver:

Average production of gold per annum.

Before 1850	ounces..	750,000
1850 to 1870	do....	6,000,000
1870 to 1892	do....	5,750,000
1892	do....	6,328,272

Average annual production of silver.

1800 to 1850	ounces..	28,000,000
1850 to 1870	do....	48,000,000
1870 to 1880	do....	80,000,000
1892	do....	152,000,000

THE PRINCIPLE OF BIMETALLISM.

The essential principle of bimetallism laid down by Hamilton in his celebrated report, on which Congress in 1792 fixed the ratio of silver to gold at 15 to 1, was that the coinage ratio must be the equivalent of the bullion ratio in the markets of the world. After a careful investigation he found that the bullion ratio was in fact on the average 15 to 1, and for that reason he recommended that ratio, and Congress concurred.

In 1834 and 1837, finding that in consequence of a slight deviation of less than 5 per cent of the coinage ratio from the bullion ratio, this country was deprived of gold, Congress revised the ratio and finally made it 16 to 1. This proved to be a slight deviation from the actual ratio which deprived us of a large portion of our legal-tender silver.

The principle of bimetallism from the beginning has been, as I have already said, to make the coinage ratio the equivalent of the bullion ratio in the market, because it never occurred to our fathers that they could retain both legal-tender gold and silver in our coinage if silver was overvalued or undervalued. Yet, here to-day, in the face of the fact of the great change in the production and cost of production of silver in the last twenty years, we find gentlemen proposing to authorize the free coinage of legal-tender silver at 16 to 1, when the market value is 28¼ to 1, and actually comforting themselves with the idea that they are imitating "the fathers!"

THE FUTURE OF SILVER.

It is probable that the price of silver has recently gone below the cost of production, and therefore that within a year or two there will be an adjustment of the market price of silver at a higher price than that of to-day, but one conformable to the laws of demand and supply and cost of production.

This situation, it seems to me, will pave the way for an international agreement on a ratio for the coinage of silver as well as gold as full legal-tender money. But I have no hope of such an agreement until we stop purchasing silver, by which policy we have been lifting from other nations burdens on account of the silver situation in which they should share, and abnormally stimulating production.

THE POOR MAN'S DOLLAR.

I have frequently heard during this debate that gold (in which term of course is included all currency at par with gold) is the rich man's money, and silver (*i. e.*, the silver dollar of 412½ grains, intrinsically worth three fifths as much as the gold dollar and good for no more than that under free coinage of silver at 16 to 1) is the poor man's money. I stand here to say that no vote of mine shall be given that will provide for the poor man a less valuable dollar than is provided for the rich man. The laborer's wages are paid in dollars, and no kind of a dollar that is worth less than a gold dollar is his due. And those legislators who, under the guise of benefiting the laborer or farmer, enact currency laws which depreciate the currency are doing all in their power to injure the men whom they pretend to be specially caring for. They seem to forget that any increase in the price of the farmer's products caused by depreciating the money in which it is measured can do him no good—in fact will do much harm—because it increases more than correspondingly the prices of what he has to buy.

Even the suggestion that a depreciation of the currency will make it easier to pay debts has little force, for the reason that the average time that private debts continue in this country is only nine months, and every new debt must be just as much larger as the currency is depreciated. The chief use of money is in exchange, and not in debt paying.

The prosperity of the country, of every citizen, whether rich or poor, laborer or employer, is largely dependent upon a sound currency, in which every dollar, whether gold or silver or paper, shall be as good as gold.

CURRENCY POLICY OF THE FUTURE.

If the silver-purchasing policy should be discontinued, as it should be, then it will be the duty of this Congress to go forward and establish a new and safe policy for providing our growing business and population with the increased volume of currency required from time to time in our transactions.

The immediate passage of the bill to allow national banks to issue circulating notes to the par value of their bonds deposited as security would aid materially in meeting the dearth of currency caused by hoarding, not only by adding twenty millions of safe money at once to the circulation, but also by the influence on men's imaginations of such an addition to our currency at this time in satisfying them that there is no further necessity or excuse for hoarding.

And whatever else shall be done, it is of vital importance that steps should be taken to maintain our gold redemption fund constantly; at least at the one hundred million mark.

But great care should be taken in devising a wise currency policy for the future, for objectionable as is the silver-purchasing policy, even with the wholesome restrictions of the act of 1890, it would be far preferable, of course, to free silver coinage or the old wild-cat, State-bank system. The plan to restore the old State-bank currency, which before the war proved so unsatisfactory and expensive, should be resisted by every friend of sound money. Let us hope that such a retrograde step will never be taken.

Why men who have so bitterly opposed our national-banking system, which secures a uniform bank currency amply secured, as good in Georgia as in New York, as current in Maine as in Louisiana—a currency which never subjected the people to a dollar's loss—should now favor State banks of issue, giving us forty-four different kinds of bank notes under forty-four different systems, some good, and more vicious, after the immense losses and sad experiences we had with our old State-bank systems before the war, is what I can not understand.

Let me indulge the hope, Mr. Speaker, that whatever Congress may do (and it must adopt some policy to provide currency for the future) it will first take care to make every dollar of it as good as gold; and secondly, that not a dollar will be allowed to be issued by authority of any State, but all shall be issued under one uniform system and under the authority and control of the nation. [Applause.]

Mr. WILSON of Ohio. Mr. Speaker, the discussion of the measures pending before the House has been voluminous if not exhaustive. It has shown that the question of money in the United States perplexes the minds of our statesmen and financiers, and is still an unsolved problem. Gentlemen have incorporated into their speeches extracts from the writings of distinguished authors, and from newspapers and reports. Yet there is no agreement or unity of opinion on the subject, and it is not strange that this is the condition of the public mind.

There can be no legislation that will not in some way affect the business of the country to the advantage of some persons and to the disadvantage of others. The creditors and non-producing classes will be affected advantageously by a restriction of the currency, while the debtors and producers will be adversely affected. During the late war the Government incurred a vast indebtedness. It was a matter of necessity. The currency was so inflated that in 1864 the average value of a paper dollar did

not exceed 50 cents in coin. And during the whole period there was great depreciation of paper currency. The Government bonds were sold during that period, and they were paid for in the depreciated money. Afterwards the bonds were made payable in gold, principal and interest. Some of them were exchanged for gold bonds at a lower rate of interest. This greatly appreciated the value of the bonds. It has been said that the agreement was that the bonds were payable in gold. If so it was not the agreement of the Government, but an unauthorized one on the part of her agents.

I am not here to criticise the policy of the Government, but rather to justify the course pursued. Then came resumption of specie payments. All kinds of obligations were thereby appreciated, and debtors were required to pay in money much more valuable than it was when a large part of such indebtedness was incurred. The effect was to enrich the creditors at the expense of the debtors. This condition of things was inevitable if the country was to return to a sound financial basis, and I am not here to condemn the policy of resumption.

But, Mr. Speaker, the logic of the events which I have briefly stated convinces me that this country ought not again, and without a necessity therefor, cheapen the money by an expansion of the currency, either by promises to pay in cheap paper currency, or by putting the stamp of the Government upon a piece of coin which does not very closely approximate the value of money generally accepted in all parts of the civilized world. I say closely, because I see the great difficulty of maintaining gold and silver on a parity with each other.

The most potent argument against bimetallism arises out of that fact. We may establish a ratio to-day that will seem to be equal and therefore just, but a year hence the commercial ratio may be different from the legal ratio. If so the more valuable coin would not circulate, but the less valuable would become the medium of exchange. It may be said that my admissions of the difficulty of maintaining the parity of the two coins are conclusive arguments against my position on the money question. I have never thought it wise to refuse to admit the truth contained in any proposition. I can not afford to deceive myself, and could not hope to deceive others.

But, notwithstanding what I have said, I am in favor of this Government continuing the double standard. I would do the very best I could to place the ratio according to the commercial value of the two metals. It is probable that the commercial ratio at this time will not be sustained. The distress in business and the money panic have caused alarm, and the present is not the best time to find the true commercial ratio. But we ought to exercise a sound judgment in fixing it, and trust to experience to guide future action. I am of the opinion that if silver is admitted to coinage in either free or a limited amount on a basis of equality with gold there will not soon be an overabundance of silver coinage. I believe that the use of silver on an equality with gold would largely appreciate the value of silver and slightly depreciate the value of gold. If the value of gold and silver depended upon the production and use of these metals here the appreciation of silver would be rapid; but the great volume of gold in the world would not be greatly affected by the coinage of silver in the United States. The world's stock of gold is estimated at $3,582,605,000, of which there is in the United States $604,000,000.

Whether gold and silver shall be produced in larger or less quantities than heretofore, or whether the production will be larger of one and less of the other, is a mere matter of speculation. Experience alone will verify the truth. So far as I can I shall cast my vote for such measures as will maintain the parity of gold and silver. Their circulation as money depends upon their parity. But if I err in the matter, I prefer the error shall be in the interests of the laborers, producers, and debtors rather than in the interests of the creditors and wealthy classes. This Government has no occasion to increase her indebtedness. And there is no reason why the already overburdened debtors of this country should be required to pay their obligations in money more precious than that which existed when their obligations were assumed.

It is argued by gentlemen on this floor that bimetallism is desirable, but that we should await international action; that the ratio between gold and silver must be international. Our experience teaches us that such a ratio is not likely to be established for a long time yet, if it ever becomes possible. This country produces more than one-fourth of the gold and more than three-eighths of the silver produced in the world. The nations of Europe which have discontinued the coinage of silver only produce small quantities of that metal. Their industries are not seriously affected by the demonetization of silver. Not so with the United States. This country is rich in stores of the precious metals; and this Congress should not suffer a foreign policy to engraft itself upon this country so as to strike down any of the great industries of this Republic. And especially this should not be done if it is detrimental to the welfare of a vast number of our population.

It may be said that the refusal to coin silver will not increase the value of gold. It might as well be said that a prohibition against the use of pork would not tend to increase the value of beef and other meats. Silver and gold are mercantile commodities. If there is a greater demand for one than for the other, how is it possible that the article in greatest demand shall not become more valuable and the other less valuable than if the demand was substantially the same. It may be said that silver is produced in much larger quantities of late years than formerly, and that gold has not been produced in comparatively large quantities, and that, therefore, the difference in the value of the two metals has widened and that it will continue to widen. I think the facts show that for the last two or three years silver production has increased but little. The probabilities are that this production has reached its maximum.

The coinage of silver at a sound ratio will not affect the silver producers, for they, under present laws, only get the commercial value of their product; and if coinage is based upon the commercial ratio, they will still get the commercial value of the silver. If the ratio should be so fixed and silver production be so disproportionate to the production of gold as to increase the commercial value of silver, and make the silver dollar more valuable than the gold dollar, then the commercial demand for silver will furnish a satisfactory market for the product, and the holder of the bullion need not coin it. In the event that either metal becomes less productive or more productive so that the legal ratio should differ materially from the commercial ratio, it is safe to assume that the wisdom and patriotism of Congress would be equal to the necessity of again fixing a proper ratio. And if that long hoped for day shall ever come when, by international agreement, a legal ratio may be established, we shall then be, as we have always been, ready to meet the great nations of the earth in a friendly settlement of this vexed question.

It has been said by the distinguished gentleman from Mississippi [Mr. CATCHINGS] that the producers sell their products to-day at prices that enable them with the proceeds to purchase as much as they could when prices were higher. If that is true, and it is only in some particulars, what relief does that afford the men who incurred debts at the high prices, and because of the constant appreciation of money and therefore depression in prices, have been unable to discharge their debts? Such is the condition of the country to-day. And if there is no surplus on the farm, or if the surplus is so little that it will only pay the interest or the rent, what is there left for consumption or discharge of debts? It has been claimed by some gentlemen that the silver-purchasing clause of the act of 1890 has caused our present financial panic. I believe there is some truth in this. But it is not the whole truth or cause. This country was prosperous under Republican administration. That party came into power in 1861, and not until March, 1893, has the Democratic party been in power. The people knew that with a Republican Senate or a Republican House the Republican policy could not be reversed. But when the Democracy came into full control the people became fearful on account of the declared purpose of that party to reverse the policy of the Republicans relative to the protective tariff system.

The manufacturers were doing business under a protective tariff system, and if another system is to be the policy of the Government henceforth, then it becomes necessary to reorganize business. Manufacturers only purchase what they require from week to week. Merchants refuse to lay in their usual stock of goods. Employers reduce the wages of their employés, or close their doors, or work on only half time. And why not? Do not expect manufacturers to buy wool at old prices when they expect free wool from foreign countries. Do we expect them to manufacture and keep on hand large stocks of goods with the possibility that their goods must be sold in competition with free importations of the same kind and quality of goods? Is it to be expected that wages, under such circumstances, should be as high as they were before? Is the merchant to be blamed for not laying in a stock of goods at prices higher than they will sell for if imported goods are admitted free of duty? I think the bottom of distrust in business circles lies deeper than the silver purchase act of 1890. It lies in an attempt to reverse the wheels of Government, and turn them backwards for how long, and at what sacrifice to the people of this country, God only knows.

The gentleman from Alabama [Mr. WHEELER] said in a speech on the floor that the country was prosperous until 1861, when the Republicans came into power; and that thereafter there had been no prosperity. I think I use the substance of his remarks. Well, it is impossible to account for that statement. The whole world knows that the United States since 1861, not-

withstanding the civil war, has prospered beyond all previous periods; that our population, wealth, enterprise, and development has been unsurpassed.

I regret exceedingly that I see no prospect of a settlement of the money question in that manner, which, in my opinion, would best subserve the welfare of the American people. There is no opportunity to offer an amendment proposing a ratio approximating a commercial ratio. I am of the opinion that the commercial ratio at this time would not be a correct basis for a legal ratio. It is altogether probable that silver is unduly depreciated now because of the peculiar condition of business of this and other countries. I should be glad to vote for a ratio by which we could reasonably expect to maintain the two metals on a parity with each other. But if this privilege is denied me there is but one course left, and that is to vote for the unconditional repeal of the silver-purchasing act of 1890. This I regret to do in the light of the President's position on the money question. I construe his message to mean that he is a gold monometallist. I am pleased with the honesty of the President. But it does not follow that because he is honest he is right. The gentleman from Massachusetts [Mr. EVERETT] seems to think the President is immaculate, and that we should not question his wisdom. The President came from the money center of this country. He views the question from the creditor's standpoint. If he lived in other parts of this Union I think he would not undertake to commit this Government to the single gold standard. It may be regarded as the true ideal. But we are a practical people, and our legislation must conform to our conditions and necessities.

The majority in this House must answer to the people for the legislation of this Congress. The position is an unenviable one. They charge each other with being false to the principles of the party. They threaten dire disaster to the party if the demands of each wing of the party are not acceded to. They are in miserable straits, and it appears that both factions will be damned if they do, and they will be damned if they do not; and, speaking from a political standpoint, I freely give my unqualified sanction to the damn.

The people want relief and yet we delay. I see no way for me to answer to my constituents except to vote for the repeal of the law requiring the Government to purchase 4,500,000 ounces of silver each month. If thereby adequate relief is not afforded I certainly hope the wisdom of Congress may provide other means of relief. But I believe the purchasing of silver is only a superficial cause of our present distress, and that the real cause is the wrong of the Democratic party on the great and fundamental principles which have made this country one of the greatest, and in many respects the greatest country in the world. On these vital and living principles the Republican party was founded. To that party the people will turn for deliverance. It is useless to expect a return of confidence and prosperity while there is in power a party threatening the destruction of our protective tariff. The people must abide their time. Petitions and prayers will not avail now. I think like the clergyman, whose congregation asked him to pray for rain when there was a great drought, and he said: "I would be glad to do so, but it would do no good until the wind gets in the right direction."

But it is the duty of the Republicans in this Congress to lay aside all party politics and make an honest effort to restore confidence in the financial policy of the country. The want of confidence began in Europe. The securities and obligations of corporations are held in large amounts by foreigners. When the Government found it necessary to encroach upon the gold reserve of one hundred millions in order to redeem the Treasury notes it created alarm. And, although there was no just cause for alarm in that direction, it bred a distrust among our people. Persons who had money in banks withdrew it so rapidly that many banks were compelled to close their doors for want of cash to pay depositors.

There was not with our people any want of confidence in the money, but an alarm, amounting almost to a panic, at the possibility of losing their deposits. The money withdrawn from the banks was hidden away, and for a time retired from circulation. This made it necessary for the banks to make such collections as they could, and they refused new loans. Business men were unable to meet their obligations, and many of them were compelled to suspend operations. It was demonstrated that the much-extolled credit system of exchange is only sufficient when the drawers of the bills, drafts, and checks have to their credit the money required to meet the obligations.

There are doubtless other causes which have contributed to our discomfiture. In many instances individuals and corporations have overreached their ability, and were sure to go into liquidation at no distant day. The crisis in money matters only precipitated what had already become inevitable. But it is only important to review the causes of our present distress, that we may be able to find some means of relieving it.

It seems to me that our people are already becoming assured, and that a wave of confidence is now sweeping across the continent. It is our patriotic duty to pledge the resources of the Government for the relief of her citizens. If they are assured of the wisdom and patriotism of their lawmakers, their faith in the resources of the country will accomplish the rest. But what is the wisest course to pursue is the great problem. In my judgment it is not a time for experiments. The great President Lincoln said it was not a good time to swap horses while crossing a stream.

I do not believe we should now begin a contraction of our currency. And while I shall vote to repeal the silver-purchasing clause of the act of July 14, 1890, I do it because the people seem to believe it to be the principal cause of our present financial panic. But the question continually arises in my mind, Is it wise to discontinue the issue of the Treasury notes provided for in that act without making provision for other currency to take its place? At such a time as this, when there is such a demand for money, is it wise to contract our currency? If we had not had the silver certificates which were issued under this law I think there would have been a greater stringency in money than there has been. In my judgment there is a necessity for some substitute for the law we are about to repeal. Whether that substitute shall precede or accompany the repeal is for this Congress to determine. If Congress shall repeal the so-called Sherman act, and provide no other money for the Treasury notes issued under that act, I believe this Congress will receive, as it will deserve, the condemnation of the people of this country. The people are not ready to adopt the gold monometallism of England, and whoever undertakes to force it on them unawares will surely feel their righteous indignation and displeasure.

If such a financial policy is ever to be adopted in this country, it should be after the people have understood it and consented to it. Every declaration of the Republican party has favored bimetallism, and that too without asking European nations whether we should or should not. The proposition to defer the double standard until there is an international agreement concerning the coin ratio is premature. It is unripe fruit and will surely cause indigestion of the American stomach.

I can not conclude my remarks without reply to a portion of the able and eloquent speech of the gentleman from Pennsylvania [Mr. DALZELL]. He assumes that it is desirable that prices of farm products should be low that the laboring men may live cheaply.

Does the gentleman think that the iron of Pennsylvania should be so cheap that the farmers could purchase their stoves and hardware generally at greatly reduced prices? The farmers of this country are more numerous than any one other class of people, and whoever undertakes to impoverish them strikes a blow which will be felt by millions of the most deserving and intelligent of our population. The interests of the farmer and the laborer are mutual. If you reduce the price of farm products below living prices you will destroy the market for the workman's skill and labor, and their wages will be reduced or their services dispensed with. The argument of the gentleman from Pennsylvania is frank but fallacious. If there are any people in this country whose interests are identical with each other they are the working people, whether farmers, mechanics, or laborers. [Applause.]

During the delivery of the foregoing remarks, on motion of Mr. STRONG, by unanimous consent, the time of Mr. WILSON of Ohio was extended fifteen minutes.

Mr. VAN VOORHIS of New York. Mr. Speaker, Congress has been in session now for sixteen days, and the only action of importance that we have taken has been to vote ourselves our mileage. That, of course, is all right; but should we not have done, long before this, something that would relieve the country from its present disastrous condition? Suppose we had passed, long ago, a resolution repealing the purchase clause of the Sherman law, and declaring that there would be no attack upon the tariff for two or three years, why, Mr. Speaker, the panic would have been off in a day.

Now, the silver-purchase law undoubtedly should be repealed. It should either be repealed without conditions, or it should be repealed with proper conditions. They talk about this bill as a bill for the unconditional repeal of that law. It is no such thing. Right on the face of the bill it chisels the Treasury out of $75,000,000. How? By taking away from the $155,000,000 of silver bullion in the Treasury the quality of legal tender. That was either done designedly or carelessly. I hope it was not done by design.

The bill ought to go to a committee for amendment and revision. Let us have a bill that shall simply repeal the purchase clause of the Sherman law, preserving the legal-tender quality of all the silver which the Government has bought and

paid for under it. Mr. Speaker, the criticism that I make to this bill is obvious. The language of the bill is:

But this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined.

Why did they not add the words, "or the standard silver dollars hereafter to be coined" out of the bullion that we have bought and paid for, and for which we have issued the certificates of the Treasury to be paid out of that silver bullion when coined. The preservation of the legal-tender quality in one class of dollars only, is a repudiation of it in the other.

Now, a bare statement of that point is enough; but that is not all. The third section of the Bland-Allison act of 1878 has in it a provision that anybody may deposit coined silver dollars in the Treasury and receive certificates therefor, and it provides that these coined dollars shall remain there for the purpose of paying off and meeting those certificates.

How does this bill affect that provision? Why, it wipes it out, of course, and it charges the Treasury with the payment in gold of all the millions of the certificates that have been issued during the twelve years the act of 1878 was in force under that section of that act. So much for that.

A great deal has been said about the silver dollar by the gold-standard men on the one side and the free and unlimited coinage silver men upon the other. What is a gold dollar? I find that answered in a paper that I got through the post-office this morning, written by Mr. Edward Atkinson, and I want to read a line from it:

What is a dollar?

It is a coin made either of gold or of silver. A coin is a piece of silver or gold made in the shape of a flat disk and stamped by the government in order to certify its weight and quality.

The silver dollar weighs 412½ grains—nine-tenths pure silver, one-tenth alloy.

The gold dollar weighs 25.8 grains—nine-tenths pure gold, one-tenth alloy.

The grain is the common unit of weight. Which dollar is the unit of value?

I want to call attention to that important question by Mr. Atkinson.

And here is his answer:

The statutes of the United States provide that the gold dollar is the unit of value.

Now, Mr. Speaker, there is where Mr. Atkinson is mistaken. We never had a gold dollar until 1849. We never have had a gold dollar since 1890. By the act of September 26, 1890, the gold dollar and the three-dollar gold piece were abolished; and I will ask the Clerk to read it, to prove that Brother Atkinson is all wrong when he says that the gold dollar is now the unit of value by statute.

The Clerk read as follows:

ACT OF SEPTEMBER 26, 1890.

An act to discontinue the coinage of the three-dollar and one-dollar gold pieces and three-cent nickel piece.

Be it enacted, etc., That from and after the passage of this act the coinage of the three-dollar gold piece, the one-dollar gold piece, and the three-cent nickel piece be, and the same is hereby, prohibited, and the pieces named shall not be struck or issued by the Mint of the United States.

SEC. 2. That as fast as the said coins shall be paid into the Treasury of the United States they shall be withdrawn from circulation and be recoined into other denominations of coins.

SEC. 3. That all laws and parts of laws in conflict with this act are hereby repealed.

Mr. VAN VOORHIS of New York. Now, Mr. Speaker, while I am in favor of the unconditional repeal, if I can not have proper conditions, of the silver-purchase clause of the Sherman act, I am also in favor of keeping all the money we have, both gold and silver, at a parity. I would not be in favor of the free and unlimited coinage of silver, but that would be better than the Sherman act, because there is no limit to the purchase of silver under the Sherman act.

In ten years, if we go on purchasing silver under the Sherman act, we would have 1,110,000,000 of coined silver dollars, and in twenty years 1,700,000,000 of those dollars. We can not stop under the Sherman act, but the law of supply and demand would regulate the free coinage of silver; and therefore, in my opinion, the Sherman act is worse than the free coinage of silver.

But we have not got too much money, and will not have by issuing more under the Sherman act. We are now increasing our circulation in every way we can. The Comptroller of the Currency is issuing millions of national-bank bills every day to the national banks, and in the other branch of Congress a bill is now pending to add 10 per cent more to the issue of national banks. There has been no expansion of the currency under the Sherman law yet. That is not the objection to it.

I do not find in that famous letter of Mr. Cleveland, accepting the nomination, which he held up for months after his nomination and issued in the latter part of September, 1892, in which he arraigned the Republican party for every grievance or supposed grievance known to him, that he said one word in his indictment of the Republican party against the Sherman bill. It is a new light that has come to him. His eyes have been opened, and he discovers now what he did not then see, that this little silver-purchase clause was a dangerous law.

I do not think he believed then, and I do not believe it now, that the Sherman act has any more to do with the present state of affairs than, as a Senator from Tennessee said in the Senate yesterday, "a pebble in the bottom of a mill pond has over the distribution of its waters."

Mr. Speaker, it is amusing to notice the various reasons for this existing panic given by those Democrats who do not believe it is the fault of the Sherman law. One of the most respectable of these was that given by the gentleman from Mississippi [Mr. HOOKER], who said that the cause was not to be found in the Sherman law, but our panic is the result of thirty years of protection. Can absurdity be greater? The millenium of tariff reformers is in sight; day is about to dawn on the thirty years' night of free trade; the robber tariff is about to expire; the antiprotection party is in full control and can do whatever it pleases—and the panic drops down upon us. It was not caused by thirty years of protection, but because the prosperity caused by thirty years of protection is nearing its end.

Mr. Speaker, the coming into power of the Democratic party was accompanied by a withering blight upon the business of this country. That blight has continued to increase in intensity until it has blasted every department of business, of industry, of commerce, and of finance. What an unfortunate coincidence for the party in power.

No words that I can use can fitly describe the havoc it has wrought. Only a journalist can do that.

I find it well done in the New York Press of yesterday, in its leading editorial.

Instead of giving a bill of particulars of the condition of affairs myself, I read for my bill of particulars from that great journal.

The advent of the Democratic party to power, March 4, 1893, marked the beginning of the most sudden change from industrial prosperity to industrial adversity ever known in the economic history of any country. In extent and rapidity of action this industrial devastation brings to mind the havoc of modern warfare prosecuted with energy and force by the aid of the most fearful and ingenious life and property destroying implements. No matter what the cause or causes, this panic of distrust and contraction has swept the country from the Pacific to the Atlantic in an incredibly short space of time, and thrown its shadows alike on every section of our broad domain.

Under its blighting effects private fortunes have gone down, values have shrunk, corporations have gone to the wall, banks have closed their doors, solvent firms have songht refuge in the hands of receivers, great financial institutions have resorted to extraordinary combinations in the hope of stemming the almost resistless tide, the people have taken alarm and drained the savings banks of their deposits, orders for fall and winter commodities have been stopped, and whole communities of wage-earners have been discharged from mines, mills, factories, and workshops.

As to the cause of this panic, Democrats who advocate the solitary gold standard differ among themselves. As to the cause of this panic, Democrats who advocate the free and unlimited coinage of silver differ among themselves.

No Democrats in in this House are willing to admit the real cause of our disaster. Many of them do and many of them do not charge the cause to the poor little Sherman law. They, like the President, are tariff reformers, and like him are not expected to confess the real and undoubted reason for our disaster.

I quote from another distinguished journalist, who has visited the factories and workshops and knows whereof he speaks. I read from Eli Perkins, in the Mail and Express:

[Eli Perkins in Mail and Express.]

Yesterday, at Cohoes, I found thirty out of the forty mills closed; thousands of workmen were idle in Troy, the six knitting mills in Little Falls had silent wheels, and twenty-five thousand glove-makers were idle in Gloversville. Every manufacturer and every workman told me it was the threat to destroy the protective tariff and not the silver bill that made them idle. Man after man told me with oaths or earnest gestures that the persistent lying of the great city newspapers—making a scapegoat of the silver bill—had caused the distress.

"Hands off the tariff," said the knit-goods men of Little Falls and Amsterdam, "and we will start our wheels to-morrow."

"But when they repeal the silver bill, perhaps it will be a little better," I suggested.

"Not one penny to us," they said. "All we want is somebody to buy our manufactured articles. No one will touch them now, when a lower tariff with lower wages make them cheaper. We can sell nothing until the tariff is settled, and if they lower the tariff we will have to drop wages in order to compete with low wages in Europe."

To-day I called on Albert Morse, a leading sheep farmer in Madison County, and asked him if he had sold his wool.

"No, sir," he said. "I can't get an offer for it. The wool-buyers will not touch it. I am in a bad fix. With my hundreds of sheep I can raise no money on my wool."

Then I called on Bard Leavenworth, who has bought wool in Eaton for thirty years. When I asked him if he was buying any wool now, he said:

"How can I. The tariff is going off. If I knew how much the tariff was to be lowered I would send for the farmers and make an offer. My hands are tied."

Then I rode up "Alder Brook" valley, by Fanny Forrester's old home, passing several silent mills. At West Eaton they had put up new wooden machinery in an old mill and were going to start up four months ago. Then the change came. The mill-owner at West Eaton looked sad. Grass was growing in front of the mill. The spindles were rusting and the old hands were trying to get work on the farms.

"When will you start the mill?" I asked.

"Not till we know about the tariff on English and German cloths," he said. "The business of manufacturing woolen cloth in America is suspended. All the factories are closing now. We can not venture, not knowing what the tariff is to be. I have to pay taxes, and Heaven knows where it will end."

We Democrats have always been mistaken about our protective tariff. The object lesson is complete. The lesson of 1837 and 1857 has been taught again. There is no use trying to hide behind the silver bill. Let us own up now, right-about-face, and help the Republic back to her splendid prosperity of one hundred days ago.

This threat to destroy the tariff has shrunk values $2,000,000,000. Ten million men are idle. Twelve thousand factories have shut down. Must we have the panics of 1837 and 1857 over again?

Can we not see that these disasters do not come from the picayune silver bill? The Government has bought $419,000,000 worth of silver since 1860, and every day the people have grown in prosperity. Cleveland has bought only $7,000,000, and the nation is bankrupt. "Sell all the silver the Government has ever bought, sell it at market price to-day," says JOHN SHERMAN, "and we would lose only $7,000,000 from shrinkage." Tell me the loss of $7,000,000 by our Government has caused a destruction of two billions, made 10,000,000 workmen idle, and shut up 12,000 manufactories!

If the editors of the big daily newspapers are not fools, then what are they? They have fooled a good many people, but when Congress finally repeals the silver bill and the mills still remain silent and the poor are idle and starving, will light strike them?

And when they are finally convinced, will they own up and forever stand by that protective tariff that has made this country for thirty years the most prosperous nation on the earth?

Mr. Speaker, the present panic is a tariff panic, and will go into history as the Democratic tariff panic of 1893.

Mr. Speaker, in this situation of affairs this extra session of Congress is called.

The message of the President to this extra session of Congress states that an extraordinary business situation exists, involving the welfare and prosperity of all the people, that by reason of this situation he has been induced to call Congress together in extra session. He declares that he believes this situation is due to Congressional legislation touching the coinage of silver, and he refers to the act of July 14, 1890, commonly called the Sherman act, as expressing that legislation, and he lays upon the shoulders of this act all the ills which the business of the country is now suffering.

The President then takes an emphatic position as a monometallist, and in favor of gold alone as money. His language is:

At this stage gold and silver must part company, and this Government must fall in its established policy to maintain the two metals at a parity with each other.

He puts this upon the ground that the standard of the commercial world should control, and that is a gold standard, and we must bow to it.

This position, it is plain to see, is in the interest of foreign investors and foreign creditors. He says, in effect, that we can not claim a place among nations of the first class unless we discrown silver as money, and confine ourselves solely to the coinage of gold.

This position of the President is in direct antagonism to the platform upon which he was elected, which declares explicitly for gold and silver coinage as the standard money of the country.

The platform was good enough to get in on, but not good enough to stand on after election.

To get away from the platform of his party he declares that this matter rises above the plane of party politics.

In that he is sincere. The only recommendation he makes is of a negative character. It is the repeal of the silver-purchase clause of the Sherman law. He recommends nothing in place of the act which he desires to take off the statute book. He will abolish something and create nothing. He makes no suggestion as to the establishment of a permanent financial policy.

He would repeal the Sherman law and let the country drift.

But while the President repudiates the financial plank of the Chicago platform, it is not so with tariff reform.

He could not rise there "above the plane of party politics." On the tariff question he stands squarely upon the Chicago platform. His waxen wings would not carry him above that.

Tariff reform means free trade, or what is its equivalent, a tariff for revenue only. Even incidental protection finds no place in tariff reform. Tariff reform as interpreted by the Chicago platform means the wiping off of the statute book of all protective laws. It means a revolution in the business industries of the country. It means raising the revenue by taxing tea, sugar, coffee, and the necessaries of life.

The principle which underlies a tariff for revenue only is that the tax should be laid on those things only which all the people are compelled to use. If the tax is restored on sugar alone, as it was before the McKinley law was passed, the amount of revenue on the last year's consumption of sugar would be in the neighborhood of $75,000,000.

Tariff reform means increasing tenfold the number of the even now vast army of the unemployed. It means reducing the wages of the laborers of this country to a level with those of the pauper labor of Europe. It means depriving them of wages and keeping them unemployed. With a full knowledge of the present condition of business throughout the country; and the condition of the laboring and farming population, he shows a determination to ruin home industries at all hazards, and he serves a stay of proceedings upon business, until he and Congress get through the operation.

The Democratic party has a great opportunity. It has the Executive and the House of Representatives by a large majority and the control of the Senate. It can do what it pleases.

Is there not some Moses in that party that can lead the people through the wilderness to the promised land?

Is there not some statesman who can formulate affirmative legislation which will put the finances of the country upon a stable and prosperous and permanent basis?

Is it the Democratic policy to repeal the Sherman law and then let the country drift wherever it may, financially?

Is it not better to declare what shall be done with the millions of silver in the Treasury?

The money question is fast becoming a sectional question. The producing West and South are strong and earnest for free coinage of silver. The speculative and money-lending East is just as strong and earnest for gold coinage alone and a single standard. Can not a middle ground be found upon which both can come together?

The seat of empire in this country is in the West. If it is not already there, it soon will be. On the money question the West is a unit; no party lines divide it. The West is thundering for silver coinage at the doors of Congress. The South is practically unanimous for the same thing. What can be done; what ought to be done to restore confidence and give back prosperity again to the people?

I read, as showing what the people think about it further from the New York Press editorial:

The business men of the country turn to the party in power for some remedy—to the party which promised so much to the wage-earner.

Will that remedy be given before it is too late? At this critical moment in the nation's affairs is there a statesman in the party responsible for the terrible vacillation and delay who comprehends and is master of the situation? After delivering himself of a message that did not do justice to the subject directly treated, and which worked infinite mischief to the subject (the tariff) incidentally treated, the President left Washington and returned to his summer home. With no steady, courageous hand and comprehensive brain at the helm, legislation has drifted into an uncertainty that bewilders even the nearest friends of the collective incapacity known as President and Cabinet. Within a week the Press has heard calls emanate from Democratic quarters for the calm wisdom of Harrison, the vast experience of SHERMAN, the infinite industrial knowledge of McKinley, and the courageous determination of REED.

With such leaders as these at Washington with power to act, would the bill to increase bank notes be in danger of being talked to death? Would the fear of the destruction of the American system of protection be pending? Would the Sherman law remain unrepealed? The Republican party is a party of courage and of action. It is in touch with the labor and the industrial and financial integrity of the country. In such an emergency as the present the people could rely on its acting practically as a unit for the good of the country. Something would have been done.

Something must be done. Two weeks have gone and the only legislation has been that allowing mileage to members for the extra session. Two weeks of precious time! Two weeks of great suspense! Two weeks filled with uncertainty in all branches of industry and trade! Two weeks in which hundreds of thousands of anxious, careworn men have scanned the Washington telegrams for action and found only indifference, bickering, crankism, cupidity, and incapacity! Two weeks in which not one word of encouragement to those who are holding out, hoping against hope, has come from the party in power! In a short time the savings banks will be called upon to pay out their deposits unless public confidence is restored. The bank note bill would help in this direction if immediately enacted into a law. A timely declaration on the tariff question would help to turn the tide and relieve the people. While obstinacy and ignorance reign at Washington there is little hope of either.

Words, even when earnest and patriotic, seem of little avail in penetrating Democratic opaqueness. There are rumors that an army of 50,000 of the unemployed is on the way to Washington. There is no danger of this physical demonstration. Unlike Congressmen, the unemployed have no national Treasury to tap for mileage and expenses.

There is only one army that will call the present Congress to account, and that is the mighty army of American voters. Unfortunately a year or more must elapse before that army takes the field again. Unless the next two weeks develop some patriotic action in Congress, the party in power and its responsible leaders will hear from that army in the Congressional elections of 1894 in no unmistakable terms. The tide that swept the Democratic party in will carry it out again in 1896, and the youngest of its statesmen will never live to see the return to power of the men who betrayed their country in this serious period of its history.

The Sherman silver-purchase law does not furnish more than a scintilla of the cause of the panic which now exists.

The basis of this panic is distrust and want of confidence. Distrust and want of confidence are based upon fear. The fear which has caused the existing distrust and want of confidence, is the fear that the Democratic party will turn out to be honest, and carry into effect the baleful doctrines of its platform by overthrowing home industries and revolutionizing the tariff. Business waits to see what will be done.

If Congress would give an assurance that there will be no tinkering with the tariff, the panic would be at an end.

The Sherman law, as was so eloquently shown by the gentleman from Ohio [Mr. GROSVENOR], is sought to be made a scapegoat for evils not at all chargeable to it. Repeal the Sherman law, and you have not then got rid of the panic. The country

will prosper again under the McKinley tariff if you will let it alone. The Democratic leaders propose simply to repeal the silver-purchase clause of the so-called Sherman law. They propose to tear down a portion of the structure of the body politic and erect nothing in its place. They would contract the currency at the ratio of $54,000,000 a year, and provide no means to counteract the contraction. They offer no suggestion by legislation as to what shall become of the millions of silver, coined and uncoined, now in the Treasury.

The Sherman law is not a good law. The people demand its repeal. In the language of a Southern journal, every man in the country from the Golden Gate to Hell Gate favors its repeal.

We should repeal the Sherman silver purchase law. It might have been done before.

Why did not the Democratic party repeal it in the Fifty-second Congress? Simply because it had done no mischief up to that time. It has done no mischief up to the present time.

The danger from that law lies chiefly in the future. We have none too much silver now. We might take a good deal more and then not have too much.

We have none too much money. Our population is distributed over such a large area that it takes more money per capita to carry on our business than it does in densely populated countries like England and France.

Our circulation per capita on July 1, 1893, was only $23.88. That is none too much. It is not enough.

Our increasing population and increasing business require an increase of circulation of many millions a year. The Sherman law does not furnish enough now, and if we repeal it, we should provide by legislation that our currency be not contracted.

I do not believe in overthrowing silver as money. I believe that it can be so arranged and adjusted that both silver and gold can be kept as money in this country, as they always have been. It can be done if we refuse to let foreign nations dominate us, and legislate solely for ourselves.

I believe in Americanism. Americans should take the lead of the world in finance as they do in almost everything else. To do this some system must be devised to regulate our money. Let us have our own system and not a system devised for us in London. In that system silver must not be left out.

We repeal the purchase clause of the Sherman act. What next? We ask our masters and they are silent.

We, of the minority, are prohibited by the rule established by the majority from offering any measure or amendment to the pending bill. We must vote upon the questions our masters permit us to vote upon, and we can vote upon no other.

The President, in his message, should have made suggestions of affirmative legislation looking to the relief of the people.

He contents himself with advising the repeal of the Sherman law, and threatening, at a later time, to overthrow and revolutionize the industries of the country by legislation which he is pleased to term tariff reform.

Mr. Speaker, I do not find in any act of Congress that gold is made the standard of value, or that the gold dollar is the standard dollar. I do find that wherever the word standard in the statutes is applied to dollars it is to the silver dollar. I repeat that there never was a gold dollar coined or authorized to be coined until 1849, by the act of March 3 of that year, and that we have now no gold dollars. The gold dollar coin was abolished by act of September 26, 1890, just read, which prohibits its further coinage and provides for calling in all that have been coined and retiring them from circulation, and repeals all the former laws on that subject.

The silver standard dollar was established and its coinage began in 1792. It was recognized as the standard silver dollar in the act of February 28, 1878, the title to which is "An act to authorize the coinage of the standard silver dollar." It was recognized again by the act of July 14, 1890, which, in its third section, provides for the coinage of silver "into standard silver dollars," and in its fifth section describes the act of 1878 as "An act to authorize the coinage of the standard silver dollar."

I repeat, therefore, that while there is much warrant in the law for the claim that the coined silver dollar is the standard dollar, there is none whatever in favor of the gold dollar, and the gold dollar is not now known to our coinage laws.

But it is claimed that while gold is not now the legal standard, it has come to be the standard in fact, under the influence of commercial forces. These commercial forces come chiefly from abroad and from Wall street. The great money-lenders of the world believe it is for their interest to establish the gold standard, and they spare no means to accomplish that result.

Gold is not the money of the people and it is not the people's standard. It is not in the interest of the masses of the people that a single gold standard is urged. It is advocated in the interest of the money kings of Europe and America. It is advocated in the interest of the gold bugs of Wall street. It is advocated in the interest of the men who wreck railroads and operate corners in stocks and grain. The great producing States of the West and South are opposed to it.

I read the language of that great scholar and orator, the Senator from Kansas, John J. Ingalls, from a speech delivered in the United States Senate in 1878, at a time when Kansas was represented there by brains and not cranks. It has been read here before, but it will bear reading again. He said:

> No enduring fabric of national prosperity can be builded on gold. Gold is the money of monarchs; kings covet it; the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in the commercial centers, and to move from kingdom to kingdom in such volumes as to unsettle values and disturb the finances of the world. It is the instrument of gamblers and speculators, and the idol of the miser and the thief. Being the object of so much adoration, it becomes haughty and sensitive and shrinks at the approach of danger, and whenever it is most needed it always disappears. At the slightest alarm it begins to look for a refuge. It flies from the nation at war to the nation at peace. War makes it a fugitive.
>
> No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty that it does not break. It has no friend whom it does not sooner or later betray. Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck and disaster, it becomes the chief agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of greater peril it becomes an enemy more potent than the foe in the field; but when the battle is won and peace has been secured gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the rebels. It was the most invincible enemy of the public credit. Gold paid no soldier nor sailor. It refused the national obligation. It was worth most when our fortunes were lowest.
>
> Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction. But as usual when danger has been averted and the victory secured, gold swaggers to the front and asserts the supremacy. But silver is the money of the people. It is the money of wages and retail. Its tendency is toward diffusion and dissemination. It enters into the minute concerns of traffic, and is exchanged day by day for daily bread. It penetrates the remotest channels of commerce, and its abundance, bulk, and small subdivision prevents its deportation in sufficient amount to disturb or unsettle values. If it retires at the approach of danger, or from the presence of an inferior currency, it still remains at home ready to respond to the first summons for its return.

No political party in this country has ever declared, or dared to declare, in favor of the single gold standard.

Both political parties are committed by their platforms to retain silver as money. I read from platforms of the Republican party:

THE REPUBLICAN POSITION.

1888.

The Republican national platform adopted in 1888 contains this plank:

> The Republican party is in favor of the use of both gold and silver as money and condemns the policy of the Democratic administration in its efforts to demonetize silver.

1892.

The same party in 1892 adopted a platform containing the following language:

> The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, such restrictions to be determined by contemplation of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be equal at all times.
>
> The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or gold, issued by the Government, shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international parity of value between gold and silver for use as money throughout the world.

Never has the Republican party taken a position in favor of a gold standard. I read from platforms of the Democratic party:

THE DEMOCRATIC POSITION.

1880.

The Democratic platform of 1880 contained these words:

> Honest money, consisting of gold and silver, and paper convertible into coin on demand.

1884.

In 1884 the Democratic platform contained this plank:

> We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

It would seem that at that time silver was considered honest money.

1888.

In 1888 the Democratic party did not express itself on the money question except by saying:

> It renewed the pledge of its fidelity to Democratic faith, and reaffirms the platform adopted by its representatives in the convention of 1884.

Since the platform of 1884 commended silver as an honest money, we must assume that the reaffirming of that platform declared anew that silver was honest money as late as 1888, although at that time its bullion value had fallen still more.

1892.

The last utterance of a Democratic national convention upon this subject is contained in the platform adopted at Chicago in 1892. It is as follows:

> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination

against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

I am content to stand where my party stands on this great issue.

We can maintain gold and silver as unlimited legal tender, and we ought to do so. We can make and keep every dollar of each of equal value. We can place a limit on the amount of silver to be coined. We can put 100 cents into a silver dollar.

In France, with a population not exceeding one-half of ours, the silver coinage exceeds ours by more than a hundred millions of dollars, and France finds no difficulty in keeping silver at a parity with gold at a ratio of 15½ to 1.

Germany has a limited coinage of silver, and maintains what she has at a parity with gold.

These propositions do not suit the extreme gold men on the one hand or the extreme silver-coinage men on the other.

The gold faction of the Democratic party and the free-coinage faction of that party are united on one thing, and that is the destruction of the great system of protection under which we have prospered so long.

I know of but one course to take, and that is to vote upon the pending bill, upon the merits of the Sherman law alone. I intend to vote for repeal if amended so as to preserve the silver we have as legal tender. If I can, I would have suitable conditions attached to its repeal.

One great evil which we encounter in times of panic consists in contracts payable in gold. The instant gold becomes scarce, those—mostly foreign—contracts are presented and the gold demanded. If those contracts were payable in lawful, legal-tender money of the country that would not happen. There is a perfect remedy.

Let us enact a law which shall make all contracts void which are payable in any specific kind of money. Perhaps we could not borrow so much money abroad if such a law were enacted. Let it be so. The less money we borrow abroad the greater will be our financial health and independence and the easier can we get out of the clutch of Lombard Street. Why should we defer to European financiers in managing our own concerns? Are Abana and Pharpar, rivers of Damascus, better than all the waters of Israel?

Mr. RUSSELL of Georgia. Mr. Speaker, the emergency which confronts this Congress is not in any degree partisan. No party is responsible for it. The great party question before the country was that of tariff reform and protection, and upon the idea of tariff reform Mr. Cleveland swept this country from one end to the other. The financial condition of this country, Mr. Speaker, did not enter into it at all. The people, having been oppressed for years and years by this protective tariff, rose in their might and landed Mr. Cleveland, the champion of tariff reform, in the Presidential chair.

The financial condition of this country has been a secondary consideration, Mr. Speaker. In my humble opinion, it has been brought about for the purpose of obstructing the main issue upon which the campaign of last year was fought. There has been, it is said, a conspiracy to bring about this unsettled condition of things. With the crops of our country now ready for market, there is no money to move them. In my own country, in the South, where the people have prospered in spite of all the adverse legislation that Congress and the Republican party has put upon them, they have to-day in their smokehouses plenty to eat and upon their backs plenty to wear.

The gentleman from Pennsylvania [Mr. SIBLEY] said the other day that he had seen naked people with cotton at 5 cents a pound, and hungry people with wheat at 40 cents a bushel. Sir, there never has been a time, even in the darkest hour of our Southern country, when there has been a starving man there, or one who lacked wherewith to clothe his nakedness. But, Mr. Speaker, this is not a question of bread and meat. The people whom I have the honor to represent have worked cheerfully and industriously and have adapted themselves to the condition of things that has existed in this country for many years. They are as industrious as any people on earth, and many of them, by their patient industry, are making their way to competency and to fortune.

But when the crop is ready to be marketed they are confronted with the price of 5 cents a pound for cotton. The man who used to walk around town with his samples, whistling a merry tune because he knew that with the proceeds of his surplus crop he could pay his debts to the merchants and carry home something in his pockets, is to-day depressed, sneaking around, so to speak, to the counting houses in the cities, begging to be "carried" over until sufficient currency may be put forth to enable him to get a reasonable price for the cotton which he has produced by his toil and his sweat.

Mr. Speaker, it is said that while Rome was burning Nero fiddled, and while cotton is going down, down in price, and the industries of the country from one end to the other are paralyzed, the American Congress is fiddling, arguing, talking, consuming time, telling the same story over and over again, while among the people all is trepidation and distress.

I have observed, Mr. Speaker, that every effort made upon this floor to have the free coinage of silver has always been objected to by some gentleman who is in favor of the unconditional repeal of the Sherman act, and, sir, while I have the greatest respect for New England—the home of Webster, of the Adamses, of Edward Everett, and of John Hancock, who wrote his signature so large that tyrants might run and read it—I am sorry to say that at every stage in this discussion, the way toward relief has been blocked by the members from New England.

[Here the hammer fell.]

Mr. TATE. Mr. Speaker, I ask unanimous consent that the time of my colleague be extended ten minutes.

There was no objection, and it was so ordered.

Mr. RUSSELL of Georgia. Mr. Speaker, I have said that the effort made here by the friends of free silver, of honest money, of an expansive currency, has been blocked by the gentlemen to whom I have referred. Because a currency is expansive is no reason why it should not be honest, and there is not a man in this House who doubts that if we should pass a free-coinage bill every dollar made under that legislation would be as honest as the gold dollar.

Further, Mr. Speaker, I have noticed that this is not a partisan fight, and I will tell you how it has struck me, a new man upon this floor. I come here a Democrat. I come here imbued with the traditions of my party, and I thank God that the party, in the main, stands by the principles upon which it was founded, and which have engrafted it forever on the institutions of this country. But I find, sir, that every step we take toward giving the people honest money, has been blocked by the representatives of New England, and the representatives of the men who hold the money bags of this nation. I am, therefore, compelled to come to the conclusion that this is not a fight between the Republican and Democratic parties, but that it is simply, in the last analysis, a fight between the men who hold the money bags and the balance of the people of this country.

Now, what are we doing? I tell you, gentlemen who hold the purse strings of this nation—just as honest, just as patriotic, perhaps, as any other portion of our people—that there is a great expanse of territory within the United States, peopled by millions who delve in the ground and in the workshop, and who come to you here, saying, "Let us have an opportunity to develop our country, to pay our debts; give us an opportunity to get living wages, let us have an equal chance in the race for happiness with you." And I tell you further that unless the cry of those people is heard, unless you respond to that cry, you gentlemen who have the stocks and the securities and the stock markets and all those things at your finger's ends—I tell you that you are sowing a crop of dragon's teeth, and sooner or later you will reap the harvest. [Applause.]

Mr. JOHNSON of Ohio was recognized.

Mr. Speaker, before beginning my remarks I ask the indulgence of the House to speak for fifteen minutes.

Mr. BAILEY. Mr. Speaker, I ask unanimous consent that the request of the gentleman from Ohio be granted.

There was no objection, and it was so ordered.

Mr. JOHNSON of Ohio. Mr. Speaker, I shall vote for the Wilson bill—for the unconditional repeal of the purchasing clause of the Sherman act.

I am far from charging to this measure the difficulties from which the country is suffering, the breakdown of credit, the paralysis of business, the stoppage of industry, now filling the country with idle men, and imposing upon our people losses and suffering as real and as widespread as though we had been visited by a great convulsion of nature or a destructive war.

Nor do I believe that its mere repeal can bring again prosperity—even that moderate prosperity to which we are in normal times accustomed. The cause of such recurring depressions of business, such spasms of paralysis in the interlaced machinery of production and exchange, is to my mind not to be found in our financial legislation, bad as that has been, but is more deeply rooted.

Our disturbed monetary condition is rather a symptom than a cause—an index or expression of evil and unnatural conditions, rather than their source. The bottom cause lies in that monopolization of the materials of nature, which goes on all around us with an intensity accelerating with every improvement: that speculation in the value of land—the indispensable requisite of all production and of all life—which, with every addition to pro-

ductive power, piles up fictitious values, on which labor and capital are called to pay as the condition of their exertions.

Important as the money question may be, its importance is as nothing when compared with the question of taxation. Money at most is a mere instrument of exchange, a mere tool for the transfer of values. Whether there is much money or little money, whether we estimate commodities in dollars or in cents, will nowise affect the fact that where labor is burdened with taxation and monopoly is exempt, where a few own the land and the many must pay directly or indirectly a tribute for living or working in a country they call their own, the few must be rich and the many poor, and labor—the mere power to work without the right to anything to work upon—must be driven by cut-throat competition to look upon the mere opportunity of work as a privilege.

Imagine, if you will, the entire absence of money, and the making of exchanges by barter, and we would, under present conditions, witness the same conjunction of wealth and want, the same phenomena of periodical hard times. What change in the amount of money or character of money could prevent the wealth created by Irish tenants from being drained across the Irish sea to the absentee owners of Irish land? What change in the amount or character of our currency could prevent wealth created in our own West being drained to the East as long as so many of the toilers of the West are but tenants or mortgagees of landowners who live in the East or in Europe? What mere monetary change would alter the law under which here in the national capital we may see that everything that adds to the population and wealth of the city of Washington, every symptom of improvement and growth, is discounted in advance by the addition of millions and millions to the capitalization on which the owners of land can demand tribute from those who live here or work here? Nevertheless, the money question is an important one—next to that of taxation the most pressing business before this Congress, and the full discussion that has been forced upon the country and upon us must be productive of good.

I am opposed to the storing up of silver by the Government, as I would be opposed to the storing up of wheat, or wool, or whisky, and just as I am opposed to the subtreasury proposal of the Populist, so I am opposed to this subtreasury act of the silver producers. It is a taxing of the many for the benefit of a few—a prostitution of governmental powers to a purpose with which government should have no concern. It is a step on the road which must inevitably destroy government of the people, by the people, for the people, and make it a government of plutocrats, by plutocrats, and for plutocrats—a form of government more corruptive and more degrading than that of hereditary aristocrats or rulers by right divine.

It is because we have swerved from the Democratic principle of simple government and equal rights, because we have allowed the very gifts of God to be monopolized, because we have abused the power of legislation to affect prices and create special privileges and manacle trade with restrictions that the political and social evils of which we are all conscious have come upon us.

Here is the reason why rings control our cities and tramps infest our roads. It is time that we should set our faces unhesitatingly and steadily against all special privileges, no matter what be their form, and against every attempt to wrest the powers of government beyond their proper sphere, no matter by what plausible pretense it is supported. Nor do we lack the mandate of the people. The popular verdict of last year meant but this, and I for one shall vote for the repeal of the Sherman act without an "if or an an," just as I would vote for the abolition of all protective duty, or, better still, for all taxes on production or consumption of whatever kind.

But the real opposition to the repeal of the purchasing clause of the Sherman act is that popular discontent with the conditions of labor, which, feeling that somehow or other the rich are growing richer and the poor poorer, turns to an extension of the volume of money for relief. It is this feeling which seeks to impose as a condition of repeal the free and unlimited coinage of silver at some ratio.

If I could see in free silver what has been so eloquently claimed for it by its advocates, I would gladly join their ranks. If it would really cure, or even in some degree tend to cure, the inequalities manifest on every side, producing the millionaire and the tramp; if it would stop, or even tend to stop, the closing of factories and the forcing of able-bodied, willing men into idleness; if there would be in it any remedy for the apparently overstocked labor market and for the hardships that the producers of this country are now suffering from, it would be our duty, even though it worked some injustice to the rich, to adopt it as a measure calculated to bring greater comfort to that class of society which, in my judgment, bears the heaviest burden.

But what does the free and unlimited coinage of silver mean? It does not mean, as its advocates seem to suppose, the concurrent coinage and use of both gold and silver. It can only mean the concurrent coinage and use of both metals when and during such time as the legal ratio in the value of the two metals shall coincide with the commercial ratio. It is not the choice between bimetallism and monometallism which is offered to us, but the choice between gold monometallism and silver monometallism.

The free coinage of silver is urged upon us under the cry of bimetallism, but that cry is but a delusion and a snare. The free coinage of silver under any of the ratios proposed would at the present commercial ratio be equivalent to the legislative prohibition of the coinage and use of gold. It would drive from our mints, and from common use as money, gold and the representatives of gold, and that by virtue of a natural law more potent than legislative fiat.

The monetary systems of the civilized world are measured by a fixed quantity of some commodity, gold or silver, but nowhere for any length of time where free coinage of both is permitted, by both metals at once. Platform declarations, statutory provisions, constitutional requirements, penal laws, the most lavish exertions of the power of supreme monarchs, have never been able to defy this natural law. The undervalued metal will not circulate under equal free-coinage privileges.

There is no need of recalling the history of the world. Our own history proves this. From 1792 to 1834 silver was our unit of value, gold being undervalued by the established ratio of coinage. From 1834 to 1861 gold was our unit because silver was undervalued, and except worn, abraded, and foreign coins there was practically no silver in circulation at this time. So scarce was silver coin during the latter part of this period that in 1853 Congress purposely debased the minor silver coins by reducing the quantity of silver in them. From 1861 to 1879 the reign of gold as a measure of value was interrupted by the depreciation of our paper money. From that period until to-day it has again been the unit.

Mr. SNODGRASS. Do I understand the gentleman then to concede that the country is to be reduced to a single gold standard?

Mr. JOHNSON of Ohio. I understand that the country has been upon a single gold standard since 1834, except during the period of depreciated paper money; and I for one am not willing now to make a change. You offer no reason for it. You tell us that prices will go up. What of it? We are not here to deal with prices. We are here to maintain a unit (or if it were an original proposition, to select one) which will operate honestly as between these two conflicting classes. It is our duty to have a unit of value which will be fair to both debtor and creditor.

Mr. SNODGRASS. I wish to ask the gentleman whether, when the public debt was funded in 1870, that debt was not made payable in the coin of the country, both gold and silver, and whether, if we change the medium of payment now and adopt a single gold standard, we do not appreciate the claim of the creditor while we depreciate the ability of the people to pay.

Mr. JOHNSON of Ohio. If you ask me whether a great injury was then committed, I answer yes. But can you, here and now, complaining of that wrong, ask us to do a similar injury to another class?

Mr. SNODGRASS. We simply ask that the contract shall be complied with.

Mr. JOHNSON of Ohio. That is a transaction of twenty years ago. We are not responsible for what then occurred. I think it is true that when the change was then made from a depreciated paper money to the gold standard there was inflicted a great injury upon an immense class. But we can not correct that by now doing a like injury to another class. And you who complain ought to be the last to come here and ask us to scale down debts—to adopt a standard of value that will injure the creditor classes as we admit the debtor classes were injured then.

There is only one way to even momentarily obtain free coinage of both gold and silver at the same time, and that is to adopt a legal ratio that would conform to the commercial ratio—a matter as difficult as standing a needle on its point. But even if there is anyone wise enough to determine this point in advance (allowing for changes in the market values of the metals brought about through the act), the whole experience of the past shows us that with one metal or the other the free coinage thus secured would in a short time be merely nominal. A slight change in the commercial value of the metals would again, as it has before, drive one or the other of them out of use.

I think that it must be conceded to the bimetallic theory that where both metals may be legally used as the unit of value, there is a steadying influence exerted on the world value of both, for, where one of the two metals becomes relatively less valuable, it infallibly drives out the other, and this greater use of the least valuable metal tends to the increase of its value and the decrease in the value of the metal displaced. But is it wise,

especially when international agreement is hopeless, if not futile, for us to purchase this advantage for the world at the cost of constant and perpetual changes in our own measure of value and medium of exchange—of constant and inevitable fluctuation from one metal to the other?

Yet whatever may be said for the theory of bimetallism, it should be clearly kept in mind that the Sherman act is not bimetallism. It is an attempt to keep up the value of silver, not by permitting its greater use when it is, under the ratio, the cheaper metal, but by buying it up and storing it away, issuing against it certificates or Treasury notes which are in reality obligations to pay gold, and which bear to-day not a silver, but a gold value. And this is the real character of all of Mr. Bland's amendments now under discussion. None of them really proposes the free coinage of silver pure and simple, but, instead of that, unlimited Government purchase at the option of the seller. Even were we thus to provide in the Government a customer at $1.29 an ounce in gold for all the silver offered, we would still be on a gold basis, debts would not be paid more easily, and prices would not increase. We should only be purchasing at a fixed price all the silver presented. We might, so long as we would and could afford to stand the expense, keep gold and silver in this way at their old parity, just as a strong government that should offer to exchange a bushel of wheat for a bushel of corn might, by an unlimited buying of corn, keep corn and wheat at a parity.

We might thus raise the price of silver bullion all over the world, and keep it up so long as our people would consent to bear the cost of the losing investment. But sooner or later the crash would come, and when the day of reckoning arrived it would be found that the taxpayer must lose the difference between the price at which the Government had been purchasing silver and its true commercial level. Such propositions are not for free coinage, but for forced coinage, the force which might for a time artificially keep up the value of silver being the force of the tax-gather, exerted upon the working masses of the United States to take from them the products of their labor. They are not bimetallism—they are silver purchase run mad.

Let me repeat. None of the substitutes for the Sherman act proposes free coinage. What they propose would amount under existing laws and rulings simply to continued and unlimited purchase. What has been during all these years the effect of the attempt to get silver into circulation by any less drastic measure than that of reducing our unit of value to the silver level? What has become of all the silver dollars we have coined and the silver bullion we have bought? It remains in the Treasury vaults—all except the small portion that has been forced upon an unwilling people by refusing to them the small notes they would prefer.

The paper currency nominally issued on the basis of our hoarded silver is not in reality issued upon it at all. It is really issued upon the credit of the nation, and circulates upon the basis of the understanding, expressed or implied, that it is to be accepted by the Treasury and in payment of all public dues on an equal value with gold. The public credit, which gives these silver notes their circulation, derives nothing at all from the tons of idle silver with which our treasuries are gorged. Instead of strengthening the credit of the United States the tendency of this useless locking up of a depreciating commodity has been but to weaken it; first, by putting an unnecessary tax on the people, and, second, by giving ground to the fear of an impending change in our measure of value.

That we can not have a really free coinage of silver without ultimately driving out gold is shown not only by our own experience, but by the experience of the world. But even with the injuries that would attend this, it does not seem to me that there would really be much increase in the actual use of silver, and consequently much appreciation of its commercial value. It is the use of a commodity as an actual medium of exchange, not as an ideal measure of value, that affects the demand for it and consequently its commercial value. And the plain and indisputable fact is that, except for small change, our people do not like silver, and that for all the uses of small change they do not like it even for that.

In the progress of civilization we have to a very large extent got past the using of silver and even gold for currency, and prefer paper as more convenient. To reduce our currency to a silver basis does not mean that people would be content to carry around silver to much, if any, greater extent than they do now. It would mainly mean that the paper which we have become accustomed to use both as money and as substitutes for money would represent a silver value instead of a gold, and it is the conscious or unconscious recognition of this which causes the advocates of silver to always include in their real proposition some proposal for silver certificates; and up to the present the so-called silver certificates which the free-silver men have had issued, or have proposed to issue, have been certificates really payable in gold.

In considering the question before us, let us frankly and honestly face the main issue—that of a change in the unit of value. Are we ready to change our measure of value—the unit on which all our transactions and contracts and obligations and estimates are based? This is the real heart of the question.

If it were a fresh question—that is to say, if it were unembarrassed by existing habits and agreements—it might be open to debate.

I am free to confess that it is not clear to me that gold possesses any advantage over silver as a unit of value. As well as I can make out in the confusion of evidence, I am inclined to think that silver has maintained a more constant relation with commodities generally than has gold—that is to say, that its change with regard to them has been less than that of gold. But we are now on a gold basis, and, with the exception of the interlude of depreciation which began with the war and continued for some time after it, we have been on a gold basis since 1834. Why should we change?

Sentimentality on such a subject is nonsense. Gold is not, as thought by some, the God-ordained measure of value, and there is no proof that it was designed by nature to be the money of the world. Nor should we decide on silver because our forefathers at any time used it, or because of what some are pleased to call the injustice that has been done to that noble metal. Injustice is not done to metals, but to men. It may be worth while to quote against the eloquence of the "friends of silver" the similar eloquence of that staunch Democrat, Thomas H. Benton, in favor of the act of 1834, which restored gold to use in the United States and virtually drove silver out of the country. He said the object of the bill was—

> To enable the friends of gold to go to work at the right place to effect the recovery of that precious metal which their fathers once possessed, which the subjects of European kings now possess, which the citizens of the young republics to the south all possess, which even the free negroes of San Domingo possess, but of which the yeomanry of this America have been deprived for more than twenty years.

But all such fine speaking or fine writing, while it may captivate the unthinking, is really idle. The question of money is simply the question of the best tool of exchange. As to this we have at least this light: Not only did the people of the United States deliberately and to their own satisfaction change in 1834 from a unit of silver to a unit of gold, and subsequently, and for obvious public convenience, reduce silver to the only place it can permanently occupy in order to concurrently circulate with gold, that of a token money, but the same change has during this century been carried out by nearly all civilized nations. It is too much to attribute this general movement to a mere conspiracy. Its steadiness and universality are much more indicative of a general demand caused by the needs of a larger commerce and a more complex industry.

Just as copper, which was at first the unit of value among the Romans and other nations, gave way in time to silver, so now it seems that silver is giving away to gold, and gold, at least as a medium of exchange, is giving way to paper. This growth in the use of paper seems to me a sufficient answer to the fears that the exclusive use of gold as a unit of value will so increase the demand for it as to abnormally raise its value.

It is clear that the use of gold as a unit of value does not necessarily involve the actual use of gold as a medium of exchange, or even as a reserve. Canada, for instance, maintains her paper money on a parity with gold, yet has neither a gold issue nor mints to coin it. This is surely a sufficient answer to those who claim that there is not gold enough in the world to furnish a sufficient basis for credit. It shows how far the use of the substitutes for gold can be carried.

The favorite argument of those who advocate a change is as to its effect on prices. This is the most captivating form of presenting the question, but it will not bear careful analysis. The question of price is one with which the Government should have no concern, further than that of preventing general fluctuation by changes in the unit of value. It is not the proper function of government to legislate with reference as to prices. It is a form of paternalism that all free-traders should condemn. An appreciation of the unit of value, of course, lowers prices, as depreciation raises them.

But, except where there is debt, this makes no difference, for a change of prices caused by depreciation or appreciation in the unit of value affects all prices alike, and does not change relative values. If a mere change in the unit of value gives the farmer $2 a bushel for his grain where before he only got $1, the $2 give him no greater command over commodities than the $1 did before. The change is a change only in expression.

If there was anything in the argument that increased prices means increased purchasing power, and that sellers are the only ones to be considered, we ought not to stop with the doubling

of prices, but should at once inaugurate a system that would make wheat worth $10 a bushel in money instead of $2, or rather so increase our currency that money would bear the same relation to commodities that it did at the close of the Revolution or in the last day, of the Southern Confederacy.

That there are temporary differences in the demand for money I am well aware, and that we are suffering to-day from a temporary scarcity in the supply of actual currency, caused by the curtailment of credits and a general distrust that has led to the hoarding instead of the circulation of money, is too obvious for argument. But in a bill to establish an interconvertibility between United States bonds and Treasury notes which I introduced at the last session of Congress, and a still simpler and more quickly effective measure of the same kind which I have introduced in this, I have endeavored to put into practical form what I believe to be the quickest, safest, and most efficient mode of putting an end to the currency famine and giving elasticity to our present currency.

While the difference in general prices caused by the greater or less value of money makes no difference as between buyer and seller—while no matter what be the medium or tool of exchange, the purpose and end of exchange is the transfer of commodities or services for commodities or services—the depreciation or appreciation of money does make a great difference as between borrower and lender in regard to the transactions entered into upon a different monetary basis.

Where it has been agreed that debt shall be paid in dollars, that it would be greatly to the interest of the debtor to have dollars become cheap, no one doubts, and so it is likewise to the interest of the creditor to have money appreciate and dollars become dear. But it should be the aim of the legislator to maintain, as near as possible, a constant measure, so as to deal honestly and fairly between these interests, and a proposition to now change our legal measure of value by accepting silver at any ratio less than its commercial parity is a proposition to destroy the validity of contracts and to wantonly exert the legislative power to injure some citizens and help others. It would be as unfair and dishonest to the creditor classes of the country as was the appreciation of the unit of values existing between 1865 and 1879 to the debtor classes.

It is true that even the free coinage of silver at 16 to 1 would not scale down the national debt. That, we have rightly or wrongly agreed, is to be paid principal and interest in gold. Nor will it in the vast majority of cases do any harm to the holders of mortgages or bring any relief to mortgagees, for these also are in most cases protected by specific contracts for the payment of gold. And this also is true of the greater number of obligations held in large amounts. But it would work injury to national and individual credit and to the public morals, and those who condemn the appreciation of the unit of value as a measure of injustice should be equally prompt and clear in denouncing its depreciation.

Whatever of error or injustice comes from natural changes in the unit of value once selected is excusable, but a wanton change from one unit to another that will thus affect the relations of debtor and creditor can not be justified on any ethical ground, nor yet on any ground of expediency.

In our own history we have seen the evils of such change. The record of our national life begins with it in the burdens imposed and evils wrought by the depreciation and final repudiation of the continental money. We of this generation know how disastrous was the depreciation of our standard of value during the war, and the subsequent injustice worked in coming back from a lower to a higher standard of value. Why should we wantonly take that road again? We have a good currency in the credit of the national Government—a credit sustained by great sacrifices and which has shown its strength even under the present stress.

One of the most striking features in what has recently happened is the reversal of the predictions made that gold would go to a premium, when it is, in fact, the paper currency of the Government, and not gold, that is most demanded and is selling at above par. Let us maintain that currency and improve it by giving it a feature of interconvertibility, and not, by suddenly changing the unit of value, bring about a shock of which no one can tell the full results.

Any forcing of the use of silver, like the forcing of the use of gold instead of paper money, is an obstacle to trade and impairs the usefulness of our currency as a tool of exchange. Absolute constancy in the value of money or of anything else is unattainable, but the true rule should be that where a government undertakes to furnish the circulating medium of the people it should provide, first, the utmost possible constancy in its measure of value, and should at least scrupulously refrain from wantonly changing it; second, convenience as to the form and character of its primary and secondary money, being controlled by the wishes of the user as to whether it should be paper or coin; and, third, furnishing a sufficient volume to perform comfortably its office, providing some feature of automatic flexibility, so that the needs of trade and not the guesses of legislative bodies shall control its amount.

We should keep clearly in mind the functions properly under governmental management, and avoid all subjects over which the legislature of a free people should properly have no control. Much of our distress comes from confusion in men's minds as to where to draw this line. While it is entirely in keeping with democratic institutions that the Government should issue money, it is no part of the functions of government to go into the banking business.

The reason for the governmental control of the mints and the furnishing of a circulating medium is that the interests of the people are thus best served. That is a business in which competition can not enter except at a sacrifice of utility. But the banking business, the receiving and safely caring for deposits, conducting exchange, loaning money, is a business in which competition does exist, and which, therefore, should not be undertaken by Government agents. Necessary regulation and supervision of banking seems to be a step in the right direction and the proper subject of still further legislation.

I am deeply anxious to get this money question out of the way, that we may turn our attention to far more vital things. The three branches of the National Government stand pledged before the people to the abolition of the protective features of the tariff. We ought not to lose a day nor an hour in redeeming our pledge.

To strike off the shackles which protectionism has imposed upon production and trade, to strike down the trusts and monopolies which it has built up, would do more to open the factories and give relief, and create a demand for the products of mine and farm, than any amount of tinkering with the finances. And for that permanent relief which would do away with industrial depressions, which will end the strife between labor and capital, which will secure to all men their full share in the opportunities offered by nature and the improvements made by an advancing civilization, we can only look to a measure to which the advance of free trade leads, and which is its final culmination—that great measure popularly called the single tax. [Applause.]

[Here the hammer fell.]

Mr. CRAWFORD. Mr. Speaker, two men may differ and both be wrong. Our Democratic friends who propose to vote for the unconditional repeal of the Sherman law say that the financial disturbance of the country is solely due to the purchasing clause of that law. Our Republican friends who propose to cooperate with them in repealing that law say it is not so much due to the Sherman law as it is to the fear that the Democratic party may tamper with the tariff. I think both are wrong; so three men may differ and none be right. Now, I have a little sympathy for the Republican party in this fight. I am always sympathetic. They say that this House, by the rule which it has agreed upon in the consideration of the Wilson bill, has deposited them "in a cavity." That is not true. The people of this country deposited that side of the House "in a cavity" last November, and we found them there. That is all. [Laughter.]

Mr. Speaker, the great question before the House now is whether or not we shall sustain silver as one of the money metals of the country, or whether we propose to put the country absolutely on a gold basis and recognize nothing but gold. But gentlemen on the other side are trying to bring the tariff into this question in order to evade the true issue. I say to you that you will have enough of that before you get done with it later on. Why, Mr. McKinley submitted his tariff proposition to the people of this country three years ago and they repudiated it, and not only repudiated his proposition, but repudiated him as well. Last year your party put Mr. Harrison on the same platform, and I presume you all got on with him, and the whole thing was wiped out and you hardly had a minority left after that fight. Why, we could have elected two Presidents, and I think really we ought to have done it. [Laughter.]

Now, sir, I have only a few things to say right here in this connection. I want to say here and now in answer to the arguments that have been made and gone to the country trying to prove that there is such a thing as a 58-cent standard silver dollar between the two oceans, that there is no such dollar and you have never found it, nor has any other man ever found it, unless it was mutilated—the life punched out of it. You pretend to say that you must have 20 or 24 as the ratio between the two metals. You tell us that that is necessary in order to preserve the parity; but yet you will not accept that, and say that silver can not be maintained at any ratio, and that 20 to 1 is no improvement.

We stand here ready and willing to offer you that ratio if you

do not believe that 16 to 1 will sustain it, in accordance with your construction of the Democratic platform. But you know very well that you would not accept that or anything else we could offer you on that subject. You say that that is worse than 16 to 1, and that you will not vote for free coinage of silver on any ratio.

Now, sir, the country knows well, and you can not deceive them, that this is a refined argument. They know that it is political jugglery and learned nonsense, and nothing else. Experience teaches our people that gold and silver are on a parity, and should be; they know that this Government has declared that the silver dollar shall pay all debts, public and private, and is a tender for every conceivable debt in this country and pays them as readily as gold.

Mr. SNODGRASS. Will the gentleman allow me to ask him a question?

Mr. CRAWFORD. Yes.

Mr. SNODGRASS. I would like to ask the gentleman's opinion [cries of "Louder"] of the consistency of these people that say we must unconditionally repeal the Sherman act, which means a single gold standard, and yet declare themselves in favor of bimetallic coinage?

Mr. CRAWFORD. Those gentlemen who take that position can answer for themselves to their own constituents. I will not undertake to do so for them. I am not the keeper of their consciences and do not propose to construe platforms for them. I know that in my State the people thoroughly understand that the Democratic party stands now, as we have always stood, for bimetallism, the same position that we have occupied for one hundred years. [Applause.]

Now, gentlemen, what is the use of coming here and pretending to be bimetallists and at the same time profess to be late converts to the ideas that we have seen repudiated in the last election, which is a progressive step to the gold standard, sanctioned and advocated by the Republican party? Why you, the Republicans, do not want to have any more trials at the financial question, do you? You sit here and listen to the leaders of that side of the House, who insist that this is a 58-cent dollar. I heard the distinguished gentleman from Pennsylvania [Mr. DALZELL] say that on yesterday. The Republican party has had the country for thirty years, and comes here and makes excuses now for that dollar of theirs. Sad commentary. We have never indorsed by a single vote a 58-cent dollar, and never will do it. We want honest money and plenty of it.

The SPEAKER. The time of the gentleman has expired.

Mr. HENDERSON of North Carolina. I ask unanimous consent that my colleague have ten minutes longer.

There was no objection.

Mr. CRAWFORD. Now, sir, I disagree with these gentlemen. When they claim that our silver coin is depreciated I say that it may be true that the legislation you have had in the past, considering the efforts put forth to reduce this country to a 58-cent dollar, would warrant the statement, and if the result had been commensurate with the effort you would have it reduced to a 25-cent dollar, although your effort has not been sustained, as you claim.

In spite of legislation, I say, in spite of discrimination the world over, silver, wherever it has been recognized by any government and made legal tender in payment of all debts, has sustained itself. Why, to me it is perfectly absurd, in my democratic way of viewing this question, to think for one moment that there is any danger here of a great inflation of the money of the country because of the coinage of silver.

It is not true. Examine the records of France and other countries in regard to silver, and you will find that the progress that we have made, great as it has been, it will take us another hundred years to give the people of the United States the same per capita of silver that France sustains to-day on par with gold. Then to say that this country, with her 3,000,000 of square miles, with the richest soil and the most progressive people on earth, can not sustain nine or ten dollars per capita in silver when France has $17.95, is absurd, and I think it is a weakling who would contend for such a proposition.

Now, the contention is, Mr. Speaker, that on account of the great discoveries of silver there is danger of inflation. Is that true? Let me give you what Mr. Mulhall, the London statistician, says. In 1600 the ratio of silver to gold in production was 40 tons to 1. In 1700 it was 41 tons to 1. In 1880 it was 15 tons of silver to 1 ton of gold; and yet you stand up here, three hundred years after that time, and say there is danger of an overproduction of silver, when, in comparison with gold, it has fallen off more than 200 per cent in production. I say that silver has not fluctuated in the markets of the world, and the increase here has not been so uncertain as that of gold. Gold fluctuates from nothing to 96 per cent per annum, and silver at no time has ever increased more than 10 per cent per annum. That is the situation exactly.

Oh, yes; there is danger in this 58-cent silver dollar. The danger is that we have not got enough of them; and you pretend that the Sherman law is responsible for the panic. The sole responsibility is with the banks of the country and others who have built up a credit system until it has got so large that the money in reserve will not support their business, and when the people got scared, after the banks began to cry panic! they wanted their money: not gold, but any sort of money. They thought that if the New York Clearing-house Association could not rediscount the collaterals of the banks throughout the country, that they could not pay their debts, and they stepped up to the counters and demanded their own money; and that is the reason the financial crisis has come, and it is not because of lack of confidence on the part of the people in the money of the country, for they are hoarding silver as well as gold.

If it were so, why would not our national bonds, that are going to-day at a premium, be affected? and they are payable in silver as well as in gold. Nobody has doubted the power of silver when the Government has declared that it will pay these debts, and no man can go behind the law and refuse to take it. Now, I say for my people that I think the supreme object of this legislation should be to give our own American people the money with which to transact their business and pay off their debts, and let England, Russia, and Germany, and the balance of the world take care of themselves. I say that we never have had to pay England, or Germany, or France, or any other foreign country, a single dollar of silver at a discount—not one—and we never will have to do it so long as we do our duty here as American representatives legislating for our own people. That is my idea.

Now, Mr. Speaker, we have not enough of this silver. Why, it is already admitted by Secretary Carlisle that men have gone to the Treasury and offered gold in exchange for silver dollar for dollar, and he told them that he did not have it to let them have. Yet there are four thousand tons of silver piled up there in the Treasury and no demand upon it. I think we had better put it into circulation. In 1881 and 1882 $81,000,000 were exchanged for silver at the Treasury, and that continued to be the case until the Secretary of the Treasury refused to receive it.

Now, you see there is nothing in intrinsic value in the sense claimed by gentlemen. It is the debt-paying and purchasing power of money which is important. President Cleveland said in his letter of acceptance that all dollars must be of intrinsic value, of exchangeable purchasing power, and he uses intrinsic and purchasing power interchangeably. Purchasing power and debt-paying power is what we want, and we propose to protect our money and our credit. We want no cheap dollars, we want no depreciated money, and we have not had it.

Now, the only cheap money you have got, and what you are talking about now as a 58-cent dollar is this bullion that has been refused admittance to the mint, and which can find no market anywhere on the face of the earth, and for which there is no demand. But open the mints and let it be coined, and let our Government declare it to be a legal tender, and that it will pay the debts which are burdening the people for lack of money to pay, and there will be no difficulty.

The people have need for more money. Mortgages are piled upon mortgages all over the country, with no hope of relief, nothing in sight, and the Democratic party and the Republican party are juggling together to strike down half the money supply for the future. I mean elements of the two parties. I want to say here that I do not believe the Democratic party is going to do this thing. I believe when the vote is recorded that the record will show that a majority of the Democrats in this House have stood firm and true to the history of their party for a hundred years. If this bill passes it will be by a combination of a minority of Democrats with a majority of Republicans.

I believe that when it comes to a vote in the Senate of the United States, these men who want an unconditional repeal of the Sherman law, and who want to carry us back to where the Republicans started with us in 1873, will find that a majority of the Republican Senators and a minority of the Democrats have joined together there to carry out the pledges of the Democratic party. Why, gentlemen, this is the first opportunity that the Democratic party has had to make a record within the last thirty-three years; the first opportunity to establish the principles and financial system of the Democratic party for thirty years. Here we are struggling and trying to adjust this legislation to a panic, trying to quell a panic. Wait until the panic passes away, and let us legislate so as to prevent panics. That is my theory, and I believe the people of this country will still stand by this idea. Let others do as they will, and let men construe away by refined argument their platform as they may, but you will see silver still hold its place in this country as a money metal. The fight is on.

Mr. Speaker, until times become easier than they are now no party dare to go to the people upon a gold-standard platform. No party has done it in the past, and you all will be too cowardly to do it in the future.

I can not vote for the repeal of the Sherman law without a substitute looking to the free coinage of silver, for the simple reason that it gives us $50,000,000 every year and prevents the contraction of the currency, which must necessarily come about by going to a gold standard and a contraction which would result by the calling in of national bonds.

This $50,000,000 is as good as any money that ever left the mints or came from the Treasury in this country, because these notes when issued are construed to be redeemable in gold, and therefore are as good as gold to transact the business of the country. They get into the hands of the people to pay their debts, and never again will they be presented to the Secretary of the Treasury to be redeemed in gold. After these coin Treasury notes have been redeemed they are reissued and become available as Treasury assets to meet the demands of the Government. If you stop the issue of this $50,000,000 per annum you give it into the hands of the banks to control the volume of currency, and a demand will be made for a new issue of bonds for this purpose; and I will say to you there will be hard times, pressure, stringency, and panics in the money markets just so long as we depend upon this system for a money supply. [Loud applause.]

Mr. LOUD. Mr. Speaker, between the Chief Executive, the bankers, and Congress the country is receiving a pretty hard thrashing. If not already in a deplorable condition, we soon shall be; but I have yet to learn for what purpose we have been called together. It is true the President has told us to repeal the Sherman law and relieve the already stringent financial condition and scarcity of money by further contraction of the currency, if such a course is necessary, which I deny.

It seems wholly unnecessary to entail the extraordinary and useless expense of an extra session of Congress upon the country when the present imperial Administration has, in more than one instance, demonstrated that statutes and laws are but playthings to be set aside at the master's will. And it would seem that the legislative body under our present ruler is a superfluous adjunct of government. It matters not that monarchs have lost their heads for less cause, for it is well known a Democratic ruler is above the law. As early as May 5, when the present Administration had been hardly two months upon the throne, the act of May 5, 1892, known as the Chinese exclusion act, was nullified and utterly defied, and up to the present time no attempt has been made to enforce it.

This is a subject with which I propose to deal hereafter, but in the present condition of our country I am too patriotic a citizen to intrude even the criticism of this disregard of law. But to bring us here at this hour to repeal the Sherman law is the merest folly and has about it a tinge of humor which provokes a smile upon the face of us all. Why, the present Administration has already not only overridden but in fact repealed it. The act instructs the Secretary of the Treasury to purchase 4,500,000 ounces of silver per month. Has it been done? No. It is true some has been purchased, but if the master has the power to purchase less than the amount specified by law, even by one ounce, he surely has the power to refrain from purchasing a single ounce on the pretext that the imaginary market price in London or Dahomey is lower than the offered price in our own land.

So in all sincerity, Mr. Speaker and gentlemen, why need we tarry here longer? Let's adjourn while yet we may with honor to ourselves, before we are dissolved and driven in disgrace from the legislative halls of the nation. Some of the gentlemen on the other side have spent a great deal of time defining the Democratic constitution, commonly known as the Chicago platform, and have used the acuteness of good lawyers (which we knew them to be), with the evident purpose of easing their conscience, while they are permitted to obey the mandate of the ruler and strike a deadly blow at silver.

If the gentlemen are so anxious to follow their platform, why do they not demand, as the price of desertion of the silver cause, the repeal of the 10 per cent tax on State banks, a fundamental and well defined principle of the Chicago bible? I use the word "bible" in the sense that it is capable of such construction as its advocates may place upon it. They will probably answer, "Oh, I am sound on that, but we will take it up hereafter." I would ask the gentlemen in all sincerity if they believe the so-called hard money Democrats, together with this side of the House, united against them, and at such a time when the rules of this body will not be as favorable for legislation as the acuteness of the majority has now made them, can accomplish this object which should be so near their hearts? I think not. Why not proceed to relieve the oppressed and down-trodden people from those onerous burdens of the robber tariff, and then fix your currency to fit the changed condition of things? Probably then you will need nothing but gold. Possibly you will need free coinage at 1 to 1. No man can foretell; but I honestly believe you have hold of the wrong end of the dilemma. Let me urge you, at least, to take up some subject upon which you can agree, and one about which you think you know something. Be honest with yourselves, and relieve the country from this terrible suspense of uncertainty.

I have found it most valuable in life when engaged in a contest to retain what advantage I have, rather than throw such advantage away and trust to fortune to ultimately win; so I would say to the friends of silver, lose not the advantage you have, for as sure as you do you will fall into the hands of the Philistines. Within the past year Wall street, the great financial center of this country, and its inner core, the stock market, have been agitated and upset by a series of events, which influence has extended itself until it has embraced every corner of our fair land.

First came in the spring of 1892 excessive floods, damaging the wheat, cotton, and corn crops. Then in July and August the Homestead and Buffalo strikes and riots. Then the specter of cholera. Next came the campaign of 1892, which usually checks business. Then the result of the election, which meant a reversal of the tariff policy of the Government. Then came the figures of an adverse balance of trade, due chiefly to Europe's poverty and our own prosperity.

Then the scandalous collapse of the whisky trust; the insolvency of the Reading Railroad within two months after the issuance of a favorable balance sheet; and, finally, by the bursting of the disgraceful speculative cordage company bubble, and several failures, but only among brokers identified with audacious manipulations. Does not this chapter of horrors give a nightmare to the financiers who have lived through the these experiences without harrowing up the specter of the Sherman law to add to the condition?

Speculators are imprudent and ofttimes foolhardy under any and all currency systems, as past history shows. Such individuals, while digging pits for themselves, often undermine confidence and bring ruin and disaster upon the innocent and guilty in a common crash. The cause of this acute form of semipanic that has now embraced the whole country is not silver legislation. Its immediate cause was the reckless and daring conspiracy of a group of speculators who combined to work up to fictitious heights the shares of certain industrial corporations, of whose real value the public knew nothing.

It is urged by those unfriendly to silver, and who favor a single standard, that our currency legislation has rendered such a condition possible. But let me remind them that the most disastrious bull speculation the world has ever witnessed occurred twenty-five years prior to and immediately following the Baring failure in 1890. Surely our friends can not lay the blame in that instance to silver legislation. No, not even to the Sherman act, for our friend from Ohio [Mr. HARTER] tells us that England has a model system of currency, the home and the father of monometalism.

These events exercised such an influence over foreign sentiment that speculators and investors were compelled to relinquish American securities to care for their own unmarketable rubbish. They have continued to sell, on a reduced scale, and doubtless still are dribbling out some small holdings, and may be hesitating about repurchasing on account of the silver scare. The fact still remains that their largest sales were made under the pressure of other circumstances. There has never been a time when English capital could not find vast quantities of good gold-bearing American bonds if it felt in the humor to invest in anything.

She already holds many of them, but she also holds a great many railway shares whose dividends are payable in currency; notably, the New York Central, Lake Shore, Burlington, etc. In connection with railroad securities, strange as it may appear, the West Shore fours, payable in currency, is the highest bond on the American market. If the Sherman act should be repealed without some compensatory legislation, how can that fact prevent or protect our business interests from the perils of competition? The threatened revision of our present tariff in accordance with Democratic professions still remains to intimidate and stifle every industry.

Every manufacturer, importer, or owner of goods is naturally waiting breathlessly the result of the proposed change. Prudence demands that the proposed change find all with the smallest possible stock of goods on hand. I make these statements in a purely nonpartisan sense, without attempting to discuss what the ultimate results of such reductions in the tariff may be, only desiring to show that silver legislation or the Sherman law is not the disease with which we are attacked. The large crops of 1891 made our farmers feel rich; at the same time they knew of foreign shortages, and without waiting to realize the

enormous contemplated profits, they began to gamble on the future and to spend what they thought their crops would bring in the market.

Many were not satisfied with the first prices made, but held on, buying liberally of manufactured goods; silk dresses for their wives, pianos for their daughters, new carpets for their parlors, and in this manner continued to anticipate too much. The result is that they are not in as good a condition financially as they should be, and must now retrench.

The immense stocks of wheat and cotton on hand, which have to be carried by the banks at receiving points, is another cause of the stringency of the money market. Bradstreet's figures of the total stock of wheat in the United States and Canada on May 1, 1893, was 99,247,000 bushels as against 51,870,000 on May 1, 1892, and 37,875,000 on May 1, 1891. This large accumulation of wheat is not due to the Sherman law or silver legislation. It is not held at high prices, due to an inflated currency.

Concerning the peculiar action of our recent heavy export of gold, it may not be amiss to consider what has been taking place abroad. The policy of the great Continental powers has for several years dictated the accumulation of large sums of gold, simply as a war measure, and are therefore practically withdrawn from commercial uses—Germany, in substituting gold for silver; France, in adding, since 1880, $130,000,000; Austria, in accumulating $147,000,000 for the purposes of redemption of her paper currency, to say nothing of the large sum sent to the Argentine Republic and Australia—and let me say to my single-standard friends that continental Europe, upon a gold standard as she is, is no happier than our alarmist brethren would have us believe this unhappy country to be. If England is surrendering our securities, it is not through fear of silver or repudiation, but to protect her own shaky interests in the Australian colonies and the Argentine Republic.

If we had not added to our circulating medium our credit system would have broken down in the attempt to receive the mass of securities forced upon us by these causes.

France, with all her copper and Panama troubles, has been the most calm and prosperous of them all, yet it is but a few weeks since authority was given the Bank of France to increase its circulation by 500,000,000 francs. The French are the best financiers of Europe; they at all times keep an even keel, while England is trying to conduct her great commerce with an insufficient supply of currency, being driven to irregularities in the interest rate and dangerous expansion of credits.

But we are told by these single-standard advocates that the most serious difficulty we will have to confront is that the Sherman law has been driving and will continue to drive the gold out of the country. Well, let us see what has been done in that direction, and even the humblest mind can understand the past, although shrewd financiers may not foretell the future.

Our silver currency, to the extent of $150,000,000, has merely filled the vacuum occasioned by the retirement of national bank circulation. The volume of these notes on July 1, 1878, was $324,000,000, but on May 1, 1893, it was $171,000,000. While we have been adding to our silver circulation we have also increased our gold supply. The estimate of the Secretary of the Treasury on July 1, 1873, in round numbers, gives gold $245,000,000. The estimate by the same authority on May 1, 1893, was $516,000,000, and an estimate which I saw but a few days since places it at $646,000,000. I will here append report of the Acting Director of the Mint:

Acting Director of the Mint Preston has prepared a table of the monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world. This table shows that the aggregate stock of gold is $3,582,606,000, the aggregate stock of silver is $4,042,700,000, and the aggregate uncovered paper is $2,635,873,000. The stock of gold possessed by the principal countries is given as follows:

United States	$604,000,000
Great Britain	550,000,000
France	800,000,000
Germany	600,000,000
Russia	250,000,000

The silver stock of these same countries is given as follows:

United States	$615,000,000
Great Britain	100,000,000
France	700,000,000
Germany	211,000,000
Russia	60,000,000

Thus it will be seen that the assertions made by alarmists have no foundation whatever. Our stock of gold is constantly increasing in a sufficient ratio, and no nation on earth can get it so long as the balance is on the right side of the ledger. A word and I shall close. I can not support either of the measures presented to this House. I can not vote for the repeal of the Sherman law, not because I believe it to be the soundest and best legislation, but believing as I do that for temporary uses it is safe. That none of the present conditions are due to or can be honestly laid at its door, but wholly to other legitimate and illegitimate causes. I shall oppose its repeal until such time as cooler, safer, and more sound judgment may actuate this body and the country.

I shall use it as the only weapon in our power to force from single-standard advocates such legislation as justice to the people and our country demands. Let our delegates to the monetary conference return in November and see if better and wiser counsel will not prevail. It can not be that England will turn a deaf ear to her long-suffering people. They will soon demand freedom from the money power. Firm in that conviction and also in the faith that whatever ratio may be arbitrarily fixed by us can be but experimental, and possibly subject to change to-morrow, I shall content myself to wait until such time as judgment and reason assert themselves. [Applause.]

Mr. HAGER. Mr. Speaker, I have listened with attention and much interest to the discussion of the measures that have been introduced by members on the other side of this Chamber, which, they claim, will bring relief to the terrible and startling conditions in which the Administration now finds the business and industrial interests of this country. I do not expect at this time to enter into an extended discussion of my views upon the measures, nor do I flatter myself that I could inform members as to what their duty should be at this time. Every man must settle this question in the parliament of his own conscience and then vote as his own judgment directs for the best interests of his constituents and the country.

The propositions to be voted upon have been submitted to members on this side of the Chamber in the form in which the majority have seen proper to have the vote taken—not even so much as consulting the minority as to how the propositions should be voted upon, or granting to them the right to offer amendments. We are left with no alternative but to vote for the substitute and the amendments that have already been prepared, or against them, and for the unconditional repeal of the purchasing clause of the Sherman bill, or against it—only this and nothing more. For one, I desire to enter my most earnest protest against that way of doing business, and to express my surprise that the Democratic party should present such a measure at such a time in such a way, and then, with unblushing effrontery and with a spirit of "I am holier than thou art," demand that the minority shall be nonpartisan and patriotic.

I do not pretend to speak for others on this side of the Chamber, but for myself. I united with the Republican party because I regarded patriotism and Republicanism as synonymous terms, and I have never had reason to change or amend my views; and, after listening to all of this discussion, I see that we are not asked to vote to help the business and financial conditions that are threatening to overthrow the country, but to aid in widening the breach that now seems to exist in the organization known as the Democratic party, which breach, if it could be made permanent, would be a better and more satisfactory assurance to the people and the business and financial interests of the entire country than the assurance that the balance of trade was largely in our favor and hundreds of millions of gold flowing to our shores from Europe. The truth is that the people have not lost faith in the country, nor in the currency of the country, but that they never had an abiding and continuing faith in the Democratic party.

There was never a Presidential election when the country was as prosperous, when wages were as remunerative, when labor was as contented, when factories were running under such pressure, as on the day of the election in November last. On that day Harrison was defeated, Cleveland was elected, and both branches of Congress turned over to the Democratic party—the first experiment that the people had thought safe to make in that direction in a period of thirty years. I will frankly admit that I was astounded when the news was flashed over the country announcing the result of that election, but I do not think my astonishment, however great, would compare with the present grief and disappointment of a majority of the people who aided in bringing about such a result. [Applause on the Republican side.]

The platform adopted by the Democratic convention in Chicago in June of 1892 is familiar to every member on this floor, and the campaign made upon that platform is yet fresh in the minds of the people. I now recall, in part, the speech that was made by Mr. Cleveland when the committee selected by that convention notified him of his nomination. He said, referring to the chief and most important plank in the platform adopted by that convention:

Turning our eyes to the plain people of the land, we see them burdened as consumers by a tariff system which unjustly and relentlessly demands of them, in the purchase of the necessaries and comforts of life, an amount scarcely met by the wages of hard and steady toil, while the money thus wrung from them tends to build up and increase the fortunes of those for whom this injustice was perpetrated.

And behold, we find Congress convened in extraordinary session within five months after the President had taken his oath of office. For the purpose of repealing a measure that he indicated

was robbing labor for the benefit of the rich and powerful? No; but for the avowed and expressed purpose of repealing the purchasing clause of the Sherman bill, and thus nullifying one of the principal planks in the Democratic platform. We were told by every Democratic orator from Maine to California, and from the Lakes of the North to the Southern Gulf, during the campaign of 1892, that the McKinley bill was the cause of all our ills, and that if they could be intrusted with full power in the Federal Government they would at once repeal that hated and malicious measure, and thus bring happiness and prosperity to all of their fellow-citizens.

The people listened to your appeals, they believed your statements, and they returned a verdict in your favor. It would be harsh and unjust for me to say that I have no sympathy for the people in their dire distress, and the general bankruptcy and want that now surrounds them, but the truth is they had no reason to accept your statements—they should have known better; for that party has not made a prophecy in the last thirty years that has come to pass, or a promise that they have kept or intended to keep. Their prophets and their promises are exactly alike.

You came to the people in 1890, immediately after the adjournment of the Fifty-first Congress, and you promised the people that if they would elect you to Congress that you would at once repeal that damnable, that infamous measure, as you mildly termed the McKinley bill. They accepted your statements and returned you to the Fifty-second Congress with the largest majority that was ever given to a party in the popular branch, I believe. You were here in session for months and months, and did you repeal the bill, or did you make one honest effort at repeal? You know that you did not. You began nibbling and nagging and pecking away at the bill, and had just about as much effect upon its colossal strength as a lean and hungry hound would in baying at the moon or a buzzard pecking away at an Egyptian monument. [Laughter.]

There it stands now, as it did through the first and second sessions of the Fifty-second Congress, calmly looking down upon its maligners and threatened destroyers, and has brought more of prosperity and blessings and independence to the people of America than any revenue law ever before placed upon a Federal statute book. It stands as Grant stood at Appomattox, calmly dictating terms of surrender to the nations of the world. [Applause.] And now, what kind of a spectacle do you present to us, when Congress has assembled at the call of the President in this extraordinary session? Do we find a party, united and harmonious, coming into these Halls—falling upon each others' necks and mingling tears of joy over their return to absolute power in every branch of the Government? Hardly.

The gentleman from North Carolina who has just taken his seat said that the Democratic party had had votes enough in the last election to have elected two Presidents, and he did not know but they ought to have done it. I think you ought to have done it, gentlemen, because then you might have had one President who would have interpreted this plank of your platform in the way that one wing of the party understands it, and another President who would interpret it in the way to suit the other wing of the Democratic party. [Laughter.]

There does not seem to be that perfect harmony among the elements composing the Democracy that inspired them in the campaigns of 1890 and 1892. They seem to be hopelessly divided upon a plank in their platform that was but little discussed in my part of the State last fall, and each man seems to have an interpretation of his own, while there can be and should be, by any fair and honest man, but one interpretation given to that plank, viz: For the coinage of both gold and silver without discrimination against either metal.

But I said a moment ago that the Democratic party was not a pledge-keeping party, and in support of that statement, and as part of the evidence on that proposition, I desire to submit to the entire country—North and South, East and West—the arguments that have gone into the RECORD, made by members of the Democratic party on the floor of this Chamber since this discussion was first opened by the gentleman from Maryland. He seemed to be very zealous to carry out the financial plank of their platform, but was just as certain as the sun shines in the heavens that it could not be done; but I will venture the assertion that the distinguished gentleman did not argue thus before the people of his district in the campaign of 1892, and if he did not—and his fellow-citizens had the right to believe that the platform meant just what it said in plain, terse Anglo-Saxon—then the Democratic members of this House, as the gentleman from Georgia so well and truly said, obtained the votes of the people by false pretenses, and it is a well-recognized principle in law that a man shall not profit by his own wrong.

But the gentleman from Missouri, it would seem, is the most terribly deceived of all. He honestly believed that the President was elected and power given to his party for the express purpose of repealing the McKinley bill and the Sherman law, and enacting a free-coinage bill; and he gave good reasons for the faith that was in him, but he now wakes up to the terrible realization that he has been tricked on both planks. The deceivers have finally themselves been deceived.

I have but little sympathy for the gentleman, for I should judge he was born a Democrat—a man of grood grasp and quick comprehension—and who has been a hard worker in the ranks of the Democracy for lo! these many years. He should have known their history well, and had no business to be deceived by any promise or pledge that party has made in the past thirty years; but it is better to learn late than to have never learned. I judge from his argument that the gentleman's confidence in that organization is not being ground out between the upper and nether millstones, but is being pressed out between the two planks of that platform, the one known by the fond and endearing term of tariff reform and the other as free silver.

I listened with interest to the warning that he gave to his own party, when he told them in his most earnest and emphatic way that the party had reached the point in its history when there was to be a division of the sheep from the goats; a dividing of the faithful from the unfaithful; of the servants of the people from the servants of the money power; of those who bow at the shrine of gold and those who worship at the dual shrine of gold and silver, and gave them due and timely notice that it would depend upon which course they took whether or not he would be longer a member of that organization. They are most certainly divided—upon what ratio as to numbers none possessing less than infinite knowledge can tell.

But I shall watch with not a little concern the attitude of the gentleman as regards his party after the vote has been recorded on the measures now pending before this House. If sincere in his statements made to the members of his own party, and I have no reason to doubt his sincerity or his honesty, then I shall most certainly expect him to sever his political relations with a fair minority, if not the majority, of his party, and organize a party composed of members on that side of the Chamber who entertain the same views on the money plank of the platform that the gentleman expressed in his speech on the floor of this House in opening the discussion for his wing of the party.

Mr. Speaker, since this discussion opened we have heard the desires of the bankers, the boards of trade, the bondholders, the money-loaners, and the creditor classes generally; but there is a very large class of men found in every State of this broad land that we have not heard from—the men who raise corn, and wheat, and oats, and barley, and hogs, and cattle, and cotton, and rice, and tobacco. They have been too busy to speak, or too modest to be heard, or have depended upon the good faith of parties to carry out fairly and honestly the pledges made to them in the platform and on the stump.

But be not deceived; they are not mocked. If you falter in your plighted faith with them, then there will be a time, and that right speedily, when they will act; and when they exercise their right through the silent medium of the ballot, which should execute the freeman's will in every district in every State of this Union, as lightning does the will of God, then there will be weeping and wailing in the camp of those that kept the word of promise to the ear but broke it to the hope. I do not believe that the Sherman bill has scarcely the remotest effect upon the present appalling conditions in which we now find the country, and my reasons are that the Sherman bill has now been a law for more than three years, and had been upon the statute books for two years when the convention of the Democracy assembled in Chicago in June, 1892.

You there adopted your platform of faith, the chief article of which was the repeal of the unconstitutional McKinley bill, and in favor of the repeal of the Sherman bill, and "for the use of both gold and silver as the standard money of the country, and for the coinage of both gold and silver without discriminating against either metal," etc. Under the threat and the promise contained in that platform the prosperity of the country continued up to and including the day when the country was startled with the news that the Democracy had been successful and was to have control of the legislative and executive branches of this Government.

From that time up to the present hour business men and business interests, generally, began to lose confidence in themselves, and in each other, and what little confidence they had in the Democratic party; and that confidence has not been restored by reason of the assembling together of this body of the representatives of the people, and, in my humble judgment, it will not be restored, but present conditions, much aggravated, should there be an unconditional repeal of the Sherman bill and no favorable legislation for silver. The fact is, the entire people now realize that the Democratic party is in power. They could know that

from conditions, if in no other way, and they see the leaders and representatives of that party absolutely failing to come together and agreeing to any policy among themselves.

With no Moses to lead them or direct them, but a Moses from Georgia rising from his seat in this House simply to condemn them, they stand paralyzed and utterly helpless before all of the great questions that now confront them, without a remedy for any ill or a balm for any wound, and the people cry out, "Is there no balm in the Democratic party, are there no physicians there?" And I answer that there are physicians galore, of every school, of every faith, and of every shade of opinion, but if there is any balm they do not seem to have the ability to apply it. And the "unconstitutional" and "robber" McKinley bill yet stands with "knife at the throat" of labor, and in the same attitude that it has held to the industries of this country since its adoption.

You promised the people if they would intrust you with power, and place in your hands the reins of Government, that you would bring them prosperity, happiness, and plenty. They now realize that they had them in abundance before the election. They listened and gave you their confidence and their votes, and in less than nine months from the day of your election they have, as a result, adversity, misery, and poverty.

The banner of prosperity that was turned over to you has been changed into a weapon of destruction; men out of employment, factories closing down, banks failing, all business paralyzed and financial ruin rising to face us at every turn, and millions of men ready to take the road as tramps, and people cry out in amazement, "Is this the country in which we were living one short year ago!" and I answer, It is, but under entirely different conditions, and with an Administration elected in favor of tariff for revenue only, but which Administration seems now to be first in favor of the demonetization of silver.

The present demand seems to be for a speedy remedy that will restore the confidence of the people, and I have one to suggest, a little less humiliating to the Democratic party than the one proposed by the gentleman from Ohio [Mr. GROSVENOR], and the remedy is in the possession and control of the Democratic party, and if they will but use it they will be entitled to all of the honor—and that remedy is to convince the people of this country that you are as utterly and hopelessly divided upon the interpretation of the tariff plank of your platform as upon the plank now under discussion, and, my word for it, confidence would be restored, labor would be again employed, and prosperity and happiness, and business confidence would again return to bless our native land. [Loud and continued applause on Republican side.]

I have listened with attention to the arguments made that a repeal of the Sherman bill would restore business confidence and bring about an international monetary conference with the nations of Europe. The advocates of such a measure are earnest and sincere, no doubt, but I have not been persuaded that the results claimed would follow in either instances. Did I believe for one moment that the Sherman bill was the cause of the present financial distress and want of business confidence that is so widespread throughout the entire nation, I would not hesitate for a single moment to vote for its unconditional repeal, although in so doing I am satisfied that my vote would be against the judgment of a large majority of the people whom I have the honor to represent.

But upon this very important question I would prefer to be right rather than to be returned to this Chamber any number of terms; although I believe that I appreciate the honor of a seat on this floor, and the advantages that come to a man by associating with eminent men from every part of this Union as much as any member can. Or could I be persuaded that the repeal of the Sherman bill would aid in bringing about an international monetary conference, I should not hesitate for one moment to give my vote for such repeal.

But, Mr. Speaker, I am satisfied that the repeal of the Sherman law would make the conditions in which we now find ourselves much worse, and, instead of helping the country, it would merely deter it in overcoming bad conditions. I can not understand the logic of those who reason that the demonetization of silver by this Government would force the nations of Europe to a monetary conference. We are the only nation in the world that produces silver and gold in large quantities, producing, I believe, about 41 per cent of the silver and 31 per cent of the gold of the world, and it does seem to me that this nation should be the last nation to strike a blow at either gold or silver, but that it should exert every power and resource at its command to maintain the use of both metals.

In other words, we have a greater interest in bimetallism than any other nation or any other people in the civilized world. If England could have transferred to her our silver mines, a proposition made to her statesmen, as we have had made to us in this Chamber, to demonetize silver would be met with derision and contempt. England looks after English interests and English welfare alone. She always has and always will, and I respect England for so doing, and would commend her example to the people of my own country as worthy of imitation. England adopted the single gold standard nearly eighty years ago, and consulted her own interest when she did it. And as England and the United States are now the two great rivals for the commerce of the world it seems to me it would be the height of folly for us to dishonor and disgrace a precious metal that we produce so largely as silver, and which would take the lead in the fight for commercial supremacy if we will but give it an equal chance with gold. Do this and the contest for commercial supremacy is decided, the battle already won. [Applause.]

Many of those who urge the repeal of the Sherman bill admit that the present troubles can not be traced to the operation of that measure, but base their action on the assumption that it will relieve the minds of the people and thus bring about a return of confidence. For one, I am not here to help enact laws against imaginary ills. We are here to represent intelligent constituencies, who do not expect or ask us to strike at phantoms.

Mr. Speaker, as the measures are at present presented for our action, and as at present advised, I shall vote against the substitute and the amendment proposed, and against the bill for the repeal of the Sherman act. I thank you, gentlemen, for your attention. [Applause.]

Mr. MORSE. Mr. Speaker, I desire to supplement my remarks made in the opening of this debate by sending to the Clerk's desk to be read some extracts from business letters which I have received. I wish to say, with reference to these letters, that they represent large houses, doing a business of millions. One of these concerns employs, I think, a thousand or more men.

The Clerk read as follows:

[Extract from letter received from Messrs. H. J. Baker & Brother, 93 William street, New York City.]

We trust that Congress will not do anything to hamper the repeal of the silver-purchasing act. As soon as this is repealed we think that it would be for the good of the country to have Congress adjourn. Our ideas are that the business situation of the country is like a sick child, which having stood a terrible strain, is extremely weak and can not bear much more without serious results; therefore, after the repeal of the silver-purchasing act is done, the best thing, we should think, for Congress to do would be to adjourn and leave the other matters for consideration after the business community have sufficiently recuperated from their present strain, so that they can stand another strain if necessary. If Congress continues to tinker with the silver bill, make compromises, etc., after which they go on with the tariff, etc., we think the result to the manufacturers and mercantile interests of the country will be very serious, and we would be very fearful of its termination.

While the repeal of the silver-purchase clause is important, we feel with you that threatened tariff legislation is very largely responsible for the bad state of affairs, and the closing up and shutting down of various factories. Take, for example, our own factory, which we could not run for a day without the protection afforded by the tariff, as it would be absolutely impossible for us to compete against the cheap labor of India. We, of course, have to go on from hand to mouth, not knowing what the future may be, and we are only one of the numerous manufacturers in every part of the country who must be affected, more or less, in the same way.

[The following is an extract from a letter received from Messrs. Knudson, Paterson & Co., 134 Front street, New York City, dated August 12, 1893].

Hope that you will bring those advocates of silver to book as soon as possible, for the whole country is suffering as it never suffered before.

[The following is an extract from a letter received from Mr. John H. Parks, treasurer Atlas Tack Company, 508 Sears Building, Boston, Mass.]

The gravity of the financial and business situation is conceded by all authorities, irrespective of party, to be without parallel in the history of this country. To confront a tariff revision on Democratic lines is bad enough, but selling values of merchandise are so low, and the improbability of a new tariff schedule being put in force before January, 1895, is so great, that the business world might worry along under that incubus, and at least do something, if not much, but so long as the Government continues its present undertaking to buy the silver product of the country with notes payable in gold, while providing no supply of gold with which to redeem the notes, this "fright" will remain, for it appears inevitable that the Government must, in due course, redeem the notes in silver. Were it not for the sound-money Republicans in Congress (and we of New England may well be proud of our delegation), I fear President Cleveland would have but faint hopes of securing "repeal." What pæan of relief would arise throughout the land if Congress would simply repeal and adjourn; they would even forgive it, if need be, for postponing legislation to authorize banks to issue bills based on Government bonds at par.

Mr. PICKLER. I would like to ask the gentleman from Massachusetts [Mr. MORSE] a question.

The SPEAKER *pro tempore*. Does the gentleman from Massachusetts yield?

Mr. MORSE. Yes, sir.

Mr. PICKLER. As these letters from different sources in regard to the monetary situation are presented by the gentleman as an argument for the gold theory, I want to ask him whether it is true as alleged that the national banks of Boston are now refusing to pay depositors when they apply for their money, except at a premium of 1 to 3 per cent?

Mr. MORSE. I will say in answer to the gentleman from South Dakota that the banks of Boston pay their creditors in checks just as they receive them.

Mr. PICKLER. You mean clearing-house certificates.

Mr. MORSE. I mean just what I say.

Mr. PICKLER. In the West when our banks can not meet their obligations they go down and the Government sends out a receiver to take charge of them; but in Boston, New York, and Philadelphia the banks are allowed, it seems, to meet their obligations in clearing-house certificates.

Mr. MORSE. Our banks, Mr. Speaker, receive checks from their depositors, and they pay them back in checks.

Mr. PICKLER. Does not this account for some part of our present trouble—that the banks are refusing to pay depositors their money, and are holding on to it unless a premium is paid?

Mr. MORSE. I do not think it does. Our merchants and manufacturers are able to meet their obligations with the checks they receive from the banks. There are on the face of the earth no more high-toned, honorable, patriotic men than the bankers of Boston, and they have done what in them lies to tide over the present appalling business situation.

Why, Mr. Speaker, I have heard these same bankers of Boston denounced on this floor as "gold bugs," "Shylocks," "extortioners." As a representative of Massachusetts I am stung by these cruel, unjust epithets, as applied to the bankers of Boston. They may not have as many votes as some other class; but, Mr. Speaker, who builds your Western railroads? Who builds your lofty buildings, whose summits pierce the sky?

In the dark days of the war, when the Government wanted money, who responded to the call and poured out their treasure like water to save us a nation among the nations of the earth? When fire or famine or flood overtakes any section of our country, to whom do they go for contributions and relief? When the yellow wings of the pestilence flap themselves in the Southern sky who contributes of her treasure to relieve the distress? What city gives more than any other city? Why, these same "extortioners," "gold bugs," and "Shylocks," the bankers of Boston.

I repeat, Mr. Speaker, more honorable, patriotic business men do not walk God's green earth than these bankers of Boston, that I have heard unjustly derided and denounced on this floor.

And at no time in the history of the country has their patriotism, and public spirit, and helpfulness to the great business interests of the country been more thoroughly demonstrated and shown than since the present appalling financial situation has come upon us.

Mr. GARDNER. Mr. Speaker, the gentleman from South Carolina [Mr. TALBERT] mentions New Jersey as one of the nine States that have been able to save much more than their proportion of wealth. This discussion has taken an aspect that makes this an accusation and her prosperity a crime.

New Jersey did her full share in founding this nation and she has done her full share to maintain it. She owes it nothing, but that loyal, patriotic support she has always given it. The battle monuments on her soil commemorate events and achievements among the most glorious of the Revolution, and the names and deeds of her sailors, soldiers, and statesmen illumine the nation's history. Her people now are intelligent, industrious, enterprising, and energetic, and as moral as other people. They maintain as many churches and schoolhouses per capita as any other people, and more than most people. They may differ from some other people in that they still believe industry and enterprise are, as heretofore, essentials to prosperity, and do not look upon the politician (generally in the kindergarten stage upon great questions), with a volume of Walker on finance under one arm and a volume of Smith's Wealth of Nations under the other, as an immediate or promising source of wealth.

The gentleman from Massachusetts [Mr. EVERETT] has called attention to the fact that each member seems to regard his constituents as the people. Well, sir, to the member, in an important sense, his constituents are and ought to be the people. Whatever fiction enters into the assumption is the most justfiable of all the fiction in this debate. Like the honorable gentleman I claim that the people of the Second New Jersey district merit at least as great consideration as the people of any other district. This district lies largely upon that belt which eminent agricultural authorities have declared to be the garden spot of the United States—in variety of agricultural products, in production per acre, of quantity or quality, unexcelled if equaled. Our farmers have given the country a part of its best stock, and, until I heard the accusations that have been made in this debate, I believed the biggest hogs grown on the continent. I still believe our hogs heaviest and most valuable.

Our manufactures exceed in value of products and the employment they give to sturdy men those of States who are teaching us laws of industry, trade, and finance on this floor. The hum of our machinery is the music by which we have marched to the prosperity we are twitted of, and it sings the song of peace and comfort to thousands of intelligent families in happy homes, and will continue to if you in rashness do not doom it to silence.

We have more than 60 miles of seacoast dotted—filled—with resorts, deeply affected by the prosperity and depression of the country. Navigators who still conduct our commerce and a hardy race of skilled boatmen whose immediate future prospects depend as largely as does that of anybody else upon a restoration of confidence and the revival of trade.

I am going to vote for the repeal of that which is called "the purchasing clause of the Sherman law:"

1. Because, so far as I have heard, the people whom I try to represent want it repealed. All the petitions and letters that have reached me from the district, with one exception, have spoken as one voice for repeal.

2. Because the nations are not coining silver. India, producing one-third of the world's supply, British Columbia, a large producer, and all the other silver miners in the world see no governmental market for silver but in the United States. Under these conditions foreign silver will, if it has not, find its way to the Treasury as fast as the Treasury can absorb it by taking 4,500,000 ounces per month. Pardon me if I express a fear that conditions will be created under which foreign silver finds preference at the Treasury. Under the act declaring the purpose of the Government to keep the two metals at a parity and under the practice at the Treasury these silver certificates, issued for foreign silver, are redeemable in gold. The clause therefore becomes a machine that converts the foreign silver, for the owner, into American gold, and does not leave the redeemed certificate in circulation. The gold is lost and the circulation is not increased. It is well said by many honorable gentlemen here, if upon other grounds, that this clause, if left to stand, means ultimately the single silver standard in the United States. If we turn our gold into silver—exchange for silver, to be exact—what other standard can we have?

3. Because the Government, except to supply some need of the Government, has no right to purchase the productions of one class of producers at the exclusion of all other productions. This objection must have additional emphasis in a case where no discrimination is made in favor of the home producer of the commodity: for instance, if our Populist friends find themselves able to establish the subtreasury for the taking of their grain they will hardly go so far as to make the provisions include the wheat of India.

4. Because the people in the business centers of the country, for reasons, as I believe, that I have intimated, in part at least, do not believe that this Government will be able to maintain the parity between the two metals. They believe with the President that the purchasing clause has been used as a device to drain the country of her gold.

Gentlemen tell us here that it was at the option of the Government to redeem the silver certificates in either metal. Well, that seems to be the letter of the law. Admit all they say about it and the answer is that the Government redeems in gold and not in silver. They tell us then that that is a wrong administration of the law—admit that too, if you please, and what is gained? Do they promise us a reform in the administration of the law? Does anybody promise a change in the construction of the law, or the practice under it, at the Treasury? Is it desired to retain the clause simply as a test of endurance between themselves, the President, and the people? The endurance of the people is being sufficiently tested. They want no added tests at this time.

But, sir, the charge of wrong administration in the matter of redeeming the certificates in gold is not proven. Congress put a construction on the so-called Sherman law, by a declaration in the law. It declared it to be the purpose to maintain a parity between the two metals. Would any other administration of the law maintain the declared object? The Treasury was confronted by the solemn declaration of Congress and the awful obligation it imposed upon the Government. Did any free-silver man object to that declaration and the obligation it imposed? Democrats did not vote for it because they want to stand before some sections of the country as in favor of free coinage.

In this debate little attention has been given to the nature of the obligation which the pledge to maintain the two metals at a parity imposed. Every dollar of silver that has circulated under a statutory pledge of the Government to maintain it on a parity with gold has been backed by the Government as the greenback never was, and with a more burdensome and difficult obligation on the Government than any government bond ever imposed. No silver dollar ever depended on its value, nor the power and effect of being money that passed under such a declaration. When the Government issued greenbacks they bore the simple promise of the Government to pay them—at no fixed date. The Government bond is an obligation only to pay a fixed sum at a fixed time. In either case the Government assumed no obligation of maintaining the price of either. The fate of their current value was committed to the public faith in the Government's ability to pay—the one some time, the other at maturity. They might, as the greenback did, sink low in price, but no obligation of the Government was violated; national honor was not tarnished by a broken pledge.

There was absolutely no obligation to maintain the price of either note or bond—that was entirely at the holder's risk. But in the case of the silver dollar and certificate the obligation of the nation is to maintain its parity with gold every day—every hour—all the time—in prosperity and panic, and through all conditions and emergencies. Could obligation be more burdensome or more dangerous? What other circulating medium ever received such support. If the silver dollar requires such an obligation it is

a dangerous thing. If it does not require it, the obligation is a dangerous thing. I like silver money, but I don't cherish it as I do the integrity of the Government. I don't want it supported by an obligation that is a perpetual menace to the nation's financial honor and stability.

Mr. Speaker, some gentlemen grow merry and sarcastic over the idea that confidence and lack of it play an important part in panics and general financial disaster, but they change no natural laws by raillery or sarcasm. Confidence deposits and circulates money, and without it man hoards. Confidence leads to enterprise, and purchases, and business. When it departs, enterprise and business depart with it, and their activity is succeeded by that of the collector and the sheriff.

The purchasing clause of the Sherman law may not be, as many believe it is not, the cause of a public condition void of business or financial confidence.

But the financier (for his purpose, if you will) has told the country it is. The Democratic party (for its purpose, if you will) has declared it is. Financial authorities, upon their theories, have told the country it is. The country largely has believed, and this belief, if not the clause, has destroyed confidence. It is gone.

Well, sir, the financiers will not retract, the Democratic party (just now at any rate) will not retract, the financial authorities will not change their convictions, and what is left but to try to undo the serious mischief which the belief, whether right or wrong, has done. For myself I believe the path of duty leads to the effort to restore immediate confidence in business circles. The East wants it, I know the West needs it, and the South would profit by it. I shall tread that path no matter how often it is demonstrated and it has been demonstrated that the vapor of coming changes created financial disease and that party necessity made it necessary to diagnose it hydrophobia, and to find a mad dog, and one whose whelping had Republican consent; and though I confess the case would have stood better if the dog had been killed on suspicion on the 8th or 9th of August than it does after all the political veterinarians have given their reasons for the diagnosis, still I am going to help you kill the dog, for I find you are not quite able to do it alone.

Nor shall I stop to inquire just here who is responsible for precipitating a disastrous panic at this hour that general prophecy said must come at some hour. Democrats here boast that Mr. Cleveland foretold it so long ago as when he wrote his first tariff-reform message. This "juxtaposition in time" is significant—but let that pass. Populists have been heralding disaster because out of an unprecedented national prosperity some people were taking fortunes too enormous, and some sections were getting too much, and Republicans have said it must come whenever there was a general political triumph of those who intended an immediate change of our whole fiscal policy; that our business and industrial structures for thirty years had been reared upon existing principles, and that, while they might be gradually remodeled upon other plans, the promised radical changes meant the razing of this structure that had brought increased wealth, population, education, progress, and development without precedent in the history of civilization, and a long idle wait for the building of another.

Well, sir, admit that it was coming. Disaster at this hour seems the result of the prophecy of disaster. If we lay it to the Sherman law it has come because of prediction that it must come by and by. If we lay it to the coming change of tariff, Democrats answer that they have not yet changed it. In either case belief in the prophecy precipitated disaster in advance of its substantial cause. It will always be so. He is a wise mariner who prepares for a storm that all his tests warn him is approaching. On the business and financial sea, general preparation for a storm is the storm, or precipitates it. Some gentlemen who seem to think this but a gust that will be gone before they are done talking, if they talk long enough, say it has been accumulating in our financial system for thirty years. They must reconcile this denunciation of the system and compliment to it for themselves.

Other gentlemen insist that the present situation is aggravated, if it was not brought about, by some conspiracy to which the New York banks have been a party or all the parties. Well, sir, if this be true, if these New York banks are so many Samsons in strength and devils in villainy, and this purchasing clause is the bone with which they are smiting an already stricken country, let us take away the bone. The destruction of the enemy's weapon ought to go far toward restoring our confidence.

The gifted gentleman from Nebraska (Mr. BRYAN) would restore it otherwise. He sounds one note of encouragement to inspire the confidence of a nation. "Gold is coming back!" He does not seem to think it of consequence whether we have gold or not, but to humor the national whim, we are assured "Gold is coming back." Yes, and the story of why it is coming back is another story of our National misfortune, if not shame. It is not coming back because of the removal or abatement of any thing that caused it to go away. It is coming back to receive enormous interest from business in desperation for it. It is coming back to buy our obligations at present depreciated prices. It is coming back to augment itself at the nation's expense. It is not coming because of restored confidence, nor because of any change of opinion by anybody. It is coming to speculate on a broken market, where our people have no money to speculate with or lack the confidence to use it. For all the gold that is coming back in one way or another, we are paying heavy tribute, and the only assurance it gives is, that there is a price somewhere down the scale at which foreigners are willing to buy our property.

If this sort of "coming back" goes on long enough and in volume enough it will be well to quote England's policy here, for we shall be largely England's. Our hope lies in devising some means to stop gold from "coming back" on the errand it is coming now.

The very learned gentleman from Missouri [Mr. HALL] argued the money question, and against the letter of Mr. HENDERSON, and in the direction of free trade. To sustain his money theory he quotes Mr. Walker, and he lays it down as the major premise in a syllogism that the volume of the circulating medium fixes the price of all the property in a country, supply and demand being the same. How he would measure the volume of the money circulating, whether at a real or nominal or face value, we were not informed, that I understood. It must be presumed, however, that he means to measure it by its face value, and the price of the property in the nation by the standard of that money.

If the proposition be true, then when the price of the circulating medium falls, measured by any standard but itself, the price of all the property in the nation must fall, measured by the same standard that measures the money. To avoid just here the answer that gold would be the other standard and might go up, let us suppose a fixed and unalterable standard possible and adopted, then, if measured by that standard, the price of the money fell, the price of the property in the nation must fall. Well, now the farmers of Missouri and everywhere else have been informed that the price of their grain is set in a foreign market in Liverpool. The money used as circulating medium will be measured by another standard—the standard of England—gold. Whatever is returned for the wheat will be measured by the gold standard, and the circulating medium will buy of the article returned in exchange for the wheat, under the free-trade system just so much of it as it is worth by the gold standard and no more. So, if the price of his circulating medium falls, measured by the Liverpool standard, the price of his wheat falls in the same ratio.

But admit the proposition that the volume of circulating medium fixes the price, etc. The learned gentleman, in opposing the doctrine of Mr. Henderson, quotes Adam Smith to show that we should not be concerned about the balance of trade against us, that the notion that an adverse balance of trade is detrimental is "founded on the mistaken doctrine that the amount of the precious metals in a country has anything to do with its wealth and prosperity." Well, sir, the adverse balance must be settled in gold. The paying of gold takes out of the country a part of the circulating medium. This must affect the price of all the property in the country. If price bears no relation to either wealth or prosperity what place has the gentleman's major premise in the argument?

It seems to me strange that those who put so much faith in the efficacy of the Government stamp on coin do not propose here to reduce the amount of gold in the gold coin; why not divide by statute each one into two and stamp on each half the denomination the whole now has? I think, but according to the theories of some statesmen they can not believe, that this course would put silver dollars of the present standard at a premium, and if theories advanced are correct and bankers are as painted all your silver bullion would go out right away and the new gold coin would flow into the Treasury, and all doubt of the ability of the Government to maintain the parity would disappear.

The only disadvantage or hardship I can see, from the standpoint of our free-coinage friends, who do not think it of much consequence how much silver is in a dollar so the Government stamps it "One Dollar," is that we would all be forced to the new gold basis, and our most radical silver men would be compelled to be gold bugs and despise themselves. Seriously, if theories advanced here be correct, here is a suggested solution of the difficulty—"and a way to get back on the bondholder."

Nobody will propose its adoption. Why? Because, gentlemen, through the medium of lower tariff and larger trade abroad, know that all your coins go, after all, by weight, the only effect in the direction you seek effects, would be the raising of nominal prices at home. No; what is wanted, is a money for which the Government assumes some obligation to pay it in goldor maintain on a parity with gold, or to circulate where you can compel our people to receive it at par for debts. There has been much said about one money for the bondholder and another for the people. What is proposed here is one money for the American and another money for the foreigner. We are being prepared for this by doctrines that teach us not to worry over a balance of trade against us to be paid in gold; it has nothing to do with our wealth or prosperity.

The able gentleman from Mississippi [Mr. CATCHINGS], I think, asserted and illustrated here that silver had fallen in about the same proportion as all other commodities, and all in consequence of cheaper production. On this showing the receivers of interest, fees, and wages would be the only losers by free coinage of silver. The laborer would be the man most affected.

There has been much said about the debtor class, but nobody defines that class. The receiverships being created show our great corporations to belong to that class. The inability to pay depositors show many banks in that class; all are to the extent of their deposits. Our savings institutions are in that class, and who wants them to pay in cheap money?

But nobody defines the debtor class, though every man favors it. Yes, the Government is put in that class, and one gentleman after another, when talking about circulation at different times, including the period of the war and immediately following it, estimate every greenback dollar at 100 cents, but when estimating what the bondholder gave for his bond they put that same dollar at from 40 to 60 cents. Figures so used may prove anything, and it may be worth while to suggest that it theyshow there was a time when the people had better money than the bond buyer. But we constantly hear that the greenback passed as money because the Government put its stamp upon it. The greenback was a promise to pay, and fell and rose as public faith in the honor and ability of the Government to keep its promise rose and fell. It was the promise, not the thing, that passed and had credit. The promise of any honest employed man on a piece of paper to pay a dollar is good. The stamp of a millionaire upon that same paper, "This is a dollar," is worthless. The promise of a tramp upon a paper to pay a dollar is as good as the fidelity of the tramp and his ability to beg the dollar. The stamp of the sovereign upon it, "This is a dollar," tells a lie and spoils the paper.

Mr. Speaker, I am a bimetallist, but recognize that we can not change the laws of nature. Money is older than statutes, and may survive them. Evolution in the matter of money is as marked as in anything else, and it is in the direction of a gold standard. I must admit I will vote to coin the silver bullion in the Treasury so much per month. I will vote to coin all we can absorb at a parity with gold, and, to protect our silver producers, I will vote for a heavy tariff on foreign silver. But our agricultural friends, who are for free coinage but against the tariff, dwell upon the assertion the price of wheat is fixed in a foreign market.

If that be true and the volume of the circulating medium regulates prices, is it not in the country where your foreign market is—in England—that you want free coinage? If the price of American wheat is fixed in Liverpool it is prices in Liverpool you want to raise by swelling the volume of the circulating medium there. The interest of the American wheat-grower can not lie in the direction of dear money where he sells and cheap money at home where he buys. Well, gentlemen, you can only get free coinage abroad by international agreement. You can only get that agreement by force. The first force to use is the suspension of silver coinage in the United States. The next, perhaps, is to prohibit a market for foreign silver here. If you are right in your theories your war is for free coinage abroad. A free-coinage bill in the United States is a surrender and capitulation on the foreigners' own terms.

Besides this, you can not absorb and maintain the parity of the world's silver alone. No one nation ever did, no one ever will do it.

But the Western and Southern farmers want a better price for wheat. So do the farmers of all the States. I think there is one way to get it, in time—maintain a tariff that secures a home market for our manufactured articles, and build up factories around you, and draw a population that will consume and not raise grain. They will come to you, not in a day, but in time. Pursue the American policy, and you will have your own factories and your own money centers. Grain has fallen under Republican régime. Yes, Republican legislation has opened territory to settlers, and made it possible for almost every man who would go through the hardship of preëmpting it to own one of the best farms in the world. It has created in the desert millions of such farms. It has created States whose Representatives come here and denounce it. Grain has fallen. Yes for there is an empire of waving corn and kingdoms of new stubble to-day where the virgin soil was unbroken when Republican legislation began.

What the owners of this empire and these kingdoms need is consumers and not inflation of money. Your own country, that consumes nine-tenths of our crops, has not been stinted for wheat bread. No amount of currency would have made this nation eat much more wheat. You can not command the foreign market, for the vast empire of India has entered into competition with us in raising wheat and selling it in the markets of the world. Only geographical situation will keep Indian wheat out of your own market when the tariff is repealed. India wheat is produced by people who do not eat wheat bread, and many of them never saw wheat flour. It is a hard competition. American legislation did not turn them to wheat raising, consign them to a diet below wheat, nor set them to cultivating their soil by the motive power of cows and women.

American legislation has not created the competition of Russia in the wheat market, nor have the "Shylocks of Wall street and blood-suckers of New England" developed the agriculture and commerce of these semibarbarous but vast domains, till they compete with you in the "markets of the world." The American farmer's future is not in European markets; the star of his hope does not shine over Liverpool. Gentlemen seem to have yet to learn that Great Britain, France, and Germany, are not the whole Eastern Hemisphere.

We want a market for our products, including silver. We are the greatest producers of silver in the world. I have no quarrel with silver or its producers, no sympathy with those who denounce them. Mining always has been and is a hazardous enterprise. The phrase "the mines of Peru" has passed into literature as the figure for wealth, yet to open a new mine in Peru is to lose social and business caste, because the people assume the future bankruptcy of the man who embarks in the enterprise, and if the East have a cause of quarrel with the "Silver States" it is not that they produce too much, but that their mines have absorbed a vast amount of eastern capital. I want to see and will help create the best possible market for their silver through international agreement—free coinage everywhere, if you please.

But we are told that if we do not vote for free coinage now silver will never be "heard of again in our statutes." How egregious! After us the deluge. We are not here now for the triumph of any theory, nor to adopt unalterable policies. We came to meet a "condition, not a theory," and there will be other days and possibly other Congresses in which theories can be weighed and policies adopted with more safety and as much wisdom as now, and in this Congress—even this Congress will have the soberer second thought later on.

Again we are told, by a number of gentlemen, that the repeal of the purchasing clause "strikes out half of the circulating medium and raises the power of money." The honorable gentleman from Illinois goes so far as to illustrate this argument by a supposed purchase of ten horses at $100 each, $1,000, the giving of a note for them, and that before sale of the horses and the maturity of the note this repeal passes. He contends the price of the horses, in consequence of the striking out of silver accomplished by repeal, will have fallen to $500; but it will take a thousand dollars to pay the note, and the repeal will have robbed the horse owner of $500. I think I state his position correctly. I notice it especially because it embraces much of the argument made on his side of this question.

In the first place, it seems to me that the gentleman from Missouri [Mr. HALL] and others, who speak from authorities on finance, go far toward answering their friends and colleagues. These men of books show that nineteen-twentieths of the circulating medium is credit, and they certainly do not mean to contend that the volume of credit will swell and shrink with the volume of silver, for they also declare that an adverse balance of trade to be settled in coin has no relation to the wealth and prosperity. An adverse balance of trade settled in coin takes circulating medium out of the country.

If to take out coin does shrink credit to the proportion of 19 to 1, then by their own showing an adverse balance of fifty millions will mean a shrinkage of circulating medium of one thousand millions. So, the total destruction of silver would not do what the gentleman from Illinois says, on currency, unless credit shrinks with loss of coin money, in the ratio it bears to the circulating medium, 19 to 1. If credit shrinks in its ratio to coin present, then the loss of each ten million coin, in settling foreign trade balances, means a loss of two hundred millions in circulating medium, they answer themselves.

Mr. Speaker, much has been said about paying of our bonds in greenbacks, and about the amount the bondholders paid for the original bonds. I have before called attention to the fact that when they state the value of the greenback paid for a bond the greenback is heavily discredited, but when paid for wheat it is reckoned at par. Well, sir, the greenbacks paid for bonds were promises to pay by the United States—the floating debt of the country, if you please, became too large to float at anything like face value. I will not offend anybody by inquiring the cause—and it was funded. The Goverument exchanged its promise to pay at a definite time for its other promises to pay. Then came the proposition, still urged, to pay the second lot of promises by a reissue of the first promises, and this they call payment.

A gentleman inexperienced in business was pressed for a debt. It was a new experience with him, consequent insomnia and a failing appetite were wasting his system, when the creditor proposed to take a note. The debtor gave it, and with radiant countenance and streaming eyes, exclaimed to his anxious wife: "Thank God, Hannah, that debt is paid." The story is old and has excited mirthful ridicule wherever the English language is spoken. If I had located the debtor in any section or given his occupation, honorable gentlemen would indignantly declare I had insulted the intelligence of their people. Yet, sir, these same honorable gentlemen propose the payment of debts with notes by the United States, and call it statesmanship and sound policy.

If I have indicated why I shall vote for repeal and can not accept the theories nor arguments of the free-coinage gentlemen, I have done all I intended.

I have endeavored to avoid political references. I have no desire to remind anybody that their platform was constructed of a material so indefinite and void of certain texture that we have had many days of dispute as to who is on it and who is off. What it is and where it is seem alike uncertain.

In calling attention, in conclusion, to portions of three Presi-

dential messages, I do not allude to politics, but point to passages of history, undisputed and indisputable.

At the last end of one free-trade period, and near the beginning of a feared one, two Democratic Presidents wrote as follows:

BUCHANAN, DECEMBER, 1857.

The earth has yielded her fruits abundantly; our great staples command high prices, and up till within a brief period our mineral, manufacturing, and mechanical occupations have largely partaken of the general prosperity. We have possessed all the elements of material wealth in rich abundance, yet, notwithstanding these advantages, our country in its monetary interests is at present in a deplorable condition.

In the midst of unsurpassed plenty we find our manufactures suspended, our public works retarded, our private enterprises abandoned, and thousands of useful laborers thrown out of employment and reduced to want. Under these circumstances a loan may be required before the close of your present session, but this, although deeply to be regretted, would prove to be only a slight misfortune when compared with the suffering and distress prevailing among our people.

CLEVELAND, AUGUST, 1893.

With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side.

Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that securities they offer for loans, though heretofore satisfactory, are no longer accepted.

Values supposed to be fixed are fast becoming conjectural, and loss and failure have involved every branch of business.

The other is that picture painted by the truthful hand of President Harrison in his message of December 6, 1892, of a nation in unprecedented prosperity, growth, and development. That was a condition under a protective tariff. [Applause.]

Mr. PENCE. Mr. Speaker, under the five-minute rule I have but a word or two to say. I know that the House has been already too kind to me. But, raised as I was in the Indiana school, and allied as I am by matrimony with the Kentucky school, I could not let even this short opportunity pass by without expressing my opinions and feelings respecting the utterances of certain of the Hoosier and Kentucky statesmen on this floor. I do not desire to take the time of the House in any discussion of the merits of this question. I am a little bit discouraged, and my people are; and we have reason to be so.

My wife is a Kentuckian and we have a good many Kentucky friends in Denver, and each and all of them gave me brief words of encouragement when I started away, and when they on the last day before I left home told me that the New York Democrats may go back on silver and the silver platform, Connecticut Democrats may go back on silver and the silver platform, Maryland Democrats may spew the Chicago declarations out of their mouths as mere catchwords and glittering generalities, but you will find one good warm table where you can sit down in Washington, the good old "McCreary Bimetallic Hostlery," which will be open and every example of its hospitality will be spread before you.

Mr. Speaker, I have tried at the door and at the dining-room door and have been turned away from that good old inn, hungry as I was when I applied for admission and sustenance; and when upon inquiry I sought to find what means this change, I am directed to step out upon the sidewalk and look up at the old sign, and there I learned that the old hospitable inn is now being run on the European plan. [Laughter and applause.]

Mr. Speaker, they told me that it would be a warm reception, because in 1891—not back yonder before the war, when the moon was larger than it has been since hostilities ceased—but in 1891 the gentleman, who has been the chief executive of Kentucky, had been the glad recipient of a vote of thanks by a Democratic convention in Kentucky, which, in addition to declaring for the free and unlimited coinage of silver, had also voted an express resolution of thanks to him and his colleagues, for their almost unanimous vote for free coinage in Congress.

I have telegraphed my old Kentucky friends—or my wife has—that we have been fooled. [Laughter.]

Mr. Speaker, that, however, does not so much concern me, because my best recollections pertain in no wise to the "dark and bloody ground" south of the Ohio River. I was born and bred in the school of VOORHEES, of COOPER of Indiana, of BYNUM of Indianapolis; and right well they taught me my lessons, and set me upon a course concerning which I shall not turn my face at the suggestion of pie from the Administration. [Laughter.]

If it were my purpose, Mr. Speaker, standing here as a representative of the people's party——

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. SIMPSON. I ask unanimous consent that the time of the gentleman from Colorado [Mr. PENCE] be extended fifteen minutes.

There was no objection, and it was so ordered.

Mr. PENCE. Mr. Speaker, I was about to say, when my friend kindly interposed his request, now granted by the House, that if I, standing here as a member of the People's party, desired political advantage, I should greet with joy the probability of the Democracy surrendering to the command of the Executive, and of the Republican minority being chained absolutely to the Executive chariot: but I hope I am prompted by higher wishes and motives than that.

I have at home a people who are more deeply concerned in this question than any other people in the Union, and if the gentleman from Indianapolis [Mr. BYNUM] were here representing a people assaulted as are mine, he would not be an evolutionist, but as the gentleman from Pennsylvania [Mr. SIBLEY] said, one letter would be added to the word. He would protect his people; and my people in Colorado, fifteen hundred of whom were taught by this gentleman from Indiana, as was I, protest through me against this abject surrender that is being made by the Representative from the good old State. [Applause.]

It is not necessary, Mr. Speaker, for me to review any of the arguments before I come to this matter. It is not necessary to remind this House and the people that, as three thermometers hung on yonder wall under the same conditions here would fall together, so have wheat and cotton and silver gone down together since 1873. It is not necessary for me—at least, I will not consider it so—to read any number of the speeches made by prominent gentlemen upon this floor in prior Administrations. I shall in that respect be content with referring to that which my own eyes have witnessed. And oh! how vivid is the recollection of the scene.

Not back in 1873, not back in 1861, nor 1834, nor 1816. I shall not carry the gentleman back far in the recollection of the scenes that have lately transpired in his life. Only to the 13th day of October, 1891, when the gentleman from Indiana [Mr. BYNUM], Mr. Chauncey F. Black of Pennsylvania, Senator FAULKNER of West Virginia, and Mr. WILSON of West Virginia, were advertised as about to make a tour through our country for the organization of Democratic clubs. They came into our presence. Oh! how warmly we greeted them—greeted them with bed and board such as the old Kentucky hotel used to give us. [Laughter.] On the night of October 13, 1891, the gentleman from Indianapolis [Mr. BYNUM], addressed the largest audience ever assembled in the city of Denver, and he taught me no new lessons.

At his feet I had knelt in my old native State, that blessed Commonwealth, which I have remembered with the sweetest recollections of my life, around the old home before I came to manhood, in the days

> When my feet were bare and my cheek was brown,
> When my heart was as light as the elder down,

and open and free for just such lessons as he taught. But in 1891 he came to remind me of them.

I read, Mr. Speaker, from the Rocky Mountain News of October 14, 1891. I read first the words of the gentleman as uttered there—

I have always—

I know the gentleman will not forget these words—

I have always—

That means a long time past [laughter]—

been in favor of the free coinage of silver; and I do not desire to advertise my own record, but in this connection I think it is not improper to say what action I have taken in respect to this question.

This was a stenographic report of the gentleman's speech, for the kindness in making which we received his acknowledgment of thanks on the next morning.

I was on the Committee on Coinage in the Forty-ninth Congress, and was one of the three members of that committee who reported the bill in favor of free coinage away back at the beginning of Mr. Cleveland's Administration. [Loud and prolonged cheering.]

[Laughter.]

Then this further quotation—but I hope if I scrape the mold from the memory of the gentleman he will thank me for it—

I have voted for free coinage from the time the question has been before Congress, and will do so every time it comes up.

[Great laughter and applause.]

Mr. Speaker, I trust that the teacher will not rebuke the scholar whom he trained for now telling him that the question has "come up." [Renewed laughter and applause.]

But that is only a part of it. Back in Indiana they do not illustrate the speeches of public men; but with that spirit which marks all of our enterprises we do. I have here the front page of the paper of the same day which illustrates the impression made upon our people. First, the reporter, in addition to the report I have read, says:

Mr. BYNUM was greeted with hearty and prolonged applause, and it was several minutes before the cheers had subsided and the orator could enter upon his theme. His declarations and his advocacy of free silver aroused the audience to the wildest enthusiasm, although the speaking had then been in progress for three hours.

[Great laughter.]

Mr. Speaker, that is only the beginning. Here we have what I can not hold up and display to the House [referring to the bound copy of the paper before him.]

Several MEMBERS. Let us see it.

Mr. PENCE. Let me say, then, that the book will stay here to the hour of adjournment, and furthermore, Mr. Speaker, that it may not be lost to the members who are not here, I now shall request the privilege of having a copy of this cut made and incorporated as a portion of my remarks. [Great laughter.]

Several MEMBERS. Describe it.

Mr. PENCE. And here, what see I before me? Oh, the recollections that it brings up! [Describing.] A silver dollar, a medallion of a dollar, turned out by our mints. Supported; how? By the manly legs and feet of the gentleman from Indianapolis. [Great laughter.] Whose arms are these I see upraised as in invocation to high Heaven; whose face this that I see announcing to the skies, and beneath the inscription, "I always voted for free coinage; and always will when it comes up." [Great laughter.] The noble presence to my left reminds me that I can not be mistaken in the photograph. [Laughter.] If it requires unanimous consent to print that picture I hope I will get it [laughter]; and if that is not sufficient, I hope my proffer will be accepted to pay for it myself and save the Government the expense. [Laughter.]

Mr. Speaker, I have said that this gentleman taught me that lesson, which I decline to forget and leave. I begin, since I notice their utterances here, to understand why and how it is that the Democratic President, elected upon a silver platform, apparently without fear of contradiction, claimed at Gray Gables sixty days ago that these men of the majority would surrender at his command. I thought they were too brave. But, oh, no; he understood too well the favors he had to dispense—"the means at command," as Mr. COCKRAN expressed it in the columns of the North American Review in June; and he never hesitated, but felt free to fling the platform to the wind, as he had that which would turn down the platform. Brave was he, Mr. Speaker, as the sluggard who was told to go to the ant.

> "What! go to the ant," said the sluggard;
> "What a waste of time that would be;
> To my picnic I'll hie and sit down by my pie
> And there let the ants come to me."

[Great laughter.]

When the gentleman who now is chairman of the Finance Committee in the Senate is agreeing absolutely, in toto, with the plans of Mr. SHERMAN of Ohio, I could but be reminded of his article in the North American Review in November, 1891, when he (Senator VOORHEES), writing of him (Senator SHERMAN), spoke of him as—

> the financial weathercock of the Union; one who had been on all sides of the money question, who had changed oftener than anyone else, but always changed at the time and in the way that would best suit the purpose of Wall street and New York.

I will send the Senator from Indiana a copy of his own article by the first mail. [Laughter.] Mr. Speaker, it is no wonder that in our country we have come to be unable to distinguish the difference between the present Secretary of the Treasury, Mr. Carlisle, and the past Secretary of the Treasury, Mr. SHERMAN. It is true that upon this floor Mr. Carlisle denounced the Sherman policy, but little by little he has come to it, and now what scene do we behold? He who had been the denunciator of the policy of the Treasury Department in 1878 now the author of its continuance!

In my judgment, sir, the story of the gradual, slow temptation and change of Mr. Carlisle will be one of the saddest chapters in the history of this country. I worshiped at his feet as well as at the feet of the gentleman from Indianapolis continuously by day and by night during the soft and callow days of my youth. [Laughter.] We can now see in our country the difference between the policy of the Treasury Department to-day and that of 1878. It is always against us. Now, Mr. Speaker, may I illustrate this case by a little story, and then I will not further tire the House?

The SPEAKER. The time of the gentleman has expired. [Cries of "Go on!"]

Mr. BYNUM. Mr. Speaker, I ask unanimous consent that the time of the gentleman from Colorado be extended. [Laughter and applause.]

There was no objection, and it was so ordered.

Mr. PENCE. Certainly, Mr. Speaker, after that gracious act I must confine my attention to somebody outside of the State of Indiana. [Laughter.] I have said, sir, that the people out in our country can not discern the difference between the policy of the Treasury Department of to-day and the policy of the Treasury Department in 1878, under Mr. Sherman, and I want to illustrate that.

Back in Marion County, Ind., there is a little town down on the Johnson County line containing about 300 people. A stranger came into the town on a certain Sunday morning, and, walking out from the hotel, he saw a little white church and a crowd going in, and he noticed that it was a Lutheran church. He walked on, and in the next block he saw a little brown church, and was surprised to see that it also seemed to be a Lutheran church. He went back to the hotel and found the proprietor there—he had not gone to Europe [laughter]—and he said to him, "It strikes me as rather strange that in a little town like this, hardly able to sustain one church, there should be two churches just alike."

"What do you mean?" asked the landlord. The stranger told him what he had seen. "Oh," said the landlord, "you are mistaken; those two churches are not just alike; they are somewhat alike, but not *just* alike. Over in the white church they believe that the serpent tempted Eve, and Eve tempted Adam, and Adam fell; but over in the brown church they think he was a bad egg from the start." [Laughter and applause.] Now, Mr. Speaker, I have too long imposed upon the patience of the House, and, understanding that I have leave to print this picture with my remarks, I thank gentleman for their indulgence and resume my seat.

Mr. BYNUM. Mr. Speaker, I have been highly edified by the remarks of the gentleman from Colorado [Mr. PENCE], because I have taken a great interest in his welfare since he became so prominent in that State. The gentleman is correct in saying that I made a speech in Denver to a very large audience. I think it was one of the largest audiences I ever saw, though I may have overestimated its numbers. During the fall of 1891 I had the pleasure of making a tour across the continent with some distinguished gentlemen who were engaged in the organization of Democratic clubs. We started in at St. Paul, from thence went to Fargo, Butte, Helena, Spokane, Seattle, Portland, San Francisco, Salt Lake, and thence to Denver.

Now, Mr. Speaker, it is true that I have always been an advocate of free coinage. In the Forty-ninth Congress I followed the lead of the gentleman from Missouri [Mr. BLAND]. It seems to have been a case of the blind leading the blind, and I confess it. [Laughter.] After my visit to Denver, where I witnessed this evidence of wealth and prosperity—all made out of the production of silver—I am not surprised to find the gentleman from Colorado so enthusiastic on the subject. Upon our arrival at Denver, we were met, as we had been at all the points we visited, by a committee representative of the hospitable Democracy of the West. We were taken for a drive over the city, which is one of the most beautiful that I have ever seen. In fact, I have complimented the city since I first saw it whenever its name is mentioned. I never saw so many new and magnificent residences.

The suburbs of Denver will compare favorably with those of any other city in the United States. As I looked at this splendid evidence of wealth and prosperity I was led to inquire from whence it was derived. I was told that it all came from "silver mines." When asked by some of the good people the subject of my speech, which I was advertised to make in the evening, I told them I talked of nothing but tariff reform. I was informed that there was but one question in which the people of Colorado had any interest, and that was "silver." Having been a supporter of free coinage, I yielded to the temptation of those who had received and treated me in such a hospitable manner, and gave expression to some sentiments in favor of silver that were somewhat extravagant.

I distinctly stated in my speech on Tuesday that I had changed my views on the subject; a fact that was well known to my constituents. This is not a question of principle but one of policy, and I expect and intend, whenever from changed condition or from the acquisition of more light, I become convinced of my error, to change my views as my judgment may approve, and when I shall do so I shall not be too cowardly to proclaim the fact.

In the Fourty-fourth Congress, during the then exciting conditions, I was a supporter of free coinage. I made a speech on that side, and I believe it was as good a one as I have heard during this debate, but I confess my sins and am seeking forgiveness.

Mr. JOHNSON of Indiana. Mr. Speaker, I do not rise at this late hour in the debate, which has now been occupying the attention of the House for nearly two weeks, with any intention of discussing in detail the merits of the pending bill or of any of the amendments which have been offered thereto. The brief time allotted to me in which to speak forbids this; but even if I had on this occasion the opportunity for extended remarks, I very greatly doubt whether I should embrace it.

During the progress of this discussion, Mr. Speaker, there has been a great deal said, sincerely said, ably said, upon each side of the great monetary question which we have been considering, and I am not vain enough to imagine that at this stage of the the proceedings I can add anything new or original to that which has already been uttered, or that I can rehabilitate the

arguments which have been made by others in such a way as to give them any additional force or vigor.

Indeed, I have felt during the entire progress of this debate that it was infinitely more important that I should arrive at a correct solution of this financial problem than that I should simply inject myself into the RECORD through the medium of a speech. I have felt thus because I have known that the question with which we were dealing was one of great and paramount importance to the American people; because I have been conscious of the fact that on the adjournment of Congress it would be taken up again and fought over on the hustings, and because I have realized that the money question from the very nature of things was destined in one form or another to be present in this Hall for legislative action during long years that are to come.

With a view, therefore, of reaching a correct solution of this subject, I have been among the most attentive of the listeners to the discussion on this floor. I have read with painstaking care most of the pertinent literature that has come within my reach; nor have I hesitated, to consult carefully the leading economic works which I thought best calculated to elucidate the matter which has been in controversy. After much reflection, sir, I have been able to come to a conclusion entirely satisfactory to myself; and it is simply for the purpose of stating this conclusion and of giving a few of the reasons which have induced me to adopt it, that I now ask for a brief time the indulgence of the House.

I may remark in this connection, Mr. Speaker, that I have not been handicapped in coming to the conclusions which I have reached by the declarations of the platform of the great political party to which I have the honor to belong which was promulgated by it when it recently assembled in convention at Minneapolis. In this particular I differ from the distinguished gentleman from Iowa [Mr. HEPBURN], who addressed the House on day before yesterday, and from the equally distinguished gentleman from Illinois [Mr. CANNON], who spoke in this Hall just before the adjournment yesterday. I have been infinitely more concerned, sir, to square myself with the immutable truth involved in this financial controversy than I have been to square myself with the declarations of any party platform, whether Republican, Democratic, Populist, or Prohibition.

I am not going to permit either of those gentlemen to outdo me in party zeal. I have been a loyal member of the Republican party ever since I attained my majority; and I am glad now to be able to announce that the conclusions which I have reached in respect to this subject of finance are not such as put me outside of the pale of my party organization, but that I can cherish and fearlessly declare them and still walk upon that highway of intelligent progress which it has ever been the pride of this grand party to pursue.

Any gentleman who will read, however cursorily, the declarations of the last Republican national platform will at once come to the conclusion that the primary thing therein declared for is not so much bimetallism as an honest, stable, unfluctuating dollar, or standard of value. Bimetallism as there announced is not the end sought to be obtained, but the means whereby this primary end is to be achieved. And, sir, if in the light of subsequent events it is apparent that this end can not be attained through the medium of bimetallism, then I am not here to stand for the technical construction of the language employed in the platform, but rather to bring myself within the scope and object of the principle therein declared for, which is, I repeat, the establishment of a stable and unvarying measure of value.

What Republican, sir, has the hardihood to stand on this floor and say in the light of events that have transpired since the Republican platform was adopted at Minneapolis that this platform points unerringly to an impossibility?

Mr. Speaker, since this convention adjourned the nations of the world have refused to enter into an international agreement with us for the remonetization of silver, because we were obliged to beg for it as suppliants, instead of demanding it as rivals. Since this convention adjourned India has discriminated against silver, at least to the extent of closing her mints to its coinage on private account; since this convention adjourned Austria has gone upon a gold basis and silver has depreciated from a ratio of 26 to 1 to a ratio of 28 to 1.

Sir, I came to this session of Congress with my preferences all in favor of silver. I recognized the fact that ours was one of the greatest silver-producing nations on the face of the globe. I am sure I was anxious, in so far as it could be done without plainly flying in the face of all economic law, and without bringing distress upon my countrymen, to see silver utilized in the monetary system of the country. I was strongly inclined to its free coinage, but only at such a ratio to gold as the silver bullion sustained to the gold bullion in the markets.

But, Mr. Speaker, the careful study that I have since given to the investigation of this money problem has led me to the sincere and honest conviction that I ought to modify the opinions which I then entertained, and oppose the free coinage of silver at any ratio.

[Here the hammer fell.]

Mr. HARTER. I hope the gentleman from Indiana will be allowed further time.

The SPEAKER. How much more time?

Mr. HARTER. Sufficient to enable him to finish his remarks.

Mr. JOHNSON of Indiana. I shall not trespass long on the patience of the House.

The SPEAKER. Unanimous consent is asked that the gentleman from Indiana be allowed sufficient time to finish his remarks. Is there objection? The Chair hears none.

Mr. JOHNSON of Indiana. Mr. Speaker, my present opinion is that for this nation alone to undertake under its present environments to remonetize silver at any ratio whatsoever, and in this manner maintain it at a parity with gold, is an absolute and utter impossibility. To attempt it will, in my judgment, not only be a piece of foolishness, but will be absolutely suicidal. This, sir, is my solemn and deliberate conviction.

Mr. Speaker, it is within the power of Government to say out of what material its metallic money shall be made and how much of that material shall be placed in a coin and also what shall be the degree of its fineness. It can denominate its coin. It can even go further. It can make its coin a legal tender and require the creditor to receive it in payment of a debt, even if it be depreciated in value. But here the power of Government ends. The mere stamp of the creative power does not give the coin value. I utterly deny, sir, that it is within the power of Government, against the common consent of the people and by mere arbitrary legislative enactment, to give one single particle of purchasing power to its coin.

I do not wish to say, or to be understood as saying, that the Government does not, by making a metal money and thereby creating a demand for it for use as money, to a certain extent and within certain limitations appreciate its commodity value under the operations of the law of supply and demand. But I do undertake to say that in fixing what shall be its money and determining what shall be its value the Government should follow the previously expressed wishes and value estimates of the people and not undertake to give the metal any greater value than the common consent of the people has bestowed upon it.

This has been the policy pursued in the history of our Government heretofore. When the fathers undertook to determine the ratio they would give our coins they did not seek to give either to gold or to silver an arbitrary statutory value, but they went into the markets of the country and ascertained what value the people had previously conferred upon the metals, and settled upon that as the value to be placed upon the coins they provided for.

I hesitate not to avow, Mr. Speaker, that if, in the effort to remonetize silver, you fix the value of silver coin higher than the bullion value of the metal which composes it in the market, instead of appreciating the bullion to the coin value of the dollar you will find that the coin will depreciate to the market value of the bullion.

Bimetallism by one nation, as a practical fact, is, in my opinion, an impossibility and an absurdity. You may have a legal ratio, you may have a theoretical ratio, you may enact bimetallism into a statute, but practice and our experience as a nation clearly proves that you will have, as a matter of fact, the cheaper money only in use and circulation, and this will give you monometallism. Why, sir, early in our national history one of the precious metals passed out of circulation, and we did our business on the other alone for years.

Owing to a subsequent change in our coinage laws the condition was reversed, and the money which had previously gone out of circulation came back again, and the money on which we had before transacted business in turn went out of circulation. And yet, during all this period we had each coin established by law upon our statute book as a unit of value at a fixed ratio to the other. But the market value of the metal in the coins differed from that fixed by law, and under the invariable operation of Gresham's law the more valuable coin was retired and the cheaper one remained.

Mr. Speaker, the question with which we have to deal to-day is not whether the demonetization of silver was wise or foolish, right or wrong, whether it conferred benefits or inflicted evils, but the question is rather one of power and resources. We are face to face with a condition. Have we the strength and ability at this time by ourselves to free coin silver and thereby establish and maintain it on a parity with gold? This is the material, the decisive inquiry.

Let us stop, sir, and consider for a moment what is proposed by the advocates of the free-coinage system upon this floor. They are utterly ignoring the present status of silver in their demands. They forget that it has been dishonored throughout the civilized world by the leading nations; that England has

been upon a gold basis since 1816; that Italy has turned her face against silver at least to the extent of denying it free coinage on private account at her mints; that Germany has gone on a gold basis; that France and the Latin Union, after vainly having tried to stem the tide of silver in its downward progress, have stepped aside for fear that the avalanche would bring ruin upon them; and that France has at last reluctantly closed her mints to its free coinage.

They fail to observe that Austria is now adopting a gold standard. They seem to forget that twice in our history we have tried by legislative enactment to bring silver to par, or to keep its value from further declining, and have signally failed on each occasion. We tried it in 1878, by means of the Bland-Allison act, and were unsuccessful. We repeated the experiment, regardless of the teachings of our experience, in the year 1890 by the enactment of the Sherman act. It thereupon rose slightly in value, but soon commenced to fall again, and has ever since depreciated in price until to-day it has fallen lower than ever before in our national history.

The advocates of free coinage seem to ignore, too, the fact that the production of silver has within the last ten years increased enormously. Now they are asking that we shall try the very experiment which the Latin Union, including the French Government found itself unable to carry out successfully under circumstances more favorable than those by which we are at present surrounded. They are asking that we shall undertake to lift this enormous burden without aid or intervention from any foreign power.

Mr. Speaker, the moment that anything of this kind is attempted, in my honest opinion, it will result in the operation of Gresham's unvarying rule. You will find that instead of being able to maintain these coins of gold and silver at the parity fixed by law, they will separate. Silver will depreciate and remain. Gold will fly. It will retire from circulation and be hoarded, and instead of being upon a bimetallic basis of gold and silver, this nation will be upon a silver basis alone. You will have a contraction instead of an expansion of your currency. Not only that, but such silver legislation will stimulate the production of your American silver mines. It will induce foreign nations to make a sacrifice of their silver and pay a premium for your gold to the end that they may strengthen their gold reserves, they being upon a gold basis; and you will find that it will take the utmost capacity of our mints, constantly operating for two or three years, coining depreciated silver dollars with which to supply this deficiency in the currency occasioned by the retirement of gold.

And when you get that additional coinage of silver you will find that you have descended to a silver basis, not to bimetallism, but to silver monometallism pure and simple, and that, while you are not reduced to the intellectual or industrial status of the semicivilized nations of the world, yet that you have descended to the same metallic system which they employ, and have deprived yourself of those monetary advantages which are the highest products of the leading and prosperous commercial nations of this globe. And you will not only have descended to this depth, but in your descent you will have depreciated the value of every dollar of the paper money and the silver coin that is deposited in your savings banks, in your national banks, and in in your private banking institutions throughout this country.

You will have depreciated the value of every particle of that money in the hands of the people, and have brought loss and privation and entailed suffering upon them. You will find yourselves, too, as I have already said, not upon a foundation of bimetallism, but upon a foundation of silver monometallism, with a constantly fluctuating standard of value, than which there can be no greater curse in the monetary affairs of a civilized nation.

Mr. Speaker, the objections that I have urged to the remonetization of silver at any of the ratios provided for in the amendments to the measure now under consideration can be urged with equal effect, in my humble opinion, to the remonetization of silver at the ratio which the silver bullion sustains to-day in the markets of the world to the gold bullion. Unfortunately, sir, by the terms of the resolution under which we are operating, and under which at 12 o'clock on next Monday we are to take our vote, which resolution was adopted by the Democratic party within the secret chambers of its caucus, from which I and my colleagues on this side of the Chamber were rigidly excluded, no member will be able to vote for the remonetization of silver at any other ratio than that named in this order of proceeding; but, sir, I shall not attempt to hide myself like a moral coward behind this bulwark.

Recognizing the fact that the need of the hour is men of convictions; men, too, who have the courage of their convictions, and are not afraid to express their sentiments, and who are far more anxious to maintain the right than they are to preserve their consistency—I hesitate not to declare that if under this order of procedure an opportunity to vote for a different ratio were afforded me, I would not vote for it.

In addition, Mr. Speaker, to the evils which I have already pointed out as being incident to the remonetization of silver, let me call attention to others which apply more particularly to remonetization at other ratios than 16 to 1. Let me say that, in my humble opinion, the only hope of bimetallism is to obtain an international agreement for the restoration of silver, but when you remonetize silver at the ratio of 20 to 1, or at the present market ratio of gold and silver bullion, you lessen the chances of ever securing an agreement from foreign nations for international bimetallism, because of the great expense it would entail upon them to meet you anything like halfway as to ratio in the recoining of their silver.

Again, after you have remonetized silver at a different ratio from that of 16 to 1, and the metals have separated under the invariable operation of Gresham's law, you will not only be attempting to maintain your new gold dollar and your new silver dollar at a parity under your new ratio, but you will be seeking also to maintain on a parity with these two dollars the existing dollars now in circulation, thus complicating the difficulties of the situation in proportion to the number of dollars that you are trying to keep at a parity. Here we have the spectacle of the nation with three standards of value. Sir, there can, in the very nature of things, be but one standard of value. Trade and commerce can be successfully carried on in no other way.

Not only this, but there is the letter of the Secretary of the Treasury [Mr. Carlisle], addressed to Senator VOORHEES, which has clearly demonstrated the fact that to make your present silver dollar contain as much silver as your new silver dollar, if you adopt remonetization of silver at the proposed ration of 20 to 1, you will be obliged to entail an enormous expense upon the American people to supply the silver, to pay the expense of returning the present coin to the mint, to make up the loss from its abrasion, and the depreciation in the process of melting.

Mr. Speaker, passing from these propositions, I want to say, in addition, that I am absolutely opposed to and shall not cast my vote for an amendment which looks to the reënactment upon the statute book of what is known as the Bland-Allison act. That act, in my humble opinion, contains the very features that from this time forward will render the Sherman act objectionable. Aye, more, it contemplates a continued purchase of silver and the minting therefrom of a short-weight dollar, to be carried on indefinitely. The danger here is that after a while there may arise in the public mind doubt of the ability of the country to maintain its silver dollars at a parity by payment in gold, and thus there may come a depreciation of these dollars which will entail loss upon the people.

One word, Mr. Speaker, in conclusion, with respect to the repeal of the purchasing clause of the Sherman act and I am through, and will not longer tax the kindly indulgence of the House.

I am not one of those who believe, with the President, that this act is mainly responsible for the present deplorable condition of affairs in which we find ourselves. I firmly believe, and I say it with all respect to the Executive, who is doubtless honest in the expression of his opinion, that there is a disposition manifested upon the part of some persons to make the Sherman act the scapegoat for the present evils, with a view of distracting public attention from the real cause of our calamities.

I think the source of our financial trouble can be found in other directions. It is a recognized fact that since 1873 there has been a universal depression throughout the entire civilized world, affecting all nations, regardless of their financial or economic policies. There has been almost everywhere upon the globe a money stringency, a depreciation of products, and a falling in land values; and it can be possible, sir, that this evil which has afflicted foreign lands, and which has heretofore been kept away from us by our marvelous strength and material resources, has at last crossed the billowy Atlantic and laid its blighting hand upon us. Is it not possible that the presentation by foreign holders of American securities for payment, in order to secure the money to pay their own indebtedness and stem their own reverses, may have drained us of our gold, and thus helped to bring on our financial embarrassment?

Is it not possible, sir, that a conspiracy may have existed in the city of New York and in London to force this Government to issue bonds, to the end that they might be taken up for good financial investments, and that a run upon the national Treasury has been inaugurated and the gold drawn therefrom with this object in view, and that this has contributed to our distressed condition? Is it without the range of possibilities that in an effort to give the country an object lesson, in order to force the repeal of the Sherman law, the persons in the scheme have gone too far and have precipitated a panic which has passed beyond their control and reacted upon themselves?

Mr. Speaker, I hesitate not to aver that, in my humble opinion, there is another cause that has tended as much as anything described to bring about the present condition. The Republican party, by the wisdom of its enactments, has built up the business of this country on the basis of a protective tariff, and to that legislation all business interests have conformed and adjusted themselves. The dread on the part of the manufacturers and business interests of the country that the Democratic party would undertake to reverse this economic policy under which prosperity had been obtained is, in my humble opinion, one of the most far-reaching of the local causes that has induced the difficulties which now beset us.

Mr. Speaker, I do not think there existed in the breast of a single intelligent human being, either on this continent or across the water, any belief that the Government of the United States was lacking either in the intention or ability to keep at par and redeem in gold every single silver dollar that was out, every silver certificate that was issued, and every Treasury note that was issued under the Sherman act. I believe that the national credit both at home and abroad has been above reproach.

I would like to call your attention, sir, to the fact that under the wise monetary legislation of the party that has controlled this nation for so many years the national credit of this country is higher than that of any nation on the globe. Does any gentleman doubt for one moment that any issue of bonds by this Government made this day would be snapped up with avidity in every monetary center in the world as safe and profitable pecuniary investments? This is a test of the public credit.

The Sherman act never drove gold abroad. If it did, how does it happen that gold is now returning to our shores, although the act still stands unrepealed? The people have not lacked confidence in the money of the country; they have lacked confidence in the banks which had possession of it. They have not repudiated the silver or the paper currency of the country. They have hoarded silver and silver certificates as well as gold. It is said that those very certificates are at a premium to-day.

I protest, Mr. Speaker, against this unfair endeavor to put upon this one legislative enactment the burden of all the ills to which we are heir at the present time. The history of the passage of the Sherman act is within the recollection of every intelligent man upon this floor. That act was passed to avert in this country a terrible calamity—the attempt to remonetize silver and bring upon the country the evils of a depreciated coin. It did its perfect work in this respect. It added to the circulating medium of the country a sound silver and paper currency. To this extent it is to be commended.

But, Mr. Speaker, it has met the emergency that called for its creation; its mission is now ended, and I shall vote for its repeal for reasons which I now ask leave of this House to assign.

In the first place, sir, while I believe that the confidence of the people in the ability and intention of the Government to redeem our short-weight dollars that have been coined under that act has not yet been disturbed, yet I do believe that to continue to purchase silver and pay for it by the issuing of Treasury notes for an indefinite period under this act, with the possible further coinage of short-weight dollars and the further depreciation of silver, might go to such an extent that the people would finally lose faith in the capacity of the Government to keep the silver dollars and Treasury notes at par with gold, and thus bring about a depreciation of them, with all the evils that usually attend a depreciated currency.

But there is another reason, Mr. Speaker, why I shall vote for the unconditional repeal of the Sherman act. However unjust that feeling may be, discriminating men are compelled to admit that there has gone abroad in the land a feeling which is very general among the people, that the Sherman act has really been the main cause of our present condition. This belief did not bring on this financial trouble. It has arisen since it was precipitated. The condition which confronts us, while it should not excite a panic on our part, ought certainly to be viewed with seriousness.

This presents, sir, an opportunity for the exercise of the highest and most patriotic statesmanship. Contemplate for a moment the condition by which we are confronted. Banks have everywhere toppled or failed and gone into liquidation. Some of them have refused to pay over their counters the money of their depositors. They have locked up the currency, which is the life-blood of all trade. The music of the spindles is no longer heard in the land. The furnace fires are banked. Business is stagnant. Commerce is arrested.

The fear of one man, like wildfire or contagion, has communicated itself to another, and everything is in a condition of doubt, perplexity, and fear. Unemployed laborers by hundreds and thousands are standing idle on the streets of our cities, in need of employment and of the necessaries of life. I can pay no higher tribute, sir, to this brawn and muscle of our population than to say on this occasion that these men have so far borne themselves under these trying circumstances, under these conditions of distress which attack them more vitally than any other class of our people, with genuine conservatism and patriotic American obedience to law.

But, Mr. Speaker, while up to this time they have turned a deaf ear to the insidious appeals of the communist, while they have refused to be led from the path of duty by the wild declamation of the anarchist, who would reduce everything to chaos and substitute the law of might in lieu of the law of the land, yet with the lapse of time the condition of the unemployed will grow more desperate, and in view of their good conduct I would greatly hesitate to strain the quality of their moderation too far. To do this involves danger.

This is no time for hesitation. Relief, while it should not be extended in the shape of illy considered and unwise legislation, should nevertheless be afforded at as early a day as possible. And, sir, if it will contribute to the restoration of public confidence and release the money of the country from the vaults and pockets which hoard it, into the avenues of trade, that it may there perform its proper functions and lift the pall from the land, to offer up the Sherman act, even though it be an innocent victim upon the altar to the public demand, I for one am not going to stand against such a sacrifice.

After the repeal of the Sherman act, Mr. Speaker, what? I would preserve, sir, at a parity, every silver dollar now in existence, whether it was coined under the provisions of the Bland-Allison act, or under the Sherman act: I would preserve at an absolute parity every silver certificate and every United States Treasury note that is now in the hands of the people or that has been issued.

Stopping the purchase and storage of depreciating silver bullion and the issue of Treasury notes in payment therefor and of the possibility of any further coinage of short weight dollars by the repeal of the Sherman act will all the more strengthen public confidence in the ability of the Government to keep at par the money already created under it.

Mr. Speaker, the demand of the hour is not so much an inflation of the currency, a new issue of money by the Government, as it is to turn into the avenues of trade the money which we already have, and which is now locked up and hoarded and withheld from use and circulation among the people. We have to-day plenty of money if we can only get it into circulation—$9 per capita of gold, $9 per capita of silver money, $6 per capita of paper money, making a circulation of money, all of which is at a parity, of $24 a head—more money per capita, sir, than any other leading civilized nation on the face of the earth except the French Government. If it should soon become necessary to enlarge the currency, as it probably would, I would do it by proper measures which can be devised.

I would do it by recognizing silver and by using it as an auxiliary to the existing standard at the gold valuation by some wisely devised method. If further expansion is desired, possibly it can be obtained by conferring upon the national banks the right to issue notes to the par value of the bonds which they have deposited to secure their circulation, or by allowing any citizen to take Government bonds and deposit them in the Treasury, receiving in exchange therefor paper money, or by some other method—surrounding whatever plan is adopted with proper legislative precautions and safeguards.

Mr. Speaker, when we have done this I entertain no doubt of the capacity of this Government, in the competition for gold, to obtain more than its share among the nations of the earth. Let gentlemen stop and reflect that we are among the greatest gold producing nations of the world. Let them stop and reflect that our resources are boundless; that we stand in the morning of our national life, whereas the canker worm of dissolution is already eating at the hearts of the governments of the old world and that they are passing along the meridian and toward the decline of their national existence.

I have faith in the power and strength of this young Republic, standing on a sound monetary basis, to maintain its own in the money markets of the world. Sir, our failure heretofore to obtain an international agreement with the great nations of the earth, whereby we might by united action restore silver to its monetary power, has, in my humble opinion, been owing to the fact that we have approached them from disadvantageous grounds as suppliants and as mendicants.

When we have once placed ourselves in the conditiou in which I believe the measures I havesuggested will place us, and we can approach them in the arena of the world's conflict armed *cap-a-pie*, as rivals, not as suppliants, and convince them that under the economic principle of the "survival of the fittest" our opportunities for survival are equal to if not greater than theirs,

we can exact from them as being in the line of their interest, as I certainly believe it is in the line of our interest, an international agreement by virtue of which silver can be restored as standard money throughout the civilized world.

Mr. Speaker, in conclusion, this foolish, this unnecessary, but, nevertheless, this very destructive panic has precipitated upon us an issue. We stand where the roads part. There is no intermediate ground. There is no byfield to which the moral coward may retire to shift from himself responsibility. There should be no temporizing, no vacillation. The man needed at this critical hour is the man of positive convictions who, when he believes that he is right, hesitates not to go ahead in the fearless and patriotic discharge of the duty which he owes to the people. I shall not follow the road which requires this Government, in contradiction to all human experience, to undertake alone and unaided the impossible task of lifting silver from the depths to which it has descended and maintaining it at a parity with gold by its free and unlimited coinage.

I shall not follow that road, because, speak of it in as glowing language as you may, prophesy for it as kindly as you please, all the finger boards of history and civilization point in the contrary direction. I believe that it turns not into the highway of national progress and prosperity, but away from that highway into the morasses of doubt and perplexity, of individual and national loss and dishonor. I prefer, sir, recognizing the fact, of course, that there are some difficulties in the way, to turn my face hopefully and courageously towards that other road along which every nation that has most escaped monetary failure and dishonor in the past has been accustomed to travel.

I have in my breast an abiding conviction that if I hold to the proposition that the stability, the unfluctuating character of a coin, as well as its volume, is essential, and push resolutely forward, sooner or later I shall reach the destination to which every patriotic man on this floor, regardless of party belief or geographical location, desires to attain—a governmental system of finance which preserves a stable and unfluctuating standard of value, sufficient in volume to answer all legitimate demands. To such a system silver and paper at a parity with the standard are necessary. But until silver can safely be used as a standard, I earnestly submit that it is folly to invest it with such a function. [Applause.]

Mr. AVERY. Mr. Speaker, I shall vote for the repeal of the purchase clause of the so-called "Sherman law," not because I believe it to be the sole or principal cause of the financial and business distress of the country, nor because I expect any considerable relief to the business of the country from its repeal, but because the law, whether wise or not, has served its purpose, and is made the scapegoat by the Democratic party for all the evils that have followed their advent to power.

Its repeal will demonstrate to them and to the country that they have loaded their sins upon the wrong goat.

I am in favor of the repeal, because I am in favor of the use of both gold and silver as money metals, and because the only substitute offered is the free coinage of silver in differing ratios, which, in my judgment, would drive the $600,000,000 of gold out of the country and compel the use of but one metal, and that one silver.

The country is sick; it is in great distress, and in a critical condition. The eminent physician who has the case in charge has made a careful examination and declared his diagnosis to be congestion of the circulation from the use of too much silver. He has made his prescription and sent it to the apothecary shop and asks that it be filled and administered to the patient. It is to "stop the use of silver."

The Democratic party at the present time is in charge of the shop, and they hesitate about filling the prescription. Some question the diagnosis, and refuse to fill a prescription based upon a wrong theory of the disease; others say that, while the diagnosis may be correct, the remedy is not the proper one. They cry "*similia similibus curantur*," like cures like, and the patient must have more silver. Others still say the prescription means simply the "gold cure," and are willing to administer it, notwithstanding the reputation it entails upon the patient. And so, haggling over the correctness of the diagnosis and the sufficiency of the prescription, they have agreed to discuss the matter for two weeks, and, if the patient is alive at the end of that time, they promise to do something.

Now, Mr. Speaker, in a case so critical as this, where the physician and the apothecaries are at loggerheads, would it not be the part of wisdom to call in additional counsel? Would it not be the part of prudence to take into their confidence and conference the 127 Republican members of this House and ask their opinion of the disease and the proper remedy?

I very much mistake the temper of the minority if they would not be willing to give honest counsel.

It is true, they might not entirely agree with the eminent physician in his diagnosis. They might say that possibly he had mistaken a prominent symptom for the real disease; but they would say, as this symptom is most prominent in the patient's mind, allay it; administer the remedy prescribed, stop feeding silver for a time, let the patient rally about a little, and then administer a digestive powder or solvent that would enable the system to take up this surplus silver and send it coursing through the circulation again, and in this way relieve the congestion.

But possibly, upon a more careful examination, it might be discovered that the patient is suffering from an assault and battery. The assault was made in Chicago last August and the battery took place last November, when the protective policy of the country was knocked out of the ring in the first round. And from that day until this the patient has been getting worse and worse, and under the repeated threats of a renewal of the assault has been growing weaker, until hope, courage, and confidence is almost destroyed.

Stop these threats, bind up the bruises already inflicted, with the assurance that no further assaults shall be made, and I assure you the patient will leap to his feet again, a giant in strength and activity.

We have been doing business in this country for the last thirty years under the American system of protection. It matters very little whether it is the best system or not. The business of the country had adapted itself to it and the nation had prospered as no nation ever prospered before.

One year ago to-day the country was never in a more prosperous condition. The people were not overburdened with taxes; the revenues of the Government were equal to its expenditures; labor was fully employed all over the country at remunerative wages. Our granaries were filled with the products of our farms. Our mines of coal, iron, copper, and silver yielded their rich products to the brawny arm of well-paid labor.

The fires in our furnaces were lighted, our forges were aglow, and our anvils resounded with the sturdy blows of the hammer. Our mills were running and our factories were hives of industry. Our transportation lines were taxed to their utmost capacity to carry these products of industry to market.

Now, how changed are all these conditions. Two hundred thousand workmen walk our streets in idleness and ask for bread. Our mills and factories are closed; the fires in our furnaces have gone out, and our anvils and looms are silent. Our money, as good as any in the world, has sought its hiding places, and refuses to come forth at the demand of labor or business.

Now, Mr. Speaker, it seems to me to be the sheerest nonsense to attribute this great change to the act authorizing the purchase of 4,500,000 ounces of silver each month, or to expect any immediate or considerable relief to follow the repeal of the purchase clause of the Sherman law. But public attention is now centered upon it, and it is well to remove it, that the real cause may be seen and recognized.

A pledge to the country that its industrial policy shall not be disturbed must follow the repeal of the Sherman law, or we must await the slow process of the adjustment of business to the new policy to be inaugurated by the party now in power. [Applause.]

ORDER OF BUSINESS.

The SPEAKER. The Chair will recognize any member who desires to address the House on the pending question.

Mr. SIMPSON. Mr. Speaker, as nobody seems desirous to occupy the floor at this time, I move that the House now take a recess until 8 o'clock.

The SPEAKER. Several gentleman have requested that there be an evening session to-night at 8 o'clock for debate only, and, in the absence of objection, that order will now be made.

There was no objection.

Mr. BAILEY. Mr. Speaker, I desire to ask unanimous consent to introduce a bill for reference to the Committee on Banking and Currency, with leave to report at any time after the special order has been exhausted.

Mr. PAYNE. I ask that the title of the bill be read.

The Clerk read as follows:

A bill to increase the currency and provide for the redemption thereof, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Texas.

Mr. PAYNE. I object.

Mr. BAILEY. Will the gentleman permit me to make a brief statement? I have introduced this bill at the request of several gentlemen on the Committee on Banking and Currency, who desire to have it before them in connection with another bill which they are now considering.

Mr. PAYNE. I think all of these bills had better take the usual course, and after we get rules and get properly organized, they can be referred to the committees and be considered.

The SPEAKER. Objection is made. If there be no objection, the recess will now be taken until 8 o'clock, and the gentleman from Tennessee [Mr. RICHARDSON] will preside at the evening session, which is held for the purpose of debate only under the special order.

Accordingly (at 4 o'clock and 35 minutes p. m.) the House took a recess until 8 o'clock.

EVENING SESSION.

The recess having expired, the House (at 8 o'clock p. m.) resumed its session, Mr. RICHARDSON of Tennessee in the chair as Speaker *pro tempore*.

Mr. SWANSON. Mr. Speaker, it is with much diffidence that I, a new member, avail myself of your kind recognition to address this House. I would not do so unless impelled by a high sense of public duty. Silence, more becoming a new member than speech, would be much more pleasant to me. But the people of no section watch with more concern nor are more interested, nor will be more affected by the outcome of our present deliberations than the people that I have the honor to represent here. They recognize the vast importance, they perceive the far-reaching consequences which must and which will result from the settlement of the great question before us.

The people of my section have an abiding faith that we will devise a permanent and safe system of finance and currency, which will eliminate the present evils and disasters, prevent their recurrence in the future, and enable them once more to enter upon the broad road of prosperity and wealth. No people of the South recovered quicker from the losses and misfortunes of the late civil war, none progressed faster upon the road of prosperity after the clouds of war rolled by than did the people of the bright tobacco belt which I, in part, represent upon this floor.

Up to 1873 our progress was surprising and phenomenal. Few communities presented more evidences of wealth and prosperity. Since that time, along with the agricultural interests of the whole world, there has been a gradual falling off of prices, a gradual reduction from the returns of labor and sale of products. No interest is more directly affected by the currency than tobacco; its manufacture and sale are conducted upon a cash basis; no business will respond more quickly and improve more rapidly upon an expansion of the currency than tobacco. None will feel more acutely and deeply the blighting and disastrous effect of a contracted currency.

The people of my district have given me positive instructions which shall control my action upon the pending question. In the convention which nominated me I was instructed to vote for the free and unlimited coinage of both gold and silver. I promised and pledged my people if elected my efforts should be directed to its accomplishment. They have a right to demand its fulfillment. I have yet to learn, as distinguished gentlemen have here implied, that the solemn declarations of a party are "glittering catch-words" with which to acquire position and power.

Of all trusts which should be held sacred, of all promises which should be fulfilled, to my mind none can surpass, none are more binding than those made between a confiding constituency and its Representative. Speaking for myself, I can say that there is not a pledge, not a promise that I made to the generous and noble constituency which honored me in sending me here that I will not endeavor to fulfill and discharge.

I am here still to profess an abiding faith and confidence in the wisdom and declarations of the last Democratic platform. That platform has received the approval of the vast majority of the American people. Their aggregated wisdom has proclaimed its efficiency. To execute its provisions, to enact into law its promises, a confiding people have given the Democracy all the three branches of this great Government. Each branch, each member, must answer separately and independently for the discharge of this great trust.

If we are guided in our decision by the provisions of the platform, our duty is clear and unmistakable. Upon the silver question the Chicago platform makes three clear and distinct proposals. First, the repeal of the Sherman law; second, the coinage of gold and silver without discrimination, and third, its coinage at such ratio or in such manner as the parity of the two metals coined can be maintained. Each and every one of these provisions is binding upon the party.

There is no doubt but that there is a ratio where free coinage of silver is perfectly safe and will be successful. It is our duty to determine this, and obey the behest of the people who have elevated us to power. No refining of phrases, no subtle distinctions can explain away or destroy what is so clear and what was accepted as a universal interpretation until recently. There is no justification whatever in that platform for those who are here struggling to put us entirely on a gold basis. How can they answer to the people for broken pledges, and for the contraction of the currency which will inevitably result after you have completely stricken down silver?

All three of the great parties of this nation are committed to the coinage of standard dollars of both gold and silver without discrimination. No candidate dare go before the American people in advocacy of a single gold standard. If, so, that party or that candidate would be buried so deep that the hand of resurrection would never touch him.

So true is this that even those gentlemen who here contemplated by their votes putting us on a gold basis profess, while assassinating silver, a great love and affection for it.

While giving the fatal blow which destroys its life, they swear eternal friendship and prophecy greater uses and benefits which await it in the far unknown future. They shout, "Though I slay thee, yet I love thee." Judas-like, they betray silver to the money kings with kisses of endearment. They are very much like a class of people known as hypocrites, so pointedly described by the clear-sighted Goldsmith, who, he says, think they have paid virtue all of its dues when they compliment it. So with these pretended friends of silver. They think they have paid silver its entire dues when they have heaped upon it empty and profuse compliments. Such talk and such professions can not and will not deceive the people. Even though they differ with you they would yet prefer frankness, candor, and courage, and consistency in their representative. Here in this Congress, at this time, the roads diverge.

You must choose which you will take; you must decide between a single and a double standard of value; you must determine whether you believe in a single gold standard or in a standard of both gold and silver. However disagreeable and exacting, it is impossible to escape a choice. It is useless for you, and I tell you you can not deceive the friends of silver and the people when you select and travel the golden road and yet sing pæans of praise to silver and bimetallism. That will not save you. They are not deceived by such bombast and professions.

Those of you who have selected the golden road will, for a while, doubtless, find it very pleasant and cheering. Capitalists of wealth and power will approve your decision and compliment your wisdom. That portion of the press representing the money power will commend your financial ability and statesmanship. Bondholders and bankers will embrace you and prophecy for you a great future of fame and distinction. You will first be lulled into peace and repose for sudden changes and broken pledges, and then cheered with the suggestions of future elevation and power. Your ear will be deaf to the calm, quiet, unobtrusive voice of the great mass of farmers, laborers, and mechanics, who, with wonder and astonishment, have witnessed your sudden change. But a great day of reckoning will come. When the country shall be overshadowed with the effects of a stringent and contracted currency and products have further fallen in value and the debtor has become more oppressed and despairing, you will find it difficult to explain to these why you voted against every measure here introduced to expand the currency and bring relief to the producing and laboring masses.

I here and now, according to the instructions of my people and my convictions of right, in the interest of the plain, honest laboring people who have aided and sustained us in every upward step in life, select the road that leads to a double standard. It is the only one which is safe and sound. It is the road upon which our fathers started us in 1792, and which we traveled so successfully and prosperously until 1873. Those who advocate the free coinage of silver do not ask you to venture upon an unknown and untried experiment. They ask you to return to the safe, conservative methods of finance which existed here until 1873. They ask you to give them the money of the Constitution. They demand the enactment into law what has been the policy of the Democratic party from its foundation by Jefferson. They demand a righting of the fraud of 1873.

The more attentively and carefully that I have listened to this discussion the more have I been impressed with the fact that the free coinage of both gold and silver at a ratio where the parity can be maintained is the proper, safe, and permanent solution of the difficulties which now beset us. The human mind is powerless to estimate the wrongs and disasters which have resulted from the demonetization of silver in 1873. At that time there was no just excuse for it. Silver was at a premium of 3 per cent over gold. Agriculture, commerce, and manufacture were prospering and each year becoming more profitable. Statistics exhibit that from 1850 to 1873 there was a gradual rise in the prices of all agricultural products of 33⅓ per cent.

From 1873 to now there has been a gradual reduction of over 50 per cent. This reduction is not confined to the United States, but extends over the entire world. The year 1873 marked a departure from rising to falling prices. It has now reached such a fearful extent that agriculture the world over is depressed

and paralyzed. Its misfortunes, as it always will ultimately do, have brought desolation and ruin to other industries. This distress and depression extend to all portions of the world. It exists where there are tariff laws and no tariff laws; where there are Sherman laws and no Sherman laws. It first started in England with a gold standard, with the failure of Baring Brothers, and from there has circumscribed the world. England has appointed commission after commission to examine into the causes of depression and falling prices there.

An evil which is world-wide must be produced by a cause equally as extensive. The best way to determine the cause of an evil is to trace it back to the time when it first made its appearance. The era of rising prices and prosperity continued up to 1873 when it was arrested and a downward tendency precipitated, which has become greater and greater each year. Then some great causes arising in that year must have produced the sudden change. That year witnessed a revolution in the financial system of the world surpassing any convulsions which have ever disturbed the natural world. Germany went from a silver to a gold basis.

The United States demonetized silver and adopted the gold standard. France and the states of the Latin Union ceased the free coinage of silver. England has been upon a gold basis ever since 1816. Ever since 1873 agriculture has languished and each year become more and more depressed, less and less profitable. The statistics gathered from all sources verify this. Can any one doubt the demonetization of silver that year, so great and far-reaching in its influence, was the the cause of this sudden change? Is not the sensible way to recover what we have lost to retrace our steps? What excuse was there for destroying half the money of the world? At the time this wrong was perpetrated silver was at a premium of 3 per cent over gold. There was no complaint of a redundancy of currency. For whose interest and at whose instigation was this fraudulent wrong perpetrated?

Note the time at which the wrong was accomplished and the answer is complete. England adopted the gold standard in 1816. It was immediately after the great Napoleon wars, when she had contracted a public debt of vast and unprecedented proportions. She adopted it to enhance the value of these bonds, making them payable in gold and thus increasing their purchasing power. Germany was upon a silver basis until after the war with France, and France had to pay her an immense indemnity, and she for the same reason adopted the gold standard, to make her indemnity payable in gold, thus increasing its purchasing power. No one ever heard of the necessity of the United States following the course of England and shaping our financial policy after her upon a gold basis until the same cause existed here which produced the gold standard in England.

Immediately after the late civil war, and the United States had contracted a public debt of billions of dollars, the holders of these bonds, although they had agreed to receive payment in any lawful money, commenced the same agitation here that their brethren had done in England to make their bonds payable in gold. They first secured the passage of an act directing that they should be paid in coin, which included both gold and silver. They next demonetized silver in 1873, and thus left but one coin, and that gold, with which to pay them.

Thus the same conditions which had produced the gold standard in England precipitated it here. It was done in the interest of the bondholders, against the express terms and faith of the original agreement, to increase the purchasing power of their holdings. They have since resisted every attempt and effort to coin or remonetize silver. They are clamorous for the repeal of the Sherman law without making any provision for the coinage of silver. They persistently refuse to accept any compromise, however safe and sound, which creates any silver coin with which to pay them. They, and they alone, are benefited by the elimination of silver from our monetary system.

This class has already become enriched at the expense of the great mass of the American people. I am unwilling to become party to measures which will tend to their further enrichment. I am unwilling to lower the price of tobacco, corn, wheat, oats, and all other agricultural and manufacturing products to make more secure and richer the holders of these bonds.

I have been impressed that there is one fact upon which all who have addressed this House are agreed; that is, that the world's supply of gold is wholly inadequate to do its business. That if the world continues upon a gold basis long there will be a depression and falling off of prices on account of the continued appreciation of gold fearful to contemplate. Yet they are willing to venture into these great dangers and trust to an international monetary conference to extricate them. What chances are there for the success of such an agreement? What assurances have we that this will ever succeed? They all claim that England must be a party to it before it can ever be accomplished.

What reason has England to reverse her financial policy? She is the great creditor nation of the world. It is estimated that she has due her from foreign nation over $10,000,000,000. The world's entire supply of gold amounts to about $3,600,000,000, about one-third the foreign indebtedness due England. All England has to do, when the world establishes a gold standard and makes all debts due her payable in gold, to absorb the entire circulating medium of the world and leave the rest destitute of money is to enforce the collection of her debts. She is then able to dominate and control the finances and currency of the world. The price of all products, the amount of gold in any country, will then be regulated by the wishes and interests of the British people.

It is estimated that Great Britain has due her alone in the United States $2,000,000,000. We have only about $600,000,000 of gold—less than one-third enough to discharge this indebtedness. Make this debt payable in gold, as gentlemen here advocate, and all that England has to do to absorb the entire gold supply of the United States is to compel us to pay what we owe her. When we adopt a gold standard we place our entire currency, our entire financial system, at the mercy of England. Even if she does not enforce the collection of her indebedness, the fact that she can and thus produce these results would make us dependent and subservient to her. No balance of trade in our favor can prevent the depletion of our gold and the contraction and absorption of our currency.

I, for one, will never consent to be manacled and bound hand and foot to the domination and mercy of British money kings. When you do this you create here a British power, a British tyranny, a British despotism, far more potential for evil and disaster than existed prior to the Revolutionary war. England will then regulate according to her own interest the prices she shall pay for our tobacco, cotton, corn, wheat, oats, and other agricultural products. When she fixes these at a greatly reduced price to suit her own interest, to the impoverishment and ruin of the producer, you who assisted in the accomplishment of this purpose will have to answer to an indignant, outraged, and ruined constituency. That such is the interest and purpose of England there can be no question.

Mr. Gladstone, in a recent speech, demonstrated this desire and interest upon the part of England when he scorned the idea that she would ever be foolish enough to consent to a double standard. A majority of the Royal Commission of 1886, appointed to inquire into the recent changes of the relative value of the precious metals, state that England's financial supremacy is dependent upon the maintenance of the gold standard, and that, being a creditor nation, it is to her interest to ever resist the adoption of a double standard.

But observe the wild scheme proposed by the professed friends of international bimetallism to compel England to come to a double standard. They say the world's supply of gold, being far short of the world's need, that the United States should enter the contest and fiercely compete with England for the possession of gold; that with our superior resources and abilities we will deplete England of her gold, and she will be compelled to surrender and unite with us in an agreement for a double standard at a fixed ratio. To deplete England of gold, they recommend a sale there of United States bonds. What foolishness and what nonsense! All England would have to do to again acquire the gold she had parted with would be to send these bonds here and sell or collect them.

If she desired more gold, all she would have to do would be to demand payment of her other indebtedness. If she wished to deplete us of the last dollar of gold, all she would have to do, when silver is stricken down, is to require payment of the $2,000,000,000 due her. When she did this, instead of having gold sufficient to pay her, we would have to procure elsewhere twice as much as we now have. Make this immense debt payable in gold alone, as you now propose, and there will come a time when your gold will be completely drained and destitute and our currency, being based on gold alone, will fall with a tremendous crash, like a house which has lost its foundations.

To my mind, the only way to save our gold and to compel England to adopt a double standard of gold and silver is by the passage of a measure for the free coinage of silver with full legal-tender power given to the dollars, thus enabling the American debtor to pay the English creditor in gold or silver at his option. If these should be depreciated dollars, as gentlemen of the other side claim, but I do not believe, it will quickly force England to consent to free coinage at our ratio, to sustain or appreciate the value of the silver dollar she is compelled to receive. If depreciation should exist, as gentlemen claim, England will be compelled to join with us and enhance the value of silver, or else sustain an immense loss.

Can anyone doubt that, it being made her interest to unite with us and adopt the double standard, that she would hesitate

to do so? Can any reasonable person believe all British indebtedness has been made payable in gold and thus double the purchasing power of the money, that England should ever consent for it to be discharged in silver? Never, never! Nations are governed by self-interest and not sentiment. When you put yourself at their mercy you may expect to be squeezed to the fullest extent of their power. You will never witness the free coinage of silver until the United States takes the lead. When she does this, which her interest so clearly indicates is best, self-interest will compel England and the rest of the world to adopt it. You can never hasten free coinage by further depressing the price of silver and increasing the purchasing power of gold.

But there is another danger equally as appalling which will overshadow us if we determine this question without providing for the coinage of silver. The public debt of the United States amounts to about $600,000,000. This is payable in coin. Eliminate silver and you have but one coin, and that gold, in which this debt is payable. The amount of gold in the United States is also about $600,000,000, about equal to the public debt. Make this debt payable alone in gold, it would take about the entire gold supply to discharge it. The taxing power of the Federal Government, superior to and overriding every other claim, would be compelled to sacrifice enough property of its citizens to gather in this gold for the bondholders.

The holders of this public debt would thus have it in their power to absorb and control our gold supply. Our currency being based entirely on gold, they would have complete control of our finance and currency. Can anyone doubt that they would use this power to their own advantage? Can anyone doubt that they would enrich themselves at the expense of the masses? I, or one, will never consent, in order to increase the purchasing power of these bonds, to confer this great power upon them.

Mr. Speaker, there is another danger worthy of consideration which will confront us when we fail to make any provision for the coinage of silver. When the present law is repealed unconditionally you will witness a tremendous fall in the price of silver. It will probably decline to 50 cents per ounce, making our silver dollars worth about 39 cents. We have about $700,000,000 worth of currency based on silver; the whole resources of the Government will then be required to maintain the parity of this amount. Silver being discounted everywhere, the people will be disinclined to accept or use it. You will witness a great cry against the 39-cent dollar.

The same condition of affairs will be precipitated that exists now. Demand will be made that you retire the $700,000,000, or make them redeemable in gold. With this decline you will witness more uncertainty and uneasiness than now exists. It will take more resources of the Government, with the increased fears, to keep circulating this vast amount of depreciated money than it would to sustain free coinage at an increased ratio. It is much easier and safer for the United States to enhance the value of silver bullion, thus making free coinage successful, than it is to keep circulating at par a currency which she herself has depreciated and stamped with her disfavor. You, gentlemen, who now contemplate abandoning the coinage of silver entirely will precipitate upon this country either a depreciated currency or else a contraction fearful to contemplate, bringing with it ruin and disaster.

There is another danger of great moment which confronts us if no provision is made for the use of silver in settling this question. It is estimated that one-third of the supply of gold is derived from silver mines, nature having placed the two metals together. Unless the silver mines can be profitably operated this supply will cease, and thus contract the increase of gold currency one-third. At the present price of silver the mines will close, and will remain so unless we make provisions for the use of silver. This is a great and serious danger, which should demand our attention before voting down the substitute offered here.

From whatever standpoint we view this question, Mr. Speaker, it seems to me the only safe and sound solution lies in the repeal of the Sherman law and the coinage of both gold and silver at a ratio where the parity of the two metals can be maintained. We are pledged and committed to this, and our duty and our country's interest demand its execution. It is no new experiment. In 1803 Napoleon Bonaparte, the master mind of the world, the greatest genius of all ages and all times, established in France the free coinage of gold and silver at the ratio of 15½ to 1. That country, through revolution and defeat and disaster, was enabled to preserve that ratio between the two metals until 1873, when it abandoned the policy.

The variation between the two did not exceed 3 per cent. At the time this ratio was established the yearly supply of silver was about forty times as large as that of gold. At the time of the discovery of the Australian and Californian gold mines the proportion between gold and silver became 5 to 1. Yet France was enabled, despite the great changes in the supply, to maintain that established ratio and prevent a depreciation in gold. Now the supply of silver to gold is in the proportion of 23 to 1, far less than it was in 1803, when France by law established and maintained the ratio of 15½ to 1.

The United States has more power, more resources, more wealth, and commerce than did France and the Latin Union have at that time. Dr. Strong in his wonderful book, Our Country, states that the census of 1880 discloses that the wealth of the United States exceeds that of all continental Europe. The one just taken will doubtless exhibit that our wealth exceeds that of Britain and Europe combined. We occupy the first rank as a manufacturing people, our product to-day exceeding that of Britain by a billion dollars. With our superior advantage of both manufacture and sale, we have only to remove the infamous tariff restrictions, when our products in this direction will be only measured by the world's needs and necessities.

Our mines are of unequaled richness and variety; imagination herself is bewildered in contemplating the possible grandeur and greatness of our country; we have stupendous and untold wealth and resources; all that we need is currency with which to utilize and develop it. With all this wealth and power, with this unrivalled future lying before us, we are told that we are powerless to do what nations of far less wealth have so successfully accomplished. We are asked to abdicate our financial independence and dance attendance upon England. It is urged that we should follow, where our position and wealth entitle us to lead; that we should be denied all increase of currency until the rest of the world should see proper to consent for us to have it.

The last few months have demonstrated that the impoverished British dependency, India, can by having or not having the free coinage of silver, elevate or depress its price over 10 cents an ounce. Yet we are told that this great Government, with its untold wealth and resources, is unable to elevate it that much per ounce and maintain it there, and thus successfully have free coinage. The idea, to my mind, is preposterous.

Take the great law of supply and demand, to which the gentlemen who have addressed the House upon the other side so often allude, and it will clearly prove that free coinage can be made a success and the parity maintained. Establish free coinage at a safe, sound ratio. Make the silver dollar a legal tender for the payment of all taxes, State and national, all debts, public and private, and there will be a greater demand for these dollars than can be supplied. There will be a demand for them to the extent of $2,000,000,000 to pay the Federal, State, county, and municipal indebtedness. There will be a demand for $2,000,000,000 worth of them to pay our indebtedness to England.

There will be a demand for a billion dollars' worth of them a year in this country to pay the Federal, State, municipal, and county taxes. There will be a demand for billions upon billions of dollars of them to pay the immense private indebtedness of this country. There will be a demand for all and far more than can be supplied to conduct the great enterprises and industries of this country. With this great need and demand I have no fear that the United States can not safely have free coinage at parity.

Hostile legislation destroyed silver, friendly legislation can reinstate it. If this can be accomplished it is universally admitted that great and immense benefits will accrue. The currency will be expanded to answer the needs and wants of business. All agricultural products will enhance in value; trade and commerce will receive a new stimulation and revive; new enterprises will spring up giving employment to the idle; debtors will be enabled to discharge their indebtedness and commence life with renewed hope.

The country needs and must have an expansion of its currency. Nothing more distinctly proves this than the present panic. With splendid crops and abundance of wealth of all kinds, yet business and commerce are paralyzed for lack of currency. We are so limited in quantity that the least scare and uneasiness produce a great scarcity. We have a circulating medium of only $24.34, as shown by the last report of the Director of the Mint. When you take into the account the amount required by law to be held for national bank reserve, the amount in the treasuries of the United States, the States, the cities, and the counties and the numerous large corporations, it will reduce the actual amount in circulation to about one-half that amount.

France, acknowledged the most prosperous of all European countries, and less afflicted by financial distress than any country in the world, by the same report has a circulating medium of $40.56. We need far more currency than France. France is an old country and has developed; ours is a new country and needs development. We have forests to fell, rivers to span, railroads to construct, immense crops of tobacco, cotton, corn, and wheat

to pay for and move, cities to build, and new enterprises of every kind and character requiring expenditure of money and capital.

France is a small country and checks and commercial paper can there greatly supplement the currency. We are a continent, and the use of these is greatly restricted here, and instead of using drafts we are compelled to have large shipments of currency from one section to another. With these conditions we need far more currency than France, and yet have really not half so much. We will never witness marked progress and prosperity here until we have a currency sufficient to answer our needs and wants.

I favor free coinage of silver as one of the safe and sound means of acquiring this expansion, but I am not wedded absolutely to that. I am prepared to vote for any safe and good system which will supply this want. The people have a right to demand and expect this relief.

I shall never forget the joy which illumined the face of the South when the intelligence was flashed that the Democracy had acquired all the branches of this great Government, and would give relief from the burdens which so long had oppressed and impoverished her. For over twenty years of gloom and disappointment we had watched for the advent of that glorious day. No promises could seduce, no fears drive us from the ranks of Democracy. In the fierce battles which were fought by the two great parties for national supremacy, however much the Democratic line might have been broken, disorganized, and pierced elsewhere, that portion of the line intrusted to the gallant and loyal South always presented when the smoke of battle rolled by a triumphant, unbroken, and solid front.

Do not disappoint these trusting, true, and loyal people. Give us legislation that will bring us relief, give us an increase of currency. We ask no special privileges for ourselves, but only equality and justice; for an opportunity of making the dreams and possibilities of the new South realities. We ask to have swept from the statute book those iniquitous laws with which the Republican party have sought to ruin and impoverish us. We make no threats, however much we may differ as to the solution of this financial question. There are things upon which we all agree and will stand together. We are all agreed despite differences upon the financial question, to stand solidly to the Democracy as our shield, our bulwark, and only hope.

We are all agreed in our admiration of the courage, wisdom, honesty, and patriotism of our leader—the President; we are all agreed, and upon this I believe the whole country is now about unanimous, that the Republican party is thoroughly incompetent and unworthy to legislate upon the finance, the tariff, or pensions, and that when it has full sway it invariably hurls the country into the deepest depths of desolation and want. We are again all agreed—and I think upon this the country is about unanimous and likely to remain so—that the Republican party shall never again be given power and opportunity of inflicting upon us the evils and disaster with which we are now suffering, and which they so recklessly brought upon us. [Applause.]

Mr. THOMAS. Mr. Speaker, Having listened to the discussion of the question now before the House with great interest, I desire to add a few thoughts relating to the subject.

I am inclined to the belief that most of us realize the lack of knowledge as to the causes and need information as to the cure for the present condition of the business interest of our great country.

We all know the value of a correct diagnosis. It is everything in the practice of medicine, and knowledge that enables us to understand the cause or causes of our present financial difficulties is essential to the application of the proper remedies.

Let us consider, then, some of the possible causes.

If money was the cause, silver might be the cure. If the protective tariff was the cause, revision might prove the remedy; if the disputes between capital and labor, arbitration might effect a cure. But, Mr. Speaker, the cause is to be found in neither of these things. We have no scarcity of money with more than a billion and a half dollars in circulation. The cause is not in the tariff, for taxes were never less burdensome, and our people were never better fed and clothed than at the present time. It is not the lack of capital, nor the scarcity of labor, because capital was never more able to engage in new enterprises and labor never more willing to be employed. No, the cause of our troubles lies back of all these. It is a wide-eyed, shapeless monster that has cast a withering blight over our country—a monster conceived in the swamps of party contention and born in the cave of suspicion, nameless but for the one word, distrust.

This monster, Mr. Speaker, has dragged its slimy length into every mart of exchange, into every plant of industry, into every home of comfort. It has crossed the threshold of American homes and whispered of possible inflation and cheap money, and a million depositors run a thousand banks to cover. It entered our great manufacturing centers and suggested uncertain imports and doubtful prices, and our furnace fires went out from Denver to Lowell, and a hundred thousand operatives stand idle in the streets. It went to the office of the capitalist and spoke of investment risks, of labor unions, and of strikes. And from San Francisco to New York, from London to Berlin, the strong box is closed and labor walks the streets demanding work or bread.

Mr. Speaker, universal distrust, then, is the true cause of our present condition. What, then, shall this Congress do to restore confidence? If the causes of distrust are threefold, the remedy must be commensurate with the cause. Let us look for a remedy, then, along the lines of money tariff and (coining a new word) capital-labor. Since, according to history and international comparison and actual statistics, our money is sufficient in quantity—since it is all on a parity with gold, the metal of ultimate redemption in the currency of the civilized world, it follows that the distrust which comes from this source is not in what exists but what is threatened.

Mr. Speaker, the menace to our money is the attempt to make silver equal to gold as a measure of value. Since gold became the standard of value, not by legislative enactment, but by the universal law of supply and demand, there is great apprehension that an attempt to change the standard will result, first, in unsettled values, demoralizing trade, and finally in total failure, since the value of a thing, after all, is the estimate which man puts upon it while acting in his free and individual capacity, all other values being really fictitious. An attempt of Government to usurp this right naturally causes alarm and distrust. Hence, every one having a dollar in a savings bank, rather than have it supplemented by an inferior dollar, takes it into his own possession for safe keeping, and thus banks are closed by runs. The remedy is, therefore, to discontinue all governmental attempts to force or fix values. To this end the Sherman law, so called, which requires the United States Treasury to buy 4,500,000 ounces of silver every month, should be repealed for the two reasons, first, because it compels the Government to purchase a commodity which it does not need, and, secondly, because it is an attempt to give to silver an artificial value by an arbitrary market which sooner or later must be closed. Such a law being utterly without reason, deserves no concession for its repeal.

We shall still continue to use silver and nickel and copper and paper according to the necessities of business, but let it be known, fixed, and established that the unit of value in this country is in accord with the commerce of the world and the judgment of civilized mankind, and confidence will be restored and financial distrust driven from the minds of men.

Of no less importance is the tariff question. As a source of distrust it is disintegrating the very foundations of business, and while we can not agree as to what should be done, we do agree that what is done should be done definitely and quickly. If this country can be run on either the protection or free-trade plan it can not endure a halting and vacillating course between the two.

Successful business depends on stable condition. The administration has declared for tariff reform. This means a change of conditions. In such unsettled times customers will only order limited supplies, and thus business is paralyzed. Let Congress declare quickly what the imposts are to be, and business will adjust itself accordingly, and confidence will be the logical result of the knowledge. But, Mr. Speaker, the abnormal relations between capital and labor is a more pitiable source of distrust than is generally suspected, and like a subtle poison is contaminating the very life current of the nation. The angry symptoms of this disease are manifested on the one hand by trusts and combinations to fix prices and on the other by organizations and strikes to fix wages. The appalling results are that capital is driven from the field, enterprises are abandoned, and labor is unemployed—discontent everywhere and want near at hand.

Mr. Speaker, we have three distinct classes of people in this country. First, capitalists, who have a surplus for investments. Second, wage-workers, who must be employed. Third, a vast middle class, who partake of the nature of both the first and second, having some capital but no surplus, and ability to earn wages, but not necessarily obliged to. This middle class hold the balance of power and can secure justice to both the other classes. Capital is silent and selfish. Labor is loud and revolting. This attitude toward one another is the cause of widespread discontent and alarm. Let Congress declare, if only by joint resolution, that force is unlawful and that all redress must be sought through law and legislation and that both trusts and strikes are force within the meaning of the statute and therefore prohibited.

There is no doubt that in a free republic labor, by being law-abiding, would be more secure, and would have its rights speedily vindicated by law.

When the unlawful and destructive strife between capital and labor is thus ended, capital will flow again in its natural channels and labor be freely employed, prosperity universal, and perfect confidence restored between all classes.

These, Mr. Speaker, are my views as to the cause and cure of the present unfortunate condition of the business interests of our country, and these views I would be pleased to defend at length if time permitted.

Let me say to the members of this, the most important Congress for many years, that you are not here to legislate for silver or gold, not for merely two millions of people, but for sixty-seven millions;

and the action of this Congress may be such that it will be an everlasting honor for you to have had a seat in this Hall, because by your action you are able to restore universal confidence; and with confidence will come real, not fictitious values for both labor and property.

Do this, and the sunshine of prosperity will enter the home of every citizen of our Republic. [Applause.]

Mr. MADDOX. Mr. Speaker, the intense and vital interest of the pending questions before the House is the apology I have to offer for attempting to suggest a thought on the great and momentous issues to be decided by our votes, as the Representatives of the United States, on next Monday.

The gentleman from West Virginia [Mr. WILSON] introduced a bill which has for its purpose the unconditional repeal of the purchasing clause of the Sherman act of 1890:

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled, "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair, or in any manner affect, the legal tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

The gentleman from Missouri [Mr. BLAND] offers as a substitute the following measure, which I will ask to have incorporated in my remarks:

Be it enacted, etc., That from and after the passage of this act all holders of silver bullion to the amount of $100 or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

SEC. 2. That the silver dollar provided for in this act shall consist of 412½ grains of standard silver, said dollars to be a legal tender for all debts, dues, and demands, both public and private.

SEC. 3. That the holder of the silver dollars herein provided for shall be entitled to deposit the same and to receive silver certificates in the manner now provided by law for the standard silver dollars.

SEC. 4. That so much of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the monthly purchase of 4,500,000 ounces of silver bullion be, and the same is hereby, repealed.

I also incorporate the rules adopted by this House for the discussion and decision of the pending questions:

Ordered by the House, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides, as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fails, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, comonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

It will be seen from the Wilson bill that, if adopted, the purchasing clause of the Sherman act will be unconditionally repealed.

If any one of the substitutes is adopted, as offered by the gentleman from Missouri, the Sherman act will be repealed necessarily.

THE ORDER OF PASSING ON THE QUESTION.

These questions are to be passed under the rules adopted as follows: First, the substitute demanding the free coinage of silver at the ratio of 16 to 1. Should this fail, then the different ratios are to be submitted until they reach the ratio of 20 to 1; and if this should fail, then what is known as the Bland-Allison act comes next. Should this be defeated, then the Wilson bill, which has for its purpose the unconditional repeal of the purchasing clause of the Sherman act, will be reached. These are the propositions to be determined by this body.

CONSTRUCTION OF FINANCIAL PLANK.

Now, Mr. Speaker, as part of my remarks I include that part of the Democratic platform which refers to the coinage of silver and gold. I find it in these words:

Platform.

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, including its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discrimination against either metal or charge for mintage; but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring people, the first and most defenseless victims of unstable money and a fluctuating currency.

This makes up the official record, unless the President's message be considered one of the original papers in the case.

Mr. Speaker, the advocates of the Wilson bill claim that they are only asking that the platform as adopted at Chicago be carried out. The friends of the substitutes claim that they stand upon the platform. Right here the question arises, what has the Chicago platform got to do with the issues submitted and to be determined by this body? If anything, it ought to be given the closest scrutiny. If, on the other hand, the President's message is to control, then it is folly to talk about platforms.

THE VOICE OF DEMOCRACY.

But, Mr. Speaker, my understanding is that the great Democratic convention which met at Chicago created the platform just read; and that it created its standard-bearer by nominating Grover Cleveland, now President of the United States, at the same time. The principles enunciated in that platform are the voice of the Democracy of this country. That platform speaks the sentiments and views of the party, and they nominated as their standard-bearer Mr. Cleveland.

He accepted their nomination and must of necessity have accepted their platform.

If I have construed the platform in accordance with the rules of common sense and common honesty, then we must decide which one—the President or the party—has the right to demand fealty. Or, in other words, we are called upon to decide whether the created is greater than the creator.

Now, Mr. Speaker, let us analyze this Democratic platform. We find this great convention of Democrats denouncing the Sherman law as a makeshift. Mr. Speaker, the question naturally arises, For what is the Sherman law a makeshift? It must be a makeshift for something. Now, what is that something? Is it the Bland-Allison act? It can not be that, for we find in the next sentence this language:

We hold to the use of both gold and silver as the standard money of the country, and the coinage of both gold and silver without discriminating against either metal, or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value.

In other words, we, the Democracy of the country, say that we favor both silver and gold as the standard money of the country; that we are in favor of both metals being admitted to the mints without charge. The only condition we put upon them is, that they must be both of equal intrinsic and exchangeable value. This is the substance demanded by the Democracy assembled at Chicago, and the Sherman law is the shadow or makeshift for the free coinage of both gold and silver on a parity with each other.

But they say, further, that if this can not be done they favor an international agreement, using this language, "or be adjusted by international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts."

Now, it will be observed that the first command of the party is to adjust the ratio between the metals, so as to make them both intrinsically equal in value. The next idea (if this fails) is by international agreement. Everybody knows this to be an impossibility. We have tried it time and again, only to meet with certain defeat; and since the adoption of this platform this matter has been presented to the other nations, who have repelled the idea with scorn.

But the next instruction given by our party (if these fail) is that we are to sustain bimetallism and the coinage of both silver and gold by such legislation as will insure the maintenance of the parity of both metals and the equality of the debt-paying power of the dollars at all times in the market and in the payment of debts.

PAPER CURRENCY PARITY.

And they go farther and say, that—

We demand that all paper currency shall be kept at par with and redeemable in such coin.

What coin?

Conclusively, both gold and silver. The intention of the party can not and ought not to be misconstrued. It is plain that the Sherman law is condemned because it is a "makeshift" for some one of the methods already mentioned. I do not believe this proposition will be denied.

Now, the plain question before the Democrats in this House is whether they will attempt by the legislation spoken of in our platform to establish the substance there demanded or give up both the substance and the shadow (or "makeshift," if you please).

THE ISSUES ARE CLEAR.

Now, the issues are sharply presented. If either one of the substitutes offered by Mr. BLAND is successful, we will have attained the substance demanded by the Chicago platform and at the same time will have repealed the cowardly "makeshift" there denounced. But if these fail, then we are called on to vote on the Wilson bill, which, if successful, will repeal the Sherman law (or "makeshift," as the case may be), and leave us without shadow or substance. In other words, without even a "makeshift."

WAS THIS THE INTENTION?

Now, Mr. Speaker, does any reasonable man believe that any such thing was demanded, or even thought of, by the convention assembled at Chicago? I can not think so. But gentlemen on this floor, and who claim to be Democrats, attempt to justify themselves when they advocate the unconditional repeal of the Sherman law by claiming that the platform justifies them in their positions.

DOES THE PLATFORM MEAN MONOMETALLISM?

Can any man read that platform, digest it, and come to the conclusion that it means monometallism? Is it not a fact that the Sherman law was condemned because it was adopted in lieu of free coinage? Is it not a fact that the convention expressed and committed itself to bimetallism? And have they not suggested three different ways by which this may be attained? And do not they declare that all paper currency shall be kept at par with and redeemable in such coin? Can any man deny that it was the purpose to restore silver to its former position as one of the standards of value?

I think not.

Then, if I am correct, in what position are we left if the Wilson bill is passed? We are brought to the single gold standard, going back upon every pledge and even the fundamental principles of the party. Then, if I am correct, the question put heretofore arises, is the command of the created to be blindly followed, or shall we obey the commands of the creator—the demands of the Democratic party? Which will you choose?

For my part, I am yet to learn that the created is greater than the creator. I have pledged myself to follow the instructions of my constituency, and I intend to do so.

GEORGIA PLATFORM.

We demand the free and unlimited coinage of both silver and gold on a parity with each other, to the end that the money of the people shall be such in quantity and quality as was originally contemplated by the Constitution.

Mr. Speaker, I send to the Clerk's desk the platform adopted by the Georgia convention in May last, the same convention that selected delegates to the Chicago convention, and one of the largest ever attended in the State. I desire to say that in the convention which nominated me the very same plank was adopted as the sentiment of that convention. There can be no doubt as to their position on this subject.

THE COMMAND AT CHICAGO.

Now, Mr. Speaker, I believe that the first command of the party at Chicago was to repeal the Sherman law by adopting a free-coinage measure, having due regard for the equality of the two metals, both in intrinsic and exchangeable value. There can be no doubt as to the meaning of the requirements of the Georgia platform—that they demand the free coinage of both gold and silver on a parity with each other. The same principle was reaffirmed in the convention which nominated me.

Then, so far as I am concerned, and, as I believe, every other Democrat who wishes to follow out and respect the demands and wishes of his party, the only question for us to determine is as to the proper ratio. And I further believe that this course will redound to the interest of the Republic.

We are told by some gentlemen that it is impossible to reach a proper ratio under any one of the substitutes offered by the gentleman from Missouri. They talk glibly of a 58-cent dollar, and assert that the ratio of 20 to 1, if adopted, would only make a dollar whose intrinsic value would be 80 cents. Gentlemen do not meet the question fairly. All things should be considered when the parity of the two metals is discussed.

Mr. Speaker, there are three things to be considered in arriving at a proper ratio for the two metals.

First. The appreciation of gold.

Second. The depreciation of silver.

Third. The appreciation of silver when restored to its former position as one of the standards of value.

The gentlemen who discuss this subject on the other side make their calculations upon a basis that gold, as a measure of value and as a medium of exchange, was, and is now, the unvarying standard. I deny that proposition. The very argument as used by these gentlemen to decry silver, if applied to gold, will show that it has appreciated. They tell us that supply and demand regulate the price of silver, and that the overwhelming supply of that metal has caused it to depreciate.

Then, if this be true, I insist that the large and overwhelming demand for gold—and by reason of the decreasing and very limited supply of that metal—should from the same reasons, cause gold to appreciate. We are told that foreign nations have demonetized silver, and that in order to increase their gold reserves they are drawing largely upon the supply of this country. We are told that large amounts of it are needed to pay the interest on our bonds, and it is candidly admitted by the gentleman from Ohio that there is not enough gold in the world to do the business.

From the best information I can gather, the appreciation of gold, the world over, in the last twenty years has not been less than 10 per cent, and in this country, as a measure of value, from 30 to 40 per cent. Now, if this be true, this is a very important factor that should be considered in arriving at a proper ratio of the two metals.

In the second place, it is but fair that we consider the depreciation of silver. In the present condition of things, or the laws relating to the purchase of silver, it is treated as a commodity, and the excess bullion not purchased by the Treasury fixes the market price thereof. In addition to this fact, the Government has been using its utmost efforts to bear the market. These are facts to be weighed in, along with the fact that if the white metal is restored to its former position, and we admit it to the mints upon the same terms as gold, then all the silver will be measured by its value as money, and not as a commodity; and I think it but fair to say that when silver is restored to its former position (if it ever should be) no one will deny that its bullion value will appreciate very much.

So, when we get right down to a common-sense view of this matter, and weigh it in all of its phases—that is, consider the appreciation of gold from its true basis, and the appreciation of silver when admitted to the mints as one of the standards of value, then I do not think any gentleman can hesitate to vote because a true ratio can not be found in the substitute offered by the gentleman from Missouri.

Then, gentlemen, if these conclusions are right, ought we not as Democrats, loyal to our party, and true to our constituents to endeavor to reach a proper ratio and open the mints of this country to the free and unlimited coinage of both silver and gold?

Now, Mr. Speaker, I have discussed this question from the standpoint that our platform demanded this much, and that it was our duty to conform to it. But, Mr. Speaker, we are told by the gentleman from Maryland that this demand in our platform is a mere catchword, and that it is impossible to carry it out. If this be a mere catchword, what part of the platform is not subject to the same criticism? What right has he or any one else to say that the convention of Democrats at Chicago were dealing in catchwords?

THE RESULT OF REPEAL.

But we are told by some gentlemen that all the ills that are now besetting the country are due to the purchasing clause of what is known as the Sherman law, and that if we repeal this then relief will follow at once. That it will give temporary relief I have no doubt. The bankers and capitalists of the country are demanding its repeal, and the panic which they have so successfully brought upon the country will terminate when they have accomplished two things: The permanent establishment of the single gold standard, and have compelled the Government to issue large amounts of bonds, by which the national banks of this country may be perpetuated. When these things are done they will open their coffers and some of that large amount of money that you have heard of as circulating in this country will begin to circulate again, until they want something else; and, if a panic is necessary to accomplish it, they will resort to the same methods again. Shall we sell our birthright for a mess of pottage?

What the people of this country must have, and will have in the near future, is a system of finances that will render it impossible for a few individuals to wreck the country at their will. We must wrench this power from Wall street or the existence of this Republic will be short lived.

The repeal of the Sherman law, without any of the conditions proposed, takes from the circulation of the country millions of dollars. Our people all over the country are demanding more money, and yet we are told that the way to relieve the country is to contract the currency, and these gentlemen justify themselves on the plea that it is forcing the gold out of the country.

No Democrat in this country who is a producer of wealth asks for the unconditional repeal of the Sherman law. It is only the creditors and the absorbers of wealth who want this bill repealed without substitute. And why? It will enhance the value of their outstanding debts and it will add, at the least calculation, a burden of 40 per cent upon the labor of the debtors of the country, compelling them to pay in an appreciated currency.

The farmers and laborers of all classes have met time and

again and asked for relief. They have sent their petitions here asking for legislation which would bring relief to them and their families. They were denounced as "calamity howlers." But when our boards of trade get together and ask for the repeal of a law in order that they may more effectually enslave the wealth producers of this country, then partisanship is to be ignored, platforms are to be disregarded, the most solemn pledges of Representatives to their constituencies are to be violated, and everybody must rush to the Capitol and do their bidding.

There is no substantial relief in this measure for the toilers of the country. It is not what they expected. It is not what they demanded. It is not what they were promised by the Democratic party. But, on the contrary, as I have already said, it will reduce the circulating medium of the country at least forty millions per annum. It will bring us to the gold standard, and the ultimate result will be the issuing of large amounts of bonds, through which the life of the national banks may be prolonged and perpetuated.

Those gentlemen who advocate the unconditional repeal of this act do not hesitate to tell us that the next move on the board is to issue large amounts of bonds to protect the national credit. If they succeed, this means monometallism and national banks—both directly in conflict with the fundamental principles of Democracy. Yet, in the name of Democracy, by the help of the Republican party, it is to be accomplished.

As a Democrat, and in the name of Democracy, I protest against it. While I have no language to express my contempt for the Sherman law, yet it is clearly demonstrated to my mind, from the positions taken by gentlemen on this floor who are claiming to be with the Democratic party, that there is no chance to ever accomplish any financial legislation beneficial to the people I represent if we allow them to repeal this law unconditionally, and I would be derelict in the duty I owe to the constituency I represent if I should not hold the Sherman law as a hostage to compel them, if possible, to comply with the pledges and promises of the party made to the people.

But some gentlemen tell us that if we repeal this law without condition, that the President will recommend financial legislation which will meet the wants and necessities of the country. If he intends to pursue this course he ought to have taken his party into his confidence and pointed out the proposed legislation in his message, and we would in all probability have been saved the mortification of a division in our party and he would not have been compelled to rely on the Republicans to aid him in carrying out his policy.

Any close observer of passing events knows that from the very advent of this Administration the bondholders, the capitalists, and the bankers, through the metropolitan press of the country, began to foretell of the great panic and the disasters which would happen to the country unless the purchasing clause of the Sherman act was repealed; and they set to work to bring about this result when there was no real cause for it, and in my judgment entirely artificial, and they have precipated a panic upon the country which stands without a parallel; and now, with all the effrontery of the very devil himself, they take advantage of the distress and ruin which they have wrought, and threaten even worse evils which will befall us unless the representatives of the people will surrender their convictions and accede to their avaricious demands.

As for myself, I will make no concessions nor surrender a single conviction that is not justified by my judgment as being to the best interests of those I have the honor to represent. I shall adhere to the platform adopted by my constituency, and to the pledges I made to my people, if I stand alone.

The gentleman from Massachusetts [Mr. EVERETT] is welcome to extend the comparison made by the gentleman from Nebraska, from glorious Marengo to disastrous Waterloo, and his extension appropriately illustrates the positions of parties on this question, but with a sense and imagery of which he had never thought.

Wellington, unable to withstand the shock of the French without the help of the Prussians, was praying for night or Blucher, and the Emperor had already sent dispatches to every court in Europe announcing the rout of Wellington and the destruction of his army, when the arrival of Blucher on the field, made possible by the defection of two of the Emperor's ablest marshals, compelled Napoleon, with his wearied legions to face a new army of Hessian hirelings, engaged as allies by the money of the robber of nations and pirate of the sea.

Unable, with bravery unequaled on earth, to overcome the combined armies, and with sorrow unequaled since the crucifixion, the greatest commander known to earth retired and allowed the wheels of time to roll back a thousand years; allowed England for centuries to manipulate the finances of the world over which she had extended her control by her arms and by the diplomacy of debauchees made eloquent by her glittering gold. Shattered and shaken and invited to surrender, the remnant of the immortal guards exclaimed, "We know how to die, but never to surrender!"

And I call the attention of our Eastern Democratic friends, who have steadfastly stood by us on so many occasions, to the fact that in the overthrow of Napoleon, that which racked his heart with greatest grief was that his final overthrow was due to the failure of his long-trusted marshals to do their duty in his supreme crisis; and we appeal to them, that in this our supreme moment, they make no further concessions to the money kings.

If the Sherman bill be repealed without restoring the coinage of silver, I warn you, you are helping our enemies rout us from our last trenches. Our ruined country will denounce an unholy combination between Tammany, Mugwumps, and Republicans, and will rise up and curse you for aiding to perpetuate their financial slavery, when you had promised them relief, and they had trusted to your honor. [Applause.]

Mr. POST. Mr. Speaker, on two occasions I have addressed the House on the coinage question. I have given my views on "Money a Public Institution" and on "Bimetallism" at full length, and have nothing to take back. I had intended to say nothing in this discussion, but to yield all the time to those who are repudiating their former professions and their party platforms and endeavoring to explain and justify that repudiation. They need time, much time. Eternity would not suffice.

The gentleman from Virginia [Mr. SWANSON], who preceded me indicated that the people will not judge members of this House by their professions on this floor, but by their votes. Unfortunately the question is presented in such a manner that a vote will not indicate precisely the position of members on the coinage question.

I am in favor of an American coinage policy. In the Fifty-first and in the Fifty-second Congress I offered bills to secure full recognition as a money metal of the product of our own silver mines.

Neither the bill before us nor any of the amendments represent the legislation I desire, for by legislation I would notify the nations of Europe that they might do what they pleased with their silver, but they should not touch an ounce of silver from the American mines without paying full value for it at that rate at which it has always been coined throughout the world.

This discussion has been entered upon under a rule supposed to have been agreed upon in a Democratic caucus. Under this rule no amendments can be offered, and even the right of presenting a petition for or against the measure is denied. We are forced to vote for or against the several propositions just as they have been presented by two members of this House, notwithstanding that all of them may be objectionable.

I protest against this unusual and unjust abridgment of the rights of members of this House.

CAUSE OF DISTRESS.

Mr. Speaker, the producers of every nation on the globe are suffering from some cause and evidently from the same cause. What is it? The monometallists tell us it is the "Sherman law" and our Chief Executive summons Congress to repeal it. What an easy method of arresting a world-wide disaster.

The bimetallists dissent from this view. They do not believe that the monthly issue of three millions of legal-tender notes upon silver would produce industrial disaster throughout the world or even in the United States.

They trace industrial distress here and elsewhere to the attempt of monometallists to destroy the honest metallic money of the world. The monometallists have no copyright on the word "honest," though they try to monopolize it. Every American wants "honest money," a "sound and stable currency," and to attempt to beg the coinage issue by reiterating "gold is honest money," "nothing but gold can be an honest standard of value," is unfair, disreputable, dishonest argument.

THE GOLDEN CALF.

The monometallic speakers assume that gold maintains the same value in all places and at all times. If pressed upon that point they admit that it may fluctuate a little, but less than any other commodity. But they immediately reaffirm that gold will maintain its inflexible value even though the whole world by law adopts it as the only standard of value, and that the universal struggle for its possession as money of ultimate redemption will not affect its value. They assert that gold alone of all commodities is the only one not affected by the law regulating supply and demand.

If this be true, then the world should adopt the single gold standard. If this be true, then gold is honest money and the only honest money. If this be true, I will advocate the single gold standard. But if it be erroneous, then every argument founded upon that statement is unsound.

GOLD THE MOST UNSTABLE COMMODITY.

The statement that gold maintains an inflexible value at all times is totally inexact. It is the only great staple commodity on earth that has risen in value more than 50 per cent during the last twenty years. The cause of this rise is clearly traceable to the change of coinage laws.

MONEY A COMMODITY.

In his History of Europe, Alison says:

We have only to reflect that money, whether in the form of gold, silver, or paper, is a commodity and an article of commerce, and that, like all similar articles, it varies in value and price with its plenty or cheapness in the market. As certainly and inevitably as a plentiful harvest renders grain cheap, and an abundant vintage wine low-priced, does an increased supply of the currency, whether in specie or paper, render money cheap, as compared with the price of other commodities. But as money is itself the standard by which the value of everything else is measured, and in which its price is paid, this change in its price can not be seen in any change in itself, because it is the standard. It appears in the price of everything else against which it is bartered.

Torrens in his Political Economy says:

Gold is a commodity governed, as all other commodities are governed, by the laws of supply and demand.

Mr. Goschen, late chancellor of the British exchequer, speaking in the House of Commons of the fixity of the English standard, said:

Originally there was a partnership between the two metals. The one partner was withdrawn almost all over Europe. In some countries it became a sleeping partner, but generally silver was dethroned and gold was left to do unaided by silver the work which formerly gold performed aided by silver, and if gold suddenly was called upon to do more work than it did before, then the gold standard suffered in its fixity. * * * Gold has varied 30 or 40 per cent.

THE RISE OF GOLD.

What would naturally be the effect if the world strikes out silver as primary money, adopts the single gold standard, and requires all paper money to be redeemed in that standard? Would there not be a world-wide demand for gold? Under the law of supply and demand, would not money become dear? But the change in the price of money, as Alison demonstrates, can not be seen in any change in itself, because it is the standard, but it will appear in the depreciation of every other commodity.

If the American people want a money standard steadily rising in value, as the increasing population and transactions of mankind creates a greater demand for money, then let them reject bimetallism and adhere to the single gold standard. If they want the prices of property and every commodity except money steadily and surely falling, then let them cling to the gold standard.

The mere apprehension of falling prices creates distrust and produces disaster. Falling prices depreciates the value of property estimated in dollars. Depreciation of property attacks the stability of credits. When the banks' customers and debtors are ruined the banks must fail. Neither fright nor folly move small depositors to withdraw their savings from the banks. They are creditors, and with falling values creditors consult prudence.

THIS REPUBLIC FOR SILVER AND GOLD.

In 1884 the Democratic platform declared:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

On this platform Mr. Cleveland was elected, and he signalized his accession to power by a causeless and vicious assault on silver. Within one year thereafter 10 per cent of the workingmen of this land were out of employment. Why? It was not "free trade," for his famous tariff message of 1887 had not yet been promulgated. It was the fear that Congress would act upon the recommendations of the antisilver message of 1885. Congress noted the recommendation at its true value, and paid no attention to it.

When the election of 1888 approached, the people remembered Mr. Cleveland's antisilver recommendation, and they also noted, that when the Democrats renominated him as candidate for President they omitted from their platform all reference to the coinage of silver.

On the other hand, the Republican platform of 1888 said:

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic administration in its efforts to demonetize silver.

On this platform the Republican party resumed power.

In 1892 the Republican party in its platform declared:

The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money.

The Democratic platform said:

We hold to the use of both gold and silver as standard money of the country, and to the coinage of both gold and silver without discrimination against either metal, or charge for mintage.

The platforms of both parties favored bimetallism, and bimetallism means the recognition of both gold and silver as money metals "at a fixed relative value." It refers to receiving gold and silver bullion "at a fixed relative value" for coinage purposes, and is in opposition to monometallism, which recognizes but one metal as standard.

LOW PRICES FOR FARM PRODUCTS.

That the American people, "from tradition and interest," favor bimetallism can not be doubted; but the President seems willing to use all the power and patronage of his great office to rivet on this nation the coinage policy of England.

The royal commission of England, in its report on silver, referred to England as a creditor nation and said:

Any change which entails a rise in commodities generally, that is to say, the diminution of the purchasing power of gold, would be to our disadvantage.

The single gold standard in this country means to prevent "a rise in the price of commodities generally." It means to depress prices of commodities and increase the purchasing power of gold.

The Textile Record, of Philadelphia, thus graphically and plainly states the case:

England stands before the world as the champion of two theories. One is, that gold should be the only measure of value; the other is, that there should be no tariff obstructions to the freedom of trade. The American people, boasting of their independence, have accepted both of these theories, doing exactly what England has long desired them to do. Let us see what have been some of the results of this subservience to the ideas of a nation which necessarily seeks not our good, but its own. The rise in the value of gold has tumbled the price of American wheat from $1.50 to 56 cents a bushel, and the price of American cotton from 14 cents to 7¼ cents a pound. Thus England feeds her people and operates her mills at our expense. The price of American silver has fallen so far that our silver mines, producing many millions of wealth anually for our people, have stopped operations, and at this moment the whole business machinery of the mining States has been dislocated, and thousands of idle men are standing about the streets with hunger in their bodies. But England, which coins sixty millions of silver annually, buys silver cheap.

Having thus impoverished the Western farmers and miners and Southern planters—about one-half of the population of the country, and the buyers of the products of American mills—the menace against our tariff is now closing up the mills themselves. British gold monometallism has wrought havoc with the American producers of raw materials. British free trade is now bringing destruction upon American manufacturers. Absolutely all of the existing difficulties are due to these causes. We have had boundless prosperity, as we still have boundless wealth. We have deliberately sacrificed both at the bidding of a nation which would reach the highest pitch of triumph if it could close every mill upon this continent and could buy our cotton, wool, wheat, and silver at half-price.

Do not our manufacturers perceive that the cause of the silver-miners, the cotton-planters, the wheat-farmers, and the wool-growers is their cause also? These are our fellow-citizens. When they prosper, the manufacturers prosper. When they suffer, the Eastern manufacturers suffer. The enemy that aims at their hurt, is the common enemy of all. We have ridiculed the demands of the Colorado silver-miners; we have rejoiced that cotton is cheap. Some manufacturers have demanded free wool, to the injury of the domestic wool-growers. But now the blow is falling upon the manufacturers themselves. Is not the experience plainly a demonstration that self-interest, not to say patriotism, requires that all the American industrial forces should rally to the defense of American principles? Only last month we celebrated the Declaration of Independence. But, is a nation independent which suffers another nation to control injuriously its fiscal and economical policies? Are we independent, when England can fix the prices of our wheat and cotton, can shut down our silver mines, and can dictate antitariff legislation at Washington?

At this moment every condition of high prosperity seems to be present in this great, rich, self-governed country; but instead of prosperity we have commercial depression; and we have it, not because there are a few beggarly bars of silver in the Federal Treasury, but because the American people have permitted themselves to be induced to depart from the bimetallism and the protection to home industry, both of which were introduced by the founders of the Republic, and both of which are essential to the welfare of the nation.

UNDER THE WRONG BANNER.

Many say that they are bimetallists, that they believe in the use of silver, that they would use so much of it as could be safely redeemed in gold. That is not bimetallism. That means the single gold standard pure and simple and the use of silver as a subsidiary coin. In that policy there is no recognition of silver as money of ultimate redemption.

Bimetallists advocate a fixed relative value between gold and silver to be established by law.

The relative value is between the metals, by weight, which are to be coined.

Those who would only use silver at a gold valuation are not bimetallists; they are monometallists, who "steal the livery of heaven to serve the devil in."

SILVER BASIS.

It is said if we adopt bimetallism we will go to a silver basis, that gold will go to a premium, it will be hoarded, and it will fly abroad. Will men hoard gold when every kind of property except gold is rising in value? Money is hoarded now because money is the only kind of property that is rising in value. Will they hoard gold when rising prices of good times come like a benediction to the country? Will they send their money out of the country where it will not enjoy the benefits of rising prices? Will they not rather buy products or property or aid enterprise by loaning at high interest on good security because rising in value?

Those who speak of the restoration of the bimetallic standards leading to monometallism abuse the language.

A nation may have a bimetallic standard of value and offer freely to coin both gold and silver at a fixed relative value, even if the ratio is so adjusted that but one metal is brought to the Mint.

Bimetallic standards are estimates of the relative value of bullion fixed by law, and not subject to change. Commercial estimates of the value of bullion are ever changing; but the most potent factor in commercial estimates is bimetallic legislation.

PARITY.

With a single legal standard, gold and silver coins may be kept at a parity by redemption in whichever metal is the standard; but since the standard is always the dearer metal because more in demand, parity in the bullion is manifestly impossible.

The bimetallic or optional standard aims not merely at parity between legal-tender coins, but between the two metals from which the coins are fashioned. It does not pretend to rest at a parity; from some cause one of the metals may become scarce and be more highly prized. If it were held back from circulation there would be an increased demand for the other metal, because it would be needed to do business. Under the law of supply and demand the metal with which business would be done would certainly rise in value.

The metal which went to a premium or was held in reserve would neither do business nor draw interest. The only way to make it of any value as money would be to return it to the world's circulation.

Parity would always be the center toward which the swaying pendulums of commercial values would be attracted. Under bimetallism they could never swing far from parity, and the more violent the force that sent them asunder, the more rapid the return toward parity.

Let one or more great nations restore the ancient bimetallic standard of value and fix the legal relation between the two precius metals and the commercial ratio will take care of itself.

The president of the Mercantile National Bank of New York, Mr. William P. St. John, voices the sentiments of bimetallists when he says:

The Government's duty is to provide the means by which trade operations in their employment of money will effectually maintain the market value at the valuation appointed for the mint.

If the mints of the United States would receive gold bullion and silver bullion without limit in amount, and for an appointed number of grains of silver issue a silver dollar, and for an appointed number of grains of gold issue a gold dollar, each to be equally unlimited legal-tender money of the United States, and for convenience allow as now the circulation of returns by certificate, the trade demand for money would determine whether or not both gold and silver would seek our mints, and if both did seek our mints it would be because the money use of either was the best use that owners could make of it.

With a volume of domestic business to furnish such a demand for money, the appointed number of grains of gold and of silver for a dollar would be the dollar's worth of gold and silver in the markets of the world. This means that the mint price would be the market price just so long as the trade demand for money enticed both metals into the mint for coinage into money at the mint valuation.

If the domestic trade demand for money is not sufficient to employ both, as the best use of each that owners can make of their gold and silver, then the mint valuation of the one which does not seek the mint is too low. Or, what is equivalent, the mint valuation of the other is too high; which is to say, more grains must be appointed for the dollar coin of the overvalued metal.

Such an alteration of the coinage ratio for so vastly influential a mint as the Mint of the United States ought to be adopted only after the actual experience to dictate it. With intelligence controlling the Treasury, and public confidence in that intelligence, the test of experience could be applied, under our prodigious trade demand for money, with all the safety of a nursling on its mother's bosom.

Therefore we open our mints to silver without other restrictions than are prescribed for gold. Allow the actual circulation by coin certificates in lieu of coin. Let the present coinage ratio begin the conquest for the maintenance of the parity, but adopt a higher ratio if experience points the need.

RATIO.

Bimetallism may be established at any ratio. All the coins of the world are now between 15 to 16 of silver to 1 of gold. In the United States the ratio is 16 to 1. The silver dollar of 371¼ grains of pure silver is precisely the same to-day that it was when the Republic was founded. It was made of the value of the Spanish milled dollar, the coin of the colonies, which had been in circulation for a hundred years before the Revolution. The silver dollar is large enough. We have changed the ratio twice. The change was both times made in the gold dollar. The ratio of 16 to 1 means to retain the present silver dollar.

SILVER DEPRECIATED.

It is alleged that silver has depreciated. That is true, measured by gold. But measured by the standard adopted by the royal commission of England, and by every government commission which ever examined the question, silver bullion has slightly advanced.

If you take the averages of leading commodities for a number of years as a standard, you will find that silver bullion has risen slightly in value and gold bullion has risen prodigiously.

Look at Sauerback's tables, published in the census report of 1890. He shows that with a gold valuation silver bullion has fallen since 1873, but that the average price of food materials and staple commodities have fallen in price more than silver bullion.

In the House of Commons, on the 1st of last March, Sir Henry Thompson said:

The figures collected by the Economist and those collected by Mr. Sauerback show that whereas in the average of the years from 1865 to 1869 a certain amount of a number of leading commodities would on an average exchange for 100 sovereigns, exactly the same amount of these commodities would exchange for 66 sovereigns in October, 1892. What has been the result to debtors who are the bees in the social hive, the manufacturing, the agricultural classes—the producers generally? Every one knows in a general way that agriculture had been suffering terribly. Thousands of shopkeepers and men of small, aye, even with large businesses of various kinds, have been slowly ruined during the last twenty years, through no fault of their own, but solely on account of the cruel, relentless grinding of the appreciation of gold, and because they have to pay more of their produce every year to meet their fixed charges and the interest on their borrowed money.

Although Sir Henry Thomson is an eminent financier, it is evident that he did not believe that the cause of all this trouble in England was the Sherman law.

To this arraignment of monometallism Gladstone replied that England was the greatest credit nation and was making from $250,000,000 to $500,000,000 by it every year.

AMERICAN INDEPENDENCE.

The United States should adopt a new declaration of independence. It should restore its bimetallic system and England would lose her enormous profit. Every movement in the direction of bimetallism has been a blessing to our people. The Bland-Allison act of 1878 was an effort in the right direction. The act of 1890, imperfect as it is, was a blessing to the American farmer. The principle of purchasing silver at a gold valuation is more abhorrent to bimetallists than to monometallists. The President called it "a truce." It was a compromise proffered by the single gold-standard men and accepted in good faith.

Have the people lost faith in the currency of our country? No. Careful inquiry shows that those who hire boxes in safe deposits to stow away money drawn from the banks do not take gold. They take silver-certificate notes under the act of 1890, and there is where the small bills and silver have gone.

The prosperity of the country increased after the passage of the Sherman law, and the year 1892 was one of the most prosperous in our history. The people began to believe that we had an American financial as well as economical policy.

Disaster came upon us with the change of Administration, because the people now believe that both our financial and economical policy is to be dictated from England. Far better repeal the law than to have it administered as it is now, to depress the price of silver.

Must we wait until India overthrows British rule? Until oppressed industrial England revolts against aristocratic England before we declare ourselves free?

We are told that we can not have bimetallism without England, that we can not have bimetallism without the world consents.

The real question now is, what shall we do to show that we want bimetallism established throughout the world? What example in coinage shall be set to the world?

Prior to 1873 we had the true bimetallic standard of value. In 1873 we discarded silver absolutely and for all purposes, and in 1874 we even took from the silver dollars already coined their legal-tender character. We were the first bimetallic nation to stop the coinage of silver and the only nation which has repudiated its own coinage. We, the greatest silver-producing nation on earth, struck down our own product.

Why? Can any one defend the act? Did we ask for an international coinage agreement then? Now we are told that there is not independence enough left in this Republic even to frame our own coinage laws. We do not coin money for other nations. When coins go abroad in international trade they do not go as coin, but as bullion. England wants our gold; but for her Asiatic trade she wants our silver more. Silver she must have. Every ounce she obtained has been freely coined in her dominions at 15 to 1, while we refused to coin it at 16 to 1. We have made the impossibility we feared. "The wise and prudent conquer difficulties by daring to attempt them."

We should have American coinage, utilizing American precious metals, adapted to American interests, in accordance with American tradition, and promoting the welfare of America and of mankind.

Mr. MILLIKEN. Mr. Speaker, in the great uncertainty which prevails some things are clear. In the first place, we know that we are at sea on the currency question and the still more important question of what laws are to be enacted to affect the industries and labor of our people.

It is very clear, too, that whatever we do should be done promptly. The country can not afford to wait. The present suspense is more damaging than will be even the enactment of

bad laws. If there has ever been a time since the war for the suppression of the rebellion when all who desire the welfare of the people and the nation's prosperity were called upon to act at once and earnestly, that time is the present moment.

It is a time when every worthy citizen of the Republic will lay aside prejudice and selfishness and combine with his fellow-citizens, of whatsoever party or creed, to effect the common weal.

The occasion is too serious for trifling. It is patriotism and not politics that we want now.

While the ship of state is tumbling and pounding about, with torn sails and shattered spars, in a storm that every hour thickens and grows more threatening, portending irreparable disaster, we can not afford to contend for position or be concerned about the ultimate effect of our action upon persons and parties. The storm is upon us now. It will be quite time when we shall have sailed safely out of it to discuss ulterior political results. [Applause.]

The deplorable condition of the business of the country has been clearly stated by the President, and is acknowledged by all men of all parties. Indeed, it is too keenly felt, and the pinching fingers of distress make their impressions too painful to escape the sensation of the people.

The urgent, paramount question is, what is the remedy? Is there any remedy at all? If there be any, certainly every good citizen desires that it shall be promptly applied. He who would falter now or allow any personal or partisan consideration to stand in the way of a return of that prosperity to the industries and labor of our countrymen which they possessed and rejoiced in prior to the 8th day of last November, should be branded as an enemy to his fellow-citizens and his race. [Applause.]

But there are almost as many doctors as there are people; and the remedies which they prescribe are as varied as their different diagnoses of the disease.

I am sure that we could all agree upon the remedy to be administered if we could agree upon the cause of the malady.

Our sound-money Democrats, as they call themselves, and as perhaps they should be called, arraign the Sherman silver law as the root of the great evil which just now oppresses the country. They say that this law, which provides that the Government shall purchase 4,500,000 ounces of silver monthly, has destroyed faith in our currency abroad, in our financial credit, and the honor of the nation.

The question arises, why did not the Sherman silver law have this effect when it was enacted? Is it not an anomaly that this law should be enacted without disturbing our prosperous condition, and continue to be the law for three years without perceptibly affecting our welfare at home or our credit, and now all at once precipitate the ruin of our credit abroad and an unprecedented disaster to our industries? Why, at this late day, after this law has been so long the law of the land, should it suddenly, and almost as with a lightning stroke, destroy the confidence of our people so completely that money is withdrawn from circulation, the banks are depleted of currency and driven into bankruptcy or suspension, the business of manufactories curtailed or destroyed, labor thrown out of employment, and idleness, poverty, and distress made to surround us on every hand. More banks have shut their doors and suspended business within ninety days than during the entire twenty-eight years of Republican administration.

Is it because a Democratic Secretary of the Treasury temporarily determined to pay silver certificates in silver and not in gold, as had theretofore been done; or does some other cause lie at the root of all this fearful disaster which to-day oppresses the country and causes the apprehension of greater disaster in the future?

Let us be above partisanship in this fearful crisis, but let us be honest with ourselves and others.

If we are afraid to search for the real cause of our present trouble, lest in doing that we shall discover that we are searching for what we do not wish to find, then we shall surely be in no condition to administer the right remedy. If we blindly console ourselves that it is only a pimple upon the body politic, and refuse to investigate lest we find it a cancer, and apply the remedy for a pimple, then the cancer, whose existence we refuse to recognize, will kill while we are doctoring for the simple pimple.

That the purchasing clause of the Sherman silver law should be promptly repealed, unconditionally repealed, I do not entertain a doubt. It did not express the conviction and best judgment of Senator SHERMAN and a vast majority of the Republican party. It was a tub thrown to the shark of free coinage of silver. In that respect it did its work. It saved us from the free-coinage bill which had passed the Senate by a decided majority of the Democratic votes in that body, and threatened to pass this House by an equally great percentage of the Democratic votes here.

The difficulty with the free-silver advocates is that they attempt what it is impossible to do—that is, to fix and hold a price upon silver much above its market value and very much above what it costs to produce it.

That may be done, to be sure, to the extent of the subsidiary currency for our own people. We do it with nickel. We did it with copper, and we know we can do it with silver. Actual facts which no ingenuity of argument can overcome convince us of this.

But when we alone attempt to make silver, at a price far above its market value and the cost of its production a medium of exchange between ourselves and other nations, we attempt a task which both reason and experience teach us that we can not perform.

No one can blame our silver producers for desiring to sell their product at the highest price possible; and, as an American citizen to whom the prosperity of all Americans is dear, I should feel it the duty of the Government to so legislate as to give to our silver producers the best possible price for their product, so as to keep their mines open and their workmen in the mines at work and well remunerated, if this could be done without harm to our country. But they ask what not only can not be done, but what an attempt by the Government to do can result in only disastrous failure.

For that section of our country where the debtor class wishes a cheap currency in which to pay off their debts—no, not to pay them, but to discharge them by a nominal but really partial payment—I have not so much respect. But still I can have the charity to say that they only exhibit that degree of selfishness which is too largely found in all mankind.

I have spoken of the advocates of the free-coinage of silver. Well, Mr. Speaker, the contest is squarely between them and the advocates of a gold basis: for however strong a bimetallist you or I may be, if we are not in favor of the free coinage of silver we are not in favor of its coinage at all, beyond a sufficient amount for a subsidiary currency, except in some way to make it the equal of gold to the holder of it.

The Sherman law really does not enter into the contest. We all believe it should be repealed. The actual question of contention is whether that law shall be supplanted by an act providing for the free coinage of silver in some shape, or shall it be unconditionally repealed.

Now, I believe in a bimetallic currency, and because I believe we shall soonest get to it by an unconditional repeal of the purchasing clause of the Sherman law, I shall vote for the repeal. If this shall bring us to a gold standard, then we shall have gold enough to do business, or no one will have it.

We shall get our share of the money of the world, whatever it be, whether gold, silver, or paper; for when we consider our vast and varied resources, and the capability of our people to produce, we can, if we shall legislate wisely, keep the balance of trade most always in our favor, and that will give us our share of the money of the world, and more.

Then if it be found that there is not sufficient gold for a circulating medium, the stringency will not be with us so much as with others; and England, with the other commercial nations, will be driven to agree with us upon some ratio of value between gold and silver.

That is what all bimetallists desire. For the commercial nations of the world can as easily establish a ratio between the two metals and maintain it as we do with our subsidiary coin, and this they will do when they shall learn that they can not—any one of them—corner the gold of the world, and can not do business with more than their share of it.

Indeed, it is because the balance of trade has been against us—that, more than anything else, has sent our gold abroad. The gentleman from Nebraska [Mr. BRYAN] says it is not the Sherman law that has caused our trouble. He says we have been recently selling our products abroad, and therefore gold has begun to come back to us.

This is true, but it is not good Democratic doctrine. We have been all along taught by our free-trade Democracy that prosperity lies in buying more than we sell. It is a balance of imports over exports, which they have been crying out for, and which they propose to legislate for so soon as they can get at our tariff laws.

The good sense of my friend from Nebraska [Mr. BRYAN] got ahead of his political faith for once, at least, and he was right. Indeed I incline to believe, I have so much faith in him personally, that he will always be right when he forgets his partisan fallacies.

Mr. Speaker, you and I know that we are best off when we produce and sell more than we buy, when we earn more than we expend. This is universally acknowledged to be true of individuals. Then is it not equally true of that aggregation of individuals which makes a nation? Is not this great people, as

surely as any one of them, growing rich when the income from their products and earnings is larger than their expenditures; and is not that policy wisest for us which enhances the one and diminishes the other?

I have never looked with gratification upon large importations into our country and small exports from it. But as it would give me satisfaction to see my individual income increase and my expenditures grow smaller, so do I look upon large exports from our country with smaller purchases by our people from abroad.

The money of the world will go where it is most needed. It will be most needed where production is most abundant and the largest purchases are made.

And how shall we stimulate our production to its utmost limit? We can do it only by protecting the labor of our people by wholesome laws from unrestricted competition with the products of the pauper labor of other nations; and we can not do that except by protecting the industries in which our working people are engaged and by which they live. [Applause on the Republican side.]

This the Republican party has done for the last thirty-two years, and in that time we have seen the nation grow in wealth and power, in comforts of life for the people, in progress in every desirable line as it had never grown before, as no other country has grown since the dawn of history.

The gentleman from Nebraska says, "Let us apply the remedy to the disease." I heartily indorse his proposition. Indeed, unless we do apply the remedy to the disease the patient will never be cured.

You may repeal the Sherman law and so do some good, a very little good. You may thus inspire confidence in those who think the Sherman law the cause of our trouble. But the most diseased part will not be reached by that remedy. [Applause on the Republican side.]

Mr. Speaker, never in the history of mankind has a people enjoyed a greater prosperity, with a brighter promise of prosperity in the future, than our people enjoyed the day before President Cleveland and a Democratic House and Senate were elected in November last. Every industry in our country was in a healthy and flourishing condition. Our mills and factories were all running on full time. Our merchants were having large orders for their goods, with sure and quick payments; our farmers were getting good returns for their crops. The mechanic's hammer was heard in all our cities and villages and towns making improvements. The laborer was everywhere getting full employment and receiving larger remuneration for his toil than ever before in this or any other country. Idleness was banished from our land, and with it its consequent poverty. Only the sick, the infants, the very old, and the lazy were unemployed.

The Democratic party was elected to full power in the Government for the first time in thirty-two years, and paralysis of business in all departments began. It has since continuously increased, until the entire body, so strong, energetic, and active prior to the last national election, lies prostrated with a malignant and almost, if not quite, incurable malady.

And why should not this be so? That party which thirty-two years ago went out of power in its endeavor to destroy the nation has come back to full control of the Government, threatening to cripple or destroy almost every industry in the land. Adopting as its platform upon the tariff question, the provision of the Confederate constitution upon that subject, it resolved as follows:

> We denounce Republican protection as a fraud; a robbery of the great majority of the American people for the benefit of a few. We declare it to be a fundamental principle of the Democratic party that the General Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only. We denounce the McKinley tariff law as the culminating atrocity of class legislation.

This is Calhounism in its most concentrated essence. It is the doctrine of the rebellion. Why should not all this widespread disaster fall upon the country? It is exactly what Republicans, in the last campaign, predicted would be the result of a national Democratic triumph, only it has come quicker and worse than we foretold.

Many people were simple enough to believe that the Democratic party would fulfill its promises to the people. And we who, judging the future by the past, doubted it, and believed that the deplorable condition of our people would enlighten the mind and dissipate the prejudices of the party in power have been stunned by a declaration in the President's last message, which sounds the death knell to the business of the people and the prosperity of our country.

It is a declaration of war upon the nation's industries, to be commenced as soon as the silver question shall be settled. And that unfortunate declaration, that, so soon as the present question shall be decided, the attack upon the great law for the protection of the industries of our country and the labor of our workingmen shall at once commence, has done more harm than this Congress can possibly cure, unless it shall declare that during its life it will not consent to make the attack therein threatened.

Let this House pass the resolution offered by the gentleman from Ohio [Mr. GROSVENOR], or that which I will present, and a thousand industries now idle will start up in a week, and thousands upon thousands of idle men will find remunerative employment. Let us resolve that during the life of the present Congress this House will pass no bill which shall repeal or modify our present tariff laws, nor consent to any measure which shall revive State banks whose currency shall not be secured by bonds of unquestionably good character. This the House can do without the concurrence of the Senate or the approval of the Executive.

Let us do this and do it at once, and whatever be the action of Congress upon the Sherman silver law, you will see the nation arise immediately from its present wretched state, be inspired with confidence and courage, as the Christians were by the vision of the Monk of Marsailles at Antioc; and the people, assured that their enterprises and industries are not to be stricken down with the bludgeon of free trade, which is now raised menacingly over their heads, will start up their mills and factories and foundries and furnaces, and workshops of every kind. [Applause on the Republican side.]

Labor will be employed, idleness and distress will flee, the farmer will once more see a good market for his products, the merchant will find liberal and thrifty customers, the mechanic will resume his vocation, the laborer will find work and a fair remuneration for his toil, and we shall see all about us and all over our country the hopeful and happy faces which everywhere greeted us before the Democratic party had attained ascendancy in all the branches of the Government, and the specter of free trade had frightened the people with its terrifying aspect of enmity to their prosperity.

Our banks will become solvent and confident, and active business will bring out their currency to restore old enterprises and build up new ones. Hands willing to work will become busy hands, the wealth that there is in labor will again be realized, and by its magic touch our dormant resources will be converted into actual, available value.

But you reply that the McKinley tariff law is still in operation. Yes; but the threat of evil is often as potent to cause alarm as its actual presence.

When the experienced shipmaster sees the storm coming he takes in sail. He would be regarded a reckless captain who would keep all sail on when he sees in the sky the black cloud which portends the monsoon or the tempest.

Notice was served on the country last November by the election of a Democratic President and Congress that the McKinley law was to be repealed or so amended as to take all the protection out of it. The country has taken notice, and men of all pursuits have been preparing for the disaster which they saw awaiting them. When each one contracts his business, withdraws his money from circulation, reduces his expenditures to the cost of the bare necessities of life, in order to prepare for the threatened storm, why then the storm begins. The contraction of business and consumption began to contract the circulation of the currency before the dearth of currency began to embarrass business. There is quite as much money and as much to do in the country as there ever has been. The land is full of resources and wealth; our people are needlessly forced into idleness, and men and women are pinched for the necessities of life in the midst of abundance, and threatened bad legislation is the sole cause for it.

Our free-coinage Democrats are bewailing the fall of prices. They assert that gold has appreciated, because it will buy more than heretofore of the world's products.

They seem to have put a new song into their mouths since the last national campaign. Then they were all arguing for cheapness. Cheap wool, cheap tin, cheap lumber, cheap iron, cheap farm products, cheap everything except sugar, rice, and cotton, was their evening and morning slogan; and when we warned them that all this meant cheap labor, they did not lessen the volume of their song nor slacken their efforts to bring about an era of cheapness in our country.

To get directly at the cheap products of the pauperized laborers of Europe and Asia was the goal of their exertions and desires.

The result of their success in this respect is before the world. The thousands of the starving and hopeless feel it and know what it is. And now the free-silver wing of the Democracy say it has been the appreciation of gold which has caused this cheapness which they deplore.

Was not labor as high in price the day before the last national election as it ever had been? Was there ever a time when the wage earners could get more money or more of the necessities and

comforts of life for their labor than immediately before the 8th day of last November?

The sound-money wing of the Democratic party assert with equal positiveness that the purchasing clause of the Sherman law has been the source of all the mischief from which our people are suffering; and yet both the silver and anti-silver wings of the Democracy know, or certainly ought to know, that neither of them give the true cause of our great distress.

Has it been the Sherman law or the proposition to repeal it that has caused the fall in the price of wool, or lumber, or farm products, or the earnings of labor?

Our free-silver Democratic friends earnestly and emphatically declare that the Sherman law has not caused the great depression of our industries, and yet they, equally with the sound money Democrats, are very careful not to give the true cause of it.

Certainly it has a cause. Results never come without causes.

Why do they fear to proclaim the truth? Will it injure their party? And is their partisan fealty so much stronger than their desire to relieve their suffering countrymen that they will spend their time endeavoring to make a scapegoat of the Sherman silver law, while the condition of the people is every day going from bad to worse, and the brink of irrecoverable disaster seems to be only a short way before us?

Some of them say that the great panic came about naturally. There is no such thing as a panic without a specific cause, and there never has been one in this country.

The panic of 1873 was but the reaction from indulgence even to intoxication in an inflated currency following a great war.

The panic of 1857 was the culmination of the result of the low tariff of 1846, for so many years delayed and held in abeyance by the gold discovery in California and the wars in Europe.

The panic of 1837 was the short, sharp, pinching pain which followed a wild debauch in crazy speculation. The cause of the distress and almost universal disaster during the old Confederation was the practical free trade which succeeded the Revolutionary war. The war had been an embargo upon the importation of English cheap goods. It closed in 1793. The embargo was raised thereby, and free trade brought ruin, as its menace is doing now.

Yes; all of our panics have had their cause. They never come spontaneously. This panic has its cause. The ascendency of the Democratic party, after thirty-two years' retirement, bearing upon its banner the motto, "Down with American industries," as in 1861 the motto upon its escutcheon was "Down with the American Union," is the cause, and the only cause, of our trouble. You may try to hide it under one ingeniously framed excuse or another, but you can not do it. Like Banquo's ghost, it will not down at your bidding, and you can not prevent the people from seeing it in all its hideousness.

Would you arrest the course of the disaster and restore prosperity to our country?

Then join us in passing a resolution that we will not touch our tariff laws, nor flood the country with wild-cat currency by repealing the tax upon State banks. Give the national banks the right to issue bills to the full value of their bonds deposited, and so bring a return of old-fashioned Republican good times.

Thus, gentlemen, you may do the greatest patriotic duty of your lives. Thus you may atone, in some measure, for the free-trade votes you have given, the free-trade speeches you have made, and the mischievous planks in your national platform.

Yes; have the courage to acknowledge the real causes of your country's suffering; join us and help to remove them.

Do this and the people will forgive you and, perhaps, kill the fatted calf for you, the thing which you know you want above all things else.

Will you do it, gentlemen? You may now see the evil fruits of your free trade, wild-cat currency policy all too plainly to warrant you in hesitating. The wrecks caused by the announcement of that policy are strewn thickly all about you. The ruin which has followed in the wake of your national victory covers the whole land, and, like a widespread, violent, and virulent plague, it is bringing misery to almost every household in the country.

While you stand here inactive, bound hand and foot by your partisan prejudices, and bending your knees in worship of the fetich of free trade and red-dog money, the wealth of the rich is melting away, the business of the merchant and manufacturer is being paralyzed, the farmer's crops are bringing him no adequate returns, the hum of industry is hushed, there is no sound at the mechanic's bench; idleness is king, and starvation will soon be master in the land.

Whoever will take pains to read the history of our country during the years of the confederation, when we had practical free trade, will find there a picture of our country's condition to-day, or what it will grow to be if the present course of ruin is not arrested. It was free trade and universal disaster; an inflow of cheap foreign goods and closed stores, factories, and furnaces at home; an outflow of currency and depletion of money among our own people; wretchedness and despair until the Constitution was formed and a protective tariff act was passed by the first Congress under our present form of Government.

All this is seriously threatened and partially realized now. Indeed, the people can not live long upon what they have already hoarded. Idleness is a most costly luxury. It has been stated that the value of labor's productions for one year is greater than the value of all past accumulations.

Be that as it may, I believe that one year's idleness by all mankind would cause the destruction of at least one-half of the human race.

We told you last summer and autumn that to break down the walls of protection to American industries and let into our market the cheap-labor products of all mankind, would either reduce the wages of labor, or stop our industries and turn our workingmen into idleness and consequent poverty and distress.

But you would not heed us. You went on in the way of free trade and wild-cat banks, and the results are what we predicted.

Now have you the magnanimity to rise out of your political prejudices and help us to administer the only balm which can heal the wound which you have made? That is the serious question of the hour.

The gentleman from Georgia [Mr. LIVINGSTON] and the gentleman from Kansas [Mr. SIMPSON] have told us that this is a contest between the rich and the poor, the aristocracy and the plain people. Of course they profess to be very earnestly anxious to help the plain people, for it is universally known that the plain people cast vastly more votes than the aristocracy. But really no such contest exists, and rarely, if ever, has existed in our country, except in the brains of those who want the plain people's votes. [Applause.]

One good at least has grown out of the present terrible business depression. It is that capital and labor, the banks, the manufacturers, the merchants, the farmers, and the workingmen, all find themselves in the same boat together. Their interests are mutual and not antagonistic, and no injury can be inflicted upon one class without causing suffering in some degree to all the others.

The gold bug and the silver bug are subject to the same fortune in common. The financial blow which prostrates one can not fail to shake, if indeed, it does not shatter the other. And it is only the humbug who attempts to make them believe that they are natural enemies.

It has also demonstrated, what every intelligent, unprejudiced man should know, that all sections of our country are parts of one body, which can be hurt in no part without bringing pain and injury to every part. These are lessons which can not be too thoroughly learned and nursed as axioms by our people; lessons which can not fail to broaden the statesmanship and strengthen the patriotic spirit of the nation. Indeed, the people have had no more mischievous advisers and the country no more damaging enemies than they who have endeavored to array one class against another and create jealousies between different sections of our country.

To-day the disaster is general. He who talks of a conspiracy of banks and corporations against the people talks the sheerest nonsense. It is but the fool's mumbling. It is an assertion that the banks, manufacturing establishments, and other corporations have entered into a conspiracy to commit suicide for the pleasure of seeing the plain people suffer and die with themselves. This is absolutely idiotic as well as harmful.

The abstract of the report of the Comptroller of Currency on the condition of the national banks in the United States, on July 12 last, shows a decrease since May 4 last in individual deposits of $193,000,000; in loans and discounts of $137,000,000; in specie of $21,000,000, and in undivided profits of $13,000,000.

This statement is no worse for the banks than the facts which exist relative to our railroads, manufactories, and merchants' accounts. Who believes that they, or any of them, have sought to bring this unfortunate condition upon themselves? It is impossible to believe it, because it is not in the nature of man that it can be true.

And if, out of the great distress and suffering which is upon every section and class in our country, shall come a thorough realization by our people of the interdependence of all men, all pursuits, and all parts of our land, though the medicine be harsh and painful to take, the cure may be more than worth the suffering. [Applause.]

What I most fear is that the one permanent result of the crisis will be the reduction of the price of labor. That must certainly occur if the Democracy shall go on, after we shall have settled the currency question, to strike down protection to our industries by the vicious tariff legislation with which it threatens the country. Our factories and furnaces will not always be idle. Even if free trade shall inundate them with a flood of foreign cheap-labor products, they will eventually emerge from the de-

luge, but only by employing our idle and impoverished workingmen at European and Asiatic cheap wages.

The gentleman from Missouri, in his earnest, impassioned appeal for free coinage, said:

> Will you trample down the interests of your own people and destroy the value of one of the precious metals, simply to gratify the greed of Wall street—a mere agent of Lombard street? It can not, it shall not be done. [Applause.] Any body or any party who undertakes to do it will, in God's name, be trampled—as it ought to be—in the dust of condemnation now and in the future. [Continued applause on the floor and galleries.]
>
> I speak as a Democrat, but yet as an American above Democracy. [Cheers.] We do not intend that any party shall survive, if we can help it, that will lay its confiscating hand on America in the interest of England or Europe. Now you can take the choice of sustaining America against England, of sustaining American industries and American laborers against English industries and English laborers, or of our going apart.

That was an eloquent, a touching appeal, a splendid expression of patriotic feeling. But will the gentleman and his friends be equally patriotic when his party shall attempt to lay its free-trade "confiscating hand upon America in the interest of England"? When his party shall endeavor to carry out its threat, that it will "trample down the interests" and dignity of American labor, and destroy or greatly reduce its value in our labor market, "simply to gratify the greed" of foreign manufacturers, will he then as earnestly appeal for their protection? Will he then "sustain America, American industries, and American laborers against English industries and English laborers"?

Is not their value as great and their interests as sacred as the value of "one of the precious metals," and the interests of the millionaires who produce and own them? We shall see when we come to try that question whether he and his free-silver Democratic associates will vote to sustain American industries and American laborers against English industries and English laborers, or cast their votes to throw down the bars which for thirty-two years the Republican party has kept up in order to keep the products of cheap English labor from competing with the products of American workingmen in our own splendid American markets. [Applause on the Republican side.]

The gentleman from Georgia [Mr. TURNER] said, in his vigorous speech yesterday, that the banks, the manufacturers, and the people, as well as Congress, should do something to alleviate the general distress. Indeed, what have they not done, and what has Congress done? The banks have extended their accommodations quite as far as they have been warranted in doing. The manufactories have been operating at a loss, and have shut down their mills only when absolute ruin has stared them in the face; and the people who ask for work that their families may eat have up to the present moment shown a self-control that should make us proud of our countrymen, while we gain new confidence in the permanency of our country.

If, when rebel hands were raised to break the nation into fragments, and send this great home and fortress of freedom down in night and flames to everlasting death, true hearts were gladdened and the hopes of patriotic men were inspired by the grand spectacle of rallying millions hastening to the perilous battle-front to die or live, as in God's purpose it might be, for the preservation of the Union, hardly less has our faith in the perpetuity of our institutions been strengthened by the wise moderation, patient forbearance, and earnest effort to find some way to prosperity on the part of men of all conditions and callings, and especially the plain people, who suffer the most and have most to fear from the menace of free trade and bad currency. [Applause.] Why stand we here worse than idle? Who among us holds the helm of state now? Is it ignorance, partisan prejudice, or indifference to the situation that is in command?

Gentlemen of the Democratic party, you are in command. You have the Senate, the House, and the President. You alone have the power to enact laws. The great army of American workers and voters are looking to you for some legislation which shall relieve them from the situation in which your unfortunate policy has placed them. You have done nothing yet to give them even one note of encouragement. All is as uncertain and more distressing than when the President called Congress together. How long shall a suffering people wait to catch some ray of hope from you? Will you not lift the gloom from those who are so courageously facing the storm and fighting away despair?

Is there no commanding soul, no guiding spirit among you, to inspire you with patriotic determination and lead you to wise and unselfish effort? Will you repeal the purchasing clause of the Sherman silver law, empower the national banks to issue bills equal to the full value of their deposits of Government bonds, and pass an assuring resolution upon the tariff and wildcat bank questions?

Unless you do these things, the wind which swept you into power last November will become the tornado that shall hurl you from political ascendancy forever. If in this dire emergency you fail to fulfill your trust no one will be found to trust you again. [Applause.]

Mr. KEM. Mr. Speaker, it is not in the belief that further discussion of this question will change a single vote one way or the other that I ask the indulgence of the House at this time, for I believe the die was cast when this session was called and no amount of talk will change it, but I should not feel that I had done my whole duty toward my constituents should I allow this opportunity to pass without recording my voice as I shall my vote in favor of the free coinage of silver on a ratio of 16 to 1, and against the destruction of one-half of our metallic money by the combined efforts of the bondholder and interest-gatherer.

Great solicitude has been manifest on this floor by certain members of both the dominant political parties relative to what they term partisan discussion of the pending bill, claiming it to be of such vast importance that no partisan spirit should enter into its solution. We are gratified to know that at last the truth of the Populist claim that the money question was paramount to all others has been recognized by the enemies of more money, and agree with this nonpartisan sentiment by adding that no partisan spirit should enter into the solution of any question upon which rests the welfare of the people, and I can but regret that this spirit of patriotism did not take hold of these parties years ago when all this misery which is upon us now, and all that which has intervened since the destruction of the greenback, might have been averted.

I wish I could believe that their desire to avoid partisan debate at this time was prompted wholly by an unadulterated patriotism. But I may be pardoned if in the light of the past history of these two parties I entertain some doubts along these lines, and attribute this sudden outburst of patriotism, in part at least, to the knowledge of these gentlemen that each of their parties are equally guilty of treachery relative to this question, and that if one attack the platform of the other, it will only result in those structures tumbling about their ears and crushing them as the temple did Samson of old, and if I owed allegiance to a party as guilty of playing a double part as these I undoubtedly would be patriotic enough also to desire that it be not spoken of.

I have been somewhat amused at the conduct of certain other gentlemen in discussing the present distressing condition, particularly of those gentlemen who are more than anxious to save the country by increasing their facilities for clipping coupons and gathering interest.

I belong to that class of citizens who have in the past been designated by the above-named gentlemen as calamity howlers because we dared to predict just the calamity that has lain our land prostrate to-day. I have known the calamity howler in his palmiest days. I have heard him in the zenith of his glory when he howled the loudest, but I have never heard a howl from a professional that equaled in density and volume the wail of woe that has gone up from the throat of gentlemen on this floor who represent the class that have sneeringly referred to the Populists as cranks. The term calamity howler is not as explicit now as it once was, the howl not only emanates from the farmer's sod house of the West and the log cabin of the South as of yore, but the merchant, the mine owner, transportation companies, bondholders, bankers, and even grain gamblers have taken up and swelled the refrain until out of the very mansions of luxury comes one prolonged howl of woe that causes the old-time howler to turn green with envy. All of which is a gentle reminder that chickens come home to roost, and that as soon as what these despised calamity howlers predicted would come to pass, came. This class throughout the land raised a wail of distress and called upon Congress to get together and save them from themselves.

They remind me very much of the boy who hitched himself up with a steer. When they started the steer ran away and he could not stop him, and as they went sailing down the road he yelled, "for God's sake stop us, we're running away." These gentlemen have suddenly discovered that this false system with which they have been harnessed for years has gone beyond their control and like the boy are calling on Congress for heaven's sake to stop them, for they are running away. I will say for one (and I only speak for myself), that I am willing to help stop the procession, if they are willing to be stopped in a manner that will be effectual in keeping them so, but if they propose to only stop long enough to catch their breath, spit upon their hands, and get a firmer grip upon the industries of the people, as an unconditional repeal of the Sherman law would enable them to do, I, for one, will stand quietly by and see the whole outfit dash to destruction over the precipice of over-strained credit without lifting a hand to prevent it.

The plaintive cry with which the gentleman from New York (Mr. Hendricks) plead for the immediate and unconditional repeal of the Sherman law was truly touching, but when we realize it is but the echo of the senseless cry raised weeks ago by the metropolitan gold press and sent broadcast over the land of, "Repeal the Sherman law, repeal the Sherman law," it loses some of its pathos, and we begin to see it is nothing more than the cry of "Stop thief" to draw the attention of the people from the real issue. This law is not what I desire in preference to any other, but what I desire in the absence of any other, and I am more than willing to vote for its repeal when we have secured in its stead the free coinage of silver on a ratio of 16 to 1, but I do not propose, gentlemen, to submit quietly to be bound by the robber, then trust to his honor not to take my property.

But in all candor I submit upon what grounds do they ask for the repeal of this law? What reason do they give for this demand? Simply upon the bare statement that it will restore confidence. Let us look for a moment at the logic of this proposition and see if the facts will lead to such conclusions. What is the matter with confidence? Gentlemen have told us that the law filled the masses with fear that the banks would not be able to pay in gold, hence the run upon these institutions. Is this true? We think not, because the people have not demanded gold, asked for it, or even desired it, and thousands of them would be only too glad to take payment in the much-despised silver dollar. Particularly so just now, inasmuch as stated by the gentleman from California (Mr. Bowers) they are worth 3 per cent premium. Oh, no; it was not this fear of the people that they would not be able to get their deposits in gold dollars. It was the well-grounded fear that they would be unable to get them in any kind of dollars, a fear justly born of the miserable policy of contraction that has been followed for years, and which at last the people are becoming cognizant of, a practical demonstration of the truism uttered by President Lincoln, when he said: "You can fool a part of the people all of the time, all of them part of the time, but you can't fool all of them all of the time."

The people are long suffering and have been slow to realize the truth, but they are arousing at last, and let me drop a word of warning to those guilty of these wrongs, that a giant is awakening that may be hard to control. A lack of confidence, is it? Then let us apply the remedy in a common-sense manner by restoring a sufficient amount of legal-tender money to meet the business demands of the country. The moment we do this confidence will be at par, and every avenue of trade opened to its full capacity. We have been doing business so long on confidence with so little real money behind it, it has become threadbare and rotten, worn out; and the only just way to restore it is by furnishing more money. Can we do this by following the advice of the President? No. Yet the logic of the gentlemen who ask for repeal of the Sherman law is that this deficiency shall be made up by destroying half of what we now have.

As already stated, contending for the Sherman law only as a makeshift till something better can be provided, I ask in all earnestness, has the law been given a fair trial, and in all honor, if it ought not to have a fair trial before it is condemned? Justice says yes, the President says no, and after both administrations have ignored the spirit of the law in persistently redeeming the certificates in gold when the act provides that the Secretary of the Treasury may at his option redeem in silver, the demand comes up from the inner precincts of the temple of the money-changers for its repeal, backed by the power of the President, who cries, "Away with it, away with it," thus throwing off the mask and openly bringing us to a gold basis, where we have secretly been for some time, resulting in the present distressed condition of the country and the confirmation of the suspicion that the law itself was only a scheme to let us down to a gold basis without arousing the people, and I am sorry to say it has succeeded only too well.

If the Secretary had used his option under the law to pay out silver, there would have been no necessity for any encroachment on the gold reserve.

But, says the President, it is the policy of the Government to keep the two metals on a parity with each other. Does he mean to say it is the policy of the Government to keep the two metals as commodities on a parity, and see that at all times they shall bring the same price on the markets as such; if so, then is it not its duty also to see that wheat and corn are always on a parity with each other and bring the same price? Can it be he means to construe the law in this absurd manner? If not, then he must mean to say it is its duty to keep them on a parity as coined dollars, a proposition absolutely useless, if not as absurd as the former.

What necessity, I ask, is there to take special action of any kind at this time to keep our dollars at a parity? Is there a legal-tender dollar in existence to-day, or has there ever been one in the history of our country, that would not purchase as much of the necessaries or luxuries of life, as any other legal-tender dollar? I answer there is not, nor never has been, and I may add, never will be so long as the same legal-tender power is conferred alike, and all are made receivable by the Government for taxes and dues.

Thus we see that these dollars, whether silver, paper, or gold, are now, and always have been on a parity in the performance of the highest function they were created to perform, that of a medium exchange of real values, which is the only parity that should be considered in the financial problem. Any other is simply the parity of two commodities that ought to have nothing more to do with the money value than the parity of the two commodities of coal and iron, and the Government has no more right to endeavor to keep the commodities of gold and silver on a parity than it has of coal or iron; but, for argument's sake, suppose it is the function of Government to do this, has not the administration pursued a course that in its very nature is bound to produce the opposite effect. The continual paying out of gold to the neglect of silver must have the same effect upon those commodities that the exclusive demand for wheat would have upon that and all other cereals, viz, to appreciate the price of one and depreciate the price of the other, thus destroying this very parity the administration seems so desirous of maintaining. If the spirit of the law had been followed and the more plentiful money always paid out, the supply would have been equalized and the question of parity could not have arisen.

But there are those who will answer this by saying the Government must pay these certificates in gold to avoid the accusation of being dishonest and a repudiator. This position is certainly wholly unwarranted by the facts. The contract says they may be paid in either gold or silver at option of debtor. Suppose I were to agree to pay my neighbor 100 bushels of oats or corn at my option on a given date, that before the day of payment arrives a drouth prevails and destroys the oat crop, and on day of payment oats is very scarce and high, but corn is plentiful and cheap, is it not clear that I would exercise my option and pay the debt in corn; and would I be called dishonest and a repudiator if I did? No. Neither ought the Government to be so called for doing the same thing in principle, and will not be, except, perhaps, by those who measure their patriotism by the Government's inclination to fill their purses. So long as we are foolish enough to maintain a metallic currency, so long must we tenaciously adhere to the right of always paying at our option in the cheaper metal. This is our only safeguard against a single standard and the ultimate bankruptcy of the masses of our people.

Mr. Speaker, I desire here to call further attention to language used in this House on the 12th instant by the gentleman from New York [Mr. Hendrix] which, I think, deserves some notice. The gentleman took occasion to inform us that he originally hailed from the West and had grown up among the pecan and persimmon groves of Missouri, but had reached this House by way of New York and represented that kind of a constituency.

Let me suggest to the gentleman that if he had remained among those pecan and persimmon groves he probably would not be here to-day calling so lustily for the destruction of one-half of our money, and thereby increasing the size of the bushels of wheat (produced by the toil and sweat of the present dwellers among those groves), to 120 pounds, and other grains in proportion, and if he did dare do it I predict he would at once hear a rustling and quaking among these same growers that would give him a practical illustration of the force of a Western cyclone, and enable him to remain in a position where he could ever after slake his thirst in the crystal waters of the Missouri River, to which he so feelingly referred. After representing himself as the president of a national bank, he denies that he is here in the interests of that element, and appeals very feelingly to our sympathies through the distressed condition of those in the humbler walks of life, in the following language:

I ask you to listen to the men and the women, and the children, who have their money locked up in the savings banks of the country. I ask you to listen to the employés of hundreds and hundreds of workshops and factories that are idle. I ask you to listen to the expressed fears of the dread penury that will come on with the blasts of winter. I ask you to listen to the spoken fear that proceeds from the minds of men that we are entering upon a period black with sorrow and with woe.

I am sorry to say the picture is none too black, but it is only that with which the West has been afflicted for years in a somewhat milder form and to which by long usage we have become somewhat calloused and it does not gall us like those of the East, because they have just aroused to a sense of their true condition. We ask him not to forget that we have begged him and the class he represents for years to listen to the distressed complaints. Not of the men, women, and children who have their money locked up in savings banks, but to the men and women who have their money locked up in the soil of this fair land, and have only been able to get it out by turning the greater part over to the money power through unjust laws. I repeat we have begged you for relief for years, but you would not, and having sown the wind you must now reap the whirlwind.

Allow me to remind the gentleman, further, that I am not an eleventh-hour convert to this truly miserable situation, but have insisted for years from stump and rostrum that, under existing conditions, this crisis was inevitable, and implored the people to arouse and shake off the shackles that were daily becoming more firmly riveted about them, while the gentleman, and his kind, continued placidly to clip coupons, rake in interest, and heap curses upon the miserable cranks who dared to tell the people the truth. In the face of these facts the gentleman asks for what—that we help him set these bound, toiling millions free? No! but in their name, in the guise of freedom, he asks us to help clinch the last rivet in the chain of industrial slavery that binds them, and when once clinched no power on earth can unclasp.

Continuing, he adds, that all the banks there have pooled their choicest assets and securities; that this great congeries of banks is holding up the financial system of this country by the neck; that if we do not take the burden and strain off from them they may fall, and when they fall the whole country will fall.

This is certainly a remarkable admission upon the part of the moneyed men of the East, that the calamity cranks have been right all the time when they stated that the welfare of the people of this

country was held in the grip of a few money-mongers of the East, and I am glad we have at last an admission of this truth from that side. This statement is accompanied by the implied threat that if we do not concede to their demands the country will be ruined. This threat reminds one of the relation of the banks toward the credit-strengthening act, and is given in the words of that eminent statesman, Thad. Stevens, as follows, in speaking of the insatiate demands of the money bond interest:

We were foolish enough to grant them gold interest, and now they unblushingly demand further advantages; the truth is, we can never satisfy their appetite for money.

And on his deathbed, said:

Yes, we had to yield. The Senate was stubborn. We did not, however, until we found the country must be lost or the bankers gratified. And we have sought to save the country in spite of the cupidity of its wealthier citizens.

The attitude of these gentlemen to-day is the same. Their appetite for money can never be satisfied, and if the country is saved it must be saved in spite of them. As further evidence that the calamity howlers have not indulged wholly in wild visions, I quote from the New York Tribune, of issue some time during the agitation relative to that infamous measure called "resumption," whose editor was the late lamented candidate for Vice-President on the Republican ticket. Under the management of this gentleman we find the following language:

The time is near when they (the banks) will feel compelled to act strongly. Meanwhile a very good thing has been done. The machinery is now furnished by which, in any emergency, the financial corporations of the East can act together on a single day's notice with such power that no act of Congress can overcome or resist their decision.

How well this language fits the remarks of the gentleman from New York and proves the money power still combined to rule the country with a rod of iron! Stevens said they had to submit, but would it not have been infinitely better to-day if they had not compromised, but fought it out to the bitter end, and when settled have settled it right. What loss and suffering it would have saved!

We are confronted with the same proposition to-day, and I appeal to every patriot in this House, Shall we repeat the criminal folly of years ago, stultify our sense of right, smother our conscience, and submit to a dose of soothing sirup that will only retard the evil day for a time, when it will return with tenfold force, conveying with it all the accumulated evils of years, not only to be visited upon this generation, but upon generations yet unborn.

The gentleman from New York says all of the people are asking for the repeal of the Sherman law. The recklessness of this statement can only be excused on the ground that he is a new member. If he had stated that the majority of those asking such repeal were members of boards of trade, mortgage holders, bankers, and trust companies, he would have stated a fact. Why, sir, there is scarcely a mail but I get one or more petitions insisting on my standing by that law till we get free coinage 16 to 1. The masses of the people want free coinage; they want a greater volume of money, and if I mistake not the signs of the times they will have it in the near future if they have to crush the life out of both old parties to get it.

Whitelaw Reid said, as already quoted, the financial corporations of the East can act together on a single day's notice with such power that no act of Congress can overcome or resist their action. The gentleman from New York said, on the 12th instant, that all the banks of New York have pooled their choicest assets and securities; that they are holding the financial system of the country by the neck, and if we do not concede to their demands the country is ruined. Can there longer be any doubt that the money power has its grip on the industries of our land and do not propose to relax it till they have squeezed out the last penny?

After the repeal of the Sherman act, then what? In my opinion, Mr. Speaker, there can be but one inevitable result—the issue of more national bonds, upon which a greater volume of bank notes will be put in circulation. That this is the real object of those who have controlled the volume of the currency since the destruction of the greenback, I have no doubt whatever. The efforts by these gentlemen to get permission to issue to the par value of their bonds that have been made in this House in the last two sessions, and which they are yet urging throughout the country, prove their desire to contract or expand the currency at will is just as strong to-day as it was when the following famous national bankers' circular was issued from Broadway, New York, in 1865, which reads as follows:

NATIONAL BANKERS' CIRCULAR.

DEAR SIR: It is advisable to do all in your power to sustain such daily and prominent weekly newspapers, especially the *agricultural* and *religious* press, as will oppose the issuing of greenback paper money, and that you withhold patronage or favors from all applicants who are not willing to oppose the Government issue of money. Let the Government issue the coin and the banks issue the paper money of the country, for then we can better protect each other. To repeal the law creating national banks, or to restore to circulation the Government issue of money, will be to provide the people with money, and will therefore seriously affect your individual profits as banker and lender. See your member of Congress at once, and engage him to support our interest, that we may control legislation.

(Signed by the secretary.) JAS. BUELL,
No. 147 Broadway (Room 4), New York.

They wanted the greenback destroyed then to make room for their notes, and they want silver destroyed now for the same reason, which will enable them to draw more interest on what they owe. They know full well that under ordinary conditions it would be impossible to get any such infamous schemes through, but hope by a repeal of the Sherman law to cause such a desperate state of affairs, that the people in their agony will submit in order to get some temporary relief.

Shall we submit? No; a thousand times no; though the situation becomes a hundred fold more desperate than it is, we should let these fellows know the time has come when they must cease drawing interest on their debts by exercising functions belonging wholly to the Government, in issuing money to the people, which they can expand or contract at will as the opportunity for gain arises; a system under which we have suffered so much in the past, as is shown by the following brief summary, ought to be abolished at once and ever after given a wide berth. The summary is as follows:

On the 12th day of April, 1866, Congress passed a law authorizing the Secretary of the Treasury to sell 5-20 bonds, and with the proceeds *retire United States currency, including greenbacks.*

On December 4, 1866, E. G. Spalding, a Buffalo, N. Y., banker, a member of Congress, wrote to Secretary McCulloch as follows:

You no doubt now, to a certain extent, *have control of the currency of the country*, and I think that you will, of necessity, *contract moderately*, so as to preserve a *tolerable easy money market*. There may be *occasional spasms or tightness* for money, but generally I shall look for plenty of money *for at least one year to come*.

When this letter was written the country was in possession of $1,996,687,770 currency.

During this year there were but 520 business failures in the whole country, involving a loss of but $17,625,000.

Labor was well paid and fully employed.

1867.

This year the work of contraction was vigorously pushed, and there were 2,386 failures, with a total loss of $86,218,000.

1868.

During this year $473,000,000 of money was destroyed and failures increased to 2,608, with a loss to creditors of $63,774,000. Money began to be tight, and financial "spasms" were frequent.

1869.

During this year over $500,000,000 of money passed into the cremation furnace, producing 2,790 business failures and a loss of $75,054,900. Money growing tighter and wages lower.

1870.

This year $67,000,000 of money was destroyed and 3,551 failures took place, involving a loss of $88,242,000. Money very scarce and wages of labor were reduced all over the country.

1871.

Thirty-five millions of money this year is retired, with 2,915 failures and a loss of $85,250,000. More men out of work and wages cut down.

1872.

Only about $12,000,000 was destroyed this year, but such had been the strain upon the business of the country for the past five years that this proved the last straw to 4,069 business firms, involving a loss of $121,056,000. More cutting of wages and strikes talked of.

1873.

This year the storm reached its climax. Business had hoped that, with every returning season, prospects would brighten and money would become plenty. Instead of this, however, notwithstanding but $1,609,000 were destroyed, the people became panic stricken, and 5,183 business firms were precipitated, with a loss of $228,499,000. Five hundred thousand men are thrown out of employment; wages cut down all over the country, and strikes are of frequent occurrence.

1874.

Notwithstanding the terrible results of the last year, the wine press of contraction still creaks on its hinges of death, as round and round it sweeps out of circulation $75,484,000 certificates of indebtedness, which have been made legal-tender money, $85,760,000 Treasury notes, $6,335,045 legal tenders, $3,000,000 fractional currency, and $1,000,000 bank-notes, producing 5,832 failures and a loss of $155,239,000 to creditors. A million idle men began to tramp in search of work. Wages still decline and strikes more numerous.

1875.

The volume of currency this year was contracted $40,817,418 and the failures reach 7,740, with loss to creditors of $201,060,000. Two millions of laborers out of work. Famine and hunger begin to stare them in the face and "tramping" becomes a profession.

1876.

According to the most reliable estimates, the contraction of the currency this year, in the destruction of greenbacks and the withdrawal of bank currency, amounts to about $85,000,000, with 9,092 failures and $191,000,000 loss, *during the first quarter of the year.* The aggregate failures for the year reached over 10,000, with losses not less than $300,000,000. This does not include losses to stockholders by foreclosure and sale of railroads.

What a record for ten years! Who wonders times were hard, and men idle? Still, with all this array of wreck and ruin, with the finger board of contraction at the close of each year pointing to the cause, the people were asleep, or on their knees praying for some interposition of Providence in their behalf.

Three million men are out of employment.

Bankruptcies multiplying with great rapidity.

The tramp nuisance culminates.

Wages are cut down to starvation prices.

Strikes, riots, and general consternation seize the people, and the circulation is cut down to $666,000,000.

1877.

The red torch of the vandal lighted up the country from Pittsburg to Chicago. These are the footprints of the red-mouthed despot, the money power, which is still forging chains for the limbs of American industry, with a view to enslaving the American populace by robbing them of their homes and firesides, and thus controlling their life, liberty, and pursuits of happiness by controlling their wages through the control and monopoly of money.

These are God's truths which the people can heed and be saved, or heed not and the Republic be lost.

This terrible but true state of affairs which is yet fresh in the memory of every middle-aged man, was only stayed by the demands of the people, who at last became aroused and insisted that the destruction of the greenbacks cease, and the only thing that saved to

us $346,000,000 of them was this demand from the common people, that stayed the hand of destruction, and of which Mr. Blaine says in his Twenty Years of Congress, page 328, volume 2, in the close of his remarks relative to the effects of contraction, as follows: "The effect nevertheless was serious and lasting. In the end, outside of banking and financial centers, there was a strong and persistent demand for the repeal of the resumption act," and outside of these centers to-day there is just as strong demand for the free coinage of silver.

I have received letters from bankers in my district asking that I work for a measure, allowing national banks to issue to full amount of bonds, and urging as a reason that it would put more money in circulation and at once give the relief so much needed, one of them estimating that such an act would increase the circulation $200,000 in my district alone. I doubt not this is true, but I ask these gentlemen how I can vote for such a measure without stultifiying myself and eating my own words, and I can only account for their request at this time upon the theory that the very desperateness of the situation will compel me to submit. If this be true, let me say they are doomed to disappointment, for I have not spent years denouncing this false system and insisting on the right and duty of the Government to issue all money and control the volume thereof, to surrender now, the first time the real enemy is met face to face, though the situation is dire indeed and the people crying aloud for relief. My people are as great sufferers as any in the land, and will hail with as great delight as any relief when it comes, but if I mistake not their temperament they insist that it shall not come through the hand of a national banker that holds their rights and their liberties by holding their money, and compelling them to pay two interests thereon before they can supply the necessities of life or satisfy the mortgage upon which more interest must be met. The time has surely come when this Government should cease to get behind corporations, whether they be ship-builders, bankers, or what, and take the people's money to pay them premiums for furnishing supplies they ought to have at cost. Behind a national banking corporation stands the Government not only lending its power and influence in backing up its business, but pays it an interest on its capital stock, and then allows it to take another interest from the people on the same capital, while private individuals pocket all the profits.

I will never lend voice or vote directly or indirectly, to the perpetuation of such a system. We can only get justice after a long, bitter struggle, and I believe my people will sustain me when I say this is the accepted time to carry the war into Africa and fight it out along this line if it takes many summers.

As evidence of the truth of the foregoing statement as being the true object in demonetizing silver and what the gold power really desire, I here quote in full the following letter received from New York a few days since, which tells its own story in more eloquent language than I could hope to, the mask is torn off and it stands before us in all its hideous nakedness:

DEAR SIR: The present financial situation requires the following action by Congress, which should be favored by all interests, to wit:

(1) Pass a resolution repealing purchase clauses of Sherman silver bill.

(2) Pass a bill authorizing the issue of $300,000,000 of United States 3 per cent bonds, payable in gold, directing United States Treasurer to sell $100,000,000 immediately in Europe, with stipulation that none of them should be resold within the United States; the Treasurer to take this $100,000,000 of gold and issue $100,000,000 of gold certificates against it, and deposit them in the different national banks of the United States pro rata to their capital and circulation, upon adequate security being given to the Government securing such deposits; such deposits to be preferred liens upon all assets of each bank, etc.

It should also direct the Treasurer to sell $100,000,000 of such bonds immediately in Europe under similar conditions, the money to be placed in the United States Treasury or left on deposit in London, Paris, and Berlin, for use by the Government in paying deficiencies between the Government's receipts and expenditures, and drawn as needed.

The remaining $100,000,000 should be held subject to sale whenever the necessities of the Government or the financial interests of the country demand it.

Bringing $200,000,000 of gold to this country, in addition to the balances of trade in our favor, would immediately establish confidence in our financial strength.

(3) Pass a resolution calling an international conference to establish an international agreement as to the use of silver as currency, to be held within twenty days after the passage of such resolution. Twenty days' notice by cable is amply sufficient to allow time for every Government to appoint men who understand the subject thoroughly, and have them meet at some convenient place.

The delegates representing the United States should be selected by Congress and named in the resolution, two of them to be Senators from the silver States and two of them equally representative of the other side of the question.

(4) Pass the act increasing national-bank circulation to par of deposited bonds.

The above legislation would immediately inspire confidence here and abroad in American finances and start again the wheels of business, now helplessly clogged.

For the future the following action should be taken:

(5) Pass a resolution appointing a committee, to consist of five New York bankers of the highest standing and one each from Boston, Philadelphia, Chicago, St. Louis, Cincinnati, Nashville, Atlanta, Savannah, New Orleans, Galveston, San Francisco, Denver, St. Paul, Detroit, Buffalo, and Pittsburg, this committee to immediately meet, consider, and report to an adjourned session of Congress a bill incorporating a United States national bank, founded on the same lines as the National Bank of England and the National Bank of France, to be entirely divorced and free from politics; and it being expressly stipulated that one-half of the committee shall be selected from Republican bankers and one half from Democratic bankers.

A national bank is absolutely necessary for the future financial safety of the country. Under present conditions there is no elasticity to our currency.

Five per cent of our financial business is done with cash, 95 per cent with credit.

To-day credit is largely destroyed, which leaves us trying to do more than one-half of the business of the country on the insignificant 5 per cent cash, and a considerable proportion of this cash hoarded and taken out of circulation.

To meet emergencies like this, we should have a national bank, having power to make almost an unlimited issue of currency, with the same power and self-interest, when confidence returns, to take and return all this specially issued currency, and retire it.

The Bank of England and the Bank of France have power to issue millions upon millions of additional currency whenever necessary to protect and conduct the finances of the country, and they exercise this power, and therefore such extreme panics as ours are unknown in those countries. When the crisis is over, this extra currency is retired.

There is no question as to the safety of this power; it has been exercised by these great banks in these two countries for generations, and has been their financial salvation, and we can have no permanent financial safety in the United States until we create a similar national bank or else make the United States Treasury a bank and authorize and direct that in times of panic and destruction of credit the Government shall issue currency to an extent necessary to meet the emergency, and deposit it in the national banks of the country. Of the two measures, it is certainly preferable to have a great national bank, founded on almost exactly the lines of the Bank of England, thus taking financial questions and management entirely out of the influence of politics, because the Government of the great National Bank of England is entirely in the hands of the greatest business men of the country, who have no interest whatever in politics, except as citizens.

Yours truly,

WM. R. CONWAY.

Mr. HENDRIX says, in effect, "Repeal the Sherman law, go home, and all is peace."

Let me say in the spirit of Patrick Henry, "Gentlemen may cry peace, but there is no peace," neither can there be, till this financial question is settled, and settled right. For others I can not speak, but for myself, live or die, sink or swim, survive or perish, I am for free coinage, 16 to 1, and am willing to stay here till it is secured or my term in Congress expires.

He would have us believe that we have drifted to a gold standard by the process of natural evolution or the decree of God, by saying "The evolutionary processes of the world are against you, gentlemen." If this be true, then we can but bow to the inevitable. But I am not willing to bow till I have more proof of its truth than has yet been offered. The facts as I have been able to learn them compel me to change the gentleman's quotation to read thus: "The *revolutionary acts of legislation* have been against us and that alone has brought us to a gold basis." In proof of this, allow me to cite his own words, as follows:

Among the nations of the earth it [gold] has always had silver as a contestant and they have traveled side by side * * * In a policy which was entered upon the English statute books in 1816 gold was adopted as the single standard of value.

Thus we see by his own words that silver, till stricken down by the heavy hand of the law, traveled side by side on a perfect equality with gold, and it will take its place there to-day the moment you loose it from its legal shackles.

Notice this process of destruction the gentleman is pleased to call evolution. How, after England, through her conquests on land and sea, became the creditor nation. She adopted the gold standard, followed later on by the other powers, already cited by the gentleman. I ask if these changes each time were not the result of law, and instead of being the natural process of evolution were the arbitrary acts of legislation?

Let us reverse this so-called process of evolution and see what the result will be. Suppose England, in 1816, instead of demonetizing silver had demonetized gold and continued to legislate against it as they have silver, does the gentleman deny for a moment that gold to-day would be at a discount as measured by silver? Why, sir, silver with all this adverse legislation by foreign powers held its own with gold in America till the infamous act of 1873 that stabbed it in its own household, stricken down at the behest of old England by those who should have defended it with their life-blood where it has lain wounded ever since, surrounded by this same element that to-day are clamoring to finish their murderous work, that when done will not only have slain silver but will have left the mark of death on the door lintels of the home of every wealth producer in this fair land.

"I am an international bimetallist," exclaims Mr. Hendricks, and in the same breadth acknowledges he has no hope of obtaining it. This shows clearly that this scheme of international bimetallism is but to fool the people till silver can be destroyed, after which they will snap their fingers and tell us to help it if we can.

I am an American bimetallist who believes in this Government making her own laws, and particularly her own money, and sustaining it regardless of what any foreign power may do. When we surrender the right to any nation to dictate the kind of money we shall use, we have surrendered our liberties, and decay and death must ensue. Mr. Speaker, I have unbounded faith in the ability of this Government to maintain her own money system regardless of England, and, if she can't do this, she has no right to a place as an independent government, and had better surrender to the powers of Europe at once, and have them establish a protectorate.

But, says one, how about trade? Europe would not trade with us. How foolish! Do you suppose any foreign power would cease trading with us, even if there was not a grain of gold on the American continent? You had just as well talk of her people refusing to eat because they can't get gold. We have what the people of Europe must have, "silver or no silver." While Europe has nothing that we as a people can not do without, if necessary, and while I do not desire to be understood as discouraging commerce between the two countries, I do say that in a tug of war America could do much

better and longer without Europe than she without us, and in a contest of this kind America must win. Therefore let us rally once more around the flag of freedom, raise the battle cry of America for free silver, break the hold of the British bondholder, and go free.

I trust these words will not be tortured into the meaning that I am in favor of repudiating any American securities held by foreigners, for I am in favor of paying the last cent of our indebtedness, regardless of who may be the creditor, in the same kind of money in which it was contracted, but I protest against paying them in dollars containing 500 grains of silver when the contract calls for dollars containing but 412½ grains. Such a proposition is as infamous as the credit-strengthening act, which was a proposition to pay the bonds in a dearer money than the obligation called for, and of which Oliver P. Morton spoke as follows:

We should do foul injustice to the Government and to the people of the United States after we have sold these bonds, on an average of not more than 60 cents on the dollar, now to propose to make a new contract for the benefit of the bondholder.

And of which Ben. Wade, of Ohio, in a letter written at Washington, December 13, 1867, expressed himself as follows:

I am for the laboring portion of our people, the rich will take care of themselves. * * * We never agreed to pay the five-twenties in gold; no man can find it in the bond, and I will never consent to have one payment for the bondholder and another for the people. It would sink any party, and it ought to.

That prediction has come true, and the party that is guilty of further enhancing the value of our money for the benefit of the rich to the detriment of the poor, which is always the result of a continually appreciating dollar, for as it grows in value, the more wheat, pork, and days' labor does it take to get it; that party so guilty will sink beside the other in that long, long sleep that knows no waking.

The monometallist expresses great fear that under free coinage gold would all leave us, but fail to give a satisfactory reason for the same. I do not believe that silver has anything to do with it whatever, one way or the other, and I make the bold statement here and now, that there is nothing whatever to prevent England from taking gold from us at any time just as fast as our securities of different kinds, which are principally in the hands of European moneylenders and are payable in gold, come due, either principal or interest. This is borne out by the late report of the Treasury, showing that during the last fiscal year they took from us nearly one hundred millions of gold, with millions more in July, and, as is well known, they did it by returning to us our securities.

Suppose we completely destroy silver, as contemplated in the repeal of the Sherman act, and war was to arise between this country and England, is there any power on earth that could prevent her from returning our securities, taking our gold, and leave us prostrate and at her mercy?

Would it not be well in a case of this kind to have a few hundred millions of legal-tender dollars to meet the wants of our people, and it doesn't take a statesman to see that it would be infinitely better for us to dig the material to make these dollars out of our own hills rather than send our business men to England and borrow it, upon which the toiling millions must pay the interest.

The fact that gold is coming back to this country just now to some extent is being extravagantly commented upon by the metropolitan press, and rolled like a sweet morsel under the tongue of the cohorts of the money power, and they would have us believe it is an evidence of better times by telling us that as the surplus of our wheat goes abroad the gold comes back. For the money-loaner this is all right; for the money-earner it means ruin. And this argument that a balance of trade or surplus is a great advantage is a delusion and a snare, for all depends on the price we receive for it. If we dispose of our surplus at less than cost the more surplus we have the poorer we are. This we have been doing for years, and the much-boasted gold that is now coming is paid for with wheat that is leaving the hands of the farmers of my district now at 34 cents per bushel; then, when got at such terrible cost, it must be returned to England in due time to pay interest on American securities held by her for borrowed money, to be in time again borrowed or bought; and, if silver be demonetized, bought with 20-cent wheat, which will ruin any people on earth. No, no; any considerable surplus at the prices we are receiving is ruinous, for we only get some gold and the loss, while England gets the wheat and the profits.

I am constrained to cry out, "How long, O Lord, how long" will the people remain passive and allow this to continue? How long will they continue to send men here that will concede to every demand of the money power, but when the farmer asks for relief in any way hides himself in his fancied superior wisdom and cries "unconstitutional."

Cleveland Democrats have stated upon this floor that the cause of the present distress was the tariff, and that finance had nothing to do with it.

I am sorry to see these gentlemen and their leader disagree so widely, as the following words of the message will show:

It was my purpose to summon Congress in special session early in the coming September, that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand, which so large a majority of the people, as shown by their suffrages, desire and expect, and to the accomplishment of which every effort of the present administration is pledged. But while tariff reform has lost nothing of its immediate and permanent importance and must in the near future engage the attention of Congress, it has seemed to me that the financial condition of the country should at once, and before all other subjects, be considered by your honorable body.

I would ask them if the trouble is in the tariff alone, why, in the name of suffering humanity, does your party not at once, without a moment's delay, proceed to tinker it up and allay the agonizing fears that have paralyzed business?

No, no; the tariff won't wash just now, my brother; you will have to allow it to rest till we get more money. The people know it is a money famine that has brought this misery upon us, and let me say to the tariff reformer that, while I believe in the injustice of the present tariff, I also believe that in the past two months, as a result of contraction, more values have been destroyed than have resulted from the tariff from Adam down.

I desire here to refer briefly to the proposed change of ratio of the two dollars by increasing the amount of silver in the silver dollar, and protest most earnestly against any compromise, by reminding you that it is compromise legislation that has brought this evil day upon us, and that while a compromise may be justifiable at times, compromise legislation upon principles of justice never settles anything, and never can. We had far better make this fight a little more severe—prolong the agony for a time—than listen to the seductive siren called "compromise," who lulls to sleep with the soothing argument that it is better to take a half loaf than none. Let us have no more makeshifts to rise up in the future and plague us. If we agree to an increase in ratio, that moment we acknowledge superiority of gold and grant the right to measure the silver dollar by that metal, and necessitate the recoinage of the present dollar to make it conform to the size and weight of the new dollar, which at a ratio of 20 to 1 would be four grains heavier than the present one, and would cost the people almost $113,000,000 and reduce actual circulation $98,733,700, to say nothing of the reduction of the amount of bullion hereafter mined.

In proof of this I now offer the recent letter of Secretary Carlisle to Senator Voorhees relative to the subject, which ought of itself alone to put forever to rest the proposition to increase the ratio:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 19.

DEAR SIR: Referring to our conversation relative to the probable cost incident to the change from the present coinage ratio between gold and silver (16 to 1) for the standard silver dollars and 1 to 14.95 for the subsidiary, you are respectfully informed that the silver dollars, coined since 1878 aggregate 419,332,450. Without any allowance for abrasion and loss incident to melting the same, the coin value of these dollars at a ratio of 1 to 20 would be $333,222,166, or $84,110,228 less than their present face value.

To coin these dollars at a ratio of 1 to 20 would require the addition of 81,376,070 ounces of new bullion, which, at the average price paid for silver under the act of July 14, 1890, $0.9325, would cost $75,885,700.

In addition to this I estimate that there would be a loss of the abrasion and in the melting of these dollars of at least $3,000,000, which amounts, altogether, with the difference in the face value of the coins ($84,110,288), would have to be reimbursed to the Treasury by an appropriation for that purpose. From the fact that the silver dollars are distributed throughout the country, it would be necessary, as they are redeemed at the several subtreasuries, to transport them to the mints, and the expense of transportation for $300,000,000, the amount outside of the stock on hand at the subtreasuries and mints at Philadelphia, San Francisco, and New Orleans, would average at least 1½ per cent, or $4,500,000.

COST OF RECOINING.

I therefore estimate the cost of recoining the silver dollars already coined as follows:

New bullion to be added	$75,883,700
Loss by abrasion and melting	3,000,000
Cost of coinage (labor, material, etc.)	6,290,000
Copper for alloy	68,200
Transportation of dollars to mints	4,500,000
Total	89,741,900

The stock of subsidiary silver coin in the country is estimated at $77,000,000, which at full weight would contain 55,699,875 ounces of fine silver. This amount at a ratio of 1 to 20 would coin $55,843,802, or $21,156,197 less than the present face value. To recoin $77,000,000 of subsidiary silver into an equal amount of fractional coin at a ratio of 1 to 20 would require the addition of 18,797,625 fine ounces, which, at $0.9325 per ounce, the average price paid for silver under the act of July 14, 1890, would cost $17,528,785. There would be a loss of about 2½ per cent by abrasion from the face value, or about $1,925,000.

I would, therefore, estimate the cost of recoining the subsidiary silver in the country, at a ratio of 1 to 20, as follows:

New bullion	$17,528,785
Loss by abrasion	1,925,000
Cost of coinage (labor, material, etc.)	2,500,000
Copper for alloy	15,653
Cost of transportation	1,155,000
Total	23,124,438

Estimated cost of recoining:	
Silver dollars	$89,741,900
Subsidiary silver	23,114,421
Total	112,866,321

Very respectfully,

J. G. CARLISLE, *Secretary.*

But there are other reasons just as weighty, and as a matter of principle more so, for we also concede the superiority of the commercial value over the money value, or rather ignore the money value entirely and base the value of the dollar on the market value of the material out of which it is made, a position I am sure no Populist, at least, can afford to take. We also sustain the dollar that is daily becoming more valuable and harder to get by those who toil for them, and increases every bushel of grain, pound of

beef and pork, makes every mortgage harder to pay, and adds to every debt, the truth of which is so well illustrated by a letter just received from the Bowhay Investment Company, of Denver, I herein quote it in full:

THE BOWHAY INVESTMENT COMPANY,
Denver, Colo., August 14, 1893.

MY DEAR SIR: The question to be decided in your mind is this: "In the event of free coinage what ratio would be most acceptable to my constituents and the country at large?" If we change the present legal ratio of silver to gold, which is 16 to 1, and make that ratio more favorable to the purchasing power of British gold, how much more cotton and wheat would our cotton growers and farmers have to give for 1 ounce of gold? Granted that we had free coinage of silver to-day at 16 to 1, 1 ounce of gold would buy 16 ounces of silver, or $20.67 worth of wheat or cotton.

At 17 to 1, 1 ounce of gold would buy 17 ounces of silver, and as England buys her wheat and cotton in silver-using countries, notably India, with silver, she is thus enabled to buy one-sixteenth more wheat and cotton with 1 ounce of gold, or, in other words, that $20.67 in gold buys one-sixteenth more of wheat and cotton.

At the ratio of 18 to 1, England buys two-sixteenths more wheat and cotton with 1 ounce of gold bullion or coin.

At 20 to 1, England buys four-sixteenths or 25 per cent more wheat and cotton in India and other silver-using countries, with 1 ounce of gold bullion or coin. So that we must produce 25 per cent more of wheat and cotton to get the same amount of gold. Although that standard ounce of gold is worth $20.67, the instant we change or lessen the purchasing power of silver that ounce of gold will buy one-sixteenth more of wheat and cotton for every one part you increase the ratio against silver in silver-using countries. At 20 to 1, England can take 1 ounce of gold and buy 20 ounces of silver; this ounce of gold in the shape of 20 ounces of silver takes to a silver using country, such as India, will buy 4 more ounces of silver's worth of wheat or cotton.

Thus, you see, gold is appreciated in purchasing power 25 per cent. and so we must raise 25 per cent more wheat and cotton to compete for that ounce of gold. Tell this to the wheat and cotton growers. What will they say about ratio? The difference in the ratio of 16 to 1, and 20 to 1, enables England to produce her manufactured goods 25 per cent cheaper at 20 to 1, because her raw material costs her 25 per cent less in India and other silver-using countries, and she can feed her factory hands 25 per cent cheaper. Yet we legislate for England's benefit against the interests of our own producers and manufacturers.

Very sincerely, yours,

ARNOLD A. BOWHAY.

Hon. DANIEL W. VOORHEES,
United States Senate.

You will observe that this company is one of the few not in league with the gold power of the East.

Mr. HARTER, of Ohio, made a statement the other day in his remarks that would be startling if it was not so wide of the truth that it can be detected at a glance, but needs, I think, a passing notice, viz, that we have now $1,000 per capita in circulation.

I desire to call the attention of the gentleman to the last monthly report of the Treasury Department, which gives less than $25 as in circulation of all the moneys of all kinds that have ever issued from the mints and Treasury of the United States, and much of this has been lost by accident and destroyed by abrasion. It is estimated that of the $346,000,000 of greenbacks alone issued twenty-five or thirty years ago $160,000,000 have been lost by fire and other agencies; all of these losses must be deducted from the whole amount, and that remaining is the true amount in circulation, which would be very much less than $25. The last Census report fixes the total wealth of the country, including all kinds of property, at but $1,000 per capita, which alone proves the absurdity of his statement.

I would suggest to the gentleman that in his future estimates he had better not count clearing-house receipts, notes-of-hand bank credits, and other evidences of debts as money, for he may learn to his sorrow that these are not money but something which will demand money in the end, and any increased issue of these increases the demand for more money. The following clipping from the Washington Post of the 20th instant illustrates this point clearly:

BILLS TO RELIEVE THE CURRENCY FAMINE.

[Special to the Post.]

CHATTANOOGA, TENN., *August 19.*

The currency famine was relieved to-day by the issuance of bills due four months from date, secured by double the amount in collateral, and issued in bills of $5, $10, $20, and $50.

Nearly every bank in the city announces that it will receive them in payment of any obligations.

Mr. HARTER, we presume, would add this to the amount of money in circulation, when it is simply a demand for money not in circulation, and so long as this system of faith and credit exists, based on what little gold we can borrow from England by paying more for it than anyone else will pay, so long will these periodical spasms of distress and misery continue to occur as it is upon us to-day. Then let us cease this faith-cure manner of doing business. It has been tried since the history of man and has caused more misery to the human race than war, famine, flood, and pestilence.

If I were permitted, Mr. Speaker, to prescribe a remedy for these evils, I would cease to depend on Great Britain for a money supply, by opening our mints to the coinage of silver on an equality with gold, which would restore to thousands of men the sacred right to earn an honest living, of which they have been deprived by law. This would give us an additional supply of money, unaccompanied by the curse of interest, and be the first step toward that radical change in the financial system of our country that must come, as stated by the gentleman [Mr. HENDERSON, of Iowa] in his remarks on this floor but a short time since, before any permanent relief can be had.

I would then stop the gathering of Federal taxes and issue legal-tender Treasury notes to pay current expenses of the Government, and so continue till there was in active circulation $50 per capita of actual money. Then I would, as fast as the charters of each of the present so-called national banks expired, establish in its stead a bank which should be national in fact as well as name; a system behind every bank of which would be the wealth of the whole Nation; the profits of which would go to the whole people, give ample protection to the depositor, secure to the people the right to control the volume of their own money, under which contraction could not occur; a system that would endure as long as the Government endures, and under which these miserable times could not return.

I have partially drafted a bill to put the above system in practical operation and at some future time hope to be able to present it to this House for consideration, at which time I shall discuss its merits more fully. In conclusion, let me say the time has come when we should redeclare that these States are of rights and ought to be free and independent of the money power of Great Britain, and firmly stand by home rule for America. [Applause.]

Mr. MURRAY. Mr. Speaker, the speeches on this floor remind me of the custom among persons of the Methodist persuasion, when called upon in experience meeting to give expression to the reasons upon which their faith is predicated.

As my first important vote in this House will be on the pending bill, I deem it necessary to give expression to the reasons impelling me to cast it as I shall.

The casual observer very readily perceives that upon the settlement of the pending question the American people are divided into three distinct and somewhat antagonistic elements.

Upon its settlement the miner, producer, and laborer are becoming no less interested than the merchant prince and millionaire.

The first class is composed of capitalists, bankers, and commercial men, who own and control nearly all the currency, and are desirous of making and keeping it dear by keeping its volume as small as possible.

The second class is composed of those who own the silver mines and all the uncoined bullion not in possession of the Government, and are using all their power to establish free coinage, I fear, mainly to enhance the value of their possessions.

The third class is composed of the toiling and producing millions, who are neither gold bugs nor silver bugs, and who realize so little from their labor and investments that each year finds them less able to meet the obligations of the former, in consequence of which they are forced to sink deeper and deeper under threatening billows of mortgages and debts, beneath which many of the giant ships of their fellows, bringing the bread and necessaries of life from the shores of nothingness, have sunk to rise no more, leaving their overburdened barks in raging seas of debts. It is in favor of a change in our monetary policy, but not such a one as has been suggested by the advocates of the gold standard.

To the last-named class nearly all of my constituents, and the whole race of which I am the sole representative, belong.

In two respects I represent the largest constituency of any member of this House, a district of two hundred and seventy thousand, and a race of nearly eight million. [Applause.]

Speaking for them I do not believe that the great evils with which they are afflicted are owing to the operations of the so-called Sherman law.

They had been hurtfully feeling the mailed hand of the unrighteous financial policy of their country long before the silver-purchasing bill of 1890 became a law.

They believe and know that the primary cause of the direful disease which has been making paupers of them and their children for more than a dozen years lies deeper than the recent superficial, and in some respects, designing unrest in money circles.

They trace it to a contraction of the circulating medium which, like a viper with its victim in its coils, has been drawing its cords tighter and tighter around their prosperity, until it is dead. I am of the opinion that the only sure and permanent remedy is a lengthening of the cords, an enlargement of the volume of money.

Unlike the other classes, my constituents combine patriotism with self-interest.

They want the volume of money increased by the use of those substances in which their Government would have the greatest security.

While they want and must have more and cheaper money, they demand that it be made of such substances as have the greatest intrinsic value, and as the supply of gold is inadequate and growing less, are in favor of making up the deficiency with silver, and to that extent favor free coinage and bimetallism, and no one, in the course of this debate, has even pretended to prove that there is more than a sufficiency of both gold and silver obtainable to supply the monetary use of the world.

I submit that the true measure of the superabundance or insufficiency of the circulating medium is the price of labor and productions of one period compared with those of another.

For example, let us compare the war period, when circumstances forced a superabundance of money into circulation, in consequence of which the price of labor and productions rose on the Federal side from two to three, and on the Confederate side from thirty to forty times their nominal price with the present period, in which contraction, causing an insufficiency of money, has forced down the price of productions and labor to such an extent that one dollar is buying from two to three times as much of them as it should.

We want neither of these extremes, but a mean ratio between them, in which neither products and labor on the one hand nor money on the other would have the advantage.

I believe that their condition would be vastly improved by the remonetization of silver and the use of that substance in which the Government would be secured with liabilities which could be sold in the markets of the world for 60 per cent of their nominal value, even at the present suppressed price of silver bullion.

The negro, as patriotic and devoted as when dying on the plains of Boston, bleeding on Bunker Hill, or suffering the horrors of war through cold and heat, in hunger and nakedness, amidst northern snows or the malarial swamps of the South, under the lead of Marion, Sumter, and Washington, or repelling the formidable army of Lord Packenham, under the lead of the gallant and indomitable Jackson, in the war of 1812, or turning the tide of war in favor of the Stars and Stripes, under the commands of Butler, Hunter, Shaw, Logan, Hancock, and Grant, in the civil war, in such a way as caused each star to assume such brilliancy and each stripe such strength as to daze the eyes and successfully resist the great battering rams of the Confederacy, is in favor of the remonetization of silver as a means of increasing the circulating medium, because it would tend to make America the happy home of all Americans. [Applause.]

I feel proud of being able to say that history does not reveal the fact where a black hand was ever voluntarily raised to strike down the flag of its country, nor is the vote of the black man ever knowingly cast against its interest. [Applause.]

Notwithstanding the ill treatment received at the hands of his countrymen, he is always found voting and shooting for America and Americans, and on this currency question he is in favor of an American, instead of an English, German, French, or Belgian policy.

Mr. Speaker, I am especially in favor of silver, because it so fittingly illustrates the condition of the colored Americans.

Driven out of competition with gold in paying custom dues and the principal and interest on the bonded debt, which it so largely aided in making, and is not even allowed to redeem its creature, the silver certificate, there are those who ask why, does it not stand up on terms of equality in the marts of trade with gold?

It is dishonest to ask, or expect, a slave to compete on terms of equality with a free man.

I remember seeing, in my peregrinations through my native State, placarded in many nooks and corners, "White is king," which I was inclined to believe. [Laughter.]

But in the case of gold and silver it seems that that doctrine has been exploded.

The little, yellow, gold man, so small and circumscribed, has, by special training and baneful education in later years, become so strong and malevolent that he is spitefully driving this large, useful, humane, and philanthropic white man (silver) from nearly every place of honor, usefulness, and amusement. [Laughter.]

Every lover of fair play and justice, every sympathizer with the toiling millions in adversity and demoralization resulting from the lost and patronizing care of their best and ever present friend, silver, is called upon to assist in restoring his ancient power and glory, that he in turn might bring prosperity and happiness to the homes of the poor as well as those of the rich.

As I am placed in a similar position, common misery makes us one, and impels me to come to the rescue of and to use all my power to defend this white man, who has ever been the friend of the poor, white or black, the world over.

I sincerely trust that the lovers of the white metal will hereafter have more sympathy, even for human beings when suffering and dying under the fell blows of hateful prejudice and discrimination.

Each member of society, finding his wants so varied and many, and without the power, machinery, skill, or climate to supply them all, is forced to the necessity of producing enough of that substance which nature and education have enabled him to produce at least cost to himself, to supply his own wants of it and sufficient to spare for barter with others to furnish him all the necessaries of life; but as those with whom he would exchange are distant and inconvenient to reach, he needs an abundant medium of exchange that will not only measure the value of his products, when compared with the products of those with whom he would exchange, but will ever honestly measure itself when compared with the value of the products for which it is mediating.

I deny that the American people have such a medium of exchange to-day, and contend that any other is dishonorable to a great nation, and tends to rob its principals at both ends.

We are prepared to prove that such is the character of our present circulating medium.

Is the gold dollar of to-day an honest dollar?

The suffering and deplorable condition of all labor and productions, outside of manufacturing industries, answers no.

Our prostrate silver mines in anger and woe answer, no.

The one who buys another's products at the lowest price possible, and while in transit to other sections, where he would exchange them for other products, destroys their value and takes them at his own price by murdering his competitors, is a scoundrel, that should be hung to the first limb; and yet this is the character of this so much honored gold dollar.

In competition with silver, which forced the market down, he bought up millions of national and local bonds, and mortgages covering the railroads and homes of the people some dozen or more years since, and now when the time has arrived for another exchange he is making the final attempt to murder his competitor, the silver dollar, in order to be taken at the boastful and bloated estimate that he puts upon himself; and honorable Senators and Congressmen stand within the legislative halls of the greatest nation on earth and aid and abet him in the performance of his dastard deed.

I heard a gentleman say, in the course of his remarks on this floor the other day, that the only class affected by the appreciation of gold is that having long contracts.

It seems to me that his deductions will not hold good, for it is evident that when money appreciates to such an extent that $1 will purchase twice as much at a given time as it did at the time of its acquirement, the individual owning it is twice as rich at the latter period as he was when he came in possession of it.

Therefore when money appreciates to the extent of 50 per cent its owner is 50 per cent richer and every other class is 50 per cent poorer, because his property will buy 50 per cent more of the property of all other classes than at the time of acquirement, and theirs 50 per cent less of his.

Each of two citizens twenty years ago engaged in the same employment, acquired $10,000. One invested his money in bank stock, while the other invested his in real estate outside of some boomed town or city.

Now the one investing in bank stock has not only the accumulated interest of his money, but his property is worth, at the lowest estimate, 40 per cent more than that of his colaborer.

The one investing in real estate finds that $6,000 of his neighbor's bank stock will purchase all his ten thousand real estate property, notwithstanding that the property of the one cost as much sweat and blood as that of the other.

This is the great wrong of which there is so much complaint. The same amount of gold that was purchased with one day's labor, 1 pound of cotton, 1 bushel of wheat twenty years ago will buy from two to three times as much of the same commodities to-day.

Any system of finance that will add such an inflatedly dishonest value to the property of one man, at the destruction of the value of other men's property, should find no abiding place on this earth, and especially in the so-called land of the free and home of the brave.

If the organized labor of our manufacturing industries had been paid the same scale of wages as the scattered and disorganized labor of the farm, we would have had anarchy and revolution long since.

In 1866, the circulating medium, when the 7-30 notes, which ex-Treasurer, Gen. Spinner, says, was a part of the currency, are added, was $1,728,872,668—$80,839,010, the amount reserved in the Treasury, leaving $1,648,043,658, as the volume of circulation, which when divided by the population for that period 35,460,000, gives a per capita circulation of $46.40, and it is conceded on all sides that the period during and after the war was the most prosperous period ever known in this country.

While the volume of money of 1886 was $1,808,559,694—$555,-859,169 Treasury reserve, which leaves a balance of $1,252,700,-525 as the volume of circulation, which divided by 57,404,000, the population for the period, gives a per capita circulation of $21.82. But it seems to me that the reserve funds of our national banks are just as much out of circulation as those of the Treasury, and should not be any more regarded as a part of the dividend in finding the per capita circulation.

According to the statistical reports of 1886, the reserve fund in all the national banks, amounting to $225,055,019, which, when deducted from $1,252,700,525, the dividend used by Treasury

authorities, leaves a balance of $1,027,645,506 as a new dividend, and, divided by the population, gives us a per capita circulation of $17.88, instead of $21.82.

But when we consider the vast amount of money lost and destroyed and hoarded up by misers, which is as much out of circulation as that locked up in the Treasury, even the $17 per capita circulation is entirely too high an estimate.

I verily believe, Mr. Speaker, when everything is considered, that even $12 is a high estimate for the circulating medium per capita at present.

During a speech as far back as 1874 that gallant general and great statesman, Senator John A. Logan, who has gone to his grave wearing two honors, and whose memory is so dear to the men he led, as well as those he freed, said that "Contraction has gone on until the whole amount of currency of every kind now outstanding is only $742,000,000."

We can very readily perceive why we are forced to sell our products for less than cost when you came to us in 1886 with less than a billion dollars to do the business of our country, while it took at least one billion and four hundred millions of dollars in 1866.

You brought a billion dollars in 1886 to do the business of 57,000,000 people, when it took for 35,000,000 people some fourteen hundred millions in 1866.

In 1873, when we had a bimetallic standard and a silver dollar was worth as much as a gold dollar, an ounce of silver bringing $1.32, the average price of wheat was $1.31 per bushel and that of cotton 18.08 cents per pound; when now the gold dollar, through favored legislation and contraction, has appreciated some 40 per cent when compared with the silver dollar and every other species of property and productions, we are brought to the awful dilemma of a silver dollar worth 60 cents buying the same amount of cotton, corn, wheat, and every class of property, while gold buys the same as it did when silver was worth its face value anywhere in the world, thereby forcing us to take 7 cents for our cotton and 68 cents a bushel for wheat, subscribing in the use of productions to the silver standard and in the use of money to the gold standard.

The former is the standard of the producers; the latter that of money-lenders and speculators.

It seems that because a comparatively few bankers and large business concerns are failing, the metropolitan press having stirred and alarmed the nation, this Congress was speedily and gravely called into extraordinary session to furnish means of relief. Yet when we who have a patient and long-suffering constituency, which has been on bended knee for years begging for aid, enter objections to aiding gentlemen representing banking and moneyed constituencies, unless some measure is coupled with theirs to give relief to ours as well, notice intimations in a portion of the metropolitan press, which disclose a design to charge us with disloyalty, recreancy, and negligence.

If we seek no deeper than the immediate cause which brought about the present crisis, and provide only for its relief, we shall have given a dose of opiate to our country, the dying patient, in order that it may pass away without apparent pain, in a fit of stupor and resigned demoralization.

We shall have occupied the position of the foolish architect, who is extremely careless concerning his foundation, but takes alarm at the slightest leakage from the top.

Through an inequitable financial system, the foundation of this grandest of all republics is being consumed in a flame of debt, but we seem alarmed only at the falling in of the gilded top.

What should alarm us most is the decay and utter ruin of the million pillars, the producing and laboring masses, the hardy foundation upon which our gilded financial and commercial superstructures are erected.

More than half of the mortgages on the farms of our country is a true index of failures.

In making comparisons of the ratios of increase and decrease in the circulating medium, population, rates of interest, productions, and mortgages of one period and section of country with another, cold and lifeless figures grow eloquent in depicting the reasons for the sufferings of the masses at one time and in one locality when compared with their prosperity in another.

Yet, when the great masses, too busily engaged in winning the bread of life and beating back the great waves of mortgages and debts beneath which they are sinking from day to day, to study finance or monetary institutions in order to see their needs, and to understand in what way to demand protection to themselves through legislation, ask those in whom they have confided, and from whom they are expecting relief, what is the cause of such a state of affairs as has brought them to the very vortex of ruin, the answer is, almost uniformly, "overproduction."

What nonsense! What an unpatriotic and unstatesmanlike answer!

Instead of furnishing the country with sufficient currency to form an honest medium of exchange, to carry on its great, varied, and growing business, one class of doctors say raise less, when hardly a sufficiency is now raised to satisfy the demands of consumption; another class prescribes diversification of culture, which means, in a great measure, the raising of such crops as the soil is least adapted to, thereby entailing a loss on the diversifier and destruction of the market for the products of those whose soil, machinery, and experience best fit them to cultivate; and by still another, that money is not scarce, that there is abundance of it in England, Germany, and Belgium, seeking and longing for investment, and all that is necessary to secure it, is a restoration of confidence in the business world, and an exhibition of honesty and ability to pay at the expiration of the term of loans.

How unreasonable it is, while continually holding up the enormous amount of bonds and mortgages belonging to this country and citizens, in the hands of foreigners, to urge our citizens to place more bonds and mortgages with them by borrowing more of them; when even if a small portion of the principal and interest on those already placed were demanded, all the gold reserve in our national Treasury and national banks would be depleted, all that we have to construct a financial system upon, should we yield to the advocates of a gold standard.

Such a course is liable to lead to complications and war with foreign powers, for if ever the American people come to the conclusion that they are being ground to nothingness under the shrewd and skillful manipulations of a moneyed clique, a period of revolution and repudiation will speedily follow, in which our country, while in a state of chaos and anarchy, will be humiliatingly forced to conciliate, or fight some foreign power demanding the return of principal with interest of the loans of its citizens to our Government and citizens.

I believe in an American policy throughout our financial and economic legislation, and would take no note of the surplus foreign capital, even if their cities were walled in with it. [Applause].

But, Mr. Speaker, the following figures, taken from the census bulletins for 1890, grow pathetic and remorseful in exposing the fearful iniquity of the financial system which has brought so much suffering to the great mass of our countrymen, and is fast reducing them to paupers.

July 1, 1870, we had a population 38,588,371, and the circulating medium was $675,212,794, giving us a per capita of $17.50.

July 1, 1880, we had a population of 50,155,783, and a circulating medium of $973,382,228, giving us a per capita of $19.41.

Our population during that decade had increased 29.9 per cent, and if our circulating medium had increased in the proper proportional ratio, we ought to have had a per capita of $22.73 in 1880, whereas we had only $19.41.

Our population July 1, 1890, was 62,622,250, with a circulating medium of $1,429,251,270, giving us a per capita of $22.82.

Our population had increased 24.8 per cent from 1880 to 1890, and if our circulating medium had increased in the proper proportional ratio we ought to have had a per capita in 1890 of $24.22.

In 1870 our gold was regarded only as a commodity commanding a high price.

In 1880 we had $225,695,779 of gold in circulation, and in 1890, $374,258,923—a slight increase during the ten years; but we observe that from 1887 to 1890 the amount of gold coin in circulation steadily decreased while the general stock that was coined or issued increased. During the same period the amount in the Treasury increased.

DEBT AND MORTGAGES.

The census of 1890, in its investigation of ownership and debt, gives a clear idea of the burden that bears upon our farmers and upon the working class in general.

In its investigation of mortgage indebtedness it shows clearly the advantages that the East has over the South and the West in obtaining and retaining loans; and a comparison of the rates of interest paid by the borrowers discloses the fact that for the last ten years money has been scarce and dear.

Fifty-two and sixty-six one-hundredths per cent of all the families in South Carolina are farmer families, and 61 per cent of all these hire the farms that give them bread.

No State has yet been shown by the census statistics to have so high a percentage of tenancy as South Carolina.

Upon the farms of that State there are liens amounting to $3,363,679, which is more than 50 per cent of their value; and this great mortgage debt bears an average rate of interest of 8.57 per cent; and each owned and encumbered farm is subject to an average debt of $930.

I appeal to the grand old party, which has always stood for what is greatest and best in freedom and progress, which has labored for the freedom of my race and has been loud in its pro-

testations against its oppressors, to reflect before consigning us to the gold standard, for fear that in bearing us away from Sylla it may bear us upon Charybdis.

The only difference between the physical and financial masters is that our personality was the property of the former, while our labor and productions are the slave of the latter.

The one was among us, the other at a distance. The former fed and clothed us, because we represented so much property; the latter cares little for our welfare, because their interest is in our personal and real property.

Under certain conditions great real estate mortgages are signs of wealth, business, prosperity. This is the case in rich New England, in busy New York, and in the Eastern States generally. There interest is low and the life of mortgages are long. When this is the case, mortgages show wealth in a section.

This is not true of my own State, nor of the South in general; nor is it true of the great West. In those two sections rates of interest are high, and men clamor to foreclose their mortgages on the poor farmer at the end of one or two years. The real fact is that money, like human beings, will not seek distant company as long as its pleasure is satiated at home. Our census special investigation has shown that capitalists in New England and the East allow mortgages to run and live for six, seven, and eight years.

Why should I pay 8.57 per cent interest in South Carolina and have my property sold for debt in a year or in two years, while the citizen of Massachusetts can borrow at 5½ per cent and is given six years in which to pay?

If we turn to the State of Missouri, the great State represented by that gallant friend and champion of silver [Mr. BLAND], we find in the last ten years that the people have been paying on their mortgage debt seventy-two different rates of interest, varying from 1 per cent up to 80.

This interest is paid by the poor hard-working class. Now, why do I say this? The statistics show that 48 per cent of all the mortgages were for amounts of less than $500.

Only the poor man, the toiling farmer, wants these little amounts to improve his property and to keep his business going.

In Arkansas twenty-five different rates of interest are recorded, from 1 per cent up to 60 per cent. In Minnesota we find forty different rates, and there again we step from 1 per cent to 80 per cent. In Indiana we find forty-three different rates—from 1 per cent to 40 per cent.

Everything connected with our debt question shows that the South and West need more money.

If I compare the farmer families of Massachusetts and those of South Carolina, I find that only 4.80 per cent of those of Massachusetts have to pay a rate of interest greater than the State rate of 6 per cent.

In South Carolina I find that 39.65 per cent of farmer families must pay more than 8 per cent on the money that they borrow in order that they might live.

I have contrasted my own State with a rich Eastern State. What the South needs to-day is more money; there is coal beneath its surface, there is iron in the ribs of its mountains, and its fields can be made fertile and fruitful.

We need some remedy for the ills that are now upon us.

I do not speak alone for the South, to-day, but I plead for the half million idle men who are looking to us and begging to be allowed to dig in our mines, to plow our fields, to work in our shops and factories, and to have honest wages paid in honest dollars.

Standing before you to-day, the lone spokesman for my race, I hear voices which you do not hear, I see faces which you can not see.

I have visited the farmer in his cabin; have tilled the soil and followed the furrow side by side with the humblest; I have spoken and discussed with the business men, and the ruling class of my State. I see their wants and I feel their needs, and every fiber of my body vibrates in sympathy with the people—the common people. [Applause.]

They call to us to-day for help; call from the mines that close them out and deny them bread; call from the factories that have hushed their busy hum, but have not stilled the cry of the child for bread.

I shall be criticised for the stand which I have taken on this question, but as between the monopolist and the gold bugs on the one side and the common people on the other I stand with the people, feeling myself their creature and their servant and ready to do their bidding, especially while standing on one of the principal planks of my party in two national conventions, which indorsed the bimetallic standard and condemned the Democratic party for the attempted demonetization of silver.

I submit to gentlemen demanding the repeal of the purchasing clause of the silver-purchasing bill of 1890, as a means of relief to their constituency, unless some measure is coupled with it to bring relief to mine as well, whose business contraction has made a vast heap of ruin, I can never give it my approval.

Outside of manufacturing institutions the industrial classes everywhere are justly dissatisfied.

The very employment of bankers, usurers, and speculators gives them an insight into the workings of financial institutions, which supplies them with offensive and defensive weapons, used and ready for use at all times, when their interests demand protection, while that of all other classes is such that they have little opportunity to learn anything of their operations, except their baneful effects upon their lives and property.

Such is the case now, and while they do not understand the cause, they are beginning to attribute it to harmful legislation, for which they held the Republican party responsible last year; and if this Administration strikes down a protective tariff, and deny the laboring and producing millions better prices for their labor and products, through the medium of an enlarged currency, a political cyclone of such dimensions and power will sweep through the ranks of the Democratic party in 1896 that it will take a quarter of a century to get its broken and scattered fragments together.

But our opponents contend that free coinage will only benefit the owners of silver mines and silver bullion. It seems to me that that proposition is fallacious, inasmuch as the increase of money in any one section of a country lessens its use in another, and tends to make it more plentiful everywhere.

That system of finance that produces a small crop of millionaires and an abundant harvest of paupers, is antagonistic to every principle of the religion of God, and to every form of republican government, and should, and ultimately will, be wiped from the face of this beautiful earth, in which the Creator decreed every individual the enjoyment of freedom and the full fruition of his labor.

As the price of everything that we own or produce, except gold, is so much in sympathy with that of silver, that its ratio of increase or decrease is in almost exact proportion with the ratio of increase or decrease in the price of silver, a fall in the price of the latter commodity should be of alarming concern to all but owners of bonds and bank stock.

If the ratio in the price of everything else keeps pace with the ratio in the fall of price of silver when compared with gold, as has been the case for the past twenty years, and this Congress joins with England and Germany in the complete demonetization of silver, which must inevitably drop to some 30 or 40 cents per ounce, cotton will go at 4 cents per pound, and wheat at 35 cents per bushel. It does not take a prophet to foretell that revolution and repudiation will speedily follow.

Some one asks, Who wants silver?

The South needs $400,000,000 of it each year to move her cotton crop alone, and billions more to build its much-needed manufactories, dilapidated cities and towns, and to bring into activity the inexhaustible resources of its soil, forests, and waters.

Mr. Speaker, I am in favor of silver versus gold, because three-fourths of the people of the world who are not our competitors in manufactured and various other products use it, while those owning the gold of the world are our fiercest competitors, both in commerce and manufacture.

The remonetization of silver means 10 instead of 7 cents for cotton, which in turn means $120,000,000 to the producers of cotton with which to lighten the great mountains of debt which are pressing the last drop of blood out of them.

It means the appreciation of silver to such an extent that the Government will realize the full amount of its investment in silver bullion.

It means the payment of contracts in money of the same value as when the contracts were made.

If we remonetize silver it will be worth more in our market than those of demonetized England and Germany, and the money of Mexico, Central America, all South America, India, China, and Russia, being worth more in our markets than theirs, will find investment here and make our manufacturers and producers masters of the commercial situation.

New York, and not London, will speedily become the great commercial mart of the world.

Our competitors will either have to close a part of their industrial establishments or hurriedly follow us in the remonetization of silver.

I shall vote for the free and unlimited coinage of silver, because I am for the betterment of the miserable condition of my countrymen, and for America first and all the world afterwards.

This question, like the great question of abolitionism, which made new converts among honest men everywhere it was studied in the light of truth, until it resulted in a tidal wave of freedom, is beginning to be discussed in every cabin and hovel, as well as mansion and palace, and the history of this country furnishes abundant evidence of the fact that when the people be-

come alive to their interests on any subject they will rise in their manhood and vote or shoot down any man or party who would strike down their property or liberty. [Applause.]

I adjure you who are in favor of doing something to help the masses sometimes, instead of the classes always, not to be coerced or flattered into submission, but trust in the righteousness of God and the patriotism of the American people, and the day will come when you will be as proud as Abraham Lincoln was when the Stars and Stripes again floated from the parapet of Fort Sumter.

I call upon the Democratic party, which claims to be of and for the masses, to show its colors now, while laboring under the greatest responsibility that it has carried in thirty-odd years, before it is eternally too late.

I call upon the Republican party, founded upon the bedrock of human freedom, which had inscribed in letters of living light in its initial banner, "unrestricted human rights and equality before the law," every deviation from which principles marks its failure, to remember the pristine valor of its heroes and martyrs, and assume the cause of the masses in this struggle, and the white angel of hope and victory will hover over our camp, exhibiting the pillar of cloud by day and fire by night that will inevitably lead us from one victory to another until our victorious campfires shall keep burning in every State from the Lakes to the Gulf, from the Atlantic to the Pacific. [Loud applause.]

In the words of Lord Chatham, if I were an Englishman, as I am an American, I would never cease war until every creature in every land should bow to the golden calf which was erected by and sustains and maintains the honor and glory of my country. [Prolonged applause.]

And then, on motion of Mr. REILLY (at 11 o'clock and 2 minutes p. m.), the House adjourned.

SENATE.

FRIDAY, *August 25, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

SILVER COINAGE.

Mr. GORDON. Mr. President, it is not my habit to tax the Senate very often, and never I believe with long speeches. I have been too unwell up to this hour to take part in the financial debate, but if it be agreeable to the Senate I give notice that on Tuesday morning next, at the close of the morning business, I shall have something to say on the subject of the bill (S. 570) discontinuing the purchase of silver bullion, and the substitute therefor proposed by the minority of the Committee on Finance.

PETITIONS AND MEMORIALS.

Mr. SHERMAN presented a memorial of the Sherman Brigade, of Ohio, remonstrating against the recent action of the Pension Office suspending pensions, and praying Congress to make an investigation into the subject; which was referred to the Committee on Pensions.

Mr. VEST presented a petition of the Corliss Association of Stationary Engineers of St. Louis, Mo., praying for the free and unlimited coinage of silver; which was ordered to lie on the table.

Mr. CALL presented a petition of the Sumter County (Fla.) Farmers' Alliance, praying for the free and unlimited coinage of silver; which was ordered to lie on the table.

Mr. GORDON presented a petition of the Farmers' Alliance of Pulaski County, Ga., praying for the free and unlimited coinage of silver at a ratio of 16 to 1; which was ordered to lie on the table.

He also presented petitions of the Southern Hardware Jobbers' Association of Atlanta, of the Board of Trade of Savannah, and of the State Bankers' Association, in the State of Georgia, praying for the immediate repeal of the purchasing clause of the so-called Sherman silver law; which were ordered to lie on the table.

Mr. HARRIS. I present a petition of the health officer of the District of Columbia, indorsed by the Commissioners of the District, praying for the immediate allowance of two additional clerks for the bureau of public health of the District. I move that the petition be referred to the Committee on the District of Columbia.

The motion was agreed to.

Mr. PEFFER. I present a petition of a committee of citizens of Hamilton County, Ohio, known as the Direct Legislation League, praying that Congress provide for a submission of the Wilson bill, and the substitute providing for a ratio of 16 to 1, to a vote of the people at a special election to be held at an early date for their acceptance or rejection. I move that the petition lie on the table.

The motion was agreed to.

Mr. PEFFER presented petitions of citizens of Atchison; of the People's party central committee of Shawnee County; of citizens of Larned, Pawnee County; of citizens of Paola, Miami County; of citizens of Linn County, and of citizens of Pottawatomie Township, in the State of Kansas, praying for the free and unlimited coinage of silver at a ratio of 16 to 1; which were ordered to lie on the table.

Mr. LINDSAY presented a petition of sundry citizens of Bell County, Ky., praying for the repeal of the purchasing clause of the so-called Sherman silver law and for the appointment of an expert commission to consider and recommend a scientific plan of currency, based on the experience of our own and other countries, and adequate to the requirements of a great commercial nation; which was ordered to lie on the table.

Mr. SQUIRE. I present a petition of the Chamber of Commerce of Seattle, Wash., setting forth the great commercial advantage which would accrue to the Pacific coast in the way of cheapening transportation, etc., by the construction of the Nicaragua Canal and urging upon Congress the passage of some bill to accomplish that purpose. I move that the petition be referred to the Committee on Foreign Relations.

The motion was agreed to.

Mr. PLATT presented a petition of the Federated Trades and Labor Union of Meriden, Conn., praying for the passage of legislation placing silver on the same basis with gold; which was ordered to lie on the table.

DISTRIBUTION OF PUBLIC DOCUMENTS.

Mr. VEST. I am instructed by the Committee on Public Buildings and Grounds, to whom was referred the resolution submitted by the Senator from South Carolina [Mr. BUTLER] on the 16th instant, to ask to be discharged from its further consideration, and that it be referred to the Committee on Printing. The change of reference is agreeable to the Senator from South Carolina.

The report was agreed to; and the resolution was referred to the Committee on Printing, as follows:

Resolved, That the Sergeant-at-Arms of the Senate be, and is hereby, directed to distribute to the public libraries in the United States all public documents found on hand and not claimed by Senators on the 15th day of September next.

BILLS INTRODUCED.

Mr. PALMER introduced a bill (S. 697) granting a pension to Samuel Elwood; which was read twice by its title, and referred to the Committee on Pensions.

Mr. GORDON introduced a bill (S. 698) for the relief of Elsas, May & Co., of Atlanta, Ga.; which was read twice by its title, and referred to the Committee on Finance.

Mr. HUNTON introduced a bill (S. 699) for the relief of Lewis McKenzie; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 700) for the relief of Theodore Teed, his heirs, legal representatives, or assigns; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 701) for the relief of the heirs at law of Maj. Tarleton Woodson, deceased, in accordance with the findings of Court of Claims; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 702) for the construction of a memorial bridge from the Naval Observatory grounds to the Arlington estate; which was read twice by its title, and referred to the Committee on Commerce.

Mr. VEST introduced a bill (S. 703) for the relief of Arthur P. Selby; which was read twice by its title, and referred to the Committee on Claims.

Mr. PETTIGREW introduced a bill (S. 704) to increase the rate of pensions for certain cases of deafness; which was read twice by its title, and referred to the Committee on Pensions.

Mr. CULLOM introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Military Affairs:

A bill (S. 705) to pay William A. Terrill, of Company C, Fiftieth Ohio Volunteers, pay and bounty;

A bill (S. 706) for the relief of Frank Denham;

A bill (S. 707) for the relief of Orin R. McDaniel;

A bill (S. 708) for the relief of Robert E. Hemphill; and

A bill (S. 709) to correct the military record of, and grant an honorable discharge to, Isaac H. Fitzmorris, he having served in the Army of the United States three years six months and six days.

Mr. CULLOM also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Pensions:

A bill (S. 710) granting a pension to Anderson Sherman;

A bill (S. 711) granting a pension to Charles Bauermaster;
A bill (S. 712) granting an increased pension to John S. Dill, of Capt. Mayo's company, Black Hawk war;
A bill (S. 713) granting a pension to John J. Logan;
A bill (S. 714) granting a pension to Levi C. Mann;
A bill (S. 715) granting a pension to George W. Campbell;
A bill (S. 716) granting a pension to Charlotte Younes;
A bill (S. 717) granting a pension to Henry L. Flint; and
A bill (S. 718) granting a pension to John M. Snyder.

Mr. GRAY introduced a bill (S. 719) for the relief of Anthony Reybold; which was read twice by its title, and referred to the Committee on Claims.

Mr. GALLINGER introduced a bill (S. 720) to provide for the purchase of a site and the erection of a public building thereon, at Keene, in the State of New Hampshire; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

BACK CREEK ROUTE.

Mr. HIGGINS submitted the following concurrent resolution; which was referred to the Committee on Commerce.

Resolved by the Senate (the House of Representatives concurring), That the Secretary of War be requested to cause to be furnished to Congress, at the earliest practicable moment, a revised estimate and report of the survey of the Back Creek route, as already made under the act of 1882, of the 27-foot channel connecting the harbor of Baltimore, Md., with Delaware Bay, with special reference.

First. To the cost of improving its approaches in connection with the enlargement by private parties of the 14 miles of canal proper; and

Second. With reference to the acquisition of the control of the entire route by the Government and its enlargement as a free waterway or ship canal for promoting our commerce, foreign and domestic, and increasing the efficiency of our Navy.

TAX ON SPIRITS IN BOND.

Mr. VOORHEES. Some days ago I introduced a joint resolution (S. R. 13), which was referred to the Committee on Finance, authorizing the Secretary of the Treasury to remit the 5 per cent penalty on merchandise now in distillery, special bonded or customs warehouses, upon which the tax is due or about to become due. The joint resolution was referred by the Committee on Finance to the Secretary of the Treasury for his views on the subject. I ask that the letter of the Secretary of the Treasury, which I present, and also a letter of the Commissioner of Internal Revenue, to whom the Secretary referred the matter, may be read for the information of the Senate and the country, and especially of those who are interested in this question.

The VICE-PRESIDENT. Without objection the letters will be read.

The Secretary read as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 23, 1893.

SIR: In response to your favor transmitting a copy of joint resolution (S. R. 13) "authorizing the Secretary of the Treasury to remit the 5 per cent penalty on merchandise now in distillery, special bonded or customs warehouses, upon which the tax is due or about to become due," I have the honor to state that the subject was referred to the Commissioner of Internal Revenue for investigation as to the condition of the accounts for taxes due or shortly to become due on spirits in distillery warehouses, and his report thereon is herewith forwarded.

The only effect of the joint resolution, if passed, would be to authorize and direct the Secretary of the Treasury to remit the 5 per cent penalty on such spirits, provided the tax shall be paid within six months of the time now required by law, as there is no law imposing a penalty of 5 per cent, for nonpayment of tax when due upon merchandise stored in customs warehouses.

The fifty-fourth section of the act "to reduce the revenue and equalize duties and imports, and for other purposes," approved October 1, 1890, provides that any merchandise deposited in bond in any public or private bonded warehouse may be withdrawn for consumption within three years from the date of original importation on payment of the duties and charges to which it may be subject by law at the time of such withdrawal; and section 2971 of the Revised Statutes provides that goods remaining in public stores or bonded warehouses beyond three years shall be regarded as abandoned to the Government, and sold under such regulations as the Secretary of the Treasury may prescribe, and the proceeds paid into the Treasury.

It will be seen, therefore, that the proposed joint resolution would afford no relief to the owners of goods in customs warehouses, and I concur in the conclusion reached by the Commissioner of Internal Revenue that the amount of penalties assessed and to be assessed upon spirits in distillery warehouses is not sufficient to justify special legislation upon that subject alone.

Respectfully yours,

J. G. CARLISLE, *Secretary.*

Hon. D. W. VOORHEES,
Chairman Committee on Finance, United States Senate.

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, D. C., August 22, 1893.

SIR: In reply to your request pursuant to letter herewith of Hon. Daniel W. Voorhees, Chairman of the Committee on Finance, United States Senate, dated the 16th inst., I have the honor to state the following facts bearing upon the legislation proposed by Senate resolution 13, authorizing the Secretary of the Treasury to remit the 5 per centum penalty and interest at the rate of 1 per centum per month on the tax on merchandise now in distillery, special bonded, or customs warehouses, upon which the tax is due or about to become due, viz:

This proposed legislation is evidently urged by the distillers of the United States who have recently applied for similar relief to the Secretary of the Treasury, which you have refused to grant or to interfere with the operation of the existing law.

It is also evidently due to the great and unusual stringency in the money market, and to the large quantity of distilled spirits in excess of the demand for consumption, as set forth in the preamble to the resolution.

During the first three months of the present calendar year the assessment of overdue taxes on distilled spirits in bonded warehouses was considerably in excess of a million dollars each month, and during the last three months the assessments have averaged over one and a half million dollars each month, the assessment of taxes due in April being $1,499,739, in May $1,597,005, and in June $1,667,897.

All of the assessed taxes of this character due in January last appear to have been paid; those for February, except $1,568; for March, except $3,637; for April, except $10,571; for May, except $27,187; and for June, all except $157,921.

The amount to be assessed this month for July will be about $360,000; that which will be assessed in September for August is estimated to be about $500,000, and the amounts which will be assessed in the months immediately succeeding will be considerably less.

I have the honor to say, further, that for reasons set forth in the preamble to the proposed resolution, and from letters received from persons having merchandise in these warehouses, also from the statements of persons sent to this office as delegates, I entertained the opinion about one month ago that the unusually large assessments of taxes which became due (under the provisions of section 3293, Revised Statutes, as amended) in May and June, 1893, which assessments were made in June and July, 1893, could not be paid without great sacrifices. Nevertheless, these taxes have nearly all been paid, and the necessity for relief as to them does not now exist. Nor, in my opinion, does it exist as to the $300,000 to be assessed this month, which is not two-thirds as great as the amount assessed one month ago.

The mode of relief contemplated was by extension of the time in which the spirits might be withdrawn from the bonded warehouses, which would result in delaying the collection of the taxes.

The proposition for relief now before the Department is, however, not to extend the time within which the tax must be paid, but simply to relieve from the penalty accruing through neglect to pay an assessed tax. It would be manifestly unjust to favor, by relieving from penalty and interest, any of those who have failed to pay the taxes on spirits, amounting to $203,884, outstanding on the lists for the six months ended June 30, 1893 (much of which will be abated), and do nothing for those who paid the $8,504,378 also assessed on the lists. The 5 per cent penalty on the $300,000, which will be assessed this month, is $15,000. When it is remembered that the payment of this sum, the greatest amount of penalty possible on this assessment, will be distributed all over the United States, the amount seems too small to be made the subject of special legislation.

There seems to be no occasion for legislative action, unless it appears that the financial situation will become much worse than at present.

Respectfully, yours,

JOSEPH S. MILLER,
Commissioner.

Hon. JOHN G. CARLISLE,
Secretary of the Treasury.

SILVER COINAGE.

Mr. HILL. Mr. President——

Mr. VEST. Will the Senator from New York excuse me one moment?

Mr. HILL. Certainly.

Mr. VEST. Considerable attention has been called in the public press and in the Senate to a letter addressed by the Secretary of the Treasury to the Senator from Indiana [Mr. VOORHEES] in regard to the bill brought forward by the minority of the Committee on Finance, proposing to change the ratio between gold and silver from 16 to 1 to 20 to 1. In order to place the matter correctly before the public as to the amount of silver in the Treasury and the relation between the Government and the coinage of silver, I addressed a communication to the Treasury Department and received a reply which I ask may be read.

The VICE-PRESIDENT. The communication will be read.

The Secretary read as follows:

TREASURY DEPARTMENT, BUREAU OF THE MINT,
Washington, D. C., August 21, 1893.

SIR: I reply to your telegram of to-day as follows:

The total amount of silver purchased under the act of July 14, 1890, to August 16, was 161,521,000 ounces, cost $150,655,457, coining value,—$208,835,232. The difference between cost and coining value is $58,165,783. Of this silver there was on hand, August 16, 133,161,375 ounces, costing $121,217,677. The difference between cost and coining value is $60,950,565.

The amount of silver dollars coined from silver purchased under the act of July 14, 1890, has been $36,067,185, upon which the gross seigniorage was $6,977,068.75.

The amount of Treasury notes issued to August 16, 1893, in payment for silver bullion was $150,115,985, and that amount is still outstanding.

Up to August 1, 1893, the amount of Treasury notes redeemed in gold was $49,184,160, and since August 3, 1893, $714,696 in Treasury notes have been redeemed in silver dollars, this being the first redemption of these notes in silver.

The amount of silver purchased under the act of February 28, 1878, was 291,272,019 ounces of fine silver, costing $308,193,262.

The number of silver dollars coined under that act was 378,166,793, upon which the gross seigniorage was $69,967,531.

Very respectfully,

R. E. PRESTON,
Acting Director of the Mint.

Hon. GEO. G. VEST,
United States Senate.

Mr. VEST. Mr. President, it is not my intention to discuss the question of ratios at this time. I assumed from the extraordinary zeal manifested in that direction by the advocates of the unconditional repeal of the purchasing clause of the Sherman act that the great thing to be desired in the interest of the American people was the parity between the two metals, and that the commercial ratio should, as far as possible, be the same as the ratio established by statute. As the commercial ratio until a few days since was 28 to 1, while the legal ratio was 16 to 1, I took it for granted that it was honestly to be attempted to

bring the two metals together in order to redeem the pledges of the two great parties of the country and of the Administration, and that there should be coinage of gold and silver upon a parity.

Now it seems that the question of expense as to a change of ratio is to be injected into this discussion, and that leaving this great and absolute necessity of parity, we are to enter into an examination of the number of dollars that sums up the cost to the people of the United States of changing a ratio, if a change of ratio be determined to be necessary.

Without trespassing upon the kindness of the Senator from New York, permit me to make a short analytical statement of the account between silver and the Government at this time, taken from the paper which has been read at the desk.

The clear profit accruing to the Government under the act of 1878, known as the Bland-Allison act, up to August 16, 1893, is $69,967,531 seigniorage—the difference between the coin and the purchasing price. The profit under the act of 1890, known as the Sherman act, is $58,165,783, making a profit to the Government upon silver since the passage of the Bland-Allison act, in 1878, of $128,133,314.

The silver uncoined in the Treasury now amounts to 133,161,375 ounces, on which the profit is $50,950,565. The number of ounces necessary to recoin silver dollars in changing the ratio to 20 to 1 is 81,376,700. The number of ounces necessary to recoin the subsidiary silver coin to the same ratio is 18,797,625, making 100,174,325 ounces. This would leave in the Treasury uncoined 32,987,050 ounces. If the cost of recoinage, $112,865,321, be taken from the amount of profit made by the Government already upon silver, $128,133,314, there would be a balance to the credit of silver in the Treasury to-day of $15,267,993.

If the Secretary of the Treasury means to put this question fairly before the American people, why does he not tell us what he proposes to do with this vast amount of silver bullion now uncoined in the Treasury of the United States when the purchasing clause of the Sherman act is repealed? Can it not be used to recoin the old silver coin, or is it to lie there a menace to bimetallism for all time to come? He assumes that we are to purchase this $112,865,321 worth of silver in order to make good the ratio of 20 to 1, and at the same time leave uncoined the amount of silver, 133,161,375 ounces, which is now in the Treasury and lying there without use. That would be a fair statement; that would show the exact relation between silver and the Government at this time.

All I propose to do now is to put these facts before the Congress and the people of the United States in order that they may form a judgment upon them.

Mr. COCKRELL. I ask that the letter which my colleague had read be printed as a separate document, so that we may have it in that shape.

The VICE-PRESIDENT. Without objection it will be so ordered.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the Speaker of the House had appointed, in compliance with the provisions of the joint resolution providing for the appropriate commemoration of the hundredth anniversary of the laying of the corner stone of the Capitol, the following as the members of the committee on the part of the House:

Mr. BYNUM of Indiana, Mr. WARNER of New York, Mr. BLACK of Illinois, Mr. HOUK of Ohio, Mr. HENDERSON of Iowa, Mr. O'NEILL of Pennsylvania, and Mr. COGSWELL of Massachusetts.

SILVER COINAGE.

The VICE-PRESIDENT. The Chair lays before the Senate the bill (S. 570) discontinuing the purchase of silver bullion, on which the Senator from New York [Mr. HILL] is recognized as entitled to the floor.

Mr. HILL. Mr. President, the President of the United States in his recent much-commended and much-criticised special message to Congress took occasion to make a quotation from some very pertinent utterances of Daniel Webster made over fifty years ago.

Permit me at the outset of my remarks to-day to make another quotation from the opening sentences of a famous speech of the same distinguished statesman, delivered in this Chamber in the year 1830, when he said as follows:

> When the mariner has been tossed for many days in thick weather and on an unknown sea he naturally avails himself of the first pause in the storm, the earliest glance of the sun to take his latitude and ascertain how far the elements have driven him from his true course. Let us imitate this prudence, and before we float further on the waves of this debate refer to the point from which we departed, that we may at least be able to form some conjecture where we now are.

Imitating that course at this time, it seems desirable, after two weeks of a discussion which has assumed the widest latitude and embraced almost every conceivable subject, no matter how remotely related to the real controversy, that we should now return to the consideration of the precise question involved, from which we have been drifting.

Let us inquire what is the particular question to which our attention has been invited, and for the determination of which we have been convened in extraordinary session? As I understand it, the only subject legitimately presented is as to the advisability of continuing upon the statute books the provisions of the Sherman silver-purchase law. All the questions which have been so elaborately and eloquently discussed simply revolve around this one point, and are only collateral to it.

What may properly be embraced in the realm of the debate of such a concise and narrow question? Is it a wise, just, logical, or necessary measure? Has it answered the beneficent purposes for which it was ostensibly enacted? Has it fulfilled the expectations of its friends? Has it appreciated or depreciated the currency endeavored to be created by it? Has it raised or decreased the price of silver? Has it benefited or injured the country? Who are its defenders or apologists? What do the people desire in regard to it? What would be the effect of its repeal? These are pertinent inquiries to which our attention may be appropriately directed, and are issues upon which debate may well be confined. All other considerations are irrelevant to this principal question believed to be involved.

Adopting Webster's prudent suggestion, let us first recall the peculiar circumstances under which we meet, and the important character of the duty which surely confronts us at this hour. The President of the United States, in the discharge of a public duty, has summoned the official representatives of the people to the capital in this midsummer month of August to meet an exigency which has arisen in the financial affairs of the country.

Surely no trivial monetary disturbance, no slight financial commotion, no ordinary cause was sufficient to justify the convening of the Congress of the United States in an extraordinary session at such an undesirable period as this. An emergency was believed to have been presented which imperatively demanded that we should be called from our homes, and required to assemble here to deliberate upon the condition of the country. It was shown that our industries were paralyzed, that workingmen were out of employment, that prices were falling, that stocks were depreciating, that money everywhere was being withdrawn from banks and hoarded, that currency was scarce and at a premium, and that confidence was largely impaired.

Sir, the picture was not overdrawn. A financial panic was upon us and is still unabated—a panic longer in duration than the one of 1873 and approaching in severity that of 1857. It is destroying values, wrecking fortunes, and undermining prosperity. It is confined to no section of the country—it is universal. If legislation can relieve the situation, it should be applied promptly and effectually.

It may be unwise to speculate as to the causes which have produced this condition of affairs, but remedies can not well be provided without ascertaining as far as possible the true nature of the difficulty.

President Cleveland has declared to Congress and to the country that the present unusual condition is to be attributed almost wholly to the Sherman silver-purchase act of 1890, and candor compels us to admit that this view is largely sustained by popular sentiment, which has adopted this conclusion either from an intelligent conception of the vicious features of that act or because of a systematic attempt in some financial circles to impress that view upon the country.

There are those who do not wholly agree with the President in his diagnosis of the malady now affecting the body politic, and who do not hastily join with him in the rosy conclusion that the financial millenium is to come the moment the Sherman bill is removed. There are those who have given this subject much reflection who are inclined to the opinion that the cause of the present depression lies much deeper and beyond the Sherman bill, and that its foundations were laid in the evil hours of 1873, when the country unwittingly laid aside the financial policy which had been its guide and safety from the foundation of the Government.

The existing financial disturbance may be attributed to three causes:

First. It is a natural or inevitable result or incident of many years of real or fictitious prosperity. The nation is not unlike an individual. The body politic may appropriately be compared with the physical body. A most careful observance of the rules of health will not prevent sickness, and neither will a strict compliance with the laws of business prevent commercial difficulties. Sickness is incident to humanity and commercial panics are incident to trade.

Temperance, abstemiousness, dieting, and rest may retard human illness, but it comes to every man occasionally sooner or later; while conservatism, absence of speculation, and observ-

ance of correct business principles on the part of the great majority of the business community will protract prosperity for a while, but there will always be times of depression. The student of history knows that financial panics occur about every twenty years, and our country has not been an exception to the general rule. The panics of 1813, 1837, 1857, and 1873 should have led us to anticipate one in about 1893.

In addition to these causes, which for the purpose of this argument I denominate "natural" causes against which it is probable that no prudence could guard or prevent, there was much reason to apprehend financial troubles at this time, owing to the continued violation of correct business principles on the part of our business men in their haste to become suddenly rich. The spirit of gambling, the desire to indulge in illegitimate speculation, the attempt to secure wealth by any means save earning it in the old-fashioned way, are fruitful causes of these times of depression. The reaction—the retribution—has come, that is all.

Why should we be surprised at the present lack of confidence everywhere manifested?

Our financial centers have been flooded with watered stocks of every description in which innocent people have been induced to invest their means by the glittering promises of enormous dividends which are not forthcoming. It has been the fad of the times to organize corporations and issue bonds and stock to an amount ten times the value of the property, and by such questionable enterprises paupers have suddenly become millionaires. The country has been surfeited with such schemes, whereby honest and confiding investors have been virtually defrauded, and confidence has thereby been impaired.

Candor compels me to say that these transactions have usually originated with that class of financiers who infest our marts of trade and are to-day ostentatiously attracting public attention by their parrot-like clamor for an "honest" dollar, and against the continued use of silver money.

Besides we are suffering from the evils of overproduction. We have raised more than we can profitably sell, and the markets of the world have been closed to us owing to our restrictive tariff laws. The balance of trade has unfortunately been against us. We have sold our railroad and other securities abroad instead of at home, and the interest as well as portions of the principal have been coming due and must be paid in gold, because it was so "nominated in the bond," and hence our gold has naturally been leaving us for foreign shores. If we contract enormous debts abroad they must be paid abroad.

Unquestionably some of the present difficulty may be attributed to the uneasiness of our protected industries, which have been accustomed to rely to a certain extent upon governmental favoritism to support them, and whose proprietors naturally apprehend that such favoritism may be withdrawn under a revision of the taxation laws contemplated by the party in power. I do not disguise the fact that such uneasiness exists and that it contributes its share to the general existing disturbance of financial affairs.

But there is no relief for this situation unless the dominant party abandons its principles and surrenders in advance to the interests which were defeated at the last election. The Democratic party is pledged to tariff reform, and it must redeem its pledges, come what may. Of course it must be expected there will be some friction. It is unavoidable. It is incident to the anticipated withdrawal of public aid from private enterprises; and it can not be prevented, but must be endured. The people perfectly understood the question last fall, and they voted with their eyes wide open. Our course is onward, and we shall not retreat.

Second. Some portion of the present panic may be traced to a concerted effort on the part of numerous monometallists to produce it, in order to further discredit silver as a part of the standard money of the country. That fact is apparent everywhere we turn. We observe it in their senseless arguments constantly used against free bimetallic coinage and their ceaseless endeavors to confuse the present issue by characterizing it as a contest between monometallism and bimetallism. They seemed to be delighted when the first ray of financial trouble appeared. They hailed the recent action of India with ill-concealed satisfaction. They talked against silver, morning, noon, and night.

They denounced not simply the Sherman silver-purchase bill, but the future use of silver as money. With ghoulish glee they welcomed every bank failure, especially in the silver States, little dreaming that such failures would soon occur at their own doors. They encouraged the hoarding of money, they inaugurated the policy of refusing loans to the people even upon the best of security; they circulated false petitions, passed absurd and alarming resolutions, predicted the direst disaster, attacked the credit of the Government, sought to exact a premium upon currency, and attempted in every way to spread distrust broadcast throughout the land.

The best financial system in the world could not stand such an organized and vicious attack upon it. These disturbers—these promoters of the public peril—represent largely the creditor class, the men who desire to appreciate the gold dollar in order to subserve their own selfish interests, men who revel in hard times, men who drive harsh bargains with their fellow men in periods of financial distress, and men wholly unfamiliar with the true principles of monetary science.

It is not strange that the present panic has been induced, intensified, and protracted by reason of these malign influences. Having contributed much to bring about the present exigency, these men are now utterly unable to control it. They have sown to the wind, and we are all now reaping the whirlwind together.

Third. But no matter what else may have contributed to the present financial situation, it can not be denied that the Sherman silver-purchase law has been at least in part and possibly the most largely instrumental in producing the existing complications.

I do not propose at this moment to present any analysis of that law. It is sufficient now to state that it has lost the popular confidence, that its operations have been unsatisfactory even to its friends, that it has not increased the market price of silver bullion, that it has tended to discredit our silver currency, that it has hoarded up a vast mass of unexportable and undesirable silver bullion in the Treasury of the United States either from the natural effect of the law itself or from its mal or unfriendly administration, so that everywhere there exists an antagonism towards it—a lack of faith in its wisdom and usefulness—a well-founded conviction of its dangerous character and tendencies which naturally makes capital timid, frightens business men, and creates a real and genuine alarm, not a mere imaginary or fictitious suspicion of insecurity.

The nature of the act itself was alone sufficient to create uneasiness. It presented an ever-increasing danger; it was rushing the country towards a precipice which could not be evaded, and it was only a question of time when its inevitable results would bring disaster upon us. The recent action of India hastened it, while the other causes to which I have referred—some natural and some manufactured—united in producing the present extraordinary crisis.

But no matter what various causes alone or unitedly precipitated the existing emergency, it is sufficient for us to know that the panic is here—it is upon us—it is steadily growing worse, and it must be promptly met by the exhibition upon our part of the most intelligent and exalted patriotism, a patriotism which rises above partisan considerations, a patriotism which if need be must sever party lines and ties, a patriotism which sinks every selfish advantage and rises to a just conception of the terrible importance of the occasion.

I am not an alarmist and do not wish to exaggerate the present financial disturbance, but I fear that Senators do not keenly realize the sad havoc which this crisis is making in the business affairs of the country, and the end of which no man can foresee. Neither am I one of those who believe that a simple repeal of the Sherman law will at once restore abundant prosperity. It will require many years to recover from the disastrous effects of the present disturbance. The greater the emergency, however, the greater should be the effort to meet it.

OUR PLAIN DUTY.

It becomes our first duty in attempting to solve the present financial problem to ascertain whether there is any existing law upon the statute book which is indefensible and is either wholly or in part responsible for our present unfortunate condition, and if we discover such a one it is our bounden duty to promptly repeal it.

This obligation is so plain that it ought not to require any discussion to emphasize it.

That the Sherman silver-purchase law of 1890 constitutes such an act admits of no doubt. No one now defends it. Few apologize for it. The political party that enacted it seems now the most anxious for its repeal. That it has proved a disastrous failure is scarcely denied by its present or former friends. It is true that for some time after its enactment there existed a disposition among business men to acquiesce in its provisions as a solution of the silver question, and it is but fair to say that there was manifested a qualified approval of it among men of both parties, especially among those who were opposed to free bimetalic coinage and are known as monometallists.

That acquiescence and quasi approval proceeded from different motives and opposite standpoints, the gold monometallists because it had antagonized or prevented the free coinage of silver, and hence they were gratified at its passage, and accepted it as a safe measure, and extreme silver men, because it was some recognition of silver and promised to keep up its price. Both were

ultimately bound to be deceived by its specious promises, its false hopes, and its dangerous possibilities. Both ought to be unanimous to-day for its repeal, but I regret to say that those who voted against its passage seem now to be the most reluctant to part with it. It was never defensible. It was a violation of every correct principle of monetary science. It was not even an honorable compromise. It was a makeshift, a subterfuge, a mere temporary expedient. The President in his message, not desiring at this time, for obvious reasons, to offend the sensibilities of those who had voted for it, politely called it a "truce."

It has been asserted that the President himself, in his hostility to independent free-silver coinage, was disposed at one time to regard with favor or acquiesce in the provisions of the Sherman law, which had been the instrument or means by which such free coinage had been defeated. Whether this be so or not, the fact remains and has not escaped observation that while the Democratic national platform denounced the Sherman law and demanded its repeal—denounced it, not as the result of a "truce," but as a "cowardly makeshift"—yet Mr. Cleveland, neither in his speech delivered at Madison Square Garden, New York, in answer to the notification of his nomination, nor in his subsequent letter of acceptance, nor in his inaugural address in March last, criticised the Sherman law, nor made any allusion to it whatever, although it was then already threatening the prosperity of the country with the dangerous results of its operation, which were apparent to everyone who had given the subject any careful attention.

The general disposition to approve or acquiesce in the Sherman law on the part of the monometallists in both parties was further manifested by their tenderness toward it by their newspaper press, by their omission to denounce it, by their approval of it in the platforms of various State conventions—notably that of the Republican State platform of New York in 1891—and particularly by the majority report of the House Committee on Coinage, made up of members of both parties, and presented to Congress in February, 1891, wherein the Sherman law was virtually approved and the necessity for any further or other legislation denied.

On the other hand, true bimetallists—friends of a double standard—bimetallists from principle and conviction and not from mere selfish interests—never for a moment acquiesced in the propriety of the Sherman law, but always regarded it as an ill-devised scheme to retard the growing sentiment of the country in favor of free bimetallic coinage.

My own personal record is of the slightest consequence, but the Senate will pardon me for alluding to the fact that my views of the dangerous character of that act are not new, but have been entertained and repeatedly expressed ever since its passage.

Within three months thereafter—on September 23, 1890—at Brooklyn, then at Cooper Institute, New York, on October 8, 1891, at a meeting over which Mr. Cleveland presided, then at Elmira on December 4, 1891, and twice soon thereafter in Albany, I sought—in speeches which have been widely published—to arouse the people to the importance of a repeal of that law.

It is useless to disguise the fact that at that time there existed much apathy upon the subject, other topics seeming to engross the public attention. In fact, my own efforts were misconstrued, and it was insisted in some quarters that I was indifferent to the sacred cause of "tariff reform," and that I was seeking to divert the people's attention away from that great issue in endeavoring to arouse them to the dangerous possibilities of the Sherman law.

Last December at the opening of Congress I promptly introduced a bill for the unconditional repeal of that law, and on February 6 last I had the honor of addressing the Senate at length in favor of its passage. I do not deem it necessary to reiterate the arguments which were then presented. They are as pertinent to-day as they were then, although now it is likely that they would fall upon more willing ears. It was our plain duty then to have repealed that law; that duty is imperative now.

THE SHERMAN ACT IS INDEFENSIBLE.

The backbone of my argument against the Sherman bill may be concisely stated in the following points:

First. The sure peril to all our industries in another greenback issue—for that is what the Sherman law amounts to—employing paper debt in place of gold and silver as a money-measure of labor and the fruits of labor.

Second. Its sure hindrance of our return to free bimetallic coinage, the sole legal tender of the Constitution, of our history before the war, of monetary science, of the people's welfare—silver and gold.

Third. That equivalence between the same silver, whether solid in the coin or liquid in the crucible, can no otherwise be maintained than just as equivalence is established between the same gold whether coin at the mint or bullion from the melting-pot, to-wit, by the right, after melting, to have it transformed to coin again—the right of free coinage, which includes recoinage.

Fourth. That parity (not equivalence), that local parity within the United States (not world-wide parity) of our silver dollars and our gold dollars depends (while free coinage is withheld from silver) upon the Treasury in its payments never disparaging the silver dollar by keeping back gold dollars, as if a superior kind, when called for.

Fifth. That the Sherman law phrasing a concern to maintain on a parity with each other "the two metals" was meant to prevent their parity, and, in fact, contrived a sure cumulative peril to the local, legal, and minor parity of the 25.8 troy grains of gold coined, and the 412.5 troy grains of silver coined, as a dollar, in the United States.

Sixth. That the Sherman law organized an inflation of the people's debt, a prevention of its payment with the silver purchased, such as the Allison law provided, and a contraction of the people's gold. It may be further stated that the new greenback debt, also, was swollen to $150,000,000. There is one hundred and thirty-two millions less of gold in the people's Treasury, and a great depletion in their private stocks.

This law can not be defended, as it is based upon a wrong theory of finance. It does not provide for the free coinage of silver; it provides only for a limited and restricted coinage of that metal. It provides for the purchase of silver bullion: it treats silver as a commodity. In one view of it the theory of the law seems to have been that the compulsory purchases by the Government of a vast quantity of silver bullion, amounting to 4,500,000 ounces per month, would maintain the price of silver in the market, and that the obligations of the Government to redeem its Treasury notes issued in payment of silver bullion, in gold or silver, in the discretion of the Secretary of the Treasury, would practically maintain the parity of the two metals.

The law has proved a substantial failure for the accomplishment of those ends. The price of silver has steadily fallen, and the demand upon our gold for the redemption of these Treasury notes has weakened the Treasury to an alarming extent. The Secretary of the Treasury has pursued the policy of using gold instead of silver for such purposes of redemption, and necessarily so, as he alleges; and hence our bullion, instead of being coined and circulated as contemplated, has remained hoarded in the Treasury vaults.

The Sherman bill has proved the worst enemy of the silver cause, because it has retarded rather than aided the cause of free coinage.

The Democracy of New York, in their State platform of 1891, hit the nail upon the head when they declared as follows:

> We denounce the new Sherman silver law, under which one-tenth of our gold stock has been exported and all our silver output is dammed up at home, as a false pretense but artful hindrance of return to free bimetallic coinage, and as tending only to produce a change from one kind of monometallism to another.

The Democracy of New York wanted that law repealed because it blocked the way to free bimetallic coinage, and not because it would aid the cause of monometallism.

That is exactly my position to-day. I am a bimetallist. I do not believe in a single gold standard nor a single silver standard, but I do believe in the use of both gold and silver as the standard money of the country, and in their free coinage in our mints at a proper ratio, without any discrimination in favor of one against the other. And as such bimetallist, I favor the repeal of the Sherman law because it is undemocratic, illogical, dangerous in its tendencies and results, an impediment to free coinage, and a disgrace to the silver cause.

The Sherman law has used "the livery of heaven to serve the devil in" long enough. It is called the Sherman *silver* law, and thousands and tens of thousands of people—possibly a majority of them—regard it as a free-silver law, or one equivalent to it. They point to the fact that many silver men are struggling to resist its repeal as though it was a vital measure to the silver cause, when in fact it is the very opposite to free coinage.

The true friends of silver make a mistake, a serious mistake, when they defend this law and allow it to be confounded with free bimetallic coinage. Instead of it being called a *silver* law, it should have been entitled "The Sherman bill to hinder free bimetallic coinage, to discredit silver, and to impoverish the Treasury of the United States." That is precisely what it has proved to be, and yet a simple repeal thereof is being vigorously resisted as though such repeal would in some mysterious manner injure the cause of free coinage.

The Sherman law is objectionable because it directs the *purchase* of silver, instead of providing for the *free coinage* of silver. Purchase means price, price means commodity, and the treatment of silver as a commodity means its derogation from its intrinsic rank as a money metal. Gold has free coinage, and hence it has no price in the United States. But silver has price. Silver purchases are simply a Government consent to prolong its derogation. Such purchases can never promote their proposed object, to wit, the preservation of a parity between the two metals.

Gold is not purchased by the Government, and should not be. It has the right of free coinage into full legal-tender money for the people, who bring it, to any amount. If melted, it has free recoinage into the same amount of full legal money again, without loss.

Silver-coining nations have not purchased silver. They coin it for the people, just as gold-coining nations coin gold. Their silver if melted loses none of its value, for it is assured of recoinage into the same amount of full legal-tender money again without loss.

It is the absence of the free coinage of silver—the existence of a limited and restricted coinage, that compels Government purchases of silver, and such purchases absolutely prevent parity.

Even the maintenance of a semblance of parity drains the Treasury of its gold, where silver is purchased. Free bimetallic coinage is essential to the parity of the two metals, and nothing else will successfully and satisfactorily maintain such parity.

There are certain elementary facts that can not be made too plain.

The value of free coinage is that it virtually monetizes all the metal wherever it may be.

Silver purchased, even if coined, monetizes no unpurchased silver, and if not coined monetizes none at all. Free coinage of silver is not the purchase of an ounce of silver. Nor is the free coinage the purchase of any gold. The function of free coinage is to effect the monetization of all, but not by the purchase of any.

The Sherman law proceeded upon a wrong and illogical theory, and so did the Bland-Allison law. They were both anomalous and without precedent, and the true friends of a bimetallic currency should never have consented to the compromise which led to their enactment.

Mr. BLAND, in 1878, should have insisted upon his original bill, which was for the free coinage of silver, and either won or lost upon that issue. But he was persuaded to accept a limited coinage, and there has been difficulty, disparity, timidity, and danger ever since. The Sherman law perpetuated and exaggerated the same error.

The Sherman law should be repealed, and for the same reason the Bland-Allison law should not be revived. Free bimetallic coinage should be the goal for which we should now strive.

WHAT MIGHT HAVE BEEN.

My own conviction is unalterable that had the last Congress, or the present Congress if convened in extra session on the 5th of March, not delayed to repeal the Sherman law, the United States would have largely escaped the panic long to be remembered as the monetary panic of 1893, and would have precluded the closure of Indian mints to the free coinage of silver, which, besides increasing panic here, scatter the seed of monetary disorder over the whole earth, as Germany did twenty years ago.

As I have already stated, there is a remedy for our own immediate domestic difficulty—repeal, pure and simple; unconditional repeal. The first remedy for poisoning our currency is to cut off fresh doses of the poison.

But delay to appreciate the wider scope and foreign implications of our inaction has now let in, to block our path towards resumption of free bimetallic coinage, a hindrance greater than the Sherman law itself.

Great Britain by stopping free silver coinage in India interposes perhaps greater hindrance to that resumption than the act of France stopping free bimetallic coinage, in order to defeat Germany's campaign of substitution in 1873. For the free coinage of silver in India was always indispensable as a condition to the free bimetallic coinage of France, and much more important, in the balance of the two groups of free monometallic coinage, than the free silver coinage of Germany.

As the free silver coinage of India was indispensable to the free bimetallic coinage of France, by which independently and alone she maintained the parity of gold and silver at the ratio of 1 to 15½ in all parts of both hemispheres; so free silver coinage in India seems indispensable (perhaps not absolutely so) to free bimetallic coinage by the United States, independently and alone, and to the perfect parity thereby everywhere of gold and silver, either at the ratio of 15½ or 16.

Free bimetallic coinage is not witchcraft. It is business. And if not universal in all mints, but is to be accomplished by the mint of a single great metallic power, it implies the coexistence of each of the free monometallic coinages by other nations.

If even gold free coinage were to become isolated, confined to one nation, free bimetallic coinage by that nation alone would be impossible. If free silver coinage were isolated (confined to ourselves, as it would almost be if adopted now), I fear that free bimetallic coinage would be impossible, even to these great United States. Especially would it be impracticable at the present time and under existing conditions.

Independent free bimetallic coinage by the United States is not consistent with the counsels of monetary science, if it is to rest permanently upon an almost isolated free silver coinage.

Our return to free bimetallic coinage is therefore, now, for the first time since 1873, subject possibly to the new hindrance and prior condition of an adequate international agreement.

That is the legacy of the Sherman law, the joint legacy of the Sherman law and the delay to repeal it. But let the dead past bury its dead. And for our parts let us go forth to the future, "without fear and with manly hearts."

These disasters which might have been averted in February or March last, and these hindrances to a resumption of our sound historic monetary system which were doubled in July, do but prescribe to the public men of our American Republic a larger circumspection and a more unflinching purpose. We can not avert, Great Britain can not avert, the deep necessity of that great resumption.

We have a widened and more difficult task to achieve. We are driven perhaps to a change of plan. The goal of our great endeavor is no less the prize of a high calling. International free bimetallic coinage remains no less a capital interest of the human race because its renewal may now have possibly passed beyond the competency of a single government. It is no less now than ever it has been, during the two decades of its vanished beneficence, the most far-reaching worldly interest of the foremost nation of civilized men.

Perhaps, in the stress of our own domestic troubles from the universal monetary disorder, we are liable to forget that long-familiar aspects of the gold and silver question are become obsolete, now that a cessation of free silver coinage has been superadded to the twenty-year cessation of the free bimetallic silver coinage.

Arguments for the simple, easy remedy so lately within our reach are now an anachronism. Only a little while ago it was possible, while free silver coinage was upheld in India, to commit to the newly chosen President of a great people, united in this behalf, by voting to substitute for the Sherman law a free bimetallic coinage law, the renewal of the general parity of gold and silver, and then watchfully strengthening our servants' hands at every vicissitude of that endeavor.

To-day such a task, even if not rejected by an Executive veto, would, I fear, strain and snap the most cordially united efforts of Congress and the Executive.

THE PRESENT BIMETALLIC SITUATION.

Perhaps, indeed, I seem to give too much importance to these varying phases in the present nonbimetallism, stopping free silver coinage in India, stopping compulsory silver purchases in the United States. Compared with the stupendous unforeseen stumble, just twenty years ago, out of bimetallism into nonbimetallism, trivial indeed are any passing phases of the universal nonbimetallism, whether local in Calcutta or local in Washington.

The change from a fixed world-wide parity of gold and silver, to their varying disparity, on the 6th of September, 1873, by the unwitting cessation of free bimetallic coinage, was an epoch in history. These varying phases are but symptoms of that disparity. The loss of the age-long parity of gold and silver I believe to have been unwitting.

But I believe the resistance to its renewal is not quite so innocent. I fear it has arisen in the preference of a creditor kingdom and of creditor classes there and elsewhere for a new money-measure in place of the ancient universal bimetallic money-measure of mankind; for a new money-measure half as great, and therefore twice as potent, in every purchase; for a money-measure exclusively of gold; for a new money-measure containing the four thousand million dollars' worth of gold, but not the four thousand million dollars' worth of silver (in round numbers), comprised in the now dislocated bimetallic money-measure.

Such a substitution is chimerical, and it would be fraudulent. To the great bimetallic money-measure the range and plane of prices of all commodities had been for centuries conformed. After twenty years' dislocation of the two moieties of the world's old money-measure, the gold moiety and the silver moiety, a nonconformity of the range and plane of prices of commodities is far from being established, for the disuse of either moiety is not yet begun, and the abolition of either moiety is only dreamed of. There were dreamers forty years ago who dreamed of abolishing the gold moiety of the money-measure by cutting off gold from a free bimetallic coinage.

The dream of abolishing one-half the money-measure rather than reset the dislocated two halves explains the persistent opposition of Great Britain, a creditor kingdom, controlled by creditor classes, to the renewal of free bimetallic coinage—the cause and condition of their permanence in parity. It explains why Great Britain has defeated every monetary conference assembled by France and the United States to that end. It explains the

British ukase, for which no British statesman dare stand open sponsor or publish his forecast of its results.

To put either money metal out of the category of money into the category of commodity constrains them to disparity much as if both were commodities; and until their parity is renewed the consequences of disparity can but go on quite remediless.

Repeal of the Sherman law making a commodity of silver by purchases can not, therefore, produce the beneficent results of restoring the parity of gold with silver in full monetary use through a free bimetallic coinage. But meanwhile repeal will facilitate their local parity. Gold monometallists everywhere have hailed the British ukase closing the mints of Calcutta and Bombay as "the doom of silver." The American branch of believers hoot at the "pernicious pig metal" and dream the coming consummation of their hope.

On the contrary, it brings that new-fangled monetary theory—the theory of gold monometallism, begotten in the embraces of ignorance with rapacity—at last to an unequivocal and crucial test.

For the moment, for the day, for the year, it seems to finish the disparagement of silver, commenced with the cessation of its share in a free bimetallic coinage, continued by its withdrawal from a monometallic free coinage, while Cinderella's sister alone frequents the mints of all the great metallic powers.

But many years ago, the editor of an able newspaper, the New York Evening Post, who was also a great American poet (I refer to Mr. Bryant), summed up in four immortal lines the inevitable outcome of enthroning successful Error above underfoot and downtrodden Truth:

> Truth crushed to earth shall rise again—
> The eternal years of God are hers;
> But Error, wounded, writhes with pain,
> And dies among his worshipers.

The incurable wound of this error was inflicted by the worshipers of gold monometallism in England when it was pushed forward, by a necessary logic, to one more step in the disparagement of half the money of mankind—the withdrawal of free coinage from silver in a great Empire where silver was and is and must ever be the sole possible coin of universal employ and full legal tender.

THE BRITISH EDICT IN INDIA.

What was the *modus operandi?* A sudden edict, from their British conquerors on the other side of the globe, stripping off from their only money metal the primary condition of its equivalence, whether circulating as coin or hoarded in bangles. Sir David Barbour, that Indian finance minister and bimetallist who begged for free bimetallic coinage as the scientific solution of India's monetary troubles and the world's monetary troubles, testified that the silver hoards of India were correctly computed at £130,000,000 sterling worth. Free coinage had ever maintained the equivalence of silver in the ornamental bangle with silver in the coin rupee.

The British ukase stripped these Indian savings and ornaments of nearly half their purchasing power, subjected them to varying disparity like the disparity between the silver dollar and 412½ troy grains of silver bullion, and asserted for the British conquerors of 250,000,000 people power to make for them and coin silver purchases, and denied their immemorial right to the free coinage and recoinage of silver. Such is the lot of the Englishman's "dumb-driven cattle." What was the ostensible scheme? It was the endeavor to put a peg in at the present limit of disparity between silver and gold, a disparity caused and continued by stopping the ancient access of silver to free coinage at the mints of Europe, where the alternative adoption of gold was not a physical impossibility.

The public confessions of the gold monometallists—the plain implications of their scheme—are more instructive than even its present failure. The scheme is an open avowal that disparity between silver and gold, that divergence from a bimetallic par, is intolerable. The scheme is an open avowal that in any state of disparity present, the liability to greater divergence from parity, and the liability to less divergence from parity, are two evils which threaten commerce with costs and disaster. The scheme was published and recommended as an endeavor to stop the first liability. Instead of dwelling on its demerits or present failure, I prefer to note the implied admission of the supreme value of a fixed parity of gold and silver.

Another implication is that the most hidebound British gold monometallists can not avoid retaining the use of silver coin as money of full legal tender in the domestic trade and foreign commerce of subject populations whose mere increase during the last decade vastly outnumbers the total population of the United Kingdom on all its islands.

Abolition of silver as money of full legal tender, announced by the New York Evening Post as to-morrow's millennium, is not attempted yet by any sort of fools among British statesmen.

Abolition of India's sole possible coin money of full legal tender being impossible, the subordination of silver there to gold elsewhere in the British Empire is the exact description of this avowed experiment. Parity is discarded; disparity is vainly limited; subordination is attempted. For subordination, if achieved, and a renewal of parity by other powers prevented, involves usurping for gold alone the function of the standard; that is to say, the function of the ancient bimetallic money-measure. Written all over the face of this theory and this endeavor is the rapacious purpose to make the sufferings entailed by the loss of that parity which Great Britain is preventing, work out at last the halving of the old bimetallic money-measure of mankind and the doubling of the purchasing power of a new gold money-measure upon all the wages of labor, all the fruits of labor, all the debts of labor, for the benefit of the creditor classes of a creditor state.

Subsidiary and subordinate coinage of silver for small change is easy enough in Great Britain, which produces neither money metal and has enough of gold. But the attempt to make subsidiary and subordinate to gold the coinage of silver among the vastly outnumbering populations of mankind, who have no other money metal of full legal tender except silver, and whose mere numbers make their sufficient share, and their necessary divisions of gold as a money metal commercially impracticable and physically impossible, is rapacity foredoomed to defeat. It derives from cockney convenience a rule for crowded empires possessing of the two money metals but one, with no reason for its subordination to another, and without gold for it to be subsidiary to, but being subject themselves to the common need of all commercial nations, a single common money metal or a fixed parity between their respective or common money metals, if there are two—the parity of past ages, the international currency of silver equally with gold.

I have noted to the Senate the implied admissions of this precious scheme. I have mentioned its homage to the discarded rule and result of free bimetallic coinage, the parity of gold and silver, in its legalizing and untried method and sort of parity, a bureaucratic maximum limit of disparity.

If any Senator would fain believe that something else than deliberate rapacity inspires the present rulers of Great Britain in their long defeat of the efforts of the two great Republics, France and the United States, for renewal of the parity of gold and silver, and in this latest preventive measure, I will assist his aspirations by some evidence that their Anglo-Indian ukase may rather be deemed mere ornamental imbecility.

These British statesmen, like their royal George, so anxious for their own good and "the goods of all the peoples" of their empire, have commenced their campaign by creating the most stupendous mass of inconvertible money—money inconvertible with the new unit of value—ever known in the history of the human race. Nobody can deny that fact. I can put in evidence Sir David Barbour's statement of it, a man of science and affairs. I do not cite the British chancellor of the exchequer, Sir William Harcourt. He is a burley bruiser who knows as much about coinage and currencies as John Sullivan. He told a deputation comprising delegates from the London Chamber of Commerce on the 25th of January this tale of the double florin, a silver piece in the mere subsidiary coinage of Great Britain: "The double florin is so unpopular that I believe it has gone abroad."

He told the "city" men of London that, and nobody laughed. That will do for Sir William Harcourt and the "city" opinion of London. He conceives that a subsidiary coin can have extranational export or international currency; and it is this finance minister who directs the subordination of the silver rupees of India to the gold sovereign of Tower Hill.

I would myself accept the idea that the Anglo-Indian ukase is merely monumental British stupidity, if it were the first act in the monetary drama instead of the fourth.

Great Britain defeated the renewal of the parity of gold and silver at the monetary conference of 1878.

Great Britain defeated the renewal of the parity of gold and silver at the monetary conference of 1881.

Great Britain defeated the renewal of the parity of gold and silver at the Brussels monetary conference of 1892.

Great Britain now, in 1893, is combining her Asian with her European power to prevent renewal of the parity of gold and silver by the United States and France or other foreign powers at any future time. To create the hugest mass of inconvertible money ever known, while posing as monetary purists, may look like pious imbecility worthy of a Pharisee in Bedlam. But on review of the successive acts of the monetary drama, a statesman of sense will "doubt not through the stages an increasing purpose runs."

I admit, for I affirm, that the British new-fangled theory of gold monometallism is an ignorant, insular, weak-minded the-

ory, like their theory of taxation without representation before 1776, like their theory of impressments for the British navy in American ships before 1812, like their theory of irresponsible naval intervention to assist the disunion of these States before the Alabama arbitration of 1871.

But it is no disproof of a selfish rapacity that its methods may foredoom their own frustration. And what, indeed, has the greedy purpose of these insular theorists so far brought to pass? Have they demonetized silver? Strictly speaking, silver has not been demonetized. The usual phrase is at fault. It is the indignant utterance of impoverished men and injured nations, but not the accurate language of monetary science.

Until now not an ounce of silver has been demonetized. Coinage has been stopped here and there, but the old silver francs, thalers, florins, dollars, rupees, are still in existence and monetary use. Some German thalers, florins, the Roumanian and Scandinavian silver pieces, have been transformed into francs or rupees. Silver has not been demonetized. So much silver was never in monetary use as now.

Silver in that sense has not been demonetized, and the total achievement of the rapacious and ignorant theorists of gold monometallism thus far has been to polder, to confine within the several boundary lines of all nations—as if they were the dikes of so many sunken tanks—one-half the full legal-tender coin money of the world by despoiling silver of its old international monetary power. In place of the old world-wide parity of silver and gold, there is gold in a few and silver in all nations, and no parity for twenty years between them or any, and as many local parities as there are nations formerly bimetallic.

To have despoiled silver of monetary power internationally; to have suppressed parity between one money metal of the North Atlantic States and the money metal of the great mass of mankind—that is the sum-total of results achieved. That is the title of Great Britain to curse her dependent state with the curse of an inconvertible money and boast the "Pax Brittanica."

If there is any honest man among British statesmen who has favored the successive procedures of Great Britain in this latest procedure because he knew no better, he has one lesson to learn.

There is no reason under heaven to expect renewal of the stable, unvarying parity, the universal, age-long parity, of gold and silver prior to September, 1873, from any other source, by any other means, than the renewal of its cause—competent free bimetallic coinage.

There is no reason under heaven to suppose the totally unprecedented shocks and fluctuations of divergence and disparity between gold and silver, continuous now for exactly twenty years, will ever discontinue, so long as either money metal is not by competent free bimetallic coinage translated back again out of the common chances and conditions of a commodity.

Meanwhile the local legal parity of our silver dollars with the gold dollar of 25.8 troy grains should be maintained at all hazards and under all circumstances, and the silver purchases stopped and isolated free silver coinage rejected for the present, in order to avert the present and future dangers to that local legal parity of the silver in the silver dollar and the gold in the gold dollar; but especially and also in order not to avert and in order not to prevent the renewal of the greater parity, the parity of all gold and all silver at one fixed ratio around the world, by means of a competent free bimetallic coinage.

My point is not now that our isolated free coinage of silver under present conditions will entail an exclusive silver basis here. My point is that we should not confirm Great Britain in her delusion of a gold basis everywhere by thus increasing European gold stocks with our gold stock; we should not deprive the United States of all power to promote free bimetallic coinage; we should not put off the hope of monetary peace into the next century.

The local parity of the silver dollar and the gold dollar in all these United States is our point of honor. It behooves us to be intolerant of present danger from the Sherman law, intolerant of the future danger which Great Britain has created for us in absolutely isolated free silver coinage at the present time.

To attain the renewal of free silver coinage along with free-gold coinage it behooves the United States to reverse their present policy, to augment Great Britain's difficulties and diminish our own, to stop temporarily the increase of silver in our currency under existing conditions and increase its gold constituent. Both are feasible. I hope to address the Senate further upon this point at some future time. I will not dwell upon it now.

Repeal of the Sherman law, had it taken place when, almost alone and unsupported, three months after its enactment, I began the systematic advocacy of its repeal, would have entailed long ere this, as I believe, free bimetallic coinage in Europe and America.

It will hasten now that day of deliverance; for it will release from an invidious position all those in the great West who are accused of a dishonest intent of inflation and enable them to fight for the first time with full powers for restoring free bimetallic coinage of the best money in the world—the sole money incapable of inflation.

THE PERMANENT REMEDY.

It will be observed from what has already been stated that the permanent remedy for our financial difficulties is a return to the bimetallism which existed prior to 1873. Nothing else will do it. We have tried everything but the right thing. It has been stated over and over again during the present debate, especially in the other House, that the country has tried the experiment of silver coinage and that it has proved a failure, and that therefore we should now return to a gold standard.

The country has not tried free coinage since it was unwittingly abandoned in 1873, but it has tried a limited and restricted coinage, silver purchases, the accumulation of silver bullion, and a depreciated currency, all of which have been forced upon the country by monometallists through miserable compromises obtained from silver men.

Why not try the only remedy that has not yet been applied? Why keep the Sherman law intact or why indulge in other experiments equally delusive, equally illogical, and equally unsatisfactory? The fact should not be forgotten and can not be too strongly impressed upon the public mind that at the very time silver was demonetized in 1873 it was upon a par with gold. That was when we had free bimetallic coinage in this country—not a gold standard nor a silver standard, but both gold and silver were the standard money.

If pledges in platforms amount to anything, unless they are to be regarded as mere set phrases with which to catch votes and not to be fulfilled, then both the great political parties are solemnly pledged to a return to that bimetallic system which existed prior to 1873. There may be permitted differences as to ratios, as to minor details, as to methods of procedure, and as to the precise opportune time for a return; but the important fact remains that all the political parties are irrevocably committed to the general policy of bimetallism, which, if pledges are kept, must sooner or later be permanently established.

The Senator who asserts that he is in favor of a single gold standard for the money of the country can not belong to either of the great parties. He must be a no-party man, a free-thinker, a go-as-you-please politician, of which there are types in Congress, in Cabinets, and everywhere. Such a Senator certainly has no right to speak for the Democratic party.

Bimetallism does not mean the stoppage of further silver coinage, while maintaining our present silver currency intact, but it means the free coinage of silver and gold by the Government, either under an international agreement or independently. The stoppage of further silver coinage, but the maintenance of existing silver currency accompanied by the free coinage of gold, is not bimetallism, but it is what the famous French financier, Mr. Cernuschi, called "humped-back monometallism," such as exists in France and Germany to-day.

This is not what our country needs for permanent relief, but we want the establishment of a perfect system of free bimetallic coinage as it existed prior to 1873, whereby every silver dollar may be kept at a parity with every gold dollar. That result was accomplished then—it can be accomplished again.

I am opposed to a single standard of gold because there is not gold enough in the world to fulfill the needs of a sole money metal. I believe I hazard nothing in that statement, but only express the profound conviction of the thoughtful people of the United States, and of the people of every other country in the whole civilized world except the ruling powers of Great Britain. Their course is determined by what they regard as their own selfish home interests, regardless even of the best interests of their colonies.

The business of the United States as well as the business of the world is rapidly augmenting. Ours is comparatively a new country; yet our population is already larger than the mother country, larger than either Great Britain, France, or Germany; our resources are being surprisingly developed, our commerce is increasing, our industries are desirious of extension, the wonderful inventions of our citizens are demanding additional capital, the spirit of progress is abroad, we insist upon more of the costly comforts, conveniences, and luxuries of life than were permitted to our fathers before us; new and growing States are knocking for admission into our Union, and the star of empire is rapidly making its way westward; new and gigantic enterprises of every conceivable description are crowding to the front, and the evidences of a higher, better, grander, and more magnificent civilization are accumulating. We are no longer a weak, puny, contracted, and poverty stricken people, but soon will be by far the wealthiest nation on the globe.

The observance of these gratifying evidences of national progress, gratifying as they are to the patriotic citizen, naturally

lead to the suggestion that such a country and such a people should not, in their onward march of improvement, be cramped, hampered, embarrassed, and restricted on account of any insufficiency in the currency. Money is but a measure of value and a medium for facilitating exchanges. Its volume should be sufficient to adequately represent the aggregate wealth of the world. The value of money—the standard—is fixed by governments in statutes. As one of the financial writers of the world says, "Without law there is no legal tender, without legal tender there is no money."

This great and growing country of ours needs a much larger circulation per capita than any other country in the world. It will not answer to compare the needs of our nation in this regard with the old, unprogressive, finished nations of Europe, where the wealth is largely controlled by a few families.

The insufficiency of our present volume of currency seems to be everywhere conceded, and yet there is an unaccountable reluctance to establish a permanent financial system under which that deficiency can be easily supplied.

The proposition now before Congress to allow the national banks to increase their circulation 10 per cent—and which proposition I earnestly favor—is the outcome of a general desire for an increase of the currency, the insufficiency of which has been made plainly manifest during the present crisis.

To that proposition of itself there is little objection, yet it is a strange spectacle which is presented when we witness that those who are the most clamorous for such increase at the present juncture are usually holding up their hands in holy horror and solemnly protesting against any other increase of the currency—especially an increase of silver money—as "inflation," when in truth both silver and gold are money metals absolutely incapable of inflation.

The speech of a distinguished gold monometallist in the House the other day abounded in references to our "redundant currency;" to the "abundance of money" with which the country is blessed; to the "ample supply" of the circulating medium, and other expressions indicative of the opinion that the country was already surfeited, or at least too well supplied, with circulation.

I do not believe it. The country does not believe it. The business men of our land believe it to be untrue. If one fact more than another has been adequately demonstrated in the present emergency, it is the fact that we need more circulation with which to do business. Let us give our national banks the relief which they ask, and then prepare the way for a steady, permanent, and safe increase of silver circulation—silver which shall be at a parity with gold; silver which shall be able to buy as much as gold; silver which shall be coined and circulated, and not hoarded up; silver for which the plain people are clamoring—the silver which was mentioned in the Democratic national platform of 1884, when it declared that "We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss."

In the year 1892 the total production of gold in the United States was only $33,000,000, not as much as in 1891. The production has remained about the same for several years, with no material increase, notwithstanding the increase of our population and resources. In 1878 it was $51,200,000, being $18,200,000 more than last year. For many years the average annual production was over $55,000,000, while now such average is scarcely $33,000,000.

It is true that outside of the United States there has been some increase in the world's production of gold during recent years, but an average annual increase of only $10,000,000, which is about the figure, is comparatively insignificant when the increased population and requirements of the whole world are taken into consideration. How much gold bullion is lost, hoarded, used in the arts, and otherwise disposed of and not applied to currency purposes? An annual increase of production of $30,000,000 would not keep pace with the world's needs, especially if, as is positively proclaimed here and elsewhere, a gold basis is to be finally established by all the governments of the world.

In that event what a contemptible figure the slight annual increase of ten millions would cut in the effort to answer the world's demands. It must be borne in mind that in the event of a universal gold basis, a failure in the requisite gold supply means absolute ruin, a stationery production means hard times, a diminution in production means bankruptcy of tens of thousands; in fact, it may be positively asserted that anything less than a reasonable and liberal increase in the annual gold production would mean stagnation of business, financial disturbance, and a renewal of our present difficulties. The world needs all its silver as well as its gold to give us an automatic and elastic currency.

We need not be disturbed about the increase in the production of silver. It cuts no figure in the solution of the great monetary problem. The annual increase is not 1 per cent of the world's total supply. Every ounce of silver extant on the earth now—the total accumulation—if carried to the Acropolis at Athens and melted in one block would not half fill the famous Parthenon.

When the gold mines of California were discovered, in 1849, Europe became frightened and complained loudly of a fear of being deluged with American gold: but the fear was soon shown to be groundless, and that gold proved to be a blessing to a poverty-stricken world. History will repeat itself in our American history of to-day, and silver will perform the same beneficent purpose that gold did then. It is for the interest of the United States to insist upon silver being a part of our standard money, for we are the great silver-producing country of the world.

It is unnecessary to characterize the demonetization of silver in 1873, or to inquire whether it was done intentionally or ignorantly. Secretary Carlisle, at a time when he reflected his own sentiments, and was not merely the mouthpiece or subordinate of others, characterized the act as a "gigantic crime" against the people.

James G. Blaine in speaking of the same subject said, "If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of having it renewed. If it has been restricted, I am in favor of having it enlarged."

THE QUESTION OF RATIOS.

I do not propose to discuss to any extent the matter of ratios, because I do not regard that the time has arrived for its serious consideration. When the policy of bimetallism shall have been definitely settled, then the opportunity will be ripe for the opening up of that subject. There have always been conflicting views in regard to the proper ratio which ought to prevail between the two great money metals, and, in my opinion, it is untimely to invite such differences at a period when it is not the precise ratio which is at stake, but when the whole theory of bimetallism is assailed and is struggling for existence. I beg to differ with those good friends who seem to regard the question of ratio as one of the highest importance. I esteem it of the least consequence of any of the questions which are incident to the monetary problem.

If the existing ratio is to be changed at all, the feasibility of which at the present time is of great doubt, it should not be enlarged, but diminished, and put at 15½, so as to correspond with the ratio under which the silver pieces of the countries composing the Latin Union were coined.

I realize that this is not the popular idea, and that we hear it everywhere said that the ratio should be increased so that there shall be more silver in our silver dollar, and then all objections to free coinage would be obviated. I have heard intelligent men frequently say, "Let us have a dollar's worth of silver in a silver dollar, and everybody would be satisfied." This is a very narrow and superficial view of a great problem which for its solution depends little upon a mere matter of ratio.

An enlargement of the ratio by this country involves the recoinage of nearly all our silver at a tremendous loss or else its absolute retirement, which would be disastrous; while a reduce of the ratio to 15½ would enable us to recoin at a profit, and thus place our silver pieces on the same plane as those of European countries. It is evident, under existing conditions, no European country will recoin at a fearful loss, such as would be involved in any of the changes now proposed.

If we do anything, we should hold out an inducement to the Latin Union countries to recoin at a profit instead of a loss, and that can only be accomplished by reducing the ratio to their standard, rather than enlarging ours. We must take a sensible and practical view of the ratio question, and recollect that all changes of policy should be carefully avoided, except for the most imperative and pressing causes.

It is not the quantity of silver in a silver coin piece that absolutely determines its value—it is the legal-tender quality which is given to it by law. The trade dollar contained considerably more grains of silver than did the standard dollar, and yet because it was not legal money it soon became worth only what its bullion was worth in the market. Our silver half dollars do not contain in proportion as many grains of silver as do our silver dollars, and neither do our silver 10-cent pieces; and yet everywhere ten dimes and two half dollars are interchangeable for each other and for a silver dollar, with the like effect as though they were "intrinsically" equal, if I may use that term, or equal in the market, because they are equal to each other by law and are a legal tender.

Every elementary writer on the subject of monetary science does not lay much stress upon or attach much consequence to the exact ratio, except that it is always desirable that whatever ratio is established should be uniform, and that such uniformity should exist in as many countries as possible.

It is said that the weight of all the existing silver is eighteen times the weight of all the gold. But if the quantity of silver employed as small change is deducted, and if the aggregate of silver and the aggregate of gold are valued at the ratio of 15½, the total value of gold and the total value of silver are found to be about equal. The great author or inventor of the term "bimetallism" declares that "this is only pure chance, and that bimetallism is indifferent to it," and yet it does tend to establish the fact that 15½ is after all about the right ratio, at least for successful international bimetallism. It seems to me that the suggestions of some new ratios—1 to 20, 1 to 25, 1 to 30—misconceive the nature of the present difficulty and superadd another.

What the market price of silver bullion may happen to be any day, in the absence of any ratio of free bimetallic coinage, is a fact that offers no guidance in selecting the ratio for its revival. That is making market price, which can only appear in the absence of a ratio, determine the ratio, which is inconsistent with price and excludes price.

There is no price of gold where gold has free coinage, nor of silver where silver has free coinage. There is no price, but ratio only for either metal where both have free bimetallic coinage.

THE TRUE ISSUE.

The true issue to be met is simply whether the Sherman law should be repealed. It is not an issue between monometallism and bimetallism, between a gold and a silver standard.

The question of the demonetization of silver is not involved. Speaking in the popular sense, silver was demonetized in 1873. It is true that a repeal prevents any further coinage of silver, but it only prevents a restricted coinage such as I have described, which is worse than no coinage at all. It does not of itself prevent free coinage, because free coinage has not existed since 1873. A repeal can not injure the silver cause; it should help it. It paves the way for other and better legislation.

The Sherman law has unfortunately become so identified with the free coinage of silver, and the ill effects of its operation have been so manifest, that the sooner it is wiped off from the statute books the better it will be for bimetallism.

Those who foolishly declare that the present contest is between a gold standard and bimetallism not only misstate the true issue, but thoughtlessly or designedly injure the cause of repeal.

If I believed for one moment that the repeal of the Sherman law would injure the cause of bimetallism and would be the means of placing or tending to place the country upon a single gold standard, I should never vote for it, but would as earnestly oppose it as I am now favoring it. And I tell those who seek to make that issue that if their view of the question involved is correct and was so understood, the cause of repeal would find few advocates in either House of Congress. But there is no such issue. The strongest bimetallist can safely vote for repeal without a violation of his principles. He will only clear the way for their ultimate triumph.

It is said that the President's message by its significant omissions and especially in its closing lines contemplates the establishment of a gold standard as the policy of the country, and looks upon the repeal of the Sherman law as a means to that end. It is to be regretted that the President was not more explicit in his last utterances. He expressly advised the repeal of the Sherman law, and then urged other legislation as desirable, but he left the exact nature thereof in doubt.

It was hoped that the President, in view of the provisions of the Democratic national platform in favor of a double standard, and in view of the well-known opinions of a large majority of his own party in Congress, would have at least spoken a kind or encouraging word in behalf of a return to bimetallism. It would certainly have made the path of repeal an easier one, and prevented much misconstruction and bitterness. But while I regard such omissions as unfortunate, and while conceding that it is not easy to reconcile the closing words of his message with a desire for the establishment of a double standard, yet I am not disposed to accept such a construction of them until further evidence of his adverse intentions have been manifested. If he really intended us to understand that he proposed hereafter to favor the policy of a single gold standard, then I must absolutely decline to follow him in his new departure.

I shall refuse to follow in the footsteps of any Administration that seeks to place the Democratic party in a false position, that seeks to lead it away from its traditions, away from the currency of our fathers, away from the path of safety, away from Democratic principles and platforms and into the very camp of the enemy. The President must rely upon Republican votes to carry out any such suicidal policy. I shall not believe, however, that any such course will be taken by the President of his own volition or even under the inspiration of indiscreet advisers until clearer evidence shall be furnished than now exists.

I urge a repeal of the Sherman law because it is a hindrance to free bimetallic coinage; because its practical operation is depleting the Treasury of our gold; because it is hoarding up our silver bullion, instead of coining it; because it is lowering the price of silver and creating a greater disparity between silver and gold every day of its existence; because it has lost the public confidence, weakened the public credit, and disgraced the silver cause it was designed to serve.

These are sufficient causes for its repeal without inventing other reasons about which there might be serious differences of opinion, and the discussion of which is unprofitable at this crisis.

HASTY ACTION TO BE AVOIDED.

It is a most difficult task at this particular juncture of affairs to mark out a fixed and definite financial plan for the future which shall not be subject to revision. We must not only take into consideration our own depressed and almost exhausted condition, but we must not ignore the conditions and actions of other countries. We must await the effect of India's unfortunate action. What has she done? She has stopped the free coinage of silver to individuals, and proposes, as it is understood, to continue it restrictedly, under government direction and control, through purchases of silver bullion.

In other words, she is imitating the action of the United States, which in 1873 stopped the free coinage of silver and subsequently resumed a limited coinage through Government purchases of bullion, and the result in India is likely to be equally disastrous as it has been in America.

India's action was hastened by the contemplated repeal of the Sherman law by the United States, as the famous Herschell report conclusively shows. She is now following our footsteps, and will sooner or later reap the same dreadful harvest. But her action can not be ignored and lightly dismissed, because it leaves the United States at the present time the only large country, except Mexico, maintaining some system of silver coinage, assuming that India's government, for the present, ceases all coinage.

I make the prediction that the attempt to impose a gold standard upon Great Britain's Indian Empire is doomed to ultimate failure. But we must wait and see.

The VICE-PRESIDENT. The Chair will remind the Senator from New York that, the hour of 2 o'clock having arrived, it becomes the duty of the Chair, under the rule, to lay before the Senate the unfinished business.

Mr. VANCE. Mr. President——

Mr. HARRIS. Let the unfinished business be laid before the Senate.

The VICE-PRESIDENT. The unfinished business, being the resolution reported from the Committee on Privileges and Elections, will be read.

The SECRETARY read the resolution, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. STEWART. I suggest that that go over informally.

Mr. HARRIS. I ask unanimous consent that the resolution be informally laid aside in order that the Senator from New York may conclude his remarks.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Tennessee?

Mr. VANCE. Before that is done, to which I have no objection, I wish to ask the Senate to fix a time when we can dispose of this matter.

The VICE-PRESIDENT. Is there any objection to the request of the Senator from Tennessee?

Mr. VANCE. I am willing to defer to the pleasure of the Senate, but the matter ought to be understood in some way.

The VICE-PRESIDENT. The Chair hears no objection to the request of the Senator from Tennessee. The Senator from New York will proceed.

THE TEMPORARY REMEDY.

Mr. HILL. The temporary relief which the country needs at this hour is the prompt repeal of the Sherman law. We can discuss our monetary theories afterwards. Our duty now is to stop further silver purchases and relieve an almost bankrupt Treasury from the drain of gold out of its vaults.

Let us legislate upon the financial question and then return to our homes. At the regular session next December we can resume the consideration of the establishment of a permanent financial system required by the necessities of our great and growing country. This is not the hour for trying experiments.

The country's condition forbids it. The patient is sick; we must cure him of his dangerous temporary fever before we attempt to cure him of his deep-seated dyspepsia or rheumatism. "One thing at a time" is a good motto in business as well as sometimes in politics and legislation.

The goal for which the country should steadily strive is, first, international bimetallism—an agreement with at least a few leading nations—and if that is absolutely impossible of achieve-

ment, then independent bimetallism at the earliest moment when the condition of our finances and conditions abroad will safely warrant it. It is impossible to say in advance when that moment will arrive. It may never come. It certainly is not at present. There must be adequate preparation, revised laws, competent administration and friendly administration before such a result can be secured.

The condition of our Treasury forbids it to-day, but I indulge the hope that in the near future the existing conditions in this and other countries may change for the better, and we may be enabled safely to return to the wise policy which we so foolishly abandoned in 1873. It is useless to disguise the fact that the situation has greatly changed for the worse during the past year. The increasing disorder of our finances and the recent action of India have complicated the financial problem and rendered it more difficult of solution.

It is possible that such action of the India government may render the adoption of independent bimetallism inadvisable or impossible for some time to come. I hope not; but we must proceed cautiously and prudently in the management of the financial affairs of a great nation. Much must depend upon the future policy of India. Nothing can be safely done without the support of a reasonable share of the public confidence, and I fear that the adoption of independent bimetallism in the present great crisis would be regarded as a dangerous experiment.

Our duty to our country and to the cause of bimetallism can best be subserved by a prompt repeal of a concededly obnoxious measure, taking the precaution at the same time that the effect of such repeal shall not be misconstrued either at home or abroad. It is not wise or feasible, for reasons to which I have alluded, to couple with such repeal any new or affirmative financial legislation, but it is desirable and all-important that the repealing bill should itself declare in general terms what the future financial policy of this Government is desired or intended to be. Such a course prevents misinterpretation of our action abroad, and reassures our own people as to the policy to which our efforts are proposed to be directed.

What harm can result from such an expression? Who can properly object to it? What Senator at least upon the Democratic side can refuse to vote for such a plain and explicit declaration of our principles? It is simply the substance of the Chicago platform embodied and reaffirmed in a statute. It is important in order that a repeal shall not be regarded as an abandonment of bimetallism—a victory for monometallism, a defeat for silver, a return to a gold standard, or a destruction of our silver industries, or a triumph of a score of other false and misleading issues which have unfortunately been injected into this contest.

Here is the declaration in full.

> And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

This declaration which I have quoted, and which is appropriately embodied in the present bill reported by the Finance Committee, will give encouragement to Balfour and his associates, the friends of international bimetallism in England, and aid them in their heroic efforts to establish a double standard. It will assist the cause of bimetallism everywhere in the world. It commits this Government to a definite general policy which no Administration, no matter how strongly it may regard itself as intrenched in the affections of the people, will dare to disregard. Its excellent results may not be witnessed now, but they will be realized in the future.

Let us not be impatient, but abide our time. We accept no compromise with principle, but we rid ourselves and our cause from the incubus of an illogical, unsafe, and unpopular law, and obtain in its stead the most important declaration of future policy ever recorded in a statute.

More than that we should not expect or ask at this time, and less than that we can not honorably accept. If you ask me if the bill unconditionally repeals the Sherman law, I answer yes—and no. Yes, in the sense that it absolutely repeals that act, and contains no distinct, affirmative financial legislation, such as has been insisted upon here and elsewhere; but no, in the sense that it does contain a most important condition or qualification, virtually limiting its significance or declaring how the effect of such repeal shall be construed, or, rather, preventing its misconstruction.

Of course there is no legal legislation in favor of bimetallism such as could be enforced in a court of law, but there is moral legislation therein—a declaratory policy embodied in it, a pledge of the faith of the Government is set forth—a binding, honorable obligation upon future legislators, cabinets, and Presidents.

President Cleveland could not approve that law to-day, if we should pass it, and next December take any position upon legislation or upon financial questions based upon the theory that the policy of this Government is any other than bimetallism as therein solemnly declared. The concession contained in the latter portion of the bill can not be overestimated, and its practical value will be more and more appreciated as time rolls on and as the contests of the future shall be developed. No gold monopolist could approve such a measure, and no public man, no matter how exalted he may be, could afford to deliberately deceive and betray the American people upon such a question.

ALL SHOULD VOTE FOR REPEAL.

No one, be he a Democrat, Republican, or Populist, should be deterred from voting for this bill simply because it is hailed as an Administration measure. That furnishes no argument either for or against it. I resent the impertinent suggestion of those sycophants who are constantly posing as the personal or especial friends of the Administration, and who whisper in our ears every day that the Administration wants this and does not want that, and we must not vote so as to displease the Administration.

Sir, I know of but one rule of conduct that has guided my official action here, and which will continue to guide it to the end. If a measure seems to me to be right and proper and meets my approval, I shall support it, and if it does not meet my conscientious judgment I shall oppose it, and the wishes, views, or suggestions of any Administration will have no effect in influencing that result.

As you well know, I was for the repeal of this bill long before the present Administration came into power, and by my voice, pen, and influence contributed my humble share toward the creation of that public sentiment in regard to it which is so well nigh unanimous in my own State. My distinguished colleague and myself will cheerfully vote for this bill, "unawed by power and uncorrupted by Federal patronage." [Applause in the galleries.]

The VICE-PRESIDENT. The Senator from New York will suspend. The Chair reminds the occupants of the galleries that applause will not be permitted. Should there be a repetition of this offense, it will be necessary to have the galleries cleared.

Mr. HILL. The President is entitled to my support and that of every other Democratic Senator when he recommends a meritorious measure which is expressly approved in the platform of the party which nominated and elected him to the high office which he holds. He could do no less than recommend the repeal of the Sherman bill, because such repeal was made a part of the Democratic creed at Chicago. It was his duty so to do, and he has simply discharged that duty, and that is all.

He deserves also in this instance the support of all the other Senators, because the measure which he recommends is demanded by the best interests of the country and is essential to its welfare and prosperity.

REPEAL WILL TRIUMPH.

Mr. President, this bill is going to pass this Senate. I believe it; I predict it. The sentiment in its favor is growing stronger each day under the light of discussion. The sober second thought of the distinguished Senators who compose this circle—their calm, deliberate, unprejudiced judgment—will in the end eventually impel them to the conclusion that after all the route of repeal is the safest, best, and surest path to pursue. I have confidence in the wisdom, the discernment, and the patriotism of the American Senate, and we can safely trust its conscientious determination of every great public question presented to it at a critical period like this.

There will be some delay, vexatious though it may be regarded by the public, whose impatience is excusable under the trying ordeal through which our business interests are passing, but such delay is inevitable in a body where deliberation has been its leading characteristic for a century, but there will be no disappointment in the final result. There will be debate, a full comparison of views, an endeavor to do the right thing, and then a prompt and honest decision.

There will be no filibustering upon such a subject as this, nonpolitical in its character, involving purely financial questions about which there always have been and always will be honest but respectful differences of opinion among men, although questions not involving life, liberty, or the vital principles of free government. Any other course in this fearful crisis would be unworthy of the Senate, and the Senate will respect itself.

Let our business men who are laboring under fearful burdens and against great obstacles and embarrassments take courage at the prospect. The present clouds of adversity which so heavily overhang these dark and gloomy days will soon pass away, and

relief will surely come. I think I see a bright, clear silver lining to the clouds in the West which now threaten danger, and in the near future that light will become stronger, better, more effulgent under the rays and inspirations of an educated public sentiment desirous of justice, freed from passion, prejudice, and selfishness, and will guide the country back to the sure ground of stable prosperity, the right financial policy, and the monetary principles of our fathers, from which it has so wonderfully and frightfully wandered in recent years.

Then our commerce will return to us, our industries will revive, our exchanges will reopen, the avenues of business will abound with activity, confidence will be resumed, and credit will be restored.

This Republic is not going to be shipwrecked on account of bad financiering. No; it will weather the present storm. Too much is at stake in its preservation, too many hopes are centered in its success, too many prayers are ascending for its safe deliverance for it now to be destroyed.

Divided though we may be in our political opinions and diverse as are our financial views, we none of us forget that this nation belongs to no party nor faction, but it is *our* country that is in peril, *our* prosperity that is to be promoted, and *our* liberties which are to be protected.

In the beautiful and appropriate language of a distinguished American statesman, in speaking of the value of our free institutions and of the inestimable boon of liberty bequeathed to us through the blood and sacrifices of our revolutionary forefathers, "This priceless heritage of freedom is ours; ours to enjoy, ours to possess, ours to transmit."

Mr. STEWART. Mr. President, the bill under consideration is a bill to utterly demonetize silver. It is legislation which would adopt the single gold standard; it is legislation which indorses the act of 1873; it is legislation which gives the lie to the platforms of both parties and the pretensions of public men who for the last twenty years have claimed that they were bimetallists.

The promise of this bill is an insult to the intelligence of the American people. They have had promises enough; they have had them from the Executive Mansion continually for the last twenty years, and they have had them from both political parties.

The friends of bimetallism have struggled for affirmative legislation, but they have been baffled by vetoes, by Federal patronage, by the influence of the banking communities, and by every monometallist, both in Europe and America. They have secured a slight recognition of silver in two laws—one the Bland law, which the act of 1890 superseded, and they have a recognition in the act of 1890, and it was pledged that that act should be faithfully executed, but it has been trampled upon by both the Executives who have been in power since its passage.

What, insult the people of the United States with more promises! Let no man who votes for monometallism think he can deceive the people of the United States by another promise.

Mr. President, an international money is a national danger. It is difficult for the people of any nation to so regulate their business as to avoid over speculation on the one hand or stagnation on the other. A perfect monetary system is impossible. Such a system would maintain stability of prices and the equity of contracts. The nearest possible approximation to such a system, however, is the highest aim of political economy and monetary science. Every nation is the best judge of its own monetary wants and necessities. No nation can fully comprehend the wants and necessities of all other nations. Every attempt to obtain an international money has proved disastrous. Every nation in the hour of its greatest necessities and greatest perils has been forced to abandon international money.

While silver was international money among the commercial nations of the world it was as vicious as gold. The principal business and commerce of any nation is domestic, not foreign. So long as there is a sufficient supply of money for the use of domestic commerce prosperity is assured. Whenever domestic commerce is drained of its life-blood—which is money—panic and disaster are inevitable. No great national achievements have been made with international money. International money is like the wolf. It seeks the wounded nation and devours the wreck. Domestic money, not international money, made England the mistress of the world.

During the twenty-two years of continental wars which ended on the bloody field of Waterloo England used no international money. Historians agree that those twenty-two years were the most prosperous in all the history of that great empire.

International money has never fought a great war or saved a nation from destruction, because in the hour of peril the enemy can draw out international money and paralyze the industries of the struggling nation. The war of the rebellion was not fought with international money. The committee of the great commoner of Pennsylvania, Thaddeus Stevens, in the darkest hours of the rebellion, proposed to follow the example of Pitt during the Napoleonic wars and banish during the war international money.

Mr. Stevens reported a bill for the issuance of bonds, the principal redeemable in coin and the interest payable in lawful money and in favor of greenbacks as the only legal-tender money until after the close of the war. Commercial New York, which has taken the side of the enemy in every struggle between the United States and Great Britain, contrived to deprive the country of the full benefits of a domestic currency. Wall street had sufficient influence in the two Houses of Congress to reverse the programme of Thaddeus Stevens and make the principal of the bonds payable in lawful currency and the interest payable in gold; and to provide the gold they took from the greenbacks, our domestic money, an important part of their legal-tender quality.

It was decreed that they should not be received for customs dues, but that such dues should be paid in international money. International money was the most formidable enemy during the rebellion. It kept up a continual war in the rear and bombarded the most essential fortification in our national finances. Thaddeus Stevens prophesied at the time that it would cost the people of the United States a thousand millions, and his estimate was far below the mark.

Wall and Lombard streets organized the gold board to prey upon the necessities of the country. The bulletins sent out from that board were more discouraging and disheartening than the defeat of armies in the field. The generals and financiers of all Europe united in the opinion that the success of the Union armies was impossible. They declared that such an army in front as the united and powerful Confederacy could furnish and such an enemy in the rear to embarrass our finances as the genius of Wall and Lombard streets had invented made victory for the Union impossible.

The struggle was desperate and for a long time doubtful. Victory was only achieved by sacrifices the like of which were never made before. If the people of England had allowed such an enemy to her finances to exist in their midst during the Napoleonic wars the fate of nations would have been changed. England would not now be the mistress of the world, but she firmly adhered to domestic money and achieved the first place in the family of nations.

The rejection of domestic money and the use of only international money by the administration of the Treasury Department is now inflicting dire distress and misery throughout the United States. Austria was weak and trembling before the British syndicate which held $2,400,000,000 of her obligations. These obligations were evidenced by 5 per cent bonds payable in silver. Her creditors told her that she must change her obligations from obligations payable in silver to obligations payable in gold, or they would destroy her finances. Austria consented upon condition that the syndicate would furnish her gold for the redemption of her paper circulation. There was no place on earth to obtain the gold except in the United States.

We were the only country that would adhere to the principle of international money at the expense of the prosperity of our own people. Russia with her $500,000,000 of gold in her war chest maintained an ample circulation of fiat domestic money. France with $900,000,000 of gold and $700,000,000 of silver would furnish no gold for export, but resisted every attempt to export gold by redeeming her paper in silver. Germany protected her $350,000,000 of gold by using her $100,000,000 of silver to redeem her paper when a demand was made for the export of gold. England paid a premium on gold by favorable rates of exchange to prevent the flow of her international money into foreign lands, and threatened to raise the rate of interest if any attempt was made to obtain her gold to consummate the Austrian scheme.

The United States was the only government which refused to protect its domestic money. The law of Congress left the discretion with the Secretary of the Treasury to retain in the country or pay out gold for export in the redemption of greenbacks, and by the law of 1890, while Congress left the discretion in the Secretary of the Treasury to pay out either gold or silver, it was provided in the law that the Secretary shall coin sufficient of the silver purchased under the Sherman act to provide for the redemption of the Treasury notes issued under that act.

But the Treasury Department of the former and the present Administrations gave the discretion which had been confided to that Department for the protection of the domestic money of the people of the United States to the foreign syndicate who had planned the destruction of the laboring masses of Austria. The exporters of gold were furnished international money for their Austrian speculation. They exported to Austria more than 100,000,000 American eagles and received their reward not only by converting the Austrian debt into gold, but enormously increasing that debt. The public press now state that the Aus-

trian gold debt is now $2,800,000,000. The effect of the coöperation of the Treasury Department with the syndicate which has made this grand speculation in Austrian securities is felt throughout the land. The basis of our circulation and credit was sent abroad and ruin and disaster have followed.

It was claimed by the press and by the former and present Administrations that a refusal to send our gold abroad would ruin the finances of the country and destroy the credit of the Government. It may be asked why the refusal of France and Germany to furnish gold for export has not ruined the credit of those great countries? If it has not ruined them why would it ruin the United States? It is unfortunate that it is impossible for this country to elect an Administration that will act in the interest of the people of the United States without regard to the schemes of Lombard street to acquire wealth by manipulating the international money of the world.

An opportunity is now furnished the United States to have a reasonable supply of metallic money which will not desert in either war or peace. Silver has been recognized as money longer than gold. It has circulated among all the nations of the earth, while gold has been confined to a few commercial centers. It was the standard money of England previous to the Napoleonic wars. It was the standard of all the continent of Europe previous to 1873. It is the standard money of Asia and all the islands of the sea, except Australia, to-day. Europe has discarded silver to enhance the obligations of contracts, and for no other purpose. No other country but Europe can rob us of our circulating medium and deprive us of domestic money.

An opportunity is now afforded to the United States to mine and coin silver and retain it as domestic money. The pioneers of the West at great cost and sacrifice have developed an empire of wealth. Mexico, our nearest and best neighbor, is rich in valuable mines of this precious metal. The opportunity under the Constitution to mine and coin domestic money is ample to insure the development of the resources of the United States and the prosperity of all our people.

But we are told by Lombard and Wall streets and their representatives in and out of office that we shall have nothing but the international money of Europe. They tell us it counts for nothing that the great mass of the gold of the world is either hoarded for war purposes or guarded for domestic purposes by the threat to pay silver, and that we can not obtain it without the utter destruction of the industries of this country.

But we are told that we must have international money or we can have no international trade. The assertion is not true. The international trade of every country which has tried the experiment, and all have tried it, has prospered most when it had no international money. The value of money depends upon its purchasing power at home, and that value will be recognized throughout the world. It is the business of exchange to regulate balances of trade and settle them according to the purchasing power of the money of different countries. International money, and international money alone, means domestic ruin.

We have come to the forks in the road. One points to Lombard street via New York City; the other to the great Mississippi Valley and the Golden Pacific, with branches radiating from the Gulf to the Lakes over a country whose productive capacity exceeds all Europe combined. The natural resources of climate, land, and minerals of all the commercial nations of Europe seem insignificant when compared with the grandeur of the bounties which nature has bestowed upon our Republic.

But the natural resources of this country are comparatively untouched and can not be developed without money. The framers of the Constitution recognized the necessity of money, and made it the duty of Congress to provide it by the coinage of gold and silver. The road leading westward, with its various branches, communicates with the patriotic, industrious, and liberty-loving citizens of the United States. They demand of Congress the exercise of the power conferred by the Constitution "to coin money and regulate the value thereof," and preserve to the people of the United States the right to mine and coin their own money independent of the dictation of any foreign power, prince, or potentate.

The road that leads to Lombard street via New York City communicates with the syndicate of money loaners, bondholders, and bankers who control and direct the policy of the bonded debt of the world, the interest upon which now absorbs the largest share of the fruits of labor of all the nations of the earth.

Lombard street, speaking for all the bondholders, commands the Congress of the United States to discard silver, destroy half of the metallic money of the world, cut off more than two-thirds of all future supplies of the precious metals, and confine the new supply for a metallic basis of circulation and credit to the meager output of gold, depending upon the sporadic and uncertain discoveries of gold exclusive of the regular supply of that metal heretofore realized from silver mines.

It is impossible to estimate the vast increase in the purchasing power of gold and diminution of the price of property and wages, which must result from traveling the road to Lombard street; nor is it possible to estimate the increase of the power and wealth of the bond-holding and money-loaning parasites of society, if Congress deserts the people of the United States in obedience to the commands of an alien enemy.

We must not forget that New York is on the way to London, and that Wall street is the Gibraltar of the imperial money power of England, with coaling stations of finance in every commercial city in the United States, and that the national banks are the tentacles by which the octopus of Lombard street sucks the lifeblood of the toiling millions of the United States.

Congress is convened in extra session to decide whether the people of this country shall have their own financial system, mine and coin their own money, pay their debts, and achieve independence, or submit to be governed by Lombard and Wall streets, through the instrumentality of the national banks. I need not point out the advantages of the financial scheme provided in the Constitution of the United States. The right to mine and coin money guaranteed by that instrument was enjoyed by the American people until the year 1873. The establishment and maintenance of free institutions, the growth and development of the resources of the United States, the happiness and prosperity of the people under the benign influence of constitutional and just financial legislation, seem a sufficient reason for adhering to the teachings of our fathers.

But we are commanded by the public press in the interest of the money power, by the banks in their own interest and in the interest of Wall and Lombard streets, and by the President of the United States to turn our backs to the people of the United States, look across the Atlantic, and receive and obey the commands of an alien enemy to the toiling masses of this country. We are commanded to repeal the Sherman act and remove the possibility of using silver as money. When that command shall have been obeyed the Treasury of the United States will be in a lamentable condition.

One thousand millions of paper circulation resting upon the narrow margin of $100,000,000 of gold reserves is a colossal fabric of credit upon an inadequate basis. The demand for the issuance of bonds to borrow gold to prevent an inevitable collapse will be imperative. The purchase of gold will increase the price of gold. As gold goes up, property and wages must go down, while the weight of obligations payable in money will continue to increase.

But the bankers will have another harvest. It is not intended that the proposed scheme for the money-changers shall be temporary, but it is to be a perpetual system. The vast gains of the national banks made by the transfer of the power "to coin money and regulate the value thereof" from Congress to the banks has created an insatiable desire on their part for more bonds and more subsidies. The simple statement which I am about to make of the operations of the national banks will explain the motive for more bonds and more national debt.

PROFIT OF NATIONAL BANKING SYSTEM.

The owner of $100,000 of United States bonds in 1863 was authorized by law to make, and did make, the following transaction:

One hundred thousand dollars of bonds which cost par in greenbacks, or $50,000 in gold, was filed in the Treasury Department. Ninety thousand dollars of the face value of the bonds was returned to the depositor in money of the United States, because the United States undertook to redeem the circulation so issued, and upon the faith of the United States, paper issued to the banks circulated on a par with greenbacks. The net investment of the banker was $10,000 in greenbacks, or $5,000 in gold. The bonds remained in the Treasury for safe-keeping, but the banker drew the interest, which was payable semiannually.

The bonds for many years drew 5 and 6 per cent, but in the last few years have drawn only 4 per cent. We will make the calculation on the assumption that the bonds drew only 4 per cent during the whole period. Such calculation will not show the extent of the profit of the banker, but it will show sufficient gain on his part to illustrate the working of the system. We will take the period of twenty-six years, from the beginning of 1863 to the end of 1889, and examine profit and loss so far as the Government is concerned. We do not propose to estimate the profits which the bank made on the $90,000 of its capital which was withdrawn at the time the deposit of the bonds was made with the Government.

Four per cent on $100,000 bonds is $4,000, from which the Government charges must be deducted. A tax of 1 per cent on the $90,000 of circulation is $900. Department charges are $150, making a total of $1,050 to be deducted from the $4,000 of annual interest, making a net annual gain, in simple interest alone, of $2,950. In twenty-six years this would amount to $76,700. No

account is made of the compound interest which the bank received by loaning at exorbitant rates of interest the money received from the Government. At the end of twenty-six years the $100,000 of bonds deposited with the Government were worth at least $127,000 in gold.

But before the banker could sell these bonds he was required to return the $90,000 which he had received from the Government in the shape of currency, and the account would stand thus:

Net interest on bonds	$76,700
Gold value of bonds	127,000
Total	203,700
From which must be deducted the $90,000 received from the Government and the $5,000 in gold originally invested, which is	95,000
Leaving a net profit on the investment of $5,000 in gold of	108,700

If it be suggested that this is an extreme case it must be remembered that the lowest rate of interest and a lower rate than bonds could be placed in 1863 were taken into consideration, and that no calculation has been made of the enormous advantage of a national bank in obtaining deposits of both public and private funds.

This example illustrates the nature of the operation by which national banks make money at the expense of the people through the power delegated to them to furnish the people money.

It was said a few days ago that no money was made by the national banks on account of the circulation they received from the United States. This declaration has been so often repeated in the last thirty years that I have been induced to examine the figures. I now present a statement of the situation on the present market price of United States bonds under the present law of allowing the issue of 90 per cent of the face value of the bonds, and also under the proposed bill, which requires the United States to furnish the bank currency equal to the face value of the bonds deposited:

PROFIT OR LOSS INVOLVED IN ISSUING NATIONAL-BANK NOTES.

Estimate on $100,000 of United States 4 per cent bonds, bought at 110 per cent, due July, 1907:

Income at 4 per cent per annum		$4,000
Sinking fund for fourteen years (ten-fourteenths) at interest about five-eighths per cent	$625	
1 per cent tax on $90,000, notes	900	
Department expenses	150	
		1,675
Yearly income, net		2,325
Cost of bonds		110,000
Less notes outstanding		90,000

(Five per cent fund counts as reserve against deposits.)

The bank's actual investment (at 110 per cent)	20,000

Two thousand three hundred and twenty-five dollars yearly income on $20,000 invested. Rate, 11¼ per cent per annum.

Same operation, bonds at 110 per cent, notes issued at par:

The bank's actual investment	$10,000
Net income	2,325

Rate, 23¼ per cent per annum to the bank.

The first operation, bonds at 120 per cent, notes at 90 per cent:

Sinking fund, fourteen years (twenty-fourteenths), say additional $625.	
Income $2,325, reduced by $625—net income	$1,700

Investment, now $80,000 for income of $1,700.

Rate, 5.7 per cent per annum.

Thus, with the bonds salable at 120 per cent, circulation becomes unprofitable whenever money will lend at a higher rate than 5.7 per cent per annum. The immediate inducement for banks able to obtain a higher rate is to sell out their bonds and for every $100,000 of bonds they contract the currency $90,000.

Under the Statutes of the United States, sections 5182, 5228, 5229, and 5230, these notes are received by the United States for all dues excepting customs dues, and are paid out by the United States for all purposes but interest on the public debt. They are acceptable to the public on account only of the public debt pledged for them; and further because the statutes quoted require that upon any default of the bank issuing them the notes shall be paid at the Treasury of the United States, for the public account. The Government must take its chances of being repaid.

Thus, to all intents and purposes, these notes of national banks are Government notes. The United States is liable for them from the time they are issued until they are paid. But the profit upon the issue accrues to the national banks. It is proposed now to double that profit, as my figures show. I have shown how a profit to the banks in the operation may disappear. From experience we know the result—an immediate contraction of the currency. If, on the other hand, we issue United States notes, the result is always profit, and all public profit, with no inducement to anyone, including the Treasury, to retire them and contract the currency.

Therefore, instead of providing the national banks an income at an exorbitant rate on the very moderate sum of their own money which they invest in the operation, and under the constant danger of the contraction of the currency which they will make without compunction, let the United States issue their own notes at their own profit. Do not employ national banks to issue notes for which the Government is liable, with the profit all inuring to the banks.

The enormous profits made by the banks out of the Government under the national-bank law is not by any means the worst feature of the system. Bearing in mind that when the price of bonds rose to $120, making the investment of the banker $30 instead of $10, the bank realized only 5.7 per cent on its investment. The banks were not satisfied with that rate of interest. Consequently they sold their bonds and withdrew their circulation.

On the 31st of October, 1883, there was outstanding United States notes, exclusive of the amount of money deposited with which the United States could redeem bank circulation of retiring banks, $316,020,326. On the 31st of October, 1888, the amount of outstanding notes, exclusive of the notes for which redemption money had been deposited, was only $130,207,285—a contraction of the circulating medium in four years of $185,813,140. Can a system which authorized the expansion and contraction of the circulating medium in this fashion by private corporations be longer tolerated in this country?

I have advised and now advise some temporary relief for the distress which the system inaugurated in Lombard and Wall streets has inflicted upon the country without increasing the power of the banks to further absorb the wealth of the country, but my advice is not acceptable to the bankers or their advocates, because there is no money in it for them—there can be no relief for the people without enriching them. I have proposed the following plan, which I have introduced as a bill in the Senate:

A bill (S. 3) to supply the deficiency in the currency.

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, directed to issue silver certificates of the character and denominations as now provided by law equal in amount to the silver bullion in the Treasury purchased under the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issuance of Treasury notes thereon, and for other purposes," in excess of the amount necessary, at its coining value, to redeem the Treasury notes issued under said act, and to use the same, or so much thereof as may be necessary, to provide for any deficiency in the revenues of the Government, and to use the balance of such certificates in the purchase of United States 4 per cent bonds at the market price thereof, not exceeding 12 per cent premium on the face value of such bonds; and the Secretary shall, as fast as practicable, coin such excess of silver and hold the same for the redemption of the certificates provided for by this act.

SEC. 2. That the Secretary of the Treasury be, and he is hereby, further directed to issue $100,000,000 of United States legal-tender notes of the character and description of the United States legal-tender notes now outstanding, and purchase with such notes United States 4 per cent bonds, at the market price, not exceeding 12 per cent premium on the face value of the bonds so purchased; and the bonds purchased under the provisions of this act shall be held in the Treasury as security for the redemption of the Treasury notes issued under this act.

It will be seen that the bill provides for the utilization of the silver bullion in the Treasury and issuing certificates on it, and subsequently coining it. It is there and must be taken care of, and it is useful for no other purpose. The Treasury must have the money in its vaults with which to pay its debts, and it will need this money immediately. My bill further provides for the issue of $100,000,000 greenbacks with which to buy bonds, the bonds to remain in the Treasury as security for the greenbacks issued.

Some such expedient as this would relieve the country; but the bondholders and the bankers will not consent to it. They have not created this panic for nothing. They must reap a rich harvest out of this crisis which they have brought on. They and their agents will not consent that the people shall have any remedy unless they are bought off. They have been bought off too often. They had to be bought off time and again during the rebellion; and every time we buy them off we increase their power to command more.

Both these propositions are antagonized in every form, and we are told that we must give relief to the people by a donation to the national banks. They are not satisfied to increase their circulation and draw interest from the Government of 11¼ per cent, but they demand circulation to the face value of the bonds, to the end that the interest on their investment may be increased to 23¼ per cent. If this can be done they will take out currency and loan it to a distressed people at panic rates of interest. We are told that in this emergency we must look to the banks; that through the banks and the banks alone relief can come.

It is true the $20,000,000 which would be issued to the banks would require of them no consideration. Their bonds are on file. They have received 90 per cent in circulation. The addition of 10 per cent is a direct donation to them, nothing more and nothing less. But when the Sherman act is repealed and silver destroyed, there will be another emergency greater than

this. The $4,000,000, or thereabouts, per month of legal-tender Treasury notes issued on the purchase of bullion will be stopped. The country must have more money. The one thousand millions of paper already out, resting upon $100,000,000 of gold, will not permit a further issue of greenbacks, and the increase of the national debt will be inevitable.

There will be no way to obtain money except through the banks. The bonds issued to borrow gold will be used by the banks to increase their circulation. The war harvest which the national banks reaped by the issuance of bonds to preserve the integrity of the Government will be repeated under the plea of necessity to furnish the people money. The efforts of the Government to buy gold will continue to advance the price of gold and augment the obligations of the debtor, while it depreciates his property and diminishes his capacity to pay.

The theory that a national debt is a national blessing was first promulgated by the owners of the national debt of England, who have dominated that country since the Napoleonic wars, and enriched the few at the expense of the many. The banks and parties interested in making money out of the Government by absorbing the power to issue money are already affirming that theory, and we hear on every side in this free America that "a national debt is a national blessing." Just how the masses are blest by paying taxes to be absorbed by a favored few has not been explained.

As I said in the beginning, we have come to the forks of the road. It is either to mine and coin our own money or submit to a system of extortion organized by bondholders and national banks, which must result in enormous wealth for the few and peon or feudal slavery for the masses.

I regret that my friend from Indiana has reported a bill to repeal the Sherman law, the passage of which without amendment would place the finances of the country under the control of Lombard and Wall streets. The price of silver has already fallen below the cost of production of the richest mines, and all silver mines are closed and will remain so under the policy of the bill reported by the Senator from Indiana. If that bill should become a law the price of silver would rapidly decline toward the price of the base metals. In that case the $600,000,000 of silver and silver coin in the United States would form no part of the basis of circulation and credit.

The entire circulation of the United States, exclusive of gold, would rest on the $100,000,000 of gold reserves in the Treasury. The President's message demanding the repeal of the Sherman act and suggesting no other legislation precludes the possibility of his signing a bill for the restoration of silver. Four years, at least, must elapse before any relief can come by legislation in Congress. The world moves. The business of the country can not wait four years. The banks and their representatives will oppose the issuance of greenbacks. They will point to the fact that the gold in the Treasury is inadequate for their redemption. They will demand, and the necessities of the case will seem to require, the issuance of bonds to buy gold to increase the reserves.

The bonds will be taken up by the banks and circulation issued, which will also be a demand for more gold for redemption. More bonds will be required to buy gold. More bank issues will follow. The banks will continue to absorb the hard earnings of the people, who will be oppressed by increased taxation while the price of their property is being continually reduced.

If the Senator from Indiana, whose generous sympathy for the masses has endeared him to the people, believes, as he has so often said, that free coinage is not only a right but a necessity, why not provide for it now? Was there ever a time in the history of the country when there was more need of an increase of metallic money than the present? By the legislation which he proposes he will augment the power of the banks and the bondholders whom he has denounced; crush and humiliate the people who love and who have honored him, and diminish if not destroy the power of the citizens of the United States to resist the aggressive power of concentrated wealth.

If he is opposed to the national banks, which he so bitterly denounced, why should he augment their power and create the necessity to surrender to their extortionate demands? If he is opposed to an increase of the national debt, why should he by legislation create a necessity for issuing bonds to buy gold? If he believes the President of the United States is a bimetallist, why not give him the opportunity to sign a bill for the restoration of the money of the Constitution?

The Senator from Indiana has reported a bill to repeal the Sherman act, coupled with a declaration in favor of bimetallism. Why not legislate while the power exists? If the Democratic party is in favor of bimetallism as declared in its platform, why adopt the gold standard first, and surrender all power to concentrated wealth, which is aggressive and vindictive in its demands for the single gold standard? Why turn over the people of this free Republic to the tender mercies of the gold monopoly?

I make these remarks in no unkind feeling toward the Senator from Indiana. I have loved and admired him for his sympathy for the toiling masses. His sympathetic nature and kind heart have kept him during a long public career in touch with the people, not only of his own State, but with the people of all the States of the Union. It will be hard for them to believe that the man whom they have trusted above all others as the advocate of their cause will, in the critical hour, desert them.

The Senator from Indiana says the Sherman act is a makeshift; that it was not passed in good faith. I am certain that it has not been executed according to its letter and spirit. I am sorry that those who have the execution of that law prefer the exporters of gold to the people of the United States. Who can say that if the law had been fairly executed it would not have been a great boon? It certainly has done no harm. All that has been done under it has been the issuance of $148,000,000 of legal-tender Treasury notes, which have done much to sustain the business of the country, and without which the panic would have come some time ago.

I know the law is odious to Lombard and Wall streets. I know it is an obstacle to the consummation of their scheme of confiscation and plunder of the masses. I know that the bondholders, the bankers, and the public press have done all in their power to make it unpopular. I regret that the Republican party, which gave us that law in the place of the Bland act, now propose to take it away without restoring the former law. They say it was a compromise. If so, why violate the compact? If you do not like the law give us back what we gave you in consideration of the compromise.

Is it good faith to compromise and then to repudiate the agreement of compromise? I regret that the Senator from Ohio, who reported and defended the law and explained its necessary and legitimate operation, should declare that he was at all times ready to destroy it. I regret that any Democrat who voted against the law because he preferred the Bland act, and who thought it was a step in the wrong direction, should vote to repeal it without giving us free coinage, which the Democrats, one and all, who spoke in opposition to the Sherman act, declared they most earnestly desired.

It is the first time in the history of this Government that the leaders of the two great political parties were united to trample upon their own platforms. The platforms of both Chicago and Minneapolis declare for bimetallism. After those platforms were made a majority of the Senate passed a bill for the free and unlimited coinage of silver. It is now proposed to reverse the action of the Senate and repudiate both platforms. What confidence will the people of the United States have in either of these great parties if platforms are held for nothing; if public pledges in campaigns are disregarded; if Wall and Lombard streets have more power in Congress than the declaration of parties and the voice of the people?

I can not believe that the Senator from Indiana will vote against an amendment providing for the restoration of silver. I do not believe that he will go home and tell his constituents that he forced the United States to the single gold standard when he had an opportunity to vote for the free and unlimited coinage of silver.

I will not at this time enter into the discussion of the revolution which concentrated wealth has inaugurated to destroy one-half of the world's money, enhance the purchasing power of the other, and increase the value of bonds and other obligations for the payment of money. At another time I will endeavor to show the wrong and injustice of this revolution and to point out the misery and want in store for the human race if the wicked scheme of capital is finally sanctioned and legalized by a majority of Congress and the President of the United States. There will be a mighty struggle in this country before Lombard and Wall streets can reduce the people of the United States to the same condition of want, misery, and starvation in which they have placed the people of Egypt and the millions of India.

But of that matter I will speak more at length at another time.

As before remarked, I have no disposition to delay any bill for the relief of the distress of the panic now prevailing. The donation of $20,000,000 to the banks would be but a bagatelle if it would stop there. I shall give the Senate an opportunity, by offering amendments, to vote for something better than the plan reported by the Committee on Finance. We certainly must have more money than the bill under consideration will afford if the panic is to be stopped and confidence restored.

The issue of Treasury notes under proper restrictions will furnish ample relief. The issuance of silver certificates on the silver in the Treasury not held for the redemption of Treasury notes outstanding would furnish $50,000,000 without delay.

I shall not abandon the hope that some of these propositions will receive the assent of the Senate until a vote shall have been taken thereon. I trust speedy relief will be afforded, the panic stopped, confidence restored, and business revived.

I appeal to the monometallists of the Senate to allow some

honest bill to be passed to relieve the people from the distress and ruin which the panic is producing. It is believed that this panic was contrived and inaugurated to prevent deliberation in Congress. The monometallists knew full well from an experience of twenty years that the deliberate judgment of Congress was opposed to the single gold standard, and that if Congress had an opportunity to deliberate there was danger to their pet scheme of financial despotism. The plan was concocted by the subtle brain of avarice to create a panic, and then declare that the Sherman act of 1890 was the cause of the panic, and stampede Congress. I beg of you to give the people immediate relief and liberate Congress from the necessity of legislating without deliberation.

How can members of Congress act deliberately while their friends and many of their constituents are appealing to them for relief and immediate relief? How frequently do we hear Senators say, "We do not believe the Sherman act of 1890 is the cause of the trouble, but the people think it is, and we must repeal it, although we know that it will bring untold disaster." Even the Senator from Indiana [Mr. VOORHEES], who has stood so long by the people and bimetallism, has been forced into the humiliating position of abandoning them at the behest of the gold ring in order to give immediate relief. Immediate relief can be given without involving eternal destruction.

I am in favor of repealing the Sherman act—not the Sherman act of 1890, which has done no harm and much good—but that other Sherman act passed in 1873, which no man in all the debates in Congress for twenty years has had the temerity to defend. No man has attempted to justify that disastrous legislation. No man has been able to tell us why the financial system established by the fathers was stricken down. No man can point out a single beneficial result of that legislation. On the contrary, the calamities which have followed it, and which are inevitable in the future if it remains on the statute book, have been described by a thousand orators on both sides of the Atlantic.

It is admitted by statisticians and writers on political economy that the act of 1873 has enhanced the value of gold, that it has made gold a fluctuating standard; always fluctuating in the wrong direction; always appreciating and growing more valuable; always measuring more property, more labor, and more sacrifice. The gold standard which we have been gradually reaching as we destroyed silver for the last twenty years has already brought more misery upon the human race than all the wars of the century.

But the work of destruction is but just begun. Confirm the Sherman act of 1873 by the passage of the bill reported by the Committee on Finance, and the growth of despotism will continue. The power of Wall and Lombard streets will then be omnipotent.

The bitter fruits of the Sherman act of 1873 are seen all over the land. The millions of the unemployed, the silent factories, the broken merchants and farmers, the distress throughout the country are the fruits of the Sherman act of 1873, which I have predicted since the discovery was made that silver had been stricken down in free America. I am no prophet, nor the son of a prophet, but I call attention to the warnings I have been giving for twenty years of the result.

The Sherman act of 1873 has brought this panic. The Sherman act of 1873 has made the misery and hard times of the present hour. It has made your National Fair a financial failure. It has deprived the laboring people of the United States of the opportunity of visiting that Fair. It has brought sorrow, grief, and starvation where, if that act had not been passed, there would have been peace, plenty, and progress.

But the Sherman act of 1873 has not done its worst. If it be reënacted as now proposed—if the legislation which has been passed in spite of the Executive to free the people from the dire effects of that act is wiped out and that infamous act confirmed and ratified by another act of Congress, one of two things must happen—a struggle more terrible than the French revolution to regain our liberties, or a slavery more galling than the feudalism of the Dark Ages.

Already the power of the great agricultural interests is destroyed. The farmers are too poor to attend conventions. They are too poor to afford themselves any pleasure, luxury, and recreation. As before remarked, they are too poor to visit the World's Fair. Their lands are being taken from them by this terrible contraction. This is not the first time that a money famine has subjugated a great race. The discovery of gold and silver in Mexico and South America found our English ancestors feudal slaves.

There were only thirty thousand landowners in all England, but within one hundred years after those grand discoveries the metallic money of Europe was more than quadrupled and the landowners in England were increased to over one hundred thousand. That increase continued until the Napoleonic wars, when the property of the masses was confiscated and the middle classes of Great Britain destroyed. It was the yeomanry of Great Britain, made comparatively independent by the increase of the circulating medium, who achieved all that is valuable in the British constitution.

Not only that; they were able to come to our shores and establish here the foundations of our free institutions. But that yeomanry was destroyed by the money power located in London. There would have been no free Parliament if the serfs of England had not been liberated by the inflow of new money from America. There would have been no independent United States if the feudal chains had not been broken from our ancestors' limbs by more money from the New World.

It is now proposed to create another money famine to sustain the powerful aristocratic organization of wealth. It is proposed to have continued contraction until the people of this country will be too poor to contend for their rights. Twenty years more of this oppression will so destroy the wealth of the masses and impoverish them that your boasted free-school system will be crushed. Aye, parochial schools, too. You will be in no better condition than the downtrodden masses of Europe, where it is impossible to educate the many.

It is true you will stop emigration from Europe, because your country will be no better than theirs. But your standard of living in this country must be the same as that of Austria, Germany, and Italy.

Why, the rapid increase of landlords and tenant farmers show the approach of the feudal ages. In some States between 1880 and 1890 tenant farmers increased 20 per cent; and since 1890 there have been more foreclosures of mortgages and evictions of owners than occurred in the preceding ten years. And still the work goes bravely on.

Contraction, stagnation, hard times, and poverty for the masses are the legitimate fruit of that legislation which undertook to destroy one-half of the world's metallic money, cut off the entire supply of one of the precious metals, and fully one-third of the supply of the other. A scheme so wicked, so far-reaching, so cruel, so potent of evil was never before conceived.

Let us give the people relief in any way we can, and then take up this infamous act of 1873 and wipe it from the statute book, and assert our rights under the Constitution to mine and coin our own money.

But we are told that England will lend us money if we change our laws; that England is afraid we will pay back in silver what was borrowed in gold. We borrowed nothing in gold, except where it was specifically named in the contract. Let such contracts stand. What we demand is that our laws shall not be changed so as to compel our people to pay in money different from the money of the contract. What an impudent demand comes from Lombard and Wall streets? "We have loaned you three thousand millions in money. We knew at the time we loaned it the laws of your country. We knew by those laws it might be paid in any legal-tender money of the Government, which was gold, silver, and greenbacks. We loaned you the money, knowing of the existence of these laws. You are our debtors. We demand of you as a condition of extension of credit, as a condition of further loans, as a condition of peace and prosperity in your country, that you shall change your laws, double the obligations of your citizens, and submit to our demand; otherwise we will destroy you with panic, with financial ruin, with distress everywhere."

Let them do their worst. Nothing can be so disastrous to the American people as to comply with such unreasonable demands. No, no; we will not change our laws and defraud our people to satisfy the greed of Lombard street. Oh, no. Give us time to investigate the cause of all this wrong; give us time to wipe from the statute book the Sherman act of 1873; give us time to restore to the people the constitutional money of their fathers. That is what we demand, and we say to the monometallists, the allies of Wall and Lombard streets, that you will not gain by attempting to utilize the miseries of the people which you have caused to stampede Congress.

There are men in Congress who can not be stampeded in any such manner, and before this debate is over you will find that there are more men in this Congress who have faith in the people who have trusted them than you suppose. This plan of obtaining such vast advantage by creating an emergency and stampeding Congress will not succeed. You will not unconditionally repeal the Sherman act of 1890 in this or any other American Congress.

A more monstrous proposition was never heard of. After there has been a majority in both Houses of Congress for twenty years to right the wrong of 1873, we are called upon in the hot month of August to ratify that wrong. After Lombard street and Wall street have created a panic to stampede Congress and create universal distress, we are called upon to augment that distress and make falling prices, misery, and hard times perpetual.

The Senator from New York [Mr. HILL] promises the gold kings that he will give them the victory for which they have fought; that he wil lcrush the people, but that he will give the people promises. Does he think that the people of the United States are so ignorant as to heed that miserable pretext?

There is nothing so insulting to honorable men as such promises. Away with them. They can come from nowhere but Wall street and Lombard street; and Wall street has always been in league with Lombard street. It was in the Revolutionary war; it was in the war of 1812; it was during the rebellion. They have all fattened upon the labors and miseries of the people of the United States.

The Senator from New York made a mistake when he promised Lombard street that we were to be slaves. We are not; and the bill will not be passed. There are not men enough who will betray their trust and go back on their pledges to pass this bill. No man in this Senate can vote for the unconditional repeal of the Sherman bill without a substitute, unless he violates his pledges to his constituents; for they have all said on all occasions that they were bimetallists, and this is monometallism.

You see the sneers in the newspapers on the present price of silver. They say it is down to so much an ounce. Why is that? Do you not see how necessary it is to keep the price down? Do you not see that the Executive has refused to execute the law of 1890 for fear of making silver respectable? Do you not see, when the banks of Denver were about to fail because the smelters could get no currency for their bullion, it was because the Executive had refused to buy silver when it was offered at a lower price than had ever existed in the history of the country?

You see that it is the effort and the necessity of the gold party to beat down the price of silver. If this bill should be passed, and silver reduced in price to 20 or 30 cents an ounce, there would be one acclaim from Wall street and Lombard street and all their agents, in and out of office, against the use of that "base metal" because it is only worth 20 cents an ounce. Give them that argument, give them that power, and then silver is doomed, gold monometallism is established, and there will be nothing left for the people of the United States but to rise in their might, break the chains with which gold contraction has bound them, and make their own money. It may not be silver, but it will not be gold.

You can not continue this process for twenty years. If you could you would reduce the people so that they could not resist. You have not stopped the common schools; you have not crushed the ambition of all the young men of the country; you have not blotted out the spirit of liberty; you have dammed it up a little; but this damming up of the spirit of liberty and of the aspirations of men will only make the torrent more terrible when they find that you are determined to make them slaves. We know we have four years of bondage, because the Executive is a monometallist. We understand that. But those four years will be a season of education, and the voice of the people will be heard.

What a mockery to speak of the Democratic party or of the Republican party, when both of those parties have pledged themselves to bimetallism and gone before the country, and then they convene in extra session to give the lie to all their professions. They say they will give us bimetallism. They promise that from this Senate, and say to Wall street and Lombard street, "Wait a little and you shall be fully satisfied. We will give the people a little taffy, but we will give you the power to crush them perpetually."

It is the paid press you hear talking now; you are surrounded by bankers; you are surrounded by money influences. The masses of the people have not been heard. They will not be deceived. The people are watching our proceedings, and they will mark those who, when they ask for bread, give them a stone. They ask for free coinage, and we say we will first give Wall street and Lombard street monometallism, and then we will consider their claims.

"True, we promised; but we are politicians, and we do not keep promises. We have contempt for you. Our object is to deceive the masses, to acquire office, and then betray." That is the position of the two parties when they strike down silver; but the position of the Republican party is more humiliating than that of the Democratic party. They say that this was a compromise, and without giving a reason they come here to break the compact. The people will understand it, and mark them.

The Democratic party said they could not vote for the compromise because they were for free coinage, but Wall street demands that the compromise on free coinage shall now be repudiated, that their greedy demands shall be satisfied, and the people's cause shall be buried forever. It will not be. This bill will not pass without a substitute.

SENATOR FROM MONTANA.

Mr. BERRY. I move that the Senate proceed to the consideration of House joint resolution No. 4.

Mr. VANCE. If the Senator from Arkansas will give way a moment, I wish to see if we can not fix an hour upon which to take the vote on the matter of privilege that is pending.

Mr. BERRY. It will only require a moment, but I have been trying for two or three days to have this joint resolution considered, and it is very important, I think, to have it disposed of, if the Senator will only wait.

Mr. VANCE. If the request I wish to make provokes any debate I will not press it.

Mr. BERRY. It will provoke debate and take some little time, and I want the Senate to dispose of the joint resolution this evening.

Mr. VANCE. It will not take five minutes to fix a time for taking the vote, if the Senate will agree to it.

Mr. BERRY. Very well; I will yield.

Mr. MANDERSON. I hope the Senator from North Carolina will pemit the vote on the question of privilege to go over until Monday.

Mr. VANCE. In deference to a very considerable desire expressed on the other side of the Chamber, I am willing that we shall fix Monday for the time to take the final vote. I trust the Senator from Nebraska will agree to fix the time at 2 o'clock on Monday. The evenings are so long and so warm that a great many Senators drift off in the after part of the day.

Mr. MANDERSON. I do not object. I presume the Senator from Alabama [Mr. MORGAN] will arrive to-day, as expected, and that he will be in his seat at 2 o'clock. I have no objection to fixing that hour.

Mr. VANCE. Then I ask unanimous consent that the vote be taken on the Montana case at 2 o'clock on Monday.

The PRESIDING OFFICER (Mr. BLACKBURN in the chair). Is there objection to the request of the Senator from North Carolina?

Mr. MITCHELL of Oregon. If it would suit the convenience of the chairman of the Committee on Privileges and Elections, I should like to have the time put off until Tuesday. I am compelled to be absent on Monday, and I should like to be here when the vote is taken.

Mr. VANCE. That would not be convenient as I expect to leave the city on Tuesday. I hope the Senator from Oregon will agree to Monday.

Mr. MITCHELL of Oregon. All right.

The PRESIDING OFFICER. Is there objection to the request made by the Senator from North Carolina, that the Senate shall vote on the Montana case at 2 o'clock on Monday next? The Chair hears none.

CHEROKEE OUTLET LANDS.

Mr. BERRY. I move that the Senate proceed to the consideration of the joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provides for townsite entries of lands in a portion of what is known as Oklahoma, applicable to the territory known as the "Cherokee Outlet," and to make the provisions of said act applicable to townsites in the "Cherokee Outlet."

The PRESIDING OFFICER. The Senator from Arkansas moves that the Senate proceed to the consideration of the joint resolution indicated by him.

Mr. HIGGINS. On that I ask for the yeas and nays.

Mr. WASHBURN. Before we vote on taking up the joint resolution I should like to hear a statement from the Senator from Arkansas.

The PRESIDING OFFICER. The Chair will state to the Senator from Minnesota that debate is not in order.

Mr. WASHBURN. I ask unanimous consent that the Senator from Arkansas be allowed an opportunity to explain the joint resolution.

The PRESIDING OFFICER. The Senator from Minnesota asks unanimous consent that the Senator from Arkansas may, at this time, be permitted to make a statement. Is there objection? The Chair hears none, and the Senator from Arkansas will proceed.

Mr. BERRY. Under the act of Congress passed at the last session the President of the United States has ordered the territory known as the Cherokee Outlet to be opened to settlement on the 16th day of September. There are certain town sites for towns to be located under the authority of the Secretary of the Interior in that Outlet, certain park reservations to be made, and certain reservations for court-houses. On the 14th day of May, 1890, Congress passed a law regulating town-site contests and the selection of the parks by a commission appointed by the Secretary of the Interior. That applied to Oklahoma as it then existed, and to the settled part of it. Probably that act does not apply to the Outlet. There is some doubt on that point.

The Secretary of the Interior and the Commissioner of the General Land Office think that it is particularly important to the orderly settlement of the Outlet on the 16th of September that

the act of the 14th of May, 1890, which applied to Oklahoma as it then existed, shall be extended to the territory included within the Outlet, in order that they may appoint a board of trustees. There are seven towns, and, there being three for each one, there will be twenty-one commissions to make the allotments and decide contests that may arise in the towns.

The matter went before the Committee on Public Lands. The letter of the Commissioner is before the Senate and can be read, if necessary, wherein he says that such legislation is important. While there is no objection made in the committee to the extension of the law, a portion of the committee were in favor of adding a proviso to the House joint resolution providing that these twenty-one commissioners shall be selected from the present residents of the occupied part of Oklahoma. A minority of the committee were opposed to regulating the discretion of the Secretary of the Interior in regard to the point from which the selections shall be made. That is the only difference that existed in the committee. It is as to whether the Secretary of the Interior shall select those twenty-one men from any part of the United States, or whether he shall be required by the act of Congress to select them from the Territory of Oklahoma now occupied.

That is all there is in the joint resolution. We who are opposed to amending the resolution oppose it on two or three grounds. In the first place, this part of the Outlet is not yet settled, and we do not conceive that the parties now occupying Oklahoma Territory have any better right to have their men appointed than any other portion of the people of the United States.

Mr. PLATT. Will the Senator allow me to interrupt him for a moment?

Mr. BERRY. Certainly.

Mr. PLATT. I do not think, upon some little consultation here, that there will be any serious objection to taking up the joint resolution. There will be opposition to it; but it might as well come up now as at any time, I think.

Mr. BERRY. I am making a statement only at the request of the Senator from Minnesota. I hope that the matter will come up, because, as I said before, it is important that it shall be passed in some shape.

Another reason why we oppose the amendment is because this is a House joint resolution. We all know that the condition of business over there is such that if the joint resolution goes back to the House it is equivalent to the defeat of the measure. I hope it may come up, and then we can discuss it.

Mr. PEFFER. I should like to ask the Senator from Arkansas, for information, what rule will govern in the matter in case no action is taken now by Congress?

Mr. BERRY. If the Senator will permit the joint resolution to come up, then I can explain that point. I think the letter of the Commissioner of the General Land Office, which can be read, will explain it better than I could do. But I want to get the resolution before the Senate. There is some doubt about what rule would prevail, I will say to the Senator from Kansas. If the joint resolution fails to pass, there is very serious doubt as to whether there will be any law to authorize the Commissioner to proceed. I hope the Senator from Delaware will withdraw his call for the yeas and nays and let the measure come before the Senate.

Mr. HIGGINS. I withdraw the call for the yeas and nays.

The PRESIDING OFFICER. The Senator from Delaware withdraws the call for the yeas and nays. The question is on the motion of the Senator from Arkansas, to proceed to the consideration of the joint resolution.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provides for town-site entries of lands in a portion of what is known as Oklahoma applicable to the territory known as the Cherokee Outlet, and to make the provisions of said act applicable to town sites in the Cherokee Outlet, which had been reported from the Committee on Public Lands with an amendment, after the word "Oklahoma," in line 8, to add:

Provided, That the trustees appointed under the provisions of said act shall be bona fide residents of the Territory of Oklahoma at the time of their appointment.

So as to make the joint resolution read:

Resolved, etc., That all the provisions of an act of Congress, approved May 14, 1890, which provides for townsite entries of lands in a portion of what is known as "Oklahoma," be, and the same are hereby, made applicable to the territory known as the "Cherokee Outlet," and now a part of the Territory of Oklahoma: *Provided*, That the trustees appointed under the provisions of said act shall be bona fide residents of the Territory of Oklahoma at the time of their appointment; and that all acts or parts of acts inconsistent with this joint resolution be, and the same are hereby, repealed.

Mr. BERRY. Mr. President, I merely wish to add a few more words in answer to the question of the Senator from Kansas [Mr. PEFFER]. I want it understood that the members of the committee with whom I agree are opposed to the adoption of the amendment. We are opposed to it on the ground that the present law, which is proposed to be extended, is a fair law, and of a certain extent a nonpolitical law. It requires the Secretary to the Interior to select not more than two members of the townsite board from the same political party.

Another reason why we oppose the amendment is that it would be very difficult within the limited time the Secretary of the Interior has now to make the selection for him to communicate with parties in Oklahoma and get proper men to go on the boards. I will state in addition that while there are plenty of good men in Oklahoma, as good as there are anywhere in the United States, it is a well-known fact that nearly every lawyer and a great many others out there are directly or indirectly interested in speculating in these lands and are fixing to make settlements on them. There are various reasons why I think a better board may be selected by taking its members from any place in the entire United States.

But in addition to that it is absolutely necessary in order to do this work that the selection shall be made at once. This is a House joint resolution. If it goes back to the House amended it is equivalent to our abandoning it, and the Commissioner of the General Land Office says he will be left without proper authority; that he is very doubtful, after a full examination of all the statutes, whether there is any authority at all for him to act. It may be asked by the Senator from Kansas why the general law where probate judges act as trustees and make the selections may not be applied there?

The Commissioner says that that law is not adapted to the present condition of affairs in the Outlet; that the law requires him to make reservations for parks, for court-houses, and various other purposes; and it is absolutely important that the trustees should be appointed before the settlement takes place; that under the operation of the other law the county judges are not yet appointed, and they would have to be first appointed, and then the application would be made by the corporation of the town after the settlement of the town, whereas it is important in his opinion that the selections should be made on a reservation before the settlement takes place.

The Secretary in the discharge of his duty simply wants to administer the law in such way as will aid in an orderly settlement of that Territory, and I think that his request that the act which was passed in 1890 for the settlement of Oklahoma be extended should be complied with. There was some complaint under that act, because at first parties were paid excessive per diems. They were paid $10 a day. Since then regulations were made by Secretary Noble by which only $5 a day was allowed them. Those regulations were enforced, and I am authorized to say they will still be enforced by the Interior Department, and that no greater sum than $5 per day will be allowed any of these parties. That is an important point in the matter. The main objection which arose to the former law when it was first passed was that $10 a day was allowed. These are the conditions which surround the pending joint resolution. I hope the Senate will vote down the amendment and pass the joint resolution as it came from the House of Representatives.

Mr. CAREY. Mr. President, in reporting the joint resolution to the Senate I was instructed to offer an amendment which only changes the proposed legislation by confining the appointment of the trustees to bona fide residents of the Territory of Oklahoma. By way of preface, so far as we have been able to obtain any information on the subject, the people of Oklahoma are very much opposed to the passage of this joint resolution.

Mr. PLATT. With the permission of the Senator from Wyoming, I understood the Senator from Arkansas to say that there was some communication from the Commissioner of the General Land Office. I think he did not put that in.

Mr. BERRY. The Senator from Wyoming has it in charge. I turned it over to him.

Mr. CAREY. The letter of the Commissioner of the General Land Office is as follows:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., August 22, 1893.

SIR: In reference to the joint resolution which has been introduced in Congress to make the act of May 14, 1890, in reference to town sites in a portion of the Territory of Oklahoma applicable to the Cherokee Outlet, I have the honor to present the following statement as explanatory of the subject, viz:

By section 2380, United States Revised Statutes, the President is authorized to reserve from the public lands, whether surveyed or unsurveyed, town sites on the shores of harbors, at the junction of rivers, important portages, or any natural or prospective centers of population.

Section 2381, United States Revised Statutes, provides for the disposal of lands so reserved, making it the duty of the Secretary of the Interior to have them, or portions thereof, surveyed into lots, to have the lots appraised and offered for sale at public auction to the highest bidder, and any lots not thus disposed of to be held for private sale at not less than the appraised value by the registers and receivers of the proper district land offices.

Sections 2382, 2383, 2384, and 2385, United States Revised Statutes, provide for the laying off of towns on the public lands, at the instance of settlers

thereon, and for the disposal of the lots by the Government, at public offering, at the minimum of $10 per lot, or in case any lots do not sell at such offering, then such lots to be sold at private entry at the same minimum, or such reasonable increase or diminution as the Secretary of the Interior may order from time to time, after at least three months' notice, in view of the increase or diminution in value of the municipal property.

Sections 2387, 2388, and 2389, United States Revised Statutes, provide for the entry of town sites by certain officials as trustees, paying the minimum price therefor and receiving the title in trust for the occupants.

The circumstances existing in the Cherokee Outlet are peculiar. The law operating in that Territory does not contemplate the taking up of tracts to be appropriated entirely in town lots by the Government or entirely for the use of the occupants by the officials making the entries as trustees to execute their trust independently of the United States and under the local statutes. The law provides for the use of certain portions of the tracts appropriated for towns as parks and for other public purposes, and the title to these portions should properly remain in the Government until the adjustment of the rights of the individual occupants of the towns and the appropriation to public purposes of the necessary subdivisions, when transfers may be made with proper discrimination, according to the several purposes in view.

The statutes above referred to as regulating the disposal of town sites are not well adapted to the conditions existing in the Cherokee Outlet. The provisions of sections 2380, 2381, and 2382, United States Revised Statutes, would most nearly answer the purpose, but the method of disposal therein prescribed would not harmonize with the legal provisions for parks and other public purposes which existing statutes prescribe for town sites in the Outlet, and which are regarded as important for the good of the communities concerned. Hence it has been regarded as highly desirable that the provisions of the act of May 14, 1890, should be made applicable to the lands in question as proposed in the pending joint resolution. Those provisions have already been in operation in another portion of the Territory, they have been practically applied, and their operation ascertained and determined by a series of departmental adjudications, and it is believed that their application to the Outlet would be highly advantageous.

Very respectfully,

J. W. LAMOREUX, *Commissioner.*

Hon. JAMES H. BERRY,
United States Senate.

The information we have is to the effect that the people of Oklahoma object to this commission, because they will be appointed in all probability from nonresidents of the Territory, and there is the further objection that the board of administration of town sites in Oklahoma has been very unsatisfactory. When Oklahoma Territory was organized the question of town sites was entirely omitted, so far as legislation was concerned. The town sites were taken up after there had been a scramble for the land and people had settled over it, under the then existing town-site law of the United States. There were no officers to administer the town-site law in the commencement, and it caused confusion. After that had taken place, Congress was appealed to and an act was passed appointing a commission to settle the town-site difficulties in that Territory.

But Congress did not, for the benefit of settlers who happened to settle upon these lands, deprive the proper officers of the right to locate town sites, but left that right just as it existed before, with the probate courts in the counties where the town sites were located. Except in those cases where confusion has arisen the probate judges have disposed of the land under the land law of the United States, which applies to every public land State in the American Union. They have adjusted the titles and disposed of the land on an average of from four to six months, while boards established three years ago, because of the per diem and because they have been shipped into that Territory to adjust the rights of the residents of the Territory, are still at the work and have not been able to adjust these matters. The people of Oklahoma say, "If you are determined to place commissions over us when we have officers who are competent to do this work, we ask this little consideration of you, that you will give us commissioners from among our own people."

The Senator from Arkansas has not intentionally misstated the position of the Commissioner of the General Land Office. He does not say that the existing law is not applicable to these cases, but he says there is some question about it. The reservation of the parks and the court-house sites do not appear to be covered by the existing law. As a matter of fact the probate judges who proceeded in the Territory of Oklahoma in the first instance have selected the parks, have selected the court-house sites, and have disposed of these matters to the entire satisfaction of the people. To give you a little idea how they feel out in Oklahoma, here is a dispatch from Mr. Spengel:

Prevent McRae bill—

That is the pending joint resolution—

becoming law. See Senator VEST and Cleveland.

I suppose he means the President. I understand that Mr. Spengel is a prominent Democrat in the Territory of Oklahoma. Here is another long dispatch. It says:

Territorial town-site law governs section 2387 United States Statutes, Strip part Oklahoma under section 1 organization act.

The dispatch is signed by J. W. McNeal, who is the president of a national bank in that country; George D. Orput, a banker there; S. H. Bradley, a prominent Democratic attorney of Oklahoma, who was an applicant for appointment under the present Administration; W. H. Merten, postmaster at Guthrie; G. S. Cunningham, Democratic attorney and late circuit judge in Arkansas; A. G. C. Bierer, universally indorsed by the Democrats and Republicans for chief justice of Oklahoma; A. J. Spengel, the man to whom I referred, late mayor of Guthrie; G. H. Dodson, register of deeds, Logan County, and S. L. Overstreet, late register of the United States land office. I will not take the time of the Senate to read all these dispatches. One other dispatch says:

See Oklahoma statutes. We have admirable law for probate-judges. To deed town sites is an inexcusable expense and a general outrage on a people already oppressed. Stop the scheme and get the appreciation of Oklahoma Republicans and men of all parties.

FRANK H. GREER,
Editor Daily State Capital.

Now, if you will look at the law which the joint resolution proposes to keep in force you will find that it makes the town-site law of Kansas applicable for the adjustment of town-lot matters in the Territory of Oklahoma. To give a little idea as to what twenty-one commissioners will cost, we find that Congress had to appropriate $10,000 to start the old commission to work. The $10,000, it is true, did not ultimately come out of the United States Treasury, because the people out there who pay this expense were compelled to reimburse it to the United States.

Mr. PLATT. I suppose each county will have one town site in it, but is it not probable that in the eastern part of the Strip there will be many town sites, so that instead of being twenty-one there will more likely be fifty?

Mr. BERRY. I will say to the Senator from Connecticut, with the permission of the Senator from Wyoming, that they are limited to that number. Seven are allowed under the act; they can not go beyond that; so that there will be twenty-one commissioners.

Mr. PLATT. Then there can be only one town site in a county?

Mr. BERRY. The act of 1890 limits the number. It provides that not more than seven boards shall be appointed within the Territory. That is the act which it is proposed to extend. The number can not go beyond that. I do not think it is limited to one county, but is limited to that number in the entire Territory. There can not be more than that number.

Mr. PLATT. Then, in view of the probability that there will be a great many more than one town site in a county, and that these seven boards will have to act in the case of all the town sites in the Strip, it will be a long time before they will get through with the business.

Mr. CAREY. I wish to say that these lands have already been selected and reserved under the laws of the United States. I also want to say in this connection that the governor of the Territory of Oklahoma had the right to appoint the probate judges in these new counties. There have already been seven reservations made. But the joint resolution is too far reaching. It proposes to repeal with reference to that country all conflicting acts. The Secretary of the Interior is to have his hand on the Territory of Oklahoma for all time in the future. In other words, the people of the Territory of Oklahoma are not to have the same right to adjust their town-lot affairs that is possessed by the other Territories and the States in which public lands are situated.

I hope my friend from Arkansas will not get it into his head for a second that this is a political question. There is no politics in this matter. All of the probate judges will be appointed by the present Democratic governor of the Territory of Oklahoma, while, if the Commissioner of the General Land Office follows the existing law, seven of the commissioners will be Republicans, and in all probability they will be selected outside of the Territory of Oklahoma.

The idea of the actual residence of those who manage the affairs of a Territory is not new with me. It has been so firmly impressed upon both of the great parties in this country that they have had occasion to put it in express terms in their platforms. It is time that you either abandon the principle or that both sides of this Chamber shall stand up and indorse the sentiment as they have declared it to the country.

Mr. KYLE. May I ask if the Cherokee Outlet is part of the Territory of Oklahoma?

Mr. CAREY. Undoubtedly.

Mr. KYLE. At the present time?

Mr. CAREY. The very minute it is opened it becomes part of it.

Mr. KYLE. Is it a part of the Territory at the present time?

Mr. CAREY. I do not know how it may be considered at the present time; probably not. It has been declared, however, to be a portion of Oklahoma; but settlers can not go on the land until the 16th of September.

Mr. KYLE. I understand that at the present time it is not a portion of the Territory of Oklahoma at all, and therefore that Oklahoma has no more right to the appointment of these commissioners than the State of Kansas or the State of Texas.

Mr. PLATT. The act for the organization of the Territory of Oklahoma provided that whenever the Indian title to the Cherokee Outlet shall be extinguished and the President make proclamation it shall become a part of the Territory of Oklahoma, the lines having been extended around it. I do not know whether that proclamation has been made.

Mr. CAREY. It has been made, and settlers are permitted to go in on the 16th of next month. It has become part and parcel of the Territory of Oklahoma. It is in all respects as much a portion of that Territory as the Indian reservations would be in the State of South Dakota were the Indian title extinguished. I have no doubt the Senator from South Dakota would make a very bitter resistance if the Commissioner of the General Land Office should attempt to send into his State commissioners from the outside to adjust the affairs among the people who were settling there and expected to reside in the State of South Dakota.

But to get to the point of this commission. There have been two sets of regulations promulgated as to compensation, expenses, etc. I will call attention only to the latest. Here is a letter from the Assistant Commissioner of the General Land Office:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., December 9, 1891.

SIR: A copy of the following letter has been forwarded to each of the several town site boards in Oklahoma. Please note its provisions, as they are equally applicable to the conduct of the affairs of the board of which you are secretary and disbursing officer:

* * * * * * *

Replying to the several recent communications from yourself and Mr. Bishop, chairman, relative to salaries, expenses, etc., of your board, I have to say that by the terms of your appointment the entire compensation of each member of the board is limited to $5 per day for each day actually employed. Neither subsistence, nor per diem in lieu thereof, nor traveling expenses, can be allowed, nor any compensation whatever except for the days during which you are actually employed upon the official work of the board.

No regular clerk should be employed; but when the services of a stenographer become necessary in contest cases compensation will be allowed for such services, not to exceed $5 per day.

Office rent will be allowed, not exceeding $15 per month, but no expenses for office furniture, fuel, or light.

Requisite stationery will be forwarded, as far as practicable, upon your request to this office.

Necessary surveying and platting must be performed at the least possible expense consistent with accuracy.

You will keep an accurate record of the proceedings of the board each day, and in rendering your accounts to the General Land Office you will particularize the nature of the work upon which you have been employed during each day for which compensation is claimed.

Your accounts embracing time occupied upon contested cases should show the exact period (days and hours) employed upon each particular case, and whether in hearings or otherwise.

No bills for printing will be allowed except when plainly necessary to the discharge of your official duties.

Very respectfully,

W. M. STONE,
Assistant Commissioner.

Mr. W. S. ROBERTSON,
Disbursing Agent Town Site Board No. 6,
Guthrie, Oklahoma Territory.

I also submit a letter from the Secretary of the Interior:

DEPARTMENT OF THE INTERIOR, *Washington, July 8, 1892.*

SIR: In reply to your communications of April 6 and 7, 1892, concerning certain expenses of town-site boards in Oklahoma, expenditures as follows may be allowed, in addition to compensation of $5 per day for each member of boards assigned to fields of duty away from their homes or the locality for which they were originally appointed, to wit:

First. Transportation going to and returning from such new field of labor.

Second. Two dollars per day for board while away from home.

If necessary each board may expend for room rent for transaction of business of the board, not exceeding, as heretofore ordered, $15 per month, and for services of janitor, not exceeding $1 per day. Should duties extend into the winter months, the actual cost of fuel and light may also be allowed.

Very respectfully,

JOHN W. NOBLE, *Secretary.*

THE COMMISSIONER OF THE GENERAL LAND OFFICE.

The Senate can see how very serious the matter is to the people who go out there and settle upon these town sites. It is a board that has no limitation placed upon it so far as time is concerned; who can stay in session for the next five years; who, if they choose, can run up extraordinary expenses in clerk hire and in hiring stenographers to do this work. Out of whom does their compensation come? Out of the settlers who go to that country with the expectation of making homes there.

The declaration on the subject of nonresident officials in Territories contained in this book of party platforms is so positive and so definite that I appeal to Senators on both sides of the Chamber to record one vote at least in favor of one plank in the platforms upon which we can all stand for all time. I heartily indorse the Democratic platform in this respect. I heartily indorse the Republican platform in this respect. They are both of the same sentiment. If you do the right thing you will leave the law to be administered by the probate judges in the several counties; but if you are not willing to do that, do the next best thing and commit it to commissioners who will be appointed from actual bona fide residents of the Strip.

Mr. ALLEN. Does the Senator from Wyoming also indorse the People's party platform upon this question?

Mr. CAREY. If the Senator can tell me what it is I can tell him very readily whether I indorse it.

Mr. ALLEN. It is in favor of retrenchment and reform and the prompt performance of all such duties without any unnecessary cost and expense.

Mr. CAREY. I am indeed at all times (as I think I can say is every Senator on this side of the aisle) in favor of that declaration.

Mr. VILAS rose.

Mr. BERRY. If the Senator from Wisconsin will permit me to occupy a single moment, I wish to say, in the first place, that this territory is not occupied. It is vacant. There is no man living upon it. It is not from the citizens who propose to live there that the Senator from Wyoming seeks to compel the Secretary of the Interior to select commissioners. The Senator read telegrams from Oklahoma. I had a telegram from a very distinguished man there yesterday, saying that there was opposition to the joint resolution, and I had a telegram last night saying that he withdrew all opposition after he understood the situation. That man is the governor of the Territory, Governor Renfro himself. I have his telegram here on my table, in which he says he withdrew his opposition to it.

Now, Mr. President, in regard to cost, it will cost the parties precisely the same sum if the general law administered by the probate judges is in force that it will cost if it is administered by the Secretary of the Interior. I am very much persuaded that the probate judges, who get fees for making the deeds, have had a great deal to do with stirring up the sentiment in the present occupied part of Oklahoma in opposition to the selection of these men by the Secretary of the Interior.

Mr. CAREY. Will the Senator from Arkansas allow me to ask him a question?

Mr. BERRY. Certainly.

Mr. CAREY. I ask the Senator if the law permitting the probate judges to perform this duty in the State of Arkansas, which is a public land district, to settle and adjust these matters, is a good one?

Mr. BERRY. But the officers of this Government, the Secretary of the Interior and the Commissioner of the General Land Office, say that law is not applicable and can not be made applicable there, because under it the town must be occupied before the application is made and before the fees are paid. The reservation can be made under the law as it exists provided the old law is in force at all in that section. I say the law officers of this Government tell us that it is necessary for them to have this authority, so far as that goes.

The whole point is this. The Senator from Wyoming wants to compel the Secretary of the Interior to select not from the men who will occupy this territory after the 16th of September, but from certain individuals already residing in another part of Oklahoma, to which this territory is to be attached. He says that the platforms of the two parties come in here and compel us to make such a provision. Mr. President, there is no such provision in the platform of the Democratic party. That applies to communities already settled, and we are to select from them. The people standing on that border to-day would have a better right to ask us to compel the Secretary of the Interior to select from those who are going to reside on the Strip, than to say that he shall select from those residing in the occupied part of the Territory.

The only point at issue is whether the discretion of the Secretary of the Interior shall be controlled and he shall be compelled to select from certain parties who are residing in one part of the Union, but who do not reside in the towns that will be occupied, where the law will be administered, who are not citizens there, unless they take their chances with all the rest in the run to be made on the 16th of September.

But in addition to that, the Secretary says this legislation is necessary, and he asks Congress to give him this power. If you put this amendment on you deny it to him. He says it is doubtful if the former law applies at all. If it does apply, he says that it can not be made applicable to the present conditions in the Territory. That is the statement of this official of the Government, and it is for the Senate to determine whether they will pass the joint resolution and give him this power or whether they will deny him the power in order to put in a provision that he shall select from a particular locality, when we might just as well say that he shall select from the State of Wyoming, from the State of Texas, or from any other point. That would be just as much in accord with the platform as to say that he shall select from the part of Oklahoma already occupied.

The Senator from Wyoming was, I think, a member of the Senate and of the Committee on Public Lands at the time the act of May 14, 1890, was passed. It was passed under the supervision of the late distinguished and now deceased Senator from Kansas, Mr. Plumb. The maximum sum, $10, which was first

allowed under the regulations, was too high, and did work a hardship upon some of those people. Secretary Noble changed it to $5 a day. That is the order of the Department now, and that, I am informed by the Commissioner of the General Land Office, will remain. It will not cost those people one dollar more under this system than under the prior law.

Mr. CAREY. I wish to state to the Senator from Arkansas that I was not upon the Committee on Public Lands when Senator Plumb was chairman of it.

Mr. BERRY. The Senator was a member of the other House when the act was passed. I will correct my statement. I thought the Senator had been put on the Committee on Public Lands at that time.

Mr. CAREY. I was upon the Committee on Public Lands in the other House, but I occupied the ostracised position of being a citizen of a Territory, and had no vote.

Mr. BERRY. I withdraw the statement in regard to the Senator being on the Committee on Public Lands. His colleagues on the other side of the Chamber composed the majority of the committee, and it was Senator Plumb's bill that was passed. I beg pardon of the Senator from Wisconsin [Mr. VILAS] for taking so much time.

Mr. VILAS. Mr. President, I was gratified by the observation of the Senator from Wyoming [Mr. CAREY], that he perceived and intended to appeal to no party interest in this question, for if that be so and none shall be stirred I can not conceive it likely that the Senate will refuse to the Department of the Interior this simple measure of relief immediately necessary and precisely the same as that which was extended by Congress to the last Secretary of the Interior when he had a similar duty to perform.

Let us observe the situation a moment and just what question is presented by the amendment proposed to the joint resolution as it was adopted by the other House and went to the Committee on Public Lands of the Senate. That portion of territory known as the Cherokee Outlet is not yet a part of the Territory of Oklahoma, but, as was correctly stated by the Senator from Connecticut [Mr. PLATT], Congress has declared that when it shall have been opened after extinguishment of the Indians' title by proclamation of the President, it shall become a part of the Territory of Oklahoma. Meantime, and before that even, the Secretary of the Interior is desirous of taking those steps which will provide for the orderly and lawful administration of the town-site laws of the United States.

It needs no refreshment of the recollection of Senators to say that there is no question so likely to breed disturbance, which has been so prolific of trouble and controversy, as this very matter of town sites upon the public lands. Men have had fortunes wrecked over and over again, as has come to my notice, by their failure to understand in advance what the law was, as if driven by a certain stress of necessity, by a kind of compulsion, to arrive at a decision early to select what was proper for them on the one hand as a lawful townsite, and what turned out to be, on the other, the real, lawful town site, as was eventually decided by the Secretary of the Interior.

To prevent disorders of this kind, to prevent injuries which may ensue to settlers, to prevent controversies in the seizure of town sites, which may go so far as to result in physical violence, even to bloodshed, the Secretary of the Interior desires to pursue the same course which Congress, in its wisdom, provided for his predecessor in office in opening the Territory of Oklahoma. He desires to appoint as many boards of commissioners as shall be suitable; but the old law limits the number to seven, so there can be but twenty-one commissioners, all told. He desires to appoint as many boards of commissioners of three each, according to the act of 1890, as shall be able to go on, locate, survey, and put up to sale in a lawful and orderly manner the town sites which have been reserved for that purpose in this new addition to Oklahoma Territory.

In order to do this thing, the appointments must be made and the work largely carried forward before the day of opening. That is the occasion of the anxiety of the Secretary upon this matter.

Mr. CAREY. It may be done afterwards.

Mr. VILAS. Oh, it may be done afterwards if it be not done before; I do not say that if it be not done before, it can not be done after; but the very point is, that it will be better done before; it will be done in a more orderly manner if it be done before. Therefore the Secretary is urging the passage of this resolution.

It is contended that as the law now stands that authority may be exercised, but the Secretary of the Interior wants no doubtful question to lie at the base of the titles which shall grow up upon these town-site entries; he wants a certainty from the action of Congress on that subject, and therefore he has asked the passage of this resolution from both Houses of Congress to make it a sure thing that he can so proceed without doubt. He has urged its immediate passage in order that the action may be had early; and it is necessary that it should be speedily passed to be most useful and effectual. The House of Representatives has passed it; it has gone to the Committee on Public Lands, and that committee agrees to it. Why, then, debate the question of expense? Why, then, discuss the right of the probate judges? The question here is limited not to matters of probate judges, but to this simple proposition of amendment, which has been suggested by some members of the Committee on Public Lands.

What is the proposed amendment? That is the only question now before the Senate, and it is this: It is proposed by the amendment to confine the selection of the Secretary of the Interior to the present inhabitants of the now existing Territory of Oklahoma to perform this service in this strip of country that is not now a part of Oklahoma. What is the reason of it? Is there any public interest to demand it? Is there any reason why the same latitude of discretion will not give him as great opportunity to do a public service as existed when the former Secretary of the Interior had the same authority conferred upon him? It is precisely the same question now as then.

But it is said that there is a sentiment in favor of the selection of the officers of a Territory from citizens of the Territory, to which both parties have given assent in their platforms. The answer is obvious. This is not the case of appointing Territorial officers; this is not the case of appointing the ordinary administrators of Territorial affairs, to which those resolutions related. This is an extraordinary and peculiar case, in which the Secretary of the Interior is seeking to provide immediate administrators of a particular law, and therefore he wants to make as fit appointments as he can and as quickly as he can.

Observe, now, what would be the effect of limiting him to the inhabitants of Oklahoma. That Territory has had but little more than three years of existence, and, a portion of that time, a very troubled existence indeed. We are to send him into that Territory, such as it is and where it is, to select at once twenty-one officers, or we are to rob him of the very advantage which this resolution would afford him.

It seems to me so obvious that this is to throw, upon a mere sentiment, an unfair fettering upon that officer in the present emergency, which nobody on either side of the Senate can desire to do unless there be reason for it such as I have not been able to see.

Then, observe another thing in respect to it. The whole value of this proposed legislation consists in its being immediately enacted. This is one of those steps among a considerable number which the President and the Secretary of the Interior have been studying all summer long in order to accomplish the end, to prepare that Territory for an orderly settlement, a settlement that shall not breed the ordinary amount of controversy and strife. This is one of those steps, therefore, which, if taken at all to effect the end, must be taken at once.

Now, observe what will be the effect of adding this amendment to the joint resolution. The House of Representatives took up the joint resolution unanimously, and passed it by unanimous consent, as I am informed, if it be proper to speak of the action of the other House at all. If we send back the resolution with an amendment of this kind, creating a bone of contention in that body, what will be the result? Nothing less than disagreement with that vote on their part. After disagreement and conference, if they adhere, as there is every reason to suppose they will, are we to recede, or are we to judge that this little simple matter of administration in the beginning is necessary to facilitate the performance and administration of the trust which has been reposed in this public officer, or to intrude a mere sentiment to compel his discretion, to control the exercise of the authority with which he is vested, in such manner as to destroy his usefulness?

I certainly trust, Mr. President, that the Senate will never adopt such a line of dealing with the public Departments of this Government.

Mr. PLATT. Some question has arisen as to whether the Cherokee Outlet is or is not already a part of the Territory of Oklahoma. I think it is. The statute organizing the Territory of Oklahoma provided:

> Whenever the interest of the Cherokee Indians in the land known as the Cherokee Outlet shall have been extinguished and the President shall make proclamation thereof, said Outlet shall thereupon, and without further legislation, become a part of the Territory of Oklahoma.

In his proclamation, just issued, for the settlement of the Territory, the President recites the fact that the Cherokee Nation of Indians ratified the agreement for the cession, and thereby ceded, conveyed, transferred, relinquished, and surrendered all title, claim, and interest of every kind and character in and to that part of the Indian Territory embracing the Cherokee Outlet. So I think there can be no question but that the title is extinguished, and proclamation has been made.

Mr. PEFFER. Mr. President, I have listened with a great deal of attention, as well as interest, to the discussion so far, but I have not yet had a satisfactory answer to the question which I asked of the Senator from Arkansas [Mr. BERRY] in the beginning, that is, as to what advantage would be gained over the present law by adding the proposed legislation? The Senator from Wisconsin [Mr. VILAS] is of the opinion that the object is to advance a more orderly proceeding in the settlement of the Territory.

It has been my experience and observation as to the settlement of Indian reservations that there is a horde of men, if I may use the expression, who make organized raids upon the reservations in advance of their opening and settlement by ordinary people. Their plans are already arranged; they are not the disorganized mass of ordinary settlers, but they are men of brains; they are shrewd men, who have talents both in their heads and in their pockets, and they expect when the barriers are removed that they will immediately rush in and have a place to set their feet upon already prepared for them, while the average man who, with his family, camps along the borders for months and even years, who is anxious to enter the Territory, not to build a town site, not to get a town lot, but to get a home for himself and his family, is kept back by reason of these preparatory arrangements for the town builders, the men who will go upon sites already prepared for them; and the first thing they do is to set up a dram shop, next a bank, then come the loan agent and the real-estate dealer; the mortgage mill begins to grind, and the people have debts fastened upon them before they have had time to get a good rest in their new home.

It seems to me it would be wiser, infinitely wiser, to make no provision whatever at this time for the selection of town sites. Let the people who want homes in the Territory go in and select their homes, select their farms, and after they have acquired a residence there under the law, after they have acquired a foothold, a place to live, then they will get together in due time, and under the law of the United States, if they do not make any local laws of their own, they will arrange this town-site business in their own way.

I do not believe in giving any advantage to the town-builders or speculators. I believe in saving the land for the man who is anxious to get a home, to make a livlihood for himself and his family, instead of for the man who would lay down town sites and become rich off of what he can gain from the losses of other people.

There is no need for hurry in the matter. Nothing has been yet suggested before the Senate which satisfies my mind that there is any need whatever for additional legislation. I am quite confident that the persons who expect to go into the Territory and make homes for themselves—not town-builders, but farmers and that class of persons—will be better protected, and that is the aim of the law, if we do not enact any additional legislation whatever.

I will say further, that I am satisfied the persons who expect to enter the lands prefer that there be no additional legislation. Their sentiment in reference to this thing is "keep your hands off; let us alone, and when we get into the Territory, have our homes, and become settlers and citizens there, we shall regulate this matter to suit ourselves." If that be done, then, for once at least, we shall have the principle of home rule adopted in a new Territory.

Mr. McPHERSON. I desire to interrupt the proceedings on the pending joint resolution for a single moment, to suggest that when we adjourn to-day it be to meet on Monday next at 12 o'clock.

Mr. BERRY. I hope the Senator will not make the motion until I see whether we can get a vote on the pending question.

Mr. McPHERSON. I think we ought to sit here until the the vote is taken.

Mr. BERRY. I shall have to ask the Senator to defer making any motion until the joint resolution now pending is passed upon.

Mr. McPHERSON. I will do so, but I will make a statement if Senators will permit me.

On consultation with Senators on both sides of the Chamber, considering that we have had a long, hot week, and the Chamber is very oppressive, there is a general disposition manifested to adjourn over from to-day until Monday, the belief being that we shall make progress quite as rapidly with the pending measures if we take that course, as if we should remain here to-morrow. Besides, there does not seem to be any member of the Senate who really desires to be heard to-morrow on the pending financial bills. Therefore, the Committee on Finance have reluctantly consented to an adjournment over, with the notice, which I am enjoined and instructed by the chairman of the committee to give, that next week we shall try to press the pending bill to a vote at as early a day as possible.

Mr. PLATT. Which bill is that?

Mr. PEFFER. To what bill does the Senator refer?

Mr. McPHERSON. The Committee on Finance have two bills pending here.

Mr. PLATT and Mr. PEFFER. To which does the Senator refer?

Mr. McPHERSON. I can not tell. The Senator from Kansas [Mr. PEFFER] made a long speech on one of them, but not upon the one which was before the Senate. Judging from the debate I can not tell which bill was before the Senate. However, as to the financial measures pending in this body, I do not know what may be the disposition of the chairman of the committee touching the one he will earliest press for consideration; but the committee wish to give notice that on Monday morning it is their intention to proceed, as fast as the Senate will permit, in the direction of reaching a vote. The committee now give notice that they will resist any and all attempts to interpose any other legislation pending the final vote by the Senate upon the financial questions.

Mr. BERRY. I hope the Senator will not interpose further obstruction in regard to the pending joint resolution, but will let us have a vote upon it.

Mr. McPHERSON. I do not wish to interfere with the pending joint resolution.

Mr. FRYE. Let us have a vote on the amendment.

Mr. CAREY. I wish to ask the Senator from Wisconsin a question. I ask whether he was a member of the committee on resolutions at the last Democratic convention?

Mr. VILAS. I was on the general committee on resolutions and the subcommittee also.

Mr. CAREY. I merely wish to call the Senator's attention to a clause in the Democratic platform which the Senator from Wisconsin himself may have prepared. I hope he did:

> We hold that the officials appointed to administer the government of any Territory, together with the Districts of Columbia and Alaska, should be *bona fide* residents of the Territory or District in which their duties are to be performed. The Democratic party believes in home rule and the control of their own affairs by the people of the vicinage.

Now, the Senator from Wisconsin says it is necessary to have immediate action in this case. I wish to state to him that in no instance have such boards been appointed in advance of the settlement of the district where town sites are located. The town sites have already been located in Oklahoma, and the land has been reserved. I wish to say to him also that more than two-thirds of all the town-site difficulties in Oklahoma have been settled and disposed of under the probate-judge law. The judges take hold of the matter. They appoint three men in the neighborhood to appraise the value of town sites, and proceed in a way which is highly satisfactory to the people.

There is nothing in the world, therefore, to prevent the Secretary of the Interior from appointing bona fide residents of the town itself, if he wishes to do so. If he will wait a little while—and there is not any hurry about the passage of the joint resolution—the matter will be all right.

Mr. VILAS. I do not happen to have the resolutions adopted by the Republican national convention, but I should like to ask the Senator from Wyoming if they are any less explicit in this respect than those adopted by the Democratic national convention?

Mr. CAREY. They are, indeed.

Mr. VILAS. Less explicit?

Mr. CAREY. They are less explicit, because we adopted ours first, and you copied ours and tried to put more to it in order to catch votes.

Mr. VILAS. I suppose that means that some delegates from the Territories prepared the resolution for both conventions, and, as the question was not a burning issue, both parties were ready to adopt what was offered.

Now, I should like to ask the Senator from Wyoming if the convention of 1888, which nominated the late President of the United States, Gen. Harrison, had not also a similar resolution in its platform?

Mr. CAREY. It had.

Mr. VILAS. I should like to ask the Senator from Wyoming if there is any better reason why the vacant territory of the Cherokee Outlet should be officered by people from the adjacent region of Oklahoma than there was why the Territory of Oklahoma should have been officered from the adjacent State of Kansas under the last Administration: and why, under that former plank in the platform of 1888, adopted by the Republican convention, the President of the United States and the Senate, participating with him in the power of appointment, found it possible to appoint judges, marshals, and other officers of the Territory from outside of the Territory?

Mr. CAREY. Where did he do it? The law was not passed so much to locate town sites as for the settlement of then existing difficulties. Difficulties arose because there were no officers

in Oklahoma at the commencement of affairs there. That difficulty does not exist now.

So far as President Harrison is concerned, he did not violate the rule of the platform except in two or three instances, and those were in the Territory of Arizona, where the people would not agree as to the appointments. He could not do anything with them. So far as the Territory in which I lived was concerned the rule was never violated, not even in connection with an appointment in the Indian service. I think that was the experience of all the Territories, except the Territory of Arizona, and there, as I have said, they would not agree as to the judges.

Mr. PLATT. Mr. President, I am not going to detain the Senate when it is impatient to vote, but I should like to say a word or two.

I understand that this question is already decided. It is a question of the appointment of some officeholders, as I may call them, agents from different sections of the country to go into this Territory and attend to the town-site matters; in other words, a question of patronage; and it will be voted in the Senate, but voted against the wishes both of the people living in Oklahoma and the people who are going there. It has been brought this far without consultation with the people of Oklahoma or the people who are going there. The statements which have been read here show that they are opposed to it; that the present law is entirely satisfactory to them, much more satisfactory than this proposed law, which involves the appointment of outsiders to go there and settle those questions in a very much more expensive way, and taking a great deal more time for it.

The recent settlements in Oklahoma of the Cheyenne and the Arapahoe reservations have all been made under the law as it at present exists without any trouble whatever, and are all disposed of, while the original question about the settlement of Oklahoma proper, which was submitted to the town-site board, is still unsettled.

What the people of the Territory and the people who are going in there ask is that the law applicable to this matter may be left as it is now, and that all these matters may be settled under the general law.

I do not care anything about the pending amendment. My objection is to the passage of such a law at all. It is unnecessary; it is not called for; and, to speak plainly about it, there is no earthly reason for it except the question of patronage.

The PRESIDING OFFICER (Mr. PASCO in the chair). The question is on agreeing to the amendment reported by the Committee on Public Lands.

Mr. CAREY and Mr. HANSBROUGH called for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. KYLE (when Mr. BUTLER'S name was called). I am requested by the Senator from South Carolina [Mr. BUTLER] to say that he is paired with the Senator from Pennsylvania [Mr. CAMERON].

Mr. DUBOIS (when his name was called). I am paired with the junior Senator from New Jersey [Mr. SMITH] on political questions. I do not know whether this is regarded as a political question or not.

Mr. McPHERSON. I think my colleague, if present, would vote "nay."

Mr. DUBOIS. Then I withhold my vote.

Mr. HANSBROUGH (when his name was called). I am paired with the Senator from Illinois [Mr. PALMER]. If he were present I should vote "yea."

Mr. HARRIS (when his name was called). I have a general pair with the Senator from Vermont [Mr. MORRILL]. I do not know how he would vote on this question if present, but I will transfer my pair with him to the Senator from Maryland [Mr. GIBSON], and vote. I vote "nay."

Mr. DIXON (when Mr. LODGE'S name was called). I was requested by the junior Senator from Massachusetts [Mr. LODGE] to announce that he has a general pair with the Senator from Kansas [Mr. MARTIN].

Mr. MANDERSON (when his name was called). I am paired with the Senator from Kentucky [Mr. BLACKBURN]. I should vote "yea" on this question if he were present.

Mr. PETTIGREW (when his name was called). I am paired on this question with the Senator from West Virginia [Mr. CAMDEN]. If he were present, I should vote "yea" and he would vote "nay."

Mr. PLATT (when his name was called). I am paired with the Senator from Virginia [Mr. HUNTON]. If he were present, he would vote "nay" and I should vote "yea."

Mr. STOCKBRIDGE (when his name was called). I am paired with the Senator from Maryland [Mr. GIBSON].

The roll call was concluded.

Mr FRYE. I am paired with the senior Senator from Maryland [Mr. GORMAN] on political questions, and as this seems to be a political question, I withhold my vote.

Mr. MANDERSON. As there is some doubt about a quorum having voted and as I think my vote, if recorded, will not change the result, I shall vote. I vote "yea."

Mr. DUBOIS. I will ask the Senator from New Jersey [Mr. McPHERSON], with whose colleague I am paired, whether he will object to my voting in order to make a quorum. I do not think my vote will make any difference in the result.

Mr. McPHERSON. I have no objection.

Mr. DUBOIS. Then I vote "yea."

The result was announced—yeas 16, nays 29, as follows:

YEAS—16.

Allison,	Dubois,	Manderson,	Proctor,
Carey,	Gallinger,	Peffer,	Shoup,
Davis,	Hawley,	Perkins,	Teller,
Dixon,	Higgins,	Power,	Washburn.

NAYS—29.

Bate,	Gray,	Mills,	Vest,
Berry,	Harris,	Mitchell, Oregon	Vilas,
Caffery,	Hill,	Pasco,	Walthall,
Call,	Irby,	Ransom,	White, Cal.
Cockrell,	Jones, Ark.	Roach,	White, La.
Coke,	Kyle,	Stewart,	
Daniel,	Lindsay,	Turpie,	
Faulkner,	McPherson,	Vance,	

NOT VOTING—40.

Aldrich,	Dolph,	Jones, Nev.	Platt,
Allen,	Frye,	Lodge,	Pugh,
Blackburn,	George,	McMillan,	Quay,
Brice,	Gibson,	Martin,	Sherman,
Butler,	Gordon,	Mitchell, Wis.	Smith,
Camden,	Gorman,	Morgan,	Squire,
Cameron,	Hale,	Morrill,	Stockbridge,
Chandler,	Hansbrough,	Murphy,	Voorhees,
Colquitt,	Hoar,	Palmer,	Wilson,
Cullom,	Hunton,	Pettigrew,	Wolcott.

So the amendment was rejected.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, and was read the third time.

The PRESIDING OFFICER. The question is, Shall the joint resolution pass?

Mr. CAREY. I had intended to call for the yeas and nays on the passage of the joint resolution, but as the last vote has shown the sentiment of the Senate in reference to it I shall not do so.

The joint resolution was passed.

ADJOURNMENT TO MONDAY.

Mr. McPHERSON. I now move that when the Senate adjourn to-day it be to meet on Monday.

The motion was agreed to.

MARY IMOGENE SANFORD.

Mr. WHITE of Louisiana, from the Committee to Audit and Control the Contingent Expenses of the Senate, to whom was referred the following resolution, submitted by Mr. HAWLEY on the 14th instant, reported it without amendment:

Resolved, That the Secretary of the Senate be, and is hereby, authorized and directed to pay out of the "miscellaneous items" of the contingent fund of the Senate, to Mary Imogene Sanford, widow of Oliver S. Sanford, deceased, late acting assistant doorkeeper of the Senate, the sum of $900, being an amount equal to six months' salary at the rate allowed by law to such acting assistant doorkeeper aforesaid.

Mr. PLATT. I ask that the resolution may be put upon its passage.

Mr. WHITE of Louisiana. I do not know whether there will be any opposition to the resolution. The report simply conforms to the practice of the committee for many years past, which was adopted after considerable discussion, to cut off extra allowances and fix a specific sum, which in such cases shall be allowed in lieu of all others. The report merely follows the precedents of the committee.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the resolution?

The resolution was considered by unanimous consent, and agreed to.

EXECUTIVE SESSION.

Mr. McPHERSON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After fifteen minutes spent in executive session the doors were reopened, and (at 5 o'clock and 12 minutes p. m.) the Senate adjourned until Monday, August 28, 1893, at 12 o'clock m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 25, 1893.

ENVOYS EXTRAORDINARY AND MINISTERS PLENIPOTENTIARY.

Luther F. McKinney, of Manchester, N. H., to be envoy extraordinary and minister plenipotentiary of the United States to Colombia.

William E. Quinby, of Detroit, Mich., to be envoy extraordinary and minister plenipotentiary of the United States to The Netherlands.

SECRETARIES OF LEGATION.

Jacob Sleeper, of Boston, Mass., to be secretary of the legation and consul-general of the United States at Bogota, Colombia.

Edward C. Butler, of Massachusetts, to be secretary of the legation of the United States to Mexico.

UNITED STATES ATTORNEY.

Owen J. H. Summers, of Florida, to be attorney of the United States for the northern district of Florida.

UNITED STATES MARSHAL.

James C. Drake, of Washington, to be marshal of the United States for the district of Washington.

COLLECTORS OF CUSTOMS.

Harry A. McNeally, of Maine, to be collector of customs for the district of Saco, in the State of Maine.

Harry H. Kain, of Mississippi, to be collector of customs for the district of Vicksburg, in the State of Mississippi.

Theodore S. Wilkinson, of Louisiana, to be collector of customs for the district of New Orleans, in the State of Louisiana.

RECEIVER OF PUBLIC MONEYS.

Walter C. Westcott, of Amethyst, Colo., to be receiver of public moneys at Del Norte, Colo.

ASSISTANT APPRAISER OF MERCHANDISE.

R. Loper Baird, of Pennsylvania, to be assistant appraiser of merchandise in the district of Philadelphia, in the State of Pennsylvania.

REGISTERS OF THE LAND OFFICE.

William D. O'Toole, of Hamilton, Wash., to be register of the land office at Seattle, Wash.

Peter Primeau, of Houghton, Mich., to be register of the land office at Marquette, Mich.

CONSULS.

William H. Jacks, of Logansport, Ind., to be consul of the United States at London, Ontario.

James H. Madden, of Danville, Ill., to be consul of the United States at Smyrna, Turkey.

Theodore Huston, of Macomb, Ill., to be consul of the United States at Paso del Norte, Mexico.

Edward Downes, of New Haven, Conn., to be consul of the United States at Amsterdam, Netherlands.

Francois X. Belleau, of Lewiston, Me., to be consul of the United States at Three Rivers, Canada.

Peter Lieber, of Indianapolis, Ind., to be consul of the United States at Dusseldorf, Germany.

Joel Linsley, of Middlebury, Vt., to be consul of the United States at Coaticook, Canada.

Frank E. Hyde, of Hartford, Conn., to be consul of the United States at Lyons, France.

Matthew M. Duffie, of Princeton, Ark, to be consul of the United States at Winnipeg, Manitoba.

Jacob T. Child, of Richmond, Mo., to be consul of the United States at Hankow, China.

Charles A. O'Connor, of Manchester, N. H., to be consul of the United States at Yarmouth, Nova Scotia.

James C. Monaghan, of Lonsdale, R. I., to be consul of the United States at Chemnitz, Germany.

Norfleet Harris, of Greensboro, Ala., to be consul of the United States at Leeds, England.

Louis S. Delaplaine, jr, of Wheeling, W. Va., to be consul of the United States at Demerara, Guiana.

Edward P. Crane, of Pittsburg, Pa., to be consul of the United States at Hanover, Germany.

Pulaski F. Hyatt, of Lewisburg, Pa., to be consul of the United States at Santiago de Cuba.

J. Courtney Hixson, of Union Springs, Ala., to be consul of the United States at Ningpo, China.

J. Hampton Hoge, of Roanoke, Va., to be consul of the United States at Amoy, China.

Warner S. Kinkead, of Shelbyville, Ky., to be consul of the United States at Southampton, England.

Thomas C. Jones, of Frankfort, Ky., to be consul of the United States at Funchal, Madeira.

Alfred C. Johnson, of Philadelphia, Pa., to be consul of the United States at Stuttgart, Germany.

George G. Mathews, jr., of Santos, Fla., to be consul of the United States at Para, Brazil.

Frank C. McGhee, of Meridian, Miss., to be consul of the United States at Huddersfield, England.

John B. Laguaite, of New Orleans, La., to be consul of the United States at Martinique, West Indies.

D. J. Partello, of the District of Columbia, to be consul of the United States at Sonneburg, Germany.

Frederick Opp, of Llano, Tex., to be consul of the United States at Breslau, Germany.

John R. Mobley, of Waco, Tex., to be consul of the United States at Baracoa, Cuba.

Andrews A. St. John, of Pennsylvania, to be consul of the United States at Batavia, Java.

William H. Robertson, of the District of Columbia, to be consul of the United States at Hamburg, Germany.

Benjamin H. Ridgely, of Louisville, Ky., to be consul of the United States at Geneva, Switzerland.

Jesse W. Sparks, of Murfreesboro, Tenn., to be consul of the United States at Piedras Negras, Mexico.

Henry C. Smith, of Birmingham, Ala., to be consul of the United States at Santos, Brazil.

W. H. Seymour, of Livingston, Ala., to be consul of the United States at Palermo, Italy.

Lucien J. Walker, of Birmingham, Ala., to be consul of the United States at Cork, Ireland.

Claude M. Thomas, of Paris, Ky., to be consul of the United States at Marseilles, France.

James B. Taney, of Wheeling, W. Va., to be consul of the United States at Belfast, Ireland.

Eugene Germain, of Los Angeles, Cal., to be consul of the United States at Zurich, Switzerland.

Harrison R. Williams, of St. Louis, Mo., to be consul of the United States at San José, Costa Rica.

Charles W. Whiley, jr., of Lewes, Del., to be consul of the United States at St. Etieune, France.

John W. Coppinger, of Alton, Ill., to be consul of the United States at Toronto, Canada.

CONSULS-GENERAL.

Darius H. Ingraham, of Portland, Me., to be consul-general of the United States at Halifax, Nova Scotia.

Frederic C. Penfield, of Hartford, Conn., to be agent and consul-general of the United States at Cairo, Egypt.

Wallace S. Jones, of Monticello, Fla., to be consul-general of the United States at Rome, Italy.

Van Leer Polk, of Nashville, Tenn., to be consul-general of the United States at Calcutta, India.

E. Spencer Pratt, of Mobile, Ala., to be consul-general of the United States at Singapore, Straits Settlements.

PROMOTIONS IN THE ARMY.

General officer.

Col. William P. Carlin, Fourth Infantry, to be brigadier-general.

Medical Department.

Lieut. Col. George M. Sternberg, deputy surgeon-general, to be Surgeon-General.

Pay Department.

Capt. William H. Hamner, Twentieth Infantry, to be paymaster.

Quartermaster's Department.

First Lieut. Frederick Von Schrader, Twelfth Infantry, to be assistant quartermaster.

Medical Department.

Maj. Johnson V. D. Middleton, surgeon, to be deputy surgeon-general.

Maj. John H. Janeway, surgeon, to be deputy surgeon-general.

Capt. Henry S. Turrill, assistant surgeon, to be surgeon.

Corps of Engineers.

Lieut. Col. George H. Elliot, to be colonel.

Maj. Amos Stickney, to be lieutenant-colonel.

Capt. Thomas Turtle, to be major.

First Lieut. Harry F. Hodges, to be captain.

Second Lieut. William V. Judson, to be first lieutenant.

Cavalry arm.

Capt. Joseph M. Kelley, Tenth Cavalry, to be major.

Capt. Thomas C. Lebo, Tenth Cavalry, to be major.

First Lieut. John Bigelow, jr., Tenth Cavalry, to be captain.

First Lieut. Robert D. Read, jr., Tenth Cavalry, to be captain.

Second Lieut. Letcher Hardeman, Fourth Cavalry, to be first lieutenant.

Second Lieut. Edmund S. Wright, Ninth Cavalry, to be first lieutenant.

Second Lieut. William H. Hay, Third Cavalry, to be first lieutenant.

Second Lieut. James E. Nolan, Fourth Cavalry, to be first lieutenant.

Artillery arm.

First Lieut. Charles Humphreys, Third Artillery, to be captain.

Second Lieut. Richmond P. Davis, Second Artillery, to be first lieutenant.

Second Lieut. George O. Squier, Third Artillery, to be first lieutenant.

Infantry arm.

Lieut. Col. Robert H. Hall, Sixth Infantry, to be colonel.

Maj. Harry C. Egbert, Seventeenth Infantry, to be lieutenant-colonel.

Capt. William H. Bisbee, Fourth Infantry, to be major.

First Lieut. Henry E. Robinson, Fourth Infantry, to be captain.

First Lieut. William W. Wotherspoon, Twelfth Infantry, to be captain.

First Lieut. Charles W. Mason, Fourth Infantry, to be captain.

First Lieut. Arthur Williams, regimental quartermaster Third Infantry, to be captain.

First Lieut. Stephen Y. Seyburn, Tenth Infantry, to be captain.

First Lieut. Edmund K. Webster, regimental quartermaster Second Infantry, to be captain.

Second Lieut. Frederick C. Kimball, Fifth Infantry, to be first lieutenant.

Second Lieut Frank L. Winn, First Infantry, to be first lieutenant.

Second Lieut. Charles C. Ballou, Sixteenth Infantry, to be first lieutenant.

Second Lieut. Erneste Y. Smith, Third Infantry, to be first lieutenant.

Second Lieut. George B. Duncan, Ninth Infantry, to be first lieutenant.

Second Lieut. Robert C. Williams, Fifteenth Infantry, to be first lieutenant.

Second Lieut. Lucius L. Durfee, Seventeenth Infantry, to be first lieutenant.

Second Lieut. Charles G. Dwyer, Twenty-first Infantry, to be first lieutenant.

HOUSE OF REPRESENTATIVES.

FRIDAY, *August 25, 1893.*

The House met at 10 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

CAPITOL CENTENNIAL ANNIVERSARY.

The SPEAKER laid before the House a message from the Senate announcing the appointment by the Vice-President of a committee on the part of the Senate, consisting of Senators VOORHEES, SHERMAN, RANSOM, CHANDLER, WHITE of California, SQUIRE, and MARTIN, under the joint resolution providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793; which was laid on the table.

The SPEAKER announced the appointment of a like committee on the part of the House, in compliance with the same joint resolution, consisting of Messrs. BYNUM, WARNER, BLACK, HOUK of Ohio, HENDERSON of Iowa, O'NEILL of Pennsylvania, and COGSWELL.

RECOINAGE OF FRACTIONAL SILVER COIN.

The SPEAKER also laid before the House a letter from the Secretary of the Treasury showing the necessity of an immediate appropriation of $300,000 for continuing the recoinage of fractional silver coin; which was referred to the Committee on Appropriations.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. SAYERS. Mr. Speaker, in the brief time allowed me I can only express an opinion as to the cause of the crisis which is upon the country, and give some of the reasons which impel me to vote against the unconditional repeal of the law which authorizes the purchase of silver bullion, and is known as the Sherman act.

That the operation under that law may be the better understood, I beg to submit to the House the following memorandum, furnished me by the Treasurer:

Total number of ounces of silver bullion purchased under the Sherman act to August 16, 1893, the latest date to which the account has been made up	161,521,000
Total number of silver dollars coined therefrom	36,087,185
Total of Treasury notes issued in purchases under the act	$149,855,280
Total silver certificates—	
Issued	859,190,000
Redeemed	528,063,496
Outstanding	331,126,504

TREASURY OF THE UNITED STATES,
August 23, 1893.

Sir, while I do not think that the policy thus inaugurated by the last Administration is wise, however it may be considered, yet it is far better that, bad as it is, it should remain on the statute book than be repealed, and the future use of silver as a money metal—other than that now coined and that represented by Treasury notes and certificates—be discontinued. Nor can I believe that it has produced the embarrassment that has befallen this country, destroying confidence and bankrupting so many of our citizens.

Rather has it been seized upon by those interested in the negotiation of securities in foreign markets and by those who desire bonds for investment as a means by which to excite public distrust.

It is admitted, Mr. Speaker, that all balances in trade, foreign or domestic, at the end of each business season, must be paid in cash or be carried over by the creditor to be afterwards met. The Chief of the Bureau of Statistics, in his communication to the Secretary of the Treasury of the 15th instant, informs us that the excess of our imports over our exports for the fiscal year ending June 30, 1893, amounted to $18,853,397, thus necessitating the payment by us of that sum to foreign countries in the matter of trade. The conditions of our exports and imports for the previous year—that is, for the year ending June 30, 1892—was quite different.

In that year, according to the same authority, our exports exceeded our imports by $202,875,687, which sum, accruing through trade, was paid to us by other countries. This balance was paid to us, and $18,853,397—the balance for 1893—was paid by us; or, perhaps, to better and more fully present the comparison, $1,030,278,148 of exports and $827,402,462 of imports for 1892, and $866,361,421 of imports and $847,508,024 of exports for 1893, properly represent the values of exports and imports for the last two years. In the latter year we exported $182,770,124 less, and we imported $38,958,959 more, than in the former.

It occurs to me, Mr. Speaker, that this condition of our foreign trade has been and is now an especial and prominent factor in our financial troubles. I can not believe that, in view of the great commercial disasters that have occurred in European centers of commerce and in other countries directly connected with such centers, indulgence has been granted us in the payment of balances in trade. Besides, the policy of Austria in resuming specie payments upon a gold basis was determined upon in January, 1892, and this operation was precisely similar to the change made in the United States between 1875 and 1879. The process of collecting gold was to continue over a period of two years, and to accomplish this about one-half the annual product of gold in California, Australia, South Africa, Russia, and Hungary was required.

The Rothschilds of London undertook to procure for the Austrian Government the necessary stock of gold, the contract being consummated in January, 1893, and went into the open market seeking its purchase at a premium. In the beginning of the month of March of the present year, $29,000,000 had been provided for by the purchase of American gold eagles. Some gold was also purchased in Germany, but $12,000,000 more was needed in order to complete the loan, and the syndicate took advantage of the fall in the rate of exchange in the United States, which enabled gold to be exported and abolished premium on all gold, whether coin or bullion.

This accounts, in part, for the large exportation of gold coin and bullion from this country during the present year; that is, for about $41,000,000, the entire amount of gold to be provided for being about $100,000,000.

The history of this transaction should admonish us as to what would become necessary should the United States undertake to make all payments on a gold basis. In such a contingency the issue and sale of at least $250,000,000 of interest-bearing gold bonds would become necessary in order to maintain a sufficient reserve.

In addition to this, Mr. Speaker, recent failures, some of great

magnitude, in our own country have demonstrated that in many instances banking institutions were being wrecked by those directly and legally charged with their safe and judicious management.

But, sir, there is another and a more deplorable cause that has led to the embarrassments which confront us and which has tended to greatly excite the public mind, and that cause is the general belief that the creditor class of this country—those who are possessed of large capitals—desire to have money scarcer and therefore more valuable and productive. These are they who, with the greatest vigor, have declared and do now maintain war against the further coinage of silver. The bonds which they hold as investments and the money which they have hoarded for the purpose of lending will, if the further coinage of silver be abandoned, become the more profitable, while other properties will correspondingly shrink in value should monometallism become the established and permanent policy of this Government.

In a word, Mr. Speaker, the pending contest is a war in which scarcity of money is on the one side and a reasonable supply, with proper distribution and in sufficient quantity to meet the just demands of commerce, of production, of manufacture, and of labor, is on the other side.

Sir, I have no confidence in the successful and satisfactory result of any attempt to establish an international ratio between gold and silver. The late international conference was a miserable failure, as has been all such conferences. That this apprehension is not unfounded, I beg to call the attention of the House to the utterance of the present prime minister of England upon the subject.

The time, the place, and the man make it worthy the most careful and thoughtful consideration. It was delivered on February 28, 1893, shortly after the adjournment of the Brussels Conference, in the House of Commons, by the greatest and most influential of living Englishmen. On a motion offered by Sir H. Meysey-Thompson, in the British House of Commons, urging that Government to use its utmost influence to procure the reassembling of the International Monetary Conference and to impress upon the British representatives the immediate necessity of finding some effective remedy for the growing divergence of value between gold and silver, Mr. Gladstone used the following language, which I quote verbatim from the London Times of March 1:

"What is our standard of value to be? [Cheers.] Are we to choose it for its fixity, or are we to choose it for its liability to indefinite and eternal change? The honorable member spoke rather with ridicule upon the proposition of this country as the great creditor country of the world. It is the great creditor country of the world; of that there can be no doubt whatever; and it is increasingly the great creditor country of the world. I suppose there is not a year which passes over our heads which does not largely add to the mass of British investments abroad. I am almost afraid to estimate the total amount of the property which the United Kingdom holds beyond the limits of the United Kingdom; but of this I am well convinced, that it is not to be counted by tens or hundreds of millions.

"One thousand millions probably would be an extremely low and inadequate estimate. Two thousand millions, or something even more than that, is very likely to be nearer the mark. ["Hear!" "Hear!"] I think under these circumstances it is a rather serious matter to ask this country to consider whether we are going to perform this supreme act of self-sacrifice. I have a profound admiration for cosmopolitan principles. I can go a great length in moderation [laughter] in recommending their recognition and establishment, but if there are these two thousand millions or fifteen hundred millions of money which we have got abroad, it is a very serious matter as between this country and other countries.

"We have nothing to pay to them; we are not debtors at all; we should get no comfort, no consolation out of the substitution of an inferior material, of a cheaper money, which we could obtain for less and part with for more. We should get no consolation, but the consolation throughout the world would be great. [Loud laughter.] This splendid spirit of philanthropy, which we can not too highly prize, because I have no doubt all this is foreseen, would result in our making a present of fifty or a hundred millions to the world. It would be thankfully accepted, but I think that the gratitude for your benevolence would be mixed with very grave misgivings as to your wisdom.

"I have shown why we should pause and consider for ourselves once, twice, and thrice before departing from the solid ground on which you have within the last half century erected a commercial fabric unknown in the whole history of the world—before departing from that solid ground you should well consult and well consider and take no step except such as you can well justify to your own understanding, to your fellow-countrymen, and to those who come after us. [Cheers.]"

No one can doubt for a moment that in so speaking Mr. Gladstone was truly and faithfully representing the commercial sentiment of England; and credulous indeed must be the American who, in the light of such an utterance, by such a man at such a time, in such a place and under the weighty responsibility of such an exalted position, can pin his faith and commit his confidence to an international monetary commission.

But, sir, it has been said, again and again, upon this floor, that it will be impossible for our Government to maintain a parity between the metals, should the free and unlimited coinage of silver be permitted. This is only a prediction, not the statement of an existing fact. I grant that the relations of the two metals, with the free and unlimited coinage of silver, would not meet the demand of the miser who carries his scales about him to measure with the exactest nicety the weight of every coin that is tendered him in payment of an usurious indebtedness, but for all practical purposes the parity can be maintained, if there should be an honest purpose to do so.

Are not four quarter-dollars or two half-dollars now being received by the people in their daily transactions with as much favor as $1 in silver, though the dollar really contains more silver than the four quarters or the two halves? And do not $5 or $10 in silver have as great purchasing power as $5 or $10 in gold?

Mr. Speaker, the enemies of bimetallism rely entirely upon foreign sentiment and foreign commerce to sustain them in the position which they have assumed and for which they are contending. They take no thought of our enormous inland commerce, the amount of which has never been accurately measured. Sir, the exchanges in the clearing-houses of the United States—fifty-eight in number—for 1892 reached the enormous sum of $61,017,839,067, and the freight service of the railways in 1891 amounted to 81,073,784,121 tons carried 1 mile.

These are but two evidences of the vast inland commerce in which our people deal, and they cover, by a very small part, the annual transactions that grow out of American industry. The mind grows weary in the attempt to trace each and every path and avenue that is trod by the American people in their effort for industrial, material, and intellectual advancement.

Mr. Speaker, in this connection I will ask the attention of the House to a statement from the Treasury Department, which reads as follows:

Statement showing the amounts of gold and silver coins and certificates, United States, notes and national bank notes, in circulation August 1, 1893.

	General stock, coined or issued.	In Treasury.	Amount in circulation Aug. 1, 1893.	Amount in circulation Aug. 1, 1892.
Gold coin	$520,273,567	$103,363,626	$416,909,941	$410,447,360
Standard silver dollars	419,332,450	363,108,461	56,223,989	57,031,893
Subsidiary silver	76,563,878	12,556,749	64,007,129	63,346,967
Gold certificates	87,704,739	93,710	87,611,029	136,861,829
Silver certificates	333,031,504	2,843,114	330,188,390	327,336,823
Treasury notes, act July 14, 1890	148,286,348	4,512,210	143,774,138	101,756,301
United States notes	346,681,016	22,286,612	324,394,404	311,852,278
Currency certificates, act June 8, 1872	8,340,000	485,000	7,855,000	26,720,000
National-bank notes	183,755,147	3,620,150	180,134,997	166,595,935
Total	2,123,968,649	512,869,632	1,611,099,017	1,601,949,325

Population of the United States August 1, 1893, estimated at 67,066,000; circulation per capita, $24.02.

In this we are informed that there is in circulation $1,611,099.17 to serve the purposes of 67,066,000 people in all their varied occupations. But, sir, how much of this sum is held as reserve in ordinary and prosperous times in the banking, life and fire insurance, and other financial institutions of the country? How much of it, when no panic is pressing upon the people with its unfortunate, depressing, and destroying effects, never sees the light of a single day during the entire year? How much of it never leaves the darkness of the vault, to travel in the channels of trade, agriculture, and manufacture, and to meet the just requirements of labor?

To say that silver, placed on the same level with gold, made a legal tender for all debts, public and private; present and being used everywhere and at all times; moving here and there; never idle, but always following closely the footsteps of the American workingman in whatever field he may toil—to say that it will not under such conditions be received by him, now and hereafter, as heretofore, is a prophecy that can not and will not be fulfilled.

Sir, our internal commerce alone will protect silver. Our Government only can debase it and destroy it as a money metal. The situation of our people is wholly unlike that of other countries, and sound logic will therefore not permit us to draw conclusions from the experience of other nations in the matter of silver coinage. It can not be safely assumed that what has happened elsewhere must necessarily be repeated here.

But, Mr. Speaker, we are asked to repeal unconditionally the Sherman act. What then—what is to follow? The message is silent. Its advocates and supporters in Congress are also silent. But we are not left entirely in the dark as to the purposes of those who are pressing this measure from the outside. It is admitted by all that there is not a sufficiency of gold in this country, even in prosperous times, to answer the purposes and to meet the necessities of trade, agriculture, manufacture, and labor.

How is the needed amount to be obtained? Through commerce with foreign nations? How are we to know that, during the present year and the next year and for years to come, the balance of trade will not be as it was during the last fiscal year—against us? The metropolitan press advises us to issue bonds—interest-bearing bonds—gold bonds—and that, too, in a time of profound peace, and with our agricultural and manufacturing products in the greatest abundance. These bonds are to be sold in Europe. Who are to pay these bonds, principal and interest? The people. How? By taxation.

To such a policy I have ever been, am now, and will always be, unalterably opposed. An interest-bearing indebtedness is a curse to any people. It eats up their substance, retards their prosperity, and brings unhappiness and discontent to every home, except that of the bondholder. In view of the past history of the Democratic party, its record, and its pledges, in view of the circumstances in which we are placed, I can not bring myself to the support of the unconditional repeal of the Sherman act.

I feel it a bounden duty to vote for the substitute prepared by the gentleman from Missouri [Mr. BLAND], and shall do so. And should the Sherman act be unconditionally repealed, and prosperity in a permanent form return to this country, no man will be readier than myself to acknowledge his error, and to accord to those who differ with me greater wisdom and clearer foresight. But I fear the result. Confidence may return with the unconditional repeal of the act, but it will be only temporary, and the next crisis, which may come very quickly, will be greater and severer than that which is now upon us.

Mr. PENDLETON of Texas. Mr. Speaker, the distrust, the loss of confidence, the complete paralysis in all our industries, and the widespread distress growing out of unfortunate financial conditions, have been described by gentlemen more able than myself, in language more eloquent than I can command. It is a situation calling for the exercise of the soundest judgment and the most exalted patriotism. At such a crisis, surely no consideration of partisan advantage ought to be allowed to influence our action. I have favored the repeal of the Sherman law and the remonetization of silver at such ratio as will make its intrinsi and exchangeable value equal to gold.

I had intended and had so announced that I would vote for the unconditional repeal of the purchasing clause of the Sherman law, because I regard it as the most potent factor in producing the present unfortunate condition, but this intention was based upon the supposition that our Democratic friends from the East agreed with us in the interpretation of the Democratic platform, and as remonetization, according to our understanding, was a part of that platform, I supposed that they would vote as readily for a silver bill as for the repeal of the Sherman law. I find that they considered only part of the platform binding and another not obligatory, or that they place a different construction upon it to that adopted by the Democrats of our section. And I now believe that if we consent to unconditional repeal we will have no further legislation upon the silver question, and that it will be struck from the list of money metals. I can not by my vote consent to this condition.

In order to secure equal intrinsic and exchangeable value in both metals, I believe that a change in ratio is necessary, and think it probable that the highest ratio proposed in the House bill is too low, but I will vote for all the ratios, hoping that some one of them may receive the support of a majority and thereby enable us to secure an acceptable compromise. I oppose the ratio of 16 to 1, but shall favor it. I favor the repeal of the Sherman law, and yet shall oppose it, because I hope with one to antagonize the other, and as a result to secure the restoration of silver as one of the great money metals of the country on a basis just and equitable and fair alike to the debtor and creditor. [Loud applause.]

Mr. BRETZ was recognized.

Mr. BLAND. Mr. Speaker, I ask the gentleman from Indiana to yield to me a moment while I ask unanimous consent to have printed in the RECORD an article by Mr. J. S. Daugherty, of Dallas, Tex., and also an article from the St. Louis Chronicle, both relating to the subject under debate.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The articles are as follows:

WILL FREE COINAGE GIVE US PROSPERITY?—HOW ENGLAND REGULATES THE PRICES OF WHEAT AND COTTON THROUGH INDIA COUNCIL DRAFTS.

[By J. S. Daugherty, Dallas, Tex.]

We hold that the greatest temporal blessing that can be conferred upon man is to give him continuous and profitable employment. Therefore, if we can show that the free and unlimited coinage of silver will more certainly do this for the people of the United States than continuing the present law, or confining our silver coinage to the product of our own mines, or establishing the gold standard, then we have established our cause.

Silver and gold are the universally recognized commodities out of which money is now made by all civilized nations and in which the balances of trade between them are settled. If a nation buys and borrows from other nations until the sum of its purchases and the interest on what it borrows added to the principal of bonds falling due and those sent home to be cashed before falling due, aggregate more than it sells or lends to them, then the balance of trade is against it and must be settled on terms dictated by the creditor.

"The borrower is servant to the lender."—*Proverbs*, chapter xxii, verse 7.

All of the gold and silver that a nation can rightfully possess must either be dug out of its mines, received in exchange for other commodities, be brought to it by immigrants who become its citizens, or borrowed. The first three are productive sources of permanent wealth. The fourth is speculative, and may prove profitable or result in disaster, owing to the conditions that may arise. Moses, in giving the law to the Israelites, condemned the policy of borrowing (see Deuteronomy, chapter xv, verse 6), "Thou shalt lend unto many nations, but thou shalt not borrow." Other things being equal, it is evident that the better prices a nation receives for all it has to sell, the more gold and silver it profitably produces from its mines, and the more and wealthier the immigrants who become its citizens, the greater its wealth and the more likely the balance of trade will be in its favor and the power to draw gold and silver from others in settlement. The laws of commerce will never permit either gold or silver to be taken from a country where the balance of trade is in its favor.

With these elementary principles in our minds, let us investigate the effects that the free coinage of silver would have on the industries of our own country and its balance of trade. The total value of the new silver added to the world's stock in 1890 was $166,667,000. Of this sum the western hemisphere produced $141,757,000, leaving the product of all the rest of the world but $24,910,000. And of that produced by the western hemisphere, the United States supplied $70,485,714. The total silver coinage of the world for 1890 was $149,404,092. Of this the eastern hemisphere coined $81,840,468, or $56,920,468 more than her entire product. In addition to this, she must have used in the arts not less than $10,000,000, so that, allowing for the alloy, the eastern hemisphere must have imported 60,000,000 ounces of pure silver more than she produced. Having bought and used it, she must have needed it. At 85 cents per ounce, the cost would be $51,000,000. At $1.2929 per ounce, the value of an ounce of pure silver in this country if we had free coinage, it would have cost her $77,574,000; we being the sellers and they the buyers, their gain was our loss to the extent of $26,574,000.

ENGLAND SILENT.

But let us accompany this silver and see what they did with it, for Mr Edward O. Leech, Director of the United States Mint, in his testimony before the committee of Congress on Coinage, Weights and Measures, in January, 1891, testified that "Even the English mint will not tell you how much silver they have bought." There must be some good reason for this secrecy. England and the United States are preëminently the two great rivals for the world's commerce. In 1890 the United States exported $26,614,000 of silver, while Great Britain coined $66,263,555 worth, and, including her entire possessions, produced but $13,746,055, so that she coined alone $52,816,500 worth more than she produced, to say nothing of what she used in the arts. Seeing that she coined all of the silver minted in the eastern heimsphere in 1890, except $15,576,931, and considering our rivalry with her for commerce, and that London is the money center of the world, and that most of the silver exported from Mexico comes to the United States, we deem it only necessary to contrast the effects of free coinage of silver as it would affect Great Britain and the United States. In 1890 the United States coined $39,202,205, using 16 of silver to 1 of gold, while Great Britain, claiming to be a gold-standard country, coined $66,263,555 worth, using but 15 ounces of silver to 1 of gold. England must need it or she would not buy it. She must make a profit on it or she would not buy it. She tries to keep as a secret how much she buys; then there must be some danger to her interests in making public her methods of handling silver.

Then what is our duty to ourselves as her rivals? To investigate, dig into, and know as much of her methods as she does, and if she is manipulating silver against our interests, try to prevent it.

Other things being equal, it is always to the interest of the consumer to buy as cheap as possible, and the consumer's gain in this case is our loss. What else does England buy that we produce? About 150,000,000 bushels of wheat and 3,500,000 bales of cotton annually. Where does she buy these? In her Indian possessions first, and in the world's market second. How does she pay for what she buys from India? With manufactured goods and silver coin. She buys silver bullion as cheap as possible, and coins it at her mints in Calcutta and Bombay into rupees on a ratio of 15 of silver to 1 of gold, and issues these rupees at .47 and .37 each, in payment for wheat and cotton. She puts no more grains of pure silver in a rupee when she buys it for 27 cents than when it costs her 41 cents, and uses this 27-cent fiated rupee to supply herself cheaply with cotton and wheat, and we furnish her the silver with which to do it.

Let us see how she does it? A pound of cotton or a bushel of wheat of the same quality is of equal value to the English, whether they lay it down from India or America. Suppose a Manchester cotton-spinner wants some cotton for his mill, and wheat for flour on which to feed his operatives. He writes to his London broker to buy him, say, 10,000 ounces of silver, and to ship it to his broker at Bombay. At 85 cents per ounce, it costs him $8,500 in gold. He writes his broker in Bombay, on the arrival of the silver bullion, to take it to the mint and have it coined into rupees, and invest the product in cotton and ship it to him.

His Bombay broker, on arrival of the silver, obeys instructions, and after paying 2 per cent seigniorage for having it coined, receives in rupees $13,504 worth, which he invests in cotton, and ships to Manchester. On its arrival, counting first cost of silver, freights, brokerage, insurance, etc., say it costs 10 cents per pound in gold to lay it down. An American offers him cotton, and if he buys it from him, he will have to pay for it in gold, so he says: "I am laying my cotton down from India, at a cost to me of 10 cents per pound in gold, and other things being equal, I would prefer to patronize our own colonies."

Moreton Frewen, in his address before the second silver convention at Washington, said: "An ounce of silver bullion will always buy a bushel of wheat in India and pay transportation on it to Liverpool. Hence the American farmer must also lay down his bushel of wheat in Liverpool for

an ounce of silver bullion. If this ounce of silver is worth but 85 cents in gold, then all the farmer can get in gold is 85 cents less the cost of transporting the wheat to Liverpool. Therefore, if the farmer will deduct the cost of transporting a bushel of wheat from Chicago to Liverpool from the price of an ounce of silver, he will have very nearly the price of a bushel of wheat in Chicago.

"Assuming the cost of sending a bushel of wheat from Chicago to Liverpool, including storage, insurance, and brokerage, to be 15 cents, and silver to be worth 85 cents an ounce, then wheat in Chicago would be worth 70 cents. But if silver were at par, as it would be under free coinage, an ounce of silver would be worth $1.29, and a bushel of wheat in Chicago would be worth $1.29, less the cost of sending it to Liverpool, or about $1.14.

"Hence, as silver rises above or falls below 85 cents an ounce so will wheat in this country rise above or fall below the prices above stated."

From the above it will be seen that while the Indian farmer gets the same price, in rupees, for his wheat now that he got twenty years ago, the American farmer gets not quite two-thirds as much, and the consumer, or the middleman, gets the difference. In 1873 India exported only 730,485 bushels of wheat; in 1892 India exported 59,000,000 bushels.

Anyone can figure up the loss to the American farmer. It amounts to from $160,000,000 to $220,000,000 on the wheat crop of a single year.

The effect on cotton and cotton manufactures is the same as on wheat. An Indian rupee will buy about 4 pounds of cotton, and pay transportation to Liverpool, or an ounce of silver will buy 10 pounds of cotton and lay it down in Liverpool. With silver at $1.29 an ounce, a pound sterling will pay for 40 pounds of cotton delivered in Liverpool. A pound sterling for 40 pounds of cotton in Liverpool would be about 12¼ cents a pound for the American planter. At 85 cents an ounce for silver a pound sterling will buy nearly six ounces of silver, which, converted into rupees, will pay for 60 pounds of cotton delivered in Liverpool. Sixty pounds of cotton in Liverpool for a pound sterling is about 8 cents a pound there, or about 6½ in Memphis. A large cotton crop in India, or a short crop here, will, of course, vary these relations somewhat, but the general effect of the fall of silver is understated rather than overstated.

The exports of cotton from India have increased from $39,570,000 in 1879 to $82,665,000 in 1891; while the export of cotton goods in the same period has increased from $4,658,500 to $33,135,725, and other manufactures of cotton from $8,220,625 to $14,348,840 in 1891, and are increasing every year.

Sir Robert N. Fowler, M. P., London banker, and ex-lord mayor, in 1886 said:

"The effect of the depreciation of silver must finally be the ruin of the wheat and cotton industries of America and be the development of India as the chief wheat and cotton exporter of the world."

Therefore, if the American sells he must offer the same quality at a lower price or a better quality at the same price. And the price at which the Englishman can lay his cotton down from India is what enables him to fix the price on our cotton. We will assume for the present that if we had free coinage of silver that an ounce of it would be worth $1.2929, and if it was, then 10,000 ounces of it would cost $12,929 in gold, and when sent to Bombay, and coined into rupees, and the seigniorage was paid, would only give $13,504 worth in rupees, the same as when the first cost was $8,500, and there being no more rupees, it would pay for no more pounds of cotton or bushels of wheat; the freight, insurance, seigniorage, and brokerage being the same in both cases, the difference in the cost of the same amount of cotton would be the difference in the first cost of silver, $8,500, at 10 cents per pound, would buy 85,000 pounds of cotton; but 85,000 pounds of cotton, the cost of the silver to pay for which was $12,929, would make it cost, laid down in gold, 15½ cents per pound, and if wheat can be laid down from India at $1 per bushel, when silver costs 85 cents per ounce, when it would cost $1.2929 per ounce wheat laid down from India would cost $1.52 per bushel, and if it cost 15½ cents a pound, and $1.52 per bushel to lay cotton and wheat down from India, then American cotton and wheat would certainly be worth 15 cents per pound and $1.50 per bushel.

DANIEL MANNING'S TESTIMONY.

Daniel Manning, the Secretary of the Treasury under President Cleveland, in 1886, says: "It is a direct consequence of the monetary dislocation that wheat of India, which there fetched three rupees per quintal fourteen years ago and there fetches three rupees per quintal to-day, can be sold (profitably) in London (cost of transportation apart) for as little as the gold price of three rupees in London to-day, a fall of 25 per cent. This lower price of wheat in London has had to be met by a lower price of the American wheat in London. * * * The price of our surplus wheat determined the price of the whole wheat crop of the United States. So that the monetary dislocation has already cost our farming population, who number nearly one-half of the total population of the United States, an almost incomputable sum, a loss of millions upon millions of dollars every year."

PRESIDENT HARRISON'S TESTIMONY.

President Harrison, in his message to Congress in December, 1892, while furnishing statistics to prove that all other industries in the United States were relatively prosperous, admitted that "wheat and cotton are depressed."

In 1873, the year in which silver was demonetized, India produced only 978,000 bales of cotton, while in 1889–'90 she had increased her crop to 2,238,000 bales. In 1879 India exported to Great Britain only 889,655 bushels of wheat, while the United States exported there 67,193,299 bushels. In 1889 India exported to Great Britain 9,337,260 bushels, while the export of the United States there had fallen to 40,503,461 bushels. In 1892 India exported the enormous quantity of 59,000,000 bushels, and as her exports increase ours decline. The average price of wheat in Great Britain in 1879 was $1.29 per bushel. In 1889 it had declined to 88 cents per bushel, while in 1892 the unprecedented low price of 78 cents per bushel was reached, so that while the price of wheat measured in gold has fallen in London from 1879 to 1892, 51 cents per bushel, the price of wheat in India, measured in silver, is about the same as it was in 1873, and the inhabitant of India can buy of all of the necessaries of life with his rupee now as much as he could in 1873, and this uniform price of wheat and cotton for the past twenty years in India is the principal cause that has contributed so largely to develop these industries there.

If the farmers of the West and planters of the South want to get an increased market for their two great staples at better prices, they will not find the true remedy in conventions to make agreements to cut down production so as to give a larger market and further stimulus to these industries in India, but by advancing the price of silver.

In 1879, London exported to India but $12,375,612 worth of silver, while in 1890 the export had grown to $35,573,177, or increased about 300 per cent in about ten years. The coinage of silver at the mints of India owned by the English in 1888, was $36,297,132, while in 1890 it had reached $57,931,333 worth, or an increased coinage in three years of 60 per cent. Why this immense increase in exports and coinage of silver? Because there is profit in it.

What effect had the advance in price of silver in 1890 from 92.4 cents per ounce to $1.21 on the exports of silver from London to India? There was a falling off in the first nine months of 1891 as compared with the first nine months of 1890 of $17,020,790. Hence it is demonstrated that the affect of cheap silver is to increase exports from London to India, and dear silver is to cause these exports to fall off. The cotton crop in the United States in 1890 was 7,311,322 bales, the largest that had ever been previously produced, and cotton was higher than it had been for several years previous or has been since. Turn to the Financial Chronicle of September 5, 1891, and you will find that the average cost of wheat in Great Britain for 1887, 1888, and 1889 was 30*s.* 10*d.* per quarter, while in 1890 it was 35*s.* 2*d.*, or about 12 cents per bushel higher than the previous years, and the short crop of wheat in Europe did not occur until 1891. So what can the higher prices of wheat and cotton be attributed to but the higher price of silver?

But our cotton and wheat industries are no longer the only ones that share the depressing effects of cheap silver in this country and high silver in India.

The duty on our rice is offset in this way, and it is cheaper now than it has been for years. The importation of old iron has begun from India, which may open the way for the introduction of chrome iron, manganiferous and hematite ores, which she possesses in the greatest abundance, and, when once started, other States than Colorado, as Pennsylvania, Ohio, and Missouri may awake too late to learn that they have an interest in the silver question. Not only are the enumerated industries developed, but when England can supply herself with cheap bread for her operatives and cheap raw material for her factories, she is that much better able to compete with all our own factories in foreign markets and hold their trade. The more we can make her bread and raw material cost her, the more successfully can our factories compete with hers.

Seeing that to enhance the value of silver would produce these effects, the question presents with a concentrated force as to whether or not we can do it and to what extent. We have seen that the eastern hemisphere imports 60,000,000 ounces of pure silver more than it produces; therefore, if we should open our mints to the free coinage of silver there would be a home demand for it at $1.2929 per ounce, and if our own mines could realize that for it at home they would not accept less than that for it to be shipped abroad.

But it has been said that if we open our mints to free coinage all of the accumulated silver of the world be dumped upon us. Let us see if it would. France, Belgium, Italy, Switzerland, Greece, Spain, Netherlands, Russia, and the Central American States, all South America, and Haiti coin all of their silver on a ratio of 15½ of silver to 1 of gold, and they had in sight in 1890, $1,000,084,000. On this ratio their 5-franc pieces, which is worth 96 cents in gold as coined, contains 347½ grains of pure silver, or at the rate of $1.2929 per ounce would be worth 93.53 cents; on every one of them that they would send here to be coined they would lose 2.47 cents, besides paying express and insurance charges both ways. Evidently none of that would come.

Yes, but there is India with her $900,000,000; what will become of that? Well, 15 ounces of it coined at home will buy an ounce of gold, and they are certainly not fools enough to send any of it to the United States where it would take 16 ounces to buy one of gold. Yes, but there is China; she will flood you, she will drown you; what about China? Well, poor old China has no coins of her own, no mint, and no ratio between gold and silver. Foreign coins are the only ones she possesses, and when she opened her ports to commerce, like all inexperienced people when they engage in trade, "she paid dearly for the whistle." The beautiful coins looked more attractive to the Mongolian eyes than red pippins to hungry schoolboys. They wanted them, and they got them, at a cost of 13 cents more on the dollar than the bullion in them is worth on a ratio of 16 to 1, and to-day, after an experience of nearly forty years, every dollar they receive costs them from 2 to 8 cents more than the silver in them is worth, and it is estimated that the introduction of foreign coins annually costs China from $4,000,000 to $5,000,000.

Is it probable under these conditions that China would send any of her coin to this country? Does she want to pay express and insurance charges, and lose from two to thirteen cents on every dollar of her $700,000,000? Benighted as she is, she is too wise for that. In fact, of all of these nations of the earth who have silver coins, Mexico and Japan are the only ones who could send them here and reduce them to bullion and have them recoined at a profit, if we had free coinage on a ratio of 16 to 1, and they are each only estimated to have $50,000,000. The additional profit on our cotton crop for one year would be more than 138 per cent of all they both have, and on our wheat crop 234 per cent more. Then we see we can make the ratio using as little of silver as 16 to 1 without bringing any damaging amount of foreign coins. And as we have seen it is to our interest to make silver as dear as possible, we should not use more of it than is necessary to keep foreigners from speculating on us by sending their coins to our mints.

IT CAN BE DONE.

But can we maintain the ratio of 16 to 1 is the question. Let us see. From 1687 to 1873, one hundred and eighty-six years, there were but three years in the world's markets when it took 16 ounces of silver to buy an ounce of gold. In 1808 it required 16.08 ounces; in 1812 it took 16.11 ounces; in 1813 it took 16.12 ounces. And during that period there was but one year (1760) when it required less than 14.14 ounces of silver to buy one ounce of gold.

In 1808, 1812, and 1813 there was 98 per cent of silver to 2 per cent of gold in the world's supply of precious metals. In 1860 there was 4 per cent of gold to 96 of silver, while in 1890 there was 5 per cent of gold to 95 per cent of silver in the world's supply of precious metals; so that in 1890, when in the world's markets it took 22.09 ounces of silver to buy 1 ounce of gold, there was a greater relative per cent of gold to silver in the world than in 1760, when it took but 14.14 ounces of silver to buy 1 of gold. So that it appears that while for one hundred and eighty-six years prior to 1873 the greatest fluctuations in the relative value between gold and silver was 1.98 ounces, for the seventeen years from 1873 to 1890 it has been 6.17 ounces, and that, too, when there is more gold in the world's supply with reference to silver (by weight) than there was when gold was highest in the one hundred and eighty-six years prior to 1873.

HOW FRANCE DID IT.

Then to what can we attribute the drawing apart of the relative value of the two metals in the last twenty years but to legislation demonetizing silver, thus depreciating it, and enhancing the value of gold by causing it to perform the double service that silver and gold had formerly done. But France alone, with about one-half of our population, one-eleventh of our territory, a foreign trade that did not equal ours, and a domestic commerce that would not compare with ours, opened her mints and kept them open to free coinage of gold and silver on the ratio of 15½ of silver to 1 of gold from 1803 to 1865, and with the Latin Union until 1870, during which time she coined $917,000,000 worth of five-franc silver, and $1,447,000,000 of gold. And it was largely during these years that her people absorbed the precious metals that enabled her to promptly respond to the call of their government with $1,000,000,000 with which to pay the German indemnity and yet leave them with more cash in their pockets per capita than any people on the earth, the result of which is that you hear of no such panics wrecking the industries of France, in the past seventy years, as have swept over Great Britain and the United States, and the reason is the people have more cash money and less bank credit than those of the United States and Great Britain.

But if free coinage is such a good thing for the United States, why did we from 1793 to 1873 coin so little silver when we had free coinage? Is it a fact that we did coin little? Let us see. From 1792 to 1873, inclusive, we produced in the United States but $189,900,000 worth of silver, and of that we coined

$157,489,898.30, while we produced in gold in the United States, from 1792 to 1873, $1,265,296,769, and coined but $852,114,537.50, or, while we coined 83 per cent of our silver product, we coined but 67 per cent of our gold product.

Since 1873 to 1890 the United States has produced $606,420,000 of gold and $807,855,000 of silver. Prior to 1873 our total product of gold and silver was 13 per cent of silver to 87 per cent of gold, while since 1873 silver is 57 per cent of the total product of gold and silver, while the value of our gold is but 43 per cent. So, should we grant that it was to our interest in 1873 to demonetize silver, which we do not, it would not follow that it was to our interest to continue it now. Conditions have changed, and it is the part of wisdom to change our laws to meet them.

If in 1873 a farmer had 13 bushels of corn and 87 bushels of wheat, and he could add 10 cents per bushel to one of them by saying so, it would not take long to say which one to add it to. If he put it on the wheat it would make him $8.70, while should he put it on the corn it would give him but $1.30. But if time wore on until 1890, and he found himself with 57 bushels of corn and 43 bushels of wheat he would put the 10 cents on the corn, as it would give him $5.70, while to put it on the wheat would give him but $4.30. Especially would he do this if he found that the capacity of his land to produce wheat was continually declining while its capacity to produce corn was improving.

What a farmer would do with his grains, why should a government not do with its metal products? "Why, if we did, all our gold would be drained out of the country," says the gold-standard man, "and as we owe a large number of debts, contracted to be paid in gold, we would have to buy it at a premium to pay them, and it would bankrupt us." Let us see if it would.

Suppose that the United States adopted free coinage of silver and that Europe refused to concur, and would not pay more than 85 cents per ounce for pure silver, while in the United States it would be worth $1.2929 per ounce. To illustrate, suppose, reader, you were a merchant in Mexico, and an American drummer entered your store, and at the same time a European drummer came in. They both display their goods and wares. If you buy from the American, $1,000 of your money will pay for $1,000 worth of his goods. If you buy from the European drummer, it will take $1,000 of your money to pay for $850 of his goods. You could pay the American 25 per cent more for the same quality and quantity of goods than you could the European, and still there would be 10 per cent profit to you in doing business with the American, because your money would go that much further in payment for the goods. If there was 5 per cent or 10 per cent profit in doing business with the American on this account, what would you do? You would buy your goods from him. Yes, and every merchant in Mexico, Central America, South America, India, China, Japan, yes, in every silver-using nation on the face of the earth, would do the same thing.

What would be the result? That the European drummer could sell no goods. If he could sell no goods, all of the factories, foundries, and machine shops that he represented would have to close down because of no demand for their product, and America would have to double and quadruple hers to supply the demand. And there is but one way under the shining sun in which Europe could prevent this, and that would be to instruct her drummer to allow as much for silver as the American did, and when he did this silver would be worth not less than $1.2929 per ounce the world over, and our cotton 8 to 13 cents per pound and our wheat $1 to $1.25 per bushel, and we challenge the combined intelligence of the opposition to disprove it.

It has been said that if we adopt the free coinage of silver we will be deserting the most civilized nations and allying ourselves with the semi-barbarous. Where are the profits in trade? Is it in selling manufactured goods to those nations who are as skillful in the use of machinery as we are? No, but in selling to those less expert, and it is the part of wisdom to adopt a financial policy that will draw their trade for our manufactured articles, and enhance the value of our raw materials that we sell to our rivals, the great manufacturing nations.

THE SHERMAN LAW.

But why not confine our coinage to the product of our own mines? Because that would not give us a chance to draw the trade of other silver-using nations. The Sherman act practically destroys that chance now. If Mexico now offers us her silver, we can only allow her 83 to 85 cents per ounce, since if we buy it we must again sell it as bullion; we therefore either reject it or buy it and ship it to England. What we reject, England steps in and buys at 83 to 85 cents per ounce and sends over to Mexico interest coupons and manufactured goods (on which she makes a big profit) to pay for it, and ships the silver to her mints in Calcutta and Bombay and coins it at $1.37.8 and issues it in payment for cotton, wheat, and rice, and depresses the prices of like commodities produced in this country, as we have illustrated. Now, if we allowed Mexico coinage price for silver, and Europe refused to do so, we would get all of Mexico's silver and supply her with our manufactures, as we have illustrated, which would give increased employment to our labor.

But is there no real danger to come to this country from the free coinage of silver? No, but there is an imaginary one that is working as great havoc to our prosperity as if it were real, and the longer the question remains unsettled the greater the destruction. We have seen that one of the sources of creating a balance of trade against a country is to send home to be cashed its evidences of debt before they are due. Whenever this happens the citizens of the country to which they are sent, carrying like securities on margins, are compelled to buy them and maintain prices, so as to prevent a sacrifice of their margins. Hence it is that though a nation may be prosperous and possessed of all the conditions necessary to meet all of its obligations promptly at maturity, yet its speculative citizens may be bankrupted by foreign holders of its securities forcing them on its markets before their maturity.

To illustrate, suppose that citizens of foreign countries during eras of prosperity have invested large sums in our bonds—government, railway, and municipal—and our own citizens also have large investments in the same classes of securities, and have them hypothecated for three-fourths of their value with our banks and trust companies, and that some misfortune overtakes the foreign holders or policy dictates to them to realize on their American securities and they should offer them in large blocks on our markets. If the American holders of like securities on margins do not get together money to buy and pay for them without permitting a serious decline in their prices, their margins will be wiped out and they bankrupted, while if they do furnish money to pay for them immense sums of cash can be withdrawn from the country without any notice, in a week, and hazard the success of every legitimate enterprise in the country that is carrying a considerable debt.

This will be made more manifest when it is shown that in October, 1890, the banks of the United States, with cash in their vaults to the amount of $475,000,000, had given credits subject to check for $2,604,000,000, or more than $5 for each dollar in actual cash they held. So that when there is a balance of trade of say $100,000,000 against us, and the cash is shipped out to satisfy it, not only the cash goes, but with it the basis for $500,000,000 of bank credits that perform practically all of the functions of money. So that our available money is cut down $600,000,000 by shipping out $100,000,000 in cash, for the banks dare not extend the credits without the cash for a basis, and the withering effect of this $600,000,000 shrinkage in the volume of our money lays its paralyzing grip on every industry, and its benumbing influence reaches to the hearthstone of every home in the land that is carrying a debt.

But suppose the people of the United States were not carrying these securities on margins, then the foreign holders could only realize cash on them by making great sacrifices, and their necessities would become our opportunities. They would then limit their sales to the smallest possible quantity. This would assist us in holding the balance of trade in our favor. Now, with this information before us, we can readily see why the speculators of our moneyed centers look almost with terror upon any movement that is calculated to cause any large quantities of our securities held in foreign countries to be sent home for cash. That the agitation of free coinage of silver has a tendency to cause our securities to be sent home for cash I will not attempt to deny. But we are placed in the painful dilemma of being forced to choose between permitting our productive industries or our speculators being bankrupted. "It is a condition, not a theory, that confronts us," and I take it that we all see that our true policy is to protect our productive sources of wealth, especially when we see that our speculators are but instruments in foreign hands to draw the nation's wealth from it.

Witness the recent conditions on Wall street. First, shipments of gold out of the country on London orders. Next, a mad rush to realize on securities; then we read in the Associated Press dispatches, "At the slaughter prices London scooped in many thousand shares of the favorites." How long, oh, how long, my countrymen, will you play like a fish on a line, to be hauled in and devoured whenever it suits the appetites of your captors?

Awake, and inform yourselves; cease to take for facts the statements of your rivals; think for yourselves and act for yourselves, or you will merit the slavery your ignorance is bringing upon you. Three millions of our forefathers struck for political liberty in 1776. Can not 65,000,000 of their descendants declare our financial liberty now? Open our mints to the free coinage of silver, and the net profits on our silver, wheat, and cotton exports would be at least $150,000,000 annually more than they now are. So much the greater credit we would have with the nations of the earth that they would have to satisfy before they could call for our gold. An increase of 2½ cents per pound on cotton and 25 to 30 cents per bushel on wheat would add one-third to the value of every acre of cotton and wheat land in the country, furnishing that much collateral for the mortgages that cover them, and would enable their owners to pay their interest on the mortgages more promptly; would stimulate all industries and add to the carrying trade of our transportation lines, so that their values would be enhanced, and their interest and dividends more surely paid; would increase the cost of living and raw materials in Europe, and better enable our factories to compete with hers in all of the world's markets, thus adding to the wealth, population, prosperity, and happiness of our own country.

J. S. DAUGHERTY.

[From the St. Louis Chronicle.]

A PLEA FOR THE VALLEY.

The prosperity of the country depends on the prosperity of the valley States. Were it not for the breadstuffs, the provisions, the cotton raised in the valley and exported, the East would become bankrupt at once. It is only through our labor that the country is enabled to carry on the foreign trade which gives it its net profits.

Now, when Providence has blessed us with abundant harvests, we have in the immediate future the prospect of increased poverty and greater hardships. Anxious to do our duty in the world and to be helpful to the world in helping ourselves, we are being driven into deeper dependence and more hopeless poverty every day.

The Northwest has an immense wealth in wheat, of a ten times higher intrinsic value than gold, yet it can not realize on this wealth for a lack of a medium of exchange to enable it to be distributed. It must depend on money-dealers who are actually demanding high rates of interest, not for money which they hold cornered, but for their own fiat paper, which, instead of being money and a rightful medium of exchange, is a mere evidence of their ability as extortionists. And while they are thus demanding usury for their fiat money of private issue, they are holding at a premium of 2 and 3 per cent the currency issued by the Government and cornered by them. All this usury and this premium come out of the proceeds of the wheat crop, and the unfortunate producer is first stripped to the skin and then flayed.

It is not different in the cotton States. The cotton crop must be distributed, and those who are holding the money corner against the people will only allow currency to be used to move the cotton crop when they are paid an extortionate premium for it. They propose to substitute their private fiat money for the people's currency, and to this end they are holding currency out of circulation.

This is accompanied by a Government policy of contraction at a time when the country is staggering toward bankruptcy.

The full force of a powerful Government is brought to bear against the people of our valley States now when they are in the most pressing need of help, and in their extremity they are subjected to the worst effects of a policy that is essentially sectional; that, if it could benefit any, would only help a small class of money-dealers and very rich capitalists in the Northeast and in London.

But it can help no one. The Northeast is commercially a dependency of the Mississippi Valley. It is idle to deny it. New York, New England, and old England are almost absolutely dependent on us for food and textile material. Ruin us here, and though it may profit a few bankers in London, a few of their associated money-dealers in New York and Boston, yet the people of England and of the Northeast will be so involved in our calamity that Downing street and Wall street and Beacon Hill will bitterly regret the depth to which they thrust in the Shylock's knife.

Our people are not fools; they are not "cranks;" they are not "repudiationists;" they are not knaves.

They are honest, law-abiding, God-fearing people, anxious to render to every man his due. They are staggering under a load of debt which has been forced on them by discriminating legislation, dictated by a foolish and shortsighted sectionalism. This debt is counted not by the million, the tens, the hundreds of million, but by the billion. Its amount is so vast that it is unthinkable. Under the most favorable conditions it will take away from us all the net profits of our labor for many years to come. But we intend to do our best to pay it. Give us the opportunity and we will pay it to the last dollar of principal and to the last cent of usury that is nominated in the bond.

But if we are crowded to the wall now, results will be the responsibility of those who crowd us.

If our Eastern friends who are controlling the policy of the Government do not relax their grip on our throats they, as well as we, will be the worse for it.

We do not desire this desperate forcing of issues with them. We know how ignorant they are. We know that their criminal folly is due to almost complete ignorance of the country they are living in; but for all that, there must be a change and that soon. We can not tolerate the conditions they have thrust upon us and we will not.

With vast resources, with real wealth greater than that of any other part of the world, we are on the verge of ruin through their folly and cupidity.

In such case we appeal to Congress. It is an earnest cry for justice the valley sends up to Washington and it is a note of grim determination to have justice. The policy of the money dealers must not be allowed to prevail against us now. For if it does, our ruin will mean unspeakable suffering for the masses of the people in North America and in Europe. The northeastern theory is that these States of the valley are provinces, but in truth they are already the mainstay of the people of America and Europe and if they are overthrown now, when the undermined structure of their trade is tottering, the whole world will shake with the jar of the fall.

Mr. BRETZ. Mr. Speaker, it was my intention up to within a few moments ago to say nothing on the pending question, but at the proper time cast my vote, believing that my constituents and the country are far more interested in the way I cast my vote than any speech I might make. But, Mr. Speaker, in the light of transpiring events, it may not be amiss for me, in a few brief sentences, to explain the several votes I shall cast on the different amendments and finally on the main question involved in the Wilson bill, if the voting should reach that point.

Mr. Speaker, I have the honor to represent on the floor of this House more than a hundred and seventy thousand honest, industrious, and frugal people, chiefly engaged in farming. They are the peer, in point of intelligence and loyalty to their country and their country's welfare, to their neighbor, his prosperity, his peace, and his happiness, as any constituency represented here. They have twice honored me with a seat on the floor of this House. They have commissioned and delegated me as their agent to vote and act for them in all matters concerning their sacred welfare guaranteed to them by the Constitution, and I am here for that purpose. Had they suspected that I would in the least violate that trust they would never have given me their confidence and suffrage.

Having intrusted me with their rights, and made known in some degree their views on certain important questions, I am, as far as I know how, going to be equally as honest and confiding with them. This they have a right to expect of me, and anything short of that on my part would be inexcusable.

Mr. Speaker, I owe my election to a seat in this House in a considerable measure to my attitude on the silver question—next to that of tariff. My people believe in the use of both gold and silver as money, and so instructed me when they constituied me their lawful agent. I accepted in good faith their confidence and instructions and promised to carry them out the best I could.

My promise is my bond, sealed with my honor, and I intend to carry out that promise made to my people the very best I know how and trust all the rest to them. I would rather have the proud satisfaction of feeling that I had stood by the people who sent me here than to be the recipient of the applause of all other powers on earth. I will not forsake my people in this the most trying time of their lives, when hunger and nakedness and the approaching days of fall and winter are around and before them, without first having made an honest effort to carry out their wishes on the pending question.

I subscribe to the doctrine that a "public office is a public trust," and, thus believing, I stand here to carry out to the best of my ability that trust, and no man dare molest me in the discharge of that duty, and I am sure none can make me afraid. Sir, I am the keeper of my own conscience and would rather be at peace with it than try to reconcile it with the conscience of some one else. I may be wrong, my people may be wrong, on this silver question; but if we are wrong we will get right after awhile. My people have not delegated to me the power to do all their thinking—they are a reading and thinking class of people, even though they follow the plow, shove the plane, or swing the hammer.

Mr. Speaker, I am not here to criticise the President, who in part I helped to elect, but who apparently entertains somewhat different views on this question to those of mine and those of my constituents. We admire him for his courage and sterling honesty. Nor do I intend to impugn the motives of any member for his action on this question. I accord to each of them the same degree of honesty of purpose that I claim for myself. I have noticed many members since the convening of this Congress who heretofore stood for free coinage now opposed to it. Even some of my colleagues have changed their views, and I have no doubt but that they are honest. It may be that new light has dawned upon their minds or that they have received instructions from their constituents of a revolution of thought on the money question since last November.

I am not going to plead an estoppel against any gentleman who has entertained views different from those now expressed, nor do I intend that such a plea shall hold good against me or my constituents if upon further investigation we receive new and better light on the question. For the present, Mr. Speaker, I have seen no satisfactory reason given why I should change my attitude on this question without affirmative instructions from my constituents. If I err in casting any one or all of these several votes it will be in an honest effort to do some good for the people whom I represent. If I err at all I would rather that error was on the side of the people than against them.

Mr. Speaker, I shall cast my vote without fear or trembling for the first amendment for the coinage of silver at the ratio of 16 to 1, and if that is not adopted, I will, with some degree of reluctance however, vote against each of the other proposed ratios, believing that if either of the ratios above 16 to 1 is adopted without any provision for the calling in and recoinage of the present outstanding silver dollar, so as to prevent a contraction of the currency, the panic instead of being alleviated would be intensified.

It is estimated that to call in and recoin our outstanding silver circulation at a different ratio than that now established, with our present mint facilities, it would require from four to five years to do it, so that during all this time, if free coinage should be adopted at a changed ratio, we would not be increasing our silver circulation one dollar; a thing certainly not desired by those who believe that our circulation is too small now. I regret, Mr. Speaker, these amendments can not now be amended so as to avoid the danger of contraction following their adoption, so that I could vote for them. Should the voting reach the sixth proposed amendment restoring the Bland act of 1878, I shall vote to restore it. Lastly, Mr. Speaker, if it is the judgment of a majority of the members of this House that neither of the amendments should be adopted, I am no obstructionist. The situation is too grave. The distress is too great for me to attempt to prevent this House from taking some action in the direction of relief; and to that end I shall vote for the repeal of the purchasing clause of the Sherman act, hoping, Mr. Speaker, that out of the wisdom and patriotism of this Administration and Congress some good, wholesome law may come that will afford relief to the anxious, waiting, and starving people of this country.

But, Mr. Speaker, let it not be said of me now or hereafter that, in casting my vote for the repeal of the purchasing clause of the Sherman act, I have abandoned my honest belief in and fidelity to the use of both gold and silver as money on a parity with each other, without discrimination against either. I only yield that conviction for the time being in the interest of harmony, and because I do not desire longer to keep the bread out of the mouths of the many hungry men, women, and children of this country.

If the repeal of this law which we have denounced as a cowardly makeshift, a fraud fraught with dangers, which its author now repudiates and which we promised to repeal, will bring that relief hoped for, then let us no longer deny the people that relief. And now, Mr. Speaker, in the five minutes allowed me I have declared the way I shall vote, and in a very general and brief way given my reasons therefor, and will trust the result to my constituents and my country. [Applause.]

Mr. BOWERS of California. Mr. Speaker, there have been two things noticeable respecting this silver discussion: the first is the number of gentlemen who declare that they are bimetallists, in favor of the use of gold and silver as money, but who declare they will vote next Monday to put this nation upon the single gold standard.

The next the number of gentlemen, especially on this side of the House, who have with such unanimity declared in their speeches that the Sherman law is not in any manner responsible for the present condition of the country, pointing to the fact that for two years under the operation of that law the country was very prosperous, and that there was no trouble until after the election of Mr. Cleveland, and that he was all wrong in his diagnosis of the disease from which the country is suffering, and yet they, under these circumstances, are going to vote with the President. "Oh consistency, thou art a jewel," not found in the head of a gold bug, especially of the Republican variety.

I believe that the mass of people understand the question pretty clearly upon which we are to vote next Monday. It is, Shall silver be destroyed as money, and this country adopt the single gold standard? That is the plain question, and the people will say to you gentlemen, "We don't care how you talked, but how did you vote?" And no meandering on the part of those who are just dying to vote on both sides of the question about an international monetary conference will avail. For the people know that no conference will amount to any more than the last one while the United States begs for it. Pass a free-coinage bill, and in less than ninety days you will have the European nations begging this country to meet them in conference, and we will have an international agreement for the use of silver as money, and not till then.

From the beginning of this discussion the gold men have continually reiterated the assertion that the United States could not establish the free coinage of silver without the permission of England, France, and Germany. If this be true, can we change the ratio without the gracious consent of these nations?

England has gold, $550,000,000; silver, $100,000,000. France

has gold, $800,000,000; silver, $700,000,000. Germany has gold, $600,000,000; silver, $210,000,000. United States has gold, $649,000,000; silver, $593,000,000.

England, France, and Germany have in round numbers about one billion of silver coin coined at the ratio of 15 to 1.

Now, if we adopt a ratio above theirs, 17, 18, 19, or 20, can we expect those nations to recoin their silver at a loss to them of one, two, or three hundred millions to bring it to a parity with ours? We know they will not. England has been compelled to buy over $50,000,000 of silver each year. The total production of the United States for the year 1891 was only $75,416,500. I shall vote for the free coinage of silver at the ratio of 16 to 1 because it approximates the true ratio, that is, the relative amounts of gold and silver in the world. This circular from the Treasury Department estimates the total production of gold and silver in the world as: Gold, $5,633,908,000; silver, $5,104,966,000. Five hundred millions more gold than silver of 15 to 1.

This is at a ratio of less than 15 to 1.

The gold men have one substitute for an argument that they ring the changes on from morning until night—"the market value—the commercial value" of silver. Take this substitute away and they have not a leg to stand on. How is this value determined? How found? Why so changeable? It is fixed and determined by an association of gamblers, licensed gamblers if you please, and changed day by day at their will and pleasure, without reference to any other reason, and for their own profit. And it seems that the Government in this struggle sides with the gamblers and against the people. The only true ratio is to be found by taking the relative amount of the two metals in existence, as all of both will not furnish one-tenth of the money needed for the use or the people. Such a ratio will be practically stable, and therefore will not answer the gambler's purpose, as he has no use for the honest and the true. This ratio, accepted and fixed by the Government, will take the money of the people out of the hands of the gamblers and will force the world to come to the true ratio.

Mr. PIGOTT. Mr. Speaker, it was not my intention to take part in this discussion until I heard the plaintive and eloquent appeal of the gentleman from Colorado [Mr. PENCE] yesterday, in which he stated that as he was about to leave his home he was warned by his friends that the Democrats of Connecticut would turn their backs upon the Democratic platform enunciated at Chicago last summer. Now, I desire to say, sir, that until the State of Colorado shows some practical interest in the Democratic party by at least casting its vote once for that party, the Democrats of Connecticut can endure the criticism. [Laughter.]

Connecticut supported the Democratic platform by its electoral vote last year, while Colorado went hunting after strange gods. Mr. Speaker, Connecticut is not like those described by the gentleman from New York [Mr. CUMMINGS] the day before yesterday, who opposed the nomination of Mr. Cleveland last summer, and are supporting him now; nor is she like those who supported his nomination at Chicago, and are opposing him now. Connecticut supported him in Chicago. She has supported him three times in Presidential elections, and cast her electoral vote for him, and she is supporting him to-day.

Mr. Speaker, as I understand this question, the mistake that is made by the friends of silver here is that they seek to drive away from their favorite metal all who believe with the President that we are in an emergency, that a crisis is at hand, and that a vigorous remedy is required. The President proposes a remedy. It is in the line of the Chicago platform. He does not propose it as a remedy for all the evils of the future, but he says that in his opinion the present distress is largely the result of the operation of the purchase clause of the Sherman silver act.

We do not believe, sir, that the President is in the category enumerated by the gentleman who last took his seat [Mr. BOWERS of California]. We do not believe that the President is a gambler, a shylock, or an aider or abettor of such. We believe in taking the President at his word; we believe in taking his Cabinet at their word. We believe in joining with him and them to see if the present distress can not be obviated by the means he proposes; and if it can not be—if he has chosen the wrong remedy—then we can come together again and choose a better one. So much for the platform and the policy of the Administration.

It has been stated frequently on this floor, Mr. Speaker, that there is a lack of confidence in this country. That is partially true, sir; but there are gentlemen in New York who make a business of "confidence;" and who constantly advertise that they are printing money from "plates lost by the Government," which money they will sell at a great discount. [Laughter.] And not a day goes by, sir, in which we do not see accounts of men going to New York, by steamboat and by rail, to purchase this money for little or nothing.

Now, ever since this discussion about the money question began here I have heard certain gentlemen say that, by some method or other which they did not explain, this Government can print a lot of cheap money and get it out among the people. And in that connection I wish to call attention to the singular fact that the gentlemen who go to New York to buy the "cheap money" to which I have referred, and who are sometimes arrested for carrying arsenals upon their persons, nearly always give as their home residences districts represented in this House by gentlemen who say here that this cheap money can be issued by the Government; and it raises a question in my mind whether climatic influences have anything to do with this question of "confidence." There is a lack of confidence, it is true, but it is on the part of members of this House in not supporting their President and his Cabinet. [Applause.]

Mr. Speaker, if the districts of this House were composed of populations as great as that of mine, the membership of this House would be one hundred less than it is. In manufacturing interests the district that I represent on this floor stands within the first three of all the districts of the United States in the amount of capital invested and in the output. The manufacturers there are not gamblers; they are not Shylocks; their interests are the interests of their workingmen, and the interests of their workingmen are their interests. Connecticut, with less than three-quarters of a million of people, has in its savings banks $135,000,000, which sum is exceeded in but three States, New York, Massachusetts, and California.

I want the people who deposited that money—more than a third of whom I represent on this floor—when they go to get their money for the purpose of building their little homes to get as good dollars as they put in. Those people sent me here. The people who work in those great shops now closed down—not two or three hundred, but a thousand or fifteen hundred or two thousand in a single shop—are the people who sent me here; and to get them back their good money and to see that their wages are paid to them in currency worth 100 cents on the dollar is my only object in taking the floor now. [Applause.]

Mr. DOCKERY. Mr. Speaker, for the twelfth time in the history of the Republic, Congress is convened in extraordinary session. The President in his message has adverted to the alarming gravity of the business situation. The untoward depression which first made its appearance some months since has enlarged its scope until it has embraced within its grasp agriculture, commerce, manufactures—indeed, all the varied interests of this great country. Confidence is utterly overthrown. Banking institutions of great stability are suspending, capital, timid and hesitating, has gone into retirement; manufactories are closing down or running upon half time, railroads reducing the compensation of their employés, and thousands of laboring men out of employment tramping the country.

Confronted with this startling condition, the people's representatives have been called together, to quote the language of the Executive, "that present evils may be mitigated and dangers threatening the future may be averted." The President expresses the opinion that these adverse business conditions are "principally chargeable to Congressional legislation touching the purchase and coinage of silver by the Government," as authorized and directed by the act of July 14, 1890, commonly known as the Sherman act.

The situation is so alarming that it should invoke dispassionate, intelligent, and patriotic consideration, with the view of determining the causes which have contributed to the stupendous decline in values and the consequent widespread industrial paralysis. The causes of the trouble must first be definitely ascertained before there can be an intelligent selection and application of a remedy. Inasmuch as the President suggests that the pernicious features of the Sherman law are mainly responsible for the economic ailments which afflict us, it may be well to give a brief summary of the coinage legislation of the United States.

COINAGE LAWS.

The act of April 2, 1792, established a mint for the purpose of national coinage, and made the standard silver dollar the unit of value. It gave free coinage to both gold and silver, the gold dollar containing 24.748 grains of pure gold or 27 grains of standard gold, and the silver dollar 371.25 grains of pure silver or 416 grains of standard silver. The act further provided that the relative value of gold and silver in the coinage of the two metals should be as 15 to 1; that is to say, "every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold, and so in proportion as to any greater or less quantities of the respective metals."

Under this act silver was first coined in 1794 and gold in 1795. The ratio between the two metals established by the acts of 1792 proved to be unsatisfactory, an ounce of gold being in fact more valuable than its equivalent in silver. The result was that gold was purchased by speculators and shipped abroad, there being a

profit of a few cents on the dollar. The inequality of the ratio was further emphasized by the fact that the Government received for a time underweight foreign coins in payment of custom dues. Silver, therefore, constituted the greater part of our metallic circulating medium until the second administration of President Jackson, when, by the act of June 28, 1834, the grains in the gold dollar were reduced from 24.748 to 23.20, the ratio thus being changed from 15 to 1 to 16.002 to 1.

The act of January 18, 1837, provided that both the gold and silver dollar should be 900 parts fine and 100 parts alloy, and increased the grains of pure gold in the gold dollar from 23.20 to 23.22, or 25.8 standard gold—the silver dollar containing 371.25 grains of pure silver, or 412½ grains of standard silver. The coinage ratio between gold and silver is thus fixed by this act at 1 to 15.988, or in round numbers 16 to 1. This ratio has been maintained until the present time. During the greater part of the period from 1834 to 1860 gold constituted the larger part of our metallic circulation because France was coining at the ratio of 15½ to 1, our ratio being 16 to 1, and for the further reason, subsequent to 1849, of the immense output of the California gold mines.

I may also state in this connection that the amount of pure silver in the standard silver dollar authorized by the act of April 2, 1792, has not been changed by any subsequent legislation, but, because of the enhanced value of silver as compared with gold, the act of February 21, 1853, reduced the weight of the silver coins of less denominations than a dollar; the weight of the half-dollar being fixed at 192 grains of standard silver, and the smaller coins sharing a proportional reduc tion.

This legislation was made necessary in order to prevent the further exportation of our subsidiary coin, and thus to furnish the people with small change for the transaction of business. The act also limited the legal-tender quality of subsidiary coin to $5.

The coinage act of February 12, 1873, demonetized the standard silver dollar by discontinuing its coinage and establishing the gold dollar as the unit of value. It also slightly increased the weight of the subsidiary coins in order to put them upon an equal footing with the minor coins of France.

This law was the initial step of the hostile movement to silver in this country, and was obnoxious to the great body of the American people. This fact, together with the stealthy manner of its enactment, provoked a storm of opposition, which finally culminated in a partial remonetization of silver by the passage, over the veto of President Hayes, of the act of February 28, 1878, known as the Bland-Allison act. This bill directed, among other things, that the Secretary of the Treasury "purchase from time to time silver bullion at the market price thereof, not less than $2,000,000 worth per month, nor more than $4,000,000 worth per month, and cause the same to be coined monthly as fast as so purchased" into standard silver dollars.

The Bland-Allison act remained upon the statute book until the Fifty-first Congress, when it was repealed by the Sherman law of July 14, 1890. This latter statute was enacted as a result of a conference between the Senate and the House, the vote in the Senate being yeas 39, nays 26, and in the House yeas 122, and nays 90. The Republican party gave the measure a united support, whilst the entire Democratic strength in both bodies was recorded against it. In so far, then, as legislation is responsible for our financial condition, the Democratic party is acquitted of responsibility.

In view of the importance of the issue raised by the President's message, I quote the exact terms of the act, so far as it relates to the pending question:

SHERMAN ACT.

An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes.

Be it enacted, etc., That the Secretary of the Treasury is hereby directed to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases of silver bullion Treasury notes of the United States to be prepared by the Secretary of the Treasury, in such form and of such denominations, not less than $1 nor more than $1,000, as he may prescribe, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 2. That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand, in coin, at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and when so redeemed may be reissued; but no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom, then held in the Treasury, purchased by such notes; and such Treasury notes shall be a legal tender in payment of all debts, public and private, except where otherwise expressly stipulated in the contract, and shall be receivable for customs, taxes, and all public dues, and when so received may be reissued; and such notes, when held by any national banking association, may be counted as a part of its lawful reserve. That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

SEC. 3. That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

SEC. 4. That the silver bullion purchased under the provisions of this act shall be subject to the requirements of existing law and the regulations of the mint service governing the methods of determining the amount of pure silver contained, and the amount of charges or deductions, if any, to be made.

SEC. 5. That so much of the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," as requires the monthly purchase and coinage of the same into silver dollars of not less than $2,000,000, nor more than $4,000,000 worth of silver bullion is hereby repealed.

Mr. Speaker, this measure, in letter and spirit, is antagonistic to the real interests of silver, because it degrades it to the inferior dignity of a mere commodity, thus recognizing for the first time in our fiscal legislation, the vicious principle involved in what is known as the "subtreasury" scheme. The measure was a compromise born of the political exigencies of the Republican party, and accomplished the twofold purpose of preventing the enactment of a free-coinage law whilst at the same time relieving the then President, Mr. Harrison (a candidate for renomination), from disastrous political complications which it was apprehended would, in certain Western States, follow the veto of a free-coinage bill.

Mr. Speaker, it is hardly gallant or courageous to designate the Sherman law as the most vicious and sinister financial legislation enacted during our constitutional history, since it is now disowned and denounced by its reputed author and is without an advocate in the commercial world or a champion in any political party. Professedly enacted for the purpose of furnishing a market for American silver and enhancing its value, under its operations silver has steadily declined; professedly friendly to silver, it debases it as a money metal. The Sherman law was therefore properly characterized by the national Democratic platform as a "cowardly makeshift, fraught with possibilities of danger in the future, which should make all its supporters as well as its author anxious for its speedy repeal."

COINAGE OF THE UNITED STATES.

But before proceeding, Mr. Speaker, to a further brief reference to the existing situation, it may be well to note the coinage which has been had under the several acts to which I have referred. The United States has now four coinage mints, located at Philadelphia, San Francisco, New Orleans, and Carson, Nev. The coinage of silver dollars from the organization of the first coinage mint at Philadelphia until the suspension by the act of February 12, 1873, was $8,031,238, the total subsidiary coinage for the same period being $137,096,047.

Of the standard silver dollars coined during this period, $3,584,198, or about 45 per cent of the whole, were coined in the five years prior to the demonetization of silver, the coinage being in 1868, $182,700; 1869, $424,300; 1870, $445,462; 1871, $1,117,136; 1872, $1,118,600, and in 1873, $296,000 up to the 12th of February. It is proper, however, to state in this connection that the Mexican dollar, containing 377.17 grains of pure silver, as well as the dollars of Peru, Chili, and Central America, the 5-franc piece of France, and other foreign coins were a legal tender in the United States at their face value during a greater part of the period prior to the passage in 1873 of the act demonetizing silver.

The coinage of silver dollars under the Bland act amounted to $378,166,793 and under the Sherman act to $36,087,185; whilst $5,078,472 have been coined under the act of March 3, 1891, providing for the redemption and coinage of trade-dollar bullion. The subsidiary coinage since the act of February 12, 1873, aggregates $69,503,655. The statement of the Secretary of the Treasury issued upon the 1st of the present month shows that the standard silver dollars outstanding at that date amounted to $419,332,450 and the subsidiary silver coinage to $76,563,878, or a total silver coinage of $495,896,328. In addition to this the records of the Treasury Department show that under the act of July 14, 1890, 161,521,000 ounces of silver have been purchased up to August 16 last, costing $150,669,459, for which Treasury notes of the same amount have been issued payable in coin.

The total gold and gold bullion in the United States on the 1st of the present month is estimated by the Director of the Mint at $603,723,903. The Director also estimates the amount of silver, including silver dollars, subsidiary silver coins and silver bullion at cost value, in the United States at the same time, at $615,174,063. He further states that the production of gold in the world in 1892 was of the value of $130,816,600, the production of silver for the same period being 152,061,800 fine ounces, of the coining value of $196,605,200. He also estimates the annual

average production of gold and silver in the world from 1844 to 1850 to be, gold, $36,216,428, and silver, $34,214,286, whilst the average annual production since that time has been, gold, $112,887,428 and silver $80,374,857.

CAUSES OF THE PANIC.

Now, Mr. Speaker, leaving the domain of statistics I shall advert very briefly to the causes which have intimidated capital, paralyzed industry, lowered the price of farm products, and wrought havoc in the commercial world. It will not be denied that the Sherman law is at war with all principles of sound finance and has operated to enhance the value of gold and decrease the value of silver. The original construction placed upon the law by the last Administration, whilst technically correct, refused silver a place in our circulating medium upon an equal footing with gold. It is true that the Secretary of the Treasury is allowed to coin a sufficient amount of silver bullion for redemption purposes, but under the practice of the Treasury Department the notes issued in payment of the silver bullion are redeemable on demand in gold.

The effect of the law, therefore, in its practical administration, is to issue Treasury notes payable in gold for silver bullion. In other words, the Sherman law has added, up to August 16, $150,669,459 to the volume of paper currency, all of which is payable on demand in gold. I am not surprised, therefore, that under this construction gold should constitute a very small part of the volume of money which finds its way into the Federal Treasury. The able gentleman from Tennessee [Mr. PATTERSON], commenting upon the decreasing volume of gold in the Treasury, says:

In June, 1888, the Government collected from customs at the port of New York $10,996,484, 74 per cent of which was paid in gold. In June, 1889, it received $10,607,716, of which 74.7 per cent was paid in gold. In June, 1890, the Government received $14,932,128, of which 94.50 per cent was in gold. In June, 1891, it received $9,131,418, of which only 12.50 per cent was in gold. In June, 1892, it received $9,591,270, of which only 8.2 per cent was in gold. In 1893, in the month of June, the Government collected at the port of New York $18,068,580. Not one cent of it was paid in gold.

Mr. Speaker, the gold in the Treasury has not only been thus decreased by the operation of the Sherman law, but the adverse balance of foreign trade under the McKinley tariff law has made large drafts upon our gold resources. The exports of gold for the fiscal year ending June 30, 1893, exceeded the imports for the same period by about $87,500,000. These two causes, associated with the necessities of Austria-Hungary for gold to inaugurate and maintain a gold standard, together with the general depression which has encircled the globe since the failure of the Baring Brothers, have necessarily reduced the gold in the public Treasury very largely. With the steady decline of the Treasury gold balance, the apprehensions of the people began to grow more pronounced. It seemed to be an impression in the public mind that the $100,000,000 gold reserve had been provided by law, and should remain intact for the redemption of greenbacks.

It is true the law did not require the fund to be maintained at this amount, but nevertheless such an impression was prevalent among the people. When, therefore, in April last, this fund was invaded, Wall street speculators sought to coerce the Government into an issue of bonds to restore and increase the gold-reserve fund. The alarm occasioned by their demands intimidated the country, confidence began to be impaired, timid depositors withdrew their money from banks, and thus a panic without parallel or precedent in this country was inaugurated.

REMEDIAL LEGISLATION.

Confronted with this situation, Congress is convened for the purpose of providing remedial legislation which shall restore confidence and set the wheels of commerce again in motion.

The distinguished gentleman from West Virginia [Mr. WILSON], upon the 11th of the present month, offered the following bill:

An act to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

This bill, Mr. Speaker, as will be noted from a cursory glance, provides simply for the unconditional repeal of the purchasing clause of the Sherman act, and pledges the faith of the United States to maintain the parity of the gold and silver coins outstanding.

My colleague from Missouri [Mr. BLAND] offered the following resolutions, which provide the method by which the Wilson bill should be considered, and also for a vote upon certain substitutes therefor. The order is in these terms:

Mr. BLAND. Mr. Speaker, I desire to present to the House an order embodying an agreement as to the mode in which proceedings shall be had in the consideration of the bill just offered, on which order I shall demand the previous question, with the statement——

The SPEAKER. The Chair will state the question. The gentleman from West Virginia [Mr. WILSON] offers a bill in the absence of any rules of the House, and the gentleman from Missouri [Mr. BLAND] offers a resolution providing for the method in which the House shall consider that bill. The Clerk will report the resolution of the gentleman from Missouri.

The resolution was read, as follows:

"*Ordered by the House*, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of the debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

"Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fails, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions."

It may be well to state in this connection that the Director of the Mint has submitted a statement to the House showing the number of grains of standard silver in the dollar at the ratios referred to in the foregoing order, as follows: 17 to 1, 438.60; 18 to 1, 464.40; 19 to 1, 490.20, and 20 to 1, 516.

Now, Mr. Speaker, as I have just stated, the Wilson bill provides for the unconditional repeal of the purchasing clause of the Sherman act. The propositions to be submitted by my colleague provide for the free coinage of silver upon ratios ranging from 16 to 1 up to 20 to 1. In the event of the failure of each and all of them, then the Bland-Allison act is to be offered as a substitute. In other words, the Wilson bill repeals the purchasing clause of the Sherman law without any substitute, whilst the propositions to be offered by my colleague also repeal the purchasing clause of the Sherman law, but with conditions authorizing the free coinage of silver upon one of several ratios, or the coinage of silver upon the terms of the Bland-Allison act.

BATTLE OF THE STANDARDS.

Mr. Speaker, the issue is thus clearly joined. The unconditional repeal of the Sherman act leaves silver for the future without any statutory recognition whatever, gold still being allowed free coinage privileges at the mint. This action unquestionably contemplates a single gold standard. If there were any doubts, they have been put beyond cavil in this debate by the declaration of leading advocates of the Wilson bill that it was impracticable to execute the provisions of the last national Democratic platform demanding the coinage of both gold and silver without discrimination.

This is a battle of the standards, a contest between a single gold standard on the one hand and a double standard on the other. There is no division of sentiment in the Democratic ranks as to the propriety of repealing the purchasing clause of the Sherman act, but a majority of the Democratic Representatives on this floor insist that the entire pledge made to the people should be kept, both as to the repeal of the Sherman law and the enactment of such legislation as will admit gold and silver to our mints upon equal terms. Our contention is that the platform in its entirety should be maintained, and that we should not defer to a more convenient season the obligations of the present hour. I quote the language of the vows made at Chicago in 1892:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the mark ts and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Mr. Speaker, the language of the platform clearly, rightfully, and unequivocally commits the Democratic party to the advocacy of a double standard. This doctrine is fundamental and of paramount importance, inasmuch as money performs the twofold duty of measuring values and exchanging values. It is a medium of exchange and a measure of value. When, therefore, the currency of the country is sound and stable and the volume of money is maintained at a normal standard, prices rule satisfactory; but whenever legislation or any other cause limits the money supply it necessarily operates to decrease the price of com-

modities. In other words, it is important that the money selected to fix values and to exchange values should be stable, and of sufficient volume; else the standard will appreciate, prices of commodities and property of all kinds will depreciate, and injustice will be done the debtor classes. It is alike and equally important, Mr. Speaker, that the money selected should not be depreciated or redundant; else the cheapening of the standard will increase the prices of commodities and property, and work injustice to the creditor classes. We must avoid the extremes of contraction on the one hand and inflation on the other—the extremes of appreciation and depreciation.

Mr. Speaker, since the very twilight of history gold and silver have been recognized as money metals. Now, then, the practical question which confronts us to-day and which this Congress must solve, is this: What standard will best reconcile the conflicting interests of the debtor and creditor classes, preserve the golden mean, and thus give the country a stable circulating medium, of ample volume to meet the demands of trade and commerce?

The eloquent gentleman from Nebraska [Mr. BRYAN], in his able argument submitted to this body a few days since, said:

> The Government does not try to fix the purchasing power of the dollar, either gold or silver. It simply says, in the language of Thomas Jefferson, that 'the money unit shall stand upon the two metals,' and then allows the exchange value of that unit to rise or fall according as the total product of both metals decreases or increases in proportion to the demand for money.

Commenting further upon the same line of thought, he says:

> Gold and silver are called precious metals because the production is limited and can not be increased indefinitely at will. If this Government or a number of governments can offer a market unlimited as compared with the supply, it can maintain the bullion value of gold and silver at the legal ratio. The moment one metal tends to cheapen, the use falls on it and increases its price, while the decreased demand for the dearer metal retards its rise and thus the bullion values are kept near to the legal ratio, so near that the variation can cause far less inconvenience and injustice than the variation in the exchangeable value of the unit would inflict under a single standard. The option is always given to the debtor in a double standard.
>
> In fact, the system could not exist if the option remained with the creditor, for he would demand the dearer metal and thus increase any fluctuation in bullion values, while the option in the hands of the debtor reduces the fluctuation to the minimum. That the unit under a double standard is more stable in its relation to all other things is admitted by Jevons and proven by several illustrations. Mr. Giffen tries to avoid the force of the admission by saying that the difference in favor of the double standard is only in the proportion of 2 to 1, and therefore not sufficient to justify its adoption. It would seem that where stability is so important—and it never was so important as to-day, when so many long-time contracts are executed—even a slight difference in favor of the double standard ought to make it acceptable.

EFFECTS OF A SINGLE STANDARD.

Mr. Speaker, a single gold standard increases the demand for gold because it imposes a double duty upon gold as a money metal. The increased demand therefor enhances its value, as is shown by the result of the action of foreign countries in demonetizing silver. If, then, the United States, by the legislation now pending, shall devolve upon gold alone the sole duty of measuring and exchanging values, it will necessarily still further appreciate its value by increasing the demand for it.

The result logically follows that the United States and other single gold standard countries will be ceaselessly engaged in the effort to increase their gold reserves in order to maintain a gold standard, and thus disasters will multiply and follow in the wake of the unconditional repeal of the purchasing clause of the Sherman act. If the annual production of gold was ample to meet the requirements of a single gold standard, its adoption would not, of course, be followed by industrial disaster; but the annual supply of gold is utterly inadequate to meet the wants of the civilized governments of the world as a money metal.

The average annual production of gold since 1851 has been only $112,887,428, of which amount two-thirds has been used in the arts, leaving but one-third to be added to the volume of gold money. The conclusion must, therefore, be reached that the adoption of a single gold standard by the United States will result in a lower wage for labor, the depreciation of farm values, farm products, and property of nearly all kinds, even if our population should remain as at present and there were no expansion in the volume of trade and commerce.

That industrial disturbances would follow the adoption of such a policy becomes more apparent when it is remembered that the average annual increase of our population ranges from 1,000,000 to 1,500,000, and that the enterprise and tireless energy of our people are constantly exploring and discovering new fields for the investment of capital and the employment of labor. The addition to the volume of our circulating medium under the provisions of the Sherman law has been $150,669,459, or about $50,000,000 annually, being less than $1 per capita; and yet it is proposed by the Wilson bill to strike down the law authorizing this annual increase without offering any substitute therefor.

This proposition evidently rests upon the theory that silver is constantly depreciating in value, but it wholly disregards the rugged fact that, during the panic through which we are passing, silver dollars have commanded a premium in the city of New York. It will not be denied that silver has declined in value, or rather that gold has appreciated in value, thus making the disparity between the two metals pronounced.

The overproduction of silver is the explanation most frequently offered for the relative decline of silver as compared with gold. The following table prepared by the Director of the Mint, shows the production of gold and silver in the world since the discovery of America, from which it appears that while silver in recent years has outstripped gold in the volume of production, yet the same inequality in the production of the two metals has heretofore obtained without disturbing the harmonious relations which existed between them as money metals:

Statement of the production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from table of averages for certain periods compiled by Dr. Adolph Soetbeer. For the years 1886-1892 the production is the annual estimate of the Bureau of the Mint.]

	Gold.				Silver.				Percentage of production.			
	Annual average of period.		Total for the period.		Annual average of period.		Total for the period.		By weight.		By value.	
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Coining value.	Fine ounces.	Coining value.	Gold.	Silver.	Gold.	Silver.

Senator VEST, commenting upon this table in its relation to overproduction, says:

This table shows that the two precious metals have fluctuated, as they necessarily must, in all ages of the world; first silver being produced in excess of gold and then gold in excess of silver. How is it possible that it could be otherwise? What intelligent man for a moment could advance the idea that two metals dependent upon the quantity discovered in the bowels of the earth should be mathematically or logically equal at all times in quantity or ratio?

For many years, as shown by this table, gold was produced in the most insignificant amounts, while silver was produced twenty, thirty, and thirty-two times in excess annually of the production of gold; yet the price of silver was not affected and it maintained its place as a money metal.

In order to show that my statement is absolutely correct, I have taken the trouble to make a calculation, based upon the Soetbeer table. From 1833 to 1840 there was produced thirty-two times as much silver as gold in the world; from 1841 to 1850, fifteen times as much; from 1851 to 1855, five times as much; from 1855 to 1860, four times as much; from 1861 to 1865, six times as much; from 1866 to 1871, three times as much; from 1871 to 1875, twelve times as much; from 1876 to 1880, sixteen times as much; from 1881 to 1885, twenty times as much; and from 1886 to 1892, from eighteen to twenty-five times as much.

Now, I assert that these tables show, if they are worth the paper upon which they are printed, that the relative proportion of silver to gold has never been as great as it was in the eras I have named here, from 1833 to 1844 and from 1844 to 1850.

We hear upon every side the assertion that the production of silver which amounted to $74,000,000, according to the report of the Director of the Mint, in 1892 in the United States has caused its decline. There were $33,000,000 of gold produced in this country for 1892, the production of silver being about 2 to 1, and it is said that this accounts for the attack upon silver as a money metal and the attempt now to destroy it throughout the world. From 1832 to 1840, thirty-two times as much of silver was produced as of gold. If it be a logical proposition that the overproduction now has destroyed silver, why was it then not blotted out from the face of the earth as a medium of exchange and of standard value?

I call the attention of the Senate to the price of silver, which it is said is affected by overproduction. From 1833 to 1840, when there was thirty-two times as much silver as gold produced in the world, silver was worth in this country $1.29 and $1.32 an ounce. From 1841 to 1850, when there was fifteen times as much silver as gold produced, silver was still worth $1.29 to $1.31 an ounce. I quote from the report of the Director of the Mint. From 1851 to 1853, when there were five times as much silver produced as gold, silver sold in the United States from $1.32 to $1.35 an ounce, being an increase of from 3 to 5 cents on the ounce. From 1855 to 1860, when there were four times as much produced, it sold from $1.34 to $1.36 an ounce.

The decrease in the production of silver, as it would appear from this table, was not really a decrease in the mining production, but there was a vast increase from 1850 to 1855 in the production of gold on account of its discovery in California and Australia and the reworking of the mines in Siberia. It is absolutely impossible under the rules of logic, if our friends be correct, that overproduction is the cause of the present condition of silver, that this enormous overproduction should have existed in the eras I have named and yet not have brought about the same result.

Now, Mr. Speaker, it will be conceded that the two metals upon the basis of commercial value have parted company to a marked degree, the silver in the standard silver dollar being worth only about 57 cents as compared with the value of the gold dollar. The explanation, however, is found almost solely in the fact that certain foreign governments have within recent years discriminated against silver by suspending its coinage. The coinage of full legal-tender silver was suspended by Portugal in 1854, by Germany in 1871, by the Scandinavian Union in 1873, by the Netherlands in 1877, by Finland in 1877, by Austria-Hungary in 1892, by Russia in 1878, by Spain (on private account) in 1878, by India (on private account) in 1893, and by the Latin Union, consisting of the governments of France, Italy, Switzerland, Belgium, and Greece, in 1878. This unfriendly legislation is the explanation for the constantly widening commercial chasm between gold and silver.

CONCLUSION.

Mr. Speaker, we are confronted with this situation: Shall the United States adopt the Wilson bill, which contemplates a single gold standard, and continue its efforts to secure an international agreement, or shall we redeem the pledges of the Chicago platform and endeavor to maintain, single-handed and alone, a double standard?

Mr. Speaker, it seems to be trifling with the interests of a great people to make any further effort at this time in the direction of an international agreement. So long as England maintains her commercial prestige, she will not consent to abandon the gold standard adopted in 1816, and the United States finds itself handicapped in this contest by the mistaken tariff policy of the last thirty years which has permitted England to dominate and control the commerce of the world. So long as the commerce of all nations passes through her clearing-house, just so long will England insist upon the maintenance of a single gold standard, because she is a creditor nation.

It is a matter of profound regret, therefore, that in this great contest between the standards, the United States is shorn of the influence among the nations of the earth to which she would be entitled under a policy which shall reëstablish her old-time commercial prowess. Hence an international agreement at this time is wholly improbable. What then? I appeal to the Representatives on this floor, especially to those on this side of the Chamber from the West and South, to ponder well their answer to that query before they respond to the roll call on the pending question on Monday next. I know not what others may do; but my action shall be in harmony with the pledges made by the party at Chicago, not only to repeal the Sherman law, but also to provide for the coinage of both gold and silver without discriminating against either metal. [Applause.] The constituency I have the honor to represent have no fixed incomes arising from bonds, or other securities of that class, which would be appreciated by a single gold standard, and they demand the redemption of those pledges which command us to bear aloft upon equal terms the banners of both gold and silver.

I know, Mr. Speaker, that the pathway which leads to independent national bimetallism in this country is not strewn with flowers. It is scarcely enlightened by precedent or experience. There is nothing in our fiscal history like the present moment. Heretofore we have had, to some extent at least, the coöperation of foreign countries in the effort to maintain a double standard. But now almost every great commercial nation of the world is in arms against silver, and its last refuge is to be found alone in the United States. [Applause.] I believe, sir, that the enterprise, the energy, business sagacity, and genius of the American people, sustained as they are by the almost illimitable natural resources of the Republic, will yet achieve a triumph for the double standard—the gold and silver money of the Constitution. [Applause.] The unconditional repeal of the Sherman act means the unconditional surrender of silver. Voicing, as I believe, the almost unanimous sentiment of my people, without regard to party, I shall vote to restore silver to its ancient honor and dignity. [Applause.]

APPENDIX.

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

TREASURY DEPARTMENT, *Bureau of the Mint, August 16, 1893.*

Mr. MOON. Mr. Speaker, in the short time allotted to me I shall not undertake to produce any additional figures or statistics or try to present any new views derived from the platforms of political parties.

When I left my home at the call of the President to attend this session of Congress I came with the intention to make all haste possible to carry out the wishes of my constituents, and I believe their wishes to be the repeal of the purchasing clause of the Sherman law. And although I believe this has but little to do with our present financial troubles, I do not think we have acted wisely in this matter. This side of the House has been given no opportunity to suggest a cure.

A few days ago, when this culprit, the Sherman law, was brought before this bar, the most of us farmers made up our minds that we would act as jurors in this case, and we were disappointed that so much time was going to be taken to find out whether it was guilty or no. But we have come to feel sorry for the poor little creature, and although it may have looked to some when it is brought in like an elephant of destruction, yet to-day we find it is only a little silver calf. [Laughter.] As we listened to the learned gentleman from New York [Mr. HENDRIX], representing the chamber of commerce, some of us were almost led to believe that the prime object of that organization was to promote the interests of the poor laboring men and farmers of the far West.

When he was telling us what kind of a dollar he was willing the farmer should have for his wheat, cotton, and corn, and the kind of a dollar the poor laboring man should have for his toil, he stated that he was willing to repeal the tax on State-bank issues, thereby giving the farmer and the poor laboring man the same kind of rag money that we had prior to 1861; and as we listened to the other side, we heard the slight scream of the eagle coming from the Rockies and the tinkling of the Liberty bell from the west of the Missouri. They come accusing the last generation of fraud and conspiracy in the part that they took in demonetizing silver in 1873.

But when we ask them what has been the matter with this country for the last twenty years, they have to admit that it has been tolerably prosperous. And, Mr. Speaker, it is a lamentable fact that, as this country had been climbing the hill of prosperity for the last twenty years, and as we were viewing our possessions with complacency from the sunlit peaks of national greatness, that at such a time our commercial enemy from across the water, with the Cobden Club and the free trader on this side, should come along with a band wagon loaded with hobgoblins and break up our picnic and obscure the sun. [Laughter.]

And, now, as we begin to descend into the valley of commercial wreck and ruin we are accosted on every hand by thousands and thousands of laboring men asking us for work; men who are not paupers; men who are asking us for work that they may give bread to their families, and what can we do?

My talented farmer friend from Georgia [Mr. MOSES] the other day told us that this country had been sick for thirty years; that she had been employing Dr. Republican, and last November she made up her mind to kick him out and dispense with his services, and she did, and began to employ Dr. Democrat or someone else. His expression put me in mind of the story that I remember seeing when a boy, which ran thus: There was a man who was well but wished to be better, took physic and died. [Laughter.]

But, Mr. Speaker, time is short. The need of the hour is great. The country is waiting for us to do something that shall relieve this great distress.

The SPEAKER. The time of the gentleman has expired.

Mr. NORTHWAY. I ask unanimous consent that the gentleman have time to complete his remarks.

Mr. BLAND. There are a great many others who desire to speak. What time does the gentleman desire?

Mr. MOON. Not more that two minutes.

There was no objection.

Mr. MOON. If I vote for the repeal of the Sherman act it will be with the mental reservation, with the conditions that will come the nearest to satisfying my constituents and protecting the interests of the wage-earner and the farmer to the full extent that we are allowed under this iron-clad rule. The country needs more money, and it needs it now. It is estimated that $300,000,000 have been withdrawn from the banks and hid away. This amount is not in circulation. We ought to give this country something to take its place. We could help some by allowing the national banks to issue up to the par value of the bonds they have on deposit; but a bill has been introduced in the Senate which provides for this.

But before I would be drawn into the issuing of $300,000,000 of gold bonds, now urged by the gold men, I would issue $300,000,000 of silver certificates, each dollar payable in a dollar's worth of American silver bullion whenever it was presented for redemption in amounts not less than $1,000. This would give us the currency that we need now, and we would not have to wait for the men from across the water to take our bonds, and we would be banking on our own product and helping our own people instead of those across the Atlantic.

I am not satisfied with the signs of the times. When this purchasing clause is repealed, which I am satisfied now it will be, what then? Yes, the people are asking, what then? After stopping the increase of the currency that we have had regularly under the provisions of the Sherman law, and at a time when it ought to be doubled, we are to run the risk of having only the twenty millions coming from the national banks.

Mr. Speaker, I am in favor of doing anything and acting with any party or any man who will do anything or present anything tangible to relieve this stringency in the money market and relieve this country. I hope we may be able to do something in the near future, so that word may go to our people that this pressure is relieved, and that we may feel entire confidence in the measure we adopt to bring relief to the manufacturing communities of the country, and to the farmers of the far West, and to the laboring man, so that we may go home feeling we have done all in our power, and done our duty to our constituents. [Applause.]

[Mr. COBB of Alabama withholds his remarks for revision, See Appendix.]

Mr. BURROWS obtained the floor and said: Mr. Speaker, I should be much obliged if I could have the indulgence of the House for forty minutes in the discussion of this question.

Mr. DINGLEY. I ask unanimous consent that the gentleman from Michigan be allowed to proceed for forty minutes.

The SPEAKER. Is there objection? The Chair hears none.

Mr. BLAND. In justice to other gentlemen I shall have to object. A number of gentlemen have come to me and stated that they wanted to occupy the floor to-day in speeches of ten or fifteen minutes; and unless some arrangement can be made by which these other gentlemen can have the time they want I shall have to object.

Mr. BURROWS. Do I understand the gentleman from Missouri to object?

Mr. BLAND. I object, Mr. Speaker, because there are gentlemen here right around me and now conferring with the Speaker who want to speak to-day; and unless a limitation of time be insisted upon, it will be impossible for them to do so.

The SPEAKER. The gentleman from Michigan desires to occupy forty minutes.

Mr. BLAND. I object for the reason that I have stated.

Mr. HENDERSON of Iowa. I submit that the objection came too late. The Speaker stated the request and after a pause brought down his gavel stating that there was no objection. Under these circumstances I feel like standing upon the vested rights which the gentleman from Michigan has thus acquired. It seems to me that the courtesy now asked should certainly be extended to an old member of the House, and, under the circumstances, it can not be denied to any member, old or new. I fubmit that the announcement has been made by the Chair and the objection came too late.

Mr. BLAND. Well, I do not think the gentleman ought to stand on any technicality of that sort. I was on my feet to make the objection; and I do not think the Speaker's gavel can deprive me of my right.

Mr. HENDERSON of Iowa. The Speaker's gavel and the Speaker's voice announced that there was no objection.

Mr. BLAND. But I was on my feet to object.

Mr. HENDERSON of Iowa. The gentleman from Michigan, before objection was made, had acquired a vested right to forty minutes by the consent of the House.

Mr. REED. I suggest that the gentleman from Missouri [Mr. BLAND] allow this matter to pass with the understanding that his objection be made hereafter to any similar application.

Mr. BLAND. Mr. Speaker, if the gentleman from Illinois [Mr. MARSH] who is to speak on our side can have the same length of time, I will withdraw my objection.

Several MEMBERS. That is right.

Mr. BLAND. But I do not think the other side should have any superior privileges in the matter of debate.

Mr. HENDERSON of Iowa. We shall be glad to hear the gentleman from Illinois [Mr. MARSH].

The SPEAKER. The Chair understands that there is now no objection——

Mr. BLAND. With the understanding that the gentleman from Michigan and the gentleman from Illinois shall occupy equal time.

The SPEAKER. The gentleman from Illinois wants only thirty minutes.

Mr. BLAND. Then let the arrangement be thirty minutes for each gentleman: let them have equal time.

The SPEAKER. The Chair will again submit the request. The gentleman from Maine [Mr. DINGLEY] asks unanimous consent that the gentleman from Michigan [Mr. BURROWS] be permitted to address the House for forty minutes. Is there objection?

Mr. BLAND. I object, unless the two requests go together.

The SPEAKER. The gentlemen from Missouri objects.

Mr. BLAND. I will not object if——

The SPEAKER. The gentlemen is not in order.

Mr. BURROWS. If the House will not indulge me beyond five minutes I do not care to occupy any time. [Cries of "That is right" and applause on the Republican side.]

The SPEAKER. The Chair will recognize any gentleman who desires now to address the House.

Mr. HOPKINS of Pennsylvania. Mr. Speaker, I desire to send to the desk for reading the financial article (or a part of it) of the Philadelphia Press of yesterday, August 24. Before doing so I wish to say that this paper is one of the most widely read and influential papers in Pennsylvania, and is considered one of the most reliable for news. It advocates gold monometallism, unless the Latin Union should join this country in the use of silver. That its great power may be better appreciated, it should be known that its editor-in-chief is understood to be our late Minister to Russia. Its views are sought at all times with avidity. It formulates ideas, which smaller papers copy. It dictates much of the opinion of my country.

For the past nine months it has pursued the Sherman act with all the malignity of any Cleveland Republican. Fortunately it has a great financial editor—to my mind one of the best writers of the day upon the question of finance. He very often hits the exact truth, and tells it with a fearlessness that must escape the notice of the managing editors.

The Clerk read as follows:

The resolution of Senator PEFFER of Kansas, calling on the Secretary of the Treasury for information as to whether the banks of this city, Boston, and New York had violated the law in refusing to pay checks attracted a good deal of attention. The subject is a dangerous one, and it is well that the resolution went over under the rules. Silver is exceedingly strong at 76 cents bid and 77 cents asked. The Treasury refused to buy at considerably lower figures.

The money market in New York is unchanged. There is plenty of call money, but it is almost impossible to make time loans. On Monday a loan of $100,000 on gilt-edged collateral was made for four months at 18 per cent. The banks are refusing to pay out currency in large sums to anybody, and their patrons accept the situation with great good humor and patient acquiescence. Just at the moment the political situation is largely affecting the money markets. The New York banks for several days have been endeavoring to bring a home influence on United States Senators to induce them to vote for the repeal of the July silver law. To this end correspondents of the New York banks in the West and South have been told that they need not expect to get money from New York until the purchasing clause was repealed, and the Southern and Western bankers have been strongly urged to write to their Senators and to insist that they work and vote for immediate repeal. This movement has given rise to the recent feeling in New York that the silver majority in the Senate could be overcome, as the influence of the banks of the metropolis, when concentrated on any object, is regarded as invincible.

Mr. HOPKINS of Pennsylvania. Now, Mr. Speaker, I wish to ask, Is that statement true or is it what the New York banker calls "rot"? It is no boy from "the wild and woolly West" who makes this assertion. It is made by a great power in the land.

If it is true—and who of us who were here in the closing days of the Fifty-second Congress, and followed by supplications and imprecations from those great city powers—who is there of us who does not believe it?

Are those city banks who refuse to give to the country banks the money due them, the same banks that Senator PEFFER refers to? If so, his resolution ought to be placed at the head of the Calendar and not at the foot. Shall we quietly allow them to place their unclean hands upon the throats of our Senators and threaten the liberties of the people? Can not our constituents have money due them till they make this Congress vote to suit the unholy wishes of these men?

Are we no longer the representatives of our respective districts? Are we in the hands of the great monied powers of the earth or are they in ours? That is the question of the hour.

Mr. BLAND. Mr. Speaker, I withdraw my objection to permitting the gentleman from Michigan [Mr. BURROWS] to have forty minutes, with the understanding that the gentleman from Illinois [Mr. MARSH] be allowed thirty minutes, which I understand is all he wants.

The SPEAKER. The Chair will understand that that will be the order of the House unless objection is made. The Chair hears no objection, and the gentleman from Michigan will proceed.

Mr. BURROWS. Mr. Speaker, on the 30th day of June just past and within a period of less than four months from the time the Democratic party assumed full control of the executive and legislative branches of the National Government the President of the United States publicly announced to the country and the world that "There is general distrust and apprehension concerning the financial situation of the country; that it pervades all business circles; that it has already caused great loss and damage to our people; and that it threatens to cripple our merchants, stop the wheels of manufactures, bring distress and privation to our farmers, and to withhold from our workingmen the wage of labor;" and that he is therefore constrained "to convene Congress in extraordinary session to the end that the people may be relieved, through legislation, from pending danger and distress." Forty days later, and on the 8th day of the present month, the President, by message, advises the assembled Congress that "there exists an alarming and extraordinary business situation involving the welfare and prosperity of all our people," and that he had convened Congress that the "present evils may be mitigated and dangers threatening the future may be averted."

These conditions as thus described by the President are not to-day materially changed.

There exists at this time the same "alarming business situation," the same "dangers" seem to be "threatening the future," and if the President of the United States could for a moment have his attention diverted from his piscatorial sports at Buzzard's Bay he would not only observe the continuance of this deplorable condition, but if he would listen he would hear the ominous tramp of a multitude of the unemployed which no man can number, fresh from the mine and the factory, carrying above them now not the delusive banner of "tariff reform," but the black flag of distress and desperation, and demanding food for themselves and their dependent families.

Such is the startling condition existing in our country to-day.

On the 6th day of December last, less than three months prior to the time this Democratic administration was inaugurated, there was read from that desk another message from the pen of Benjamin Harrison, the then outgoing President of the United States, giving a picture of the condition of the country at that time in striking contrast to that presented to-day. I beg leave to hold it up to the House and the country:

MESSAGE.

To the Senate and House of Representatives:

In submitting my annual message to Congress, I have great satisfaction in being able to say that the general condition affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

The total wealth of the country in 1860 was $16,159,616,068. In 1890 it amounted to $62,610,000,000, an increase of 287 per cent.

The total mileage of railways in the United States in 1860 was 30,626; in 1890 it was 167,741, an increase of 448 per cent; and it is estimated that there will be about 4,000 miles of track added by the close of the year 1892.

The official returns of the Eleventh Census and those of the Tenth Census for seventy-five leading cities furnish the basis for the following comparisons:

In 1880 the capital invested in manufacturing was $1,232,839,670.
In 1890 the capital invested in manufacturing was $2,900,735,884.
In 1880 the number of employés was 1,301,388.
In 1890 the number of employés was 2,251,134.
In 1880 the wages earned were $501,965,778.
In 1890 the wages earned were $1,221,170,454.
In 1880 the value of the product was $2,711,579,890.
In 1890 the value of the product was $4,860,286,837.

I am informed by the Superintendent of the Census that the omission of certain industries in 1880, which were included in 1890, accounts in part for the remarkable increase thus shown. But, after making full allowance for differences of method and deducting the returns for all industries not included in the census of 1880, there remain in the reports from these seventy-five cities an increase in the capital employed of $1,522,745,604; in the value of the product of $2,024,236,166; in wages earned of $677,943,929, and in the number of wage-earners employed of 856,029. The wage earnings not only show an increased aggregate, but an increase per capita from $386 in 1880 to $547 in 1890, or 41.71 per cent.

The new industrial plants established since October 6, 1890, and up to October 22, 1892, as partially reported in the American Economist, number 345, and the extension of existing plants, 106; the new capital invested amounts to $40,449,050, and the number of additional employés to 37,185.

The Textile World for July, 1892, states that during the first six months of the present calendar year 135 new factories were built, of which 40 are cotton mills, 48 knitting mills, 26 woolen mills, 15 silk mills, 4 plush mills, and 2 linen mills. Of the 40 cotton mills 21 have been built in the Southern States. Mr. A. B. Shepperson, of the New York Cotton Exchange, estimates the number of working spindles in the United States on September 1, 1892, at 15,200,000, an increase of 600,000 over the year 1891. The consumption of cotton by American mills in 1891 was 2,398,000 bales and in 1892 2,584,000 bales; an increase of 188,000 bales. From the year 1869 to 1892, inclusive, there has been an increase in the consumption of cotton in Europe of 92 per cent, while during the same period the increased consumption in the United States has been about 150 per cent.

The report of Ira Ayer, special agent of the Treasury Department, shows that at the date of September 30, 1892, there were thirty-two companies manufacturing tin and terne plate in the United States and fourteen companies building new works for such manufacture. The estimated investment in buildings and plants at the close of the fiscal year, June 30, 1893, if existing conditions were to be continued, was $5,000,000, and the estimated rate of production 200,000,000 pounds per annum. The actual production for the quarter ending September 30, 1892, was 10,952,725 pounds.

The report of Labor Commissioner Peck, of New York, shows that during the year 1891, in about 6,000 manufacturing establishments in that State embraced within the special inquiry made by him, and representing 67 different industries, there was a net increase over the year 1890 of $31,315,136.68 in the value of the

product, and of $6,377,925.09 in the amount of wages paid. The report of the commissioner of labor for the State of Massachusetts shows that 3,745 industries in that State paid $129,416,248 in wages during the year 1891, against $126,030,303 in 1890, an increase of $3,335,945, and that there was an increase of $9,932,490 in the amount of capital and of 7,346 in the number of persons employed in the same period.

During the last six months of the year 1891 and the first six months of 1892 the total production of pig iron was 9,710,819 tons, as against 9,202,703 tons in the year 1890, which was the largest annual production ever attained. For the same twelve months of 1891–'92 the production of Bessemer ingots was 3,876,581 tons, an increase of 159,710 gross tons over the previously unprecedented yearly production of 3,688,871 gross tons in 1890. The production of Bessemer steel rails for the first six months of 1892 was 772,436 gross tons as against 702,080 gross tons during the last six months of the year 1891.

The total value of our foreign trade (exports and imports of merchandise) during the last fiscal year was $1,857,680,610, an increase of $128,283,604 over the previous fiscal year. The average annual value of our imports and exports of merchandise for the ten fiscal years prior to 1891 was $1,457,322,019. It will be observed that our foreign trade for 1892 exceeded this annual average value by $400,358,591, an increase of 27.47 per cent. The significance and value of this increase are shown by the fact that the excess in the trade of 1892 over 1891 was wholly in the value of exports, for there was a decrease in the value of imports of $17,513,754.

The value of our exports during the fiscal year 1892 reached the highest figure in the history of the Government, amounting to $1,030,278,148, exceeding by $145,797,338 the exports of 1891, and exceeding the value of the imports by $202,875,686. A comparison of the value of our exports for 1892 with the annual average for the ten years prior to 1891 shows an excess of $265,142,651, or of 34.65 per cent. The value of our imports of merchandise for 1892, which was $829,402,462, also exceeded the annual average value of the ten years prior to 1891 by $135,215,940. During the fiscal year 1892 the value of imports free of duty amounted to $457,999,658, the largest aggregate in the history of our commerce. The value of the imports of merchandise entered free of duty in 1892 was 55.35 per cent of the total value of imports, as compared with 43.35 per cent in 1891 and 33.06 per cent in 1890.

In our coastwise trade a most encouraging development is in progress, there having been in the last four years an increase of 16 per cent. In internal commerce the statistics show that no such period of prosperity has ever before existed. The freight carried in the coastwise trade of the Great Lakes in 1890 aggregated 28,295,959 tons. On the Mississippi, Missouri, and Ohio rivers and tributaries in the same year the traffic aggregated 29,405,046 tons, and the total vessel tonnage passing through the Detroit River during that year was 21,684,000 tons. The vessel tonnage entered and cleared in the foreign trade of London during 1890 amounted to 13,480,767 tons, and of Liverpool 10,941,800 tons, a total for these two great shipping ports of 24,422,568 tons, only slightly in excess of the vessel tonnage passing through the Detroit River.

And it should be said that the season for the Detroit River was but two hundred and twenty-eight days, while, of course, in London and Liverpool the season was for the entire year. The vessel tonnage passing through the St. Marys canal for the fiscal year 1892 amounted to 9,828,874 tons, and the freight tonnage of the Detroit River is estimated for that year at 25,000,000 tons, against 23,209,619 tons in 1891. The aggregate traffic on our railroads for the year 1891 amounted to 704,398,609 tons of freight, compared with 691,344,437 tons in 1890, an increase of 13,054,172 tons.

Another indication of the general prosperity of the country is found in the fact that the number of depositors in savings banks increased from 693,870 in 1860 to 4,258,893 in 1890, an increase of 513 per cent, and the amount of deposits from $149,277,504 in 1860 to $1,524,844,506 in 1890, an increase of 921 per cent. In 1891 the amount of deposits in savings banks was $1,623,079,749. It is estimated that 90 per cent of these deposits represent the savings of wage-earners. The bank clearances for nine months ending September 30, 1891, amounted to $41,049,390,808. For the same months in 1892 they amounted to $45,189,601,947, an excess for the nine months of $4,140,211,139.

There never has been a time in our history when work was so abundant or when wages were as high, whether measured by the currency in which they are paid or by their power to supply the necessaries and comforts of life. It is true that the market prices of cotton and wheat have been low. It is one of the unfavorable incidents of agriculture that the farmer can not produce upon orders. He must sow and reap in ignorance of the aggregate production of the year, and is peculiarly subject to the depreciation which follows overproduction. But, while the fact I have stated is true, as to the crops mentioned, the general average of prices has been such as to give to agriculture a fair participation in the general prosperity. The value of our total farm products has increased from $1,363,646,866 in 1860 to $4,500,000,000 in 1891, as estimated by statisticians, an increase of 230 per cent. The number of hogs January 1, 1891, was 50,625,106 and their value $210,193,925; on January 1, 1892, the number was 52,398,919 and the value $241,031,415. On January 1, 1891, the number of cattle was 36 875,648 and the value $544,127,908; on January 1, 1892, the number was 37,651,239 and the value $570,7e9,155.

Such was the condition of the country but ninety days prior to the ascendency of the Democratic party on the 4th of March last. "Look upon that picture and then on this," and tell me what has wrought this appalling change. What is it that in the brief space of six months has plunged this nation, with all its colossal interests, from the summit of prosperity and hope to the depths of adversity and despair? When we know the cause we can intelligently apply the remedy.

And I may be permitted to suggest in passing that those of our fellow-citizens, who, nine months ago, were deluded with the idea of a necessity for a change have, I am sure, by this time the full measure of their desires gratified, unless they have an appetite for misfortunes which no calamity can appease and no disaster satisfy. [Applause.]

The President of the United States in his proclamation convening Congress declared that "this condition is the result of a distrust and apprehension concerning the financial condition of the country and that it is the outgrowth of a financial policy embodied in unwise laws which he is compelled to execute until repealed." The country was left in much uncertainty as to the laws referred to in this proclamation, but the message removes all doubt by specifying the act of 1890, commonly known as the Sherman law, as the fruitful source of all our woes. While I am frank to admit that that measure in its practical workings has been a disappointment to its friends, yet I do not believe that it is responsible in any considerable degree for the deplorable condition in which we find the country to-day.

It will be remembered we commenced buying silver under that act on the 13th day of August, 1890, and we continued these purchases through 1890, 1891, and 1892, without any alarming symptoms of approaching disaster; and not until after the Presidential election last November did the business interests of the country take alarm, and stringency in the money market begin to appear. If the operation of this law is the fruitful source of the widespread disaster we witness to-day, is it not a little remarkable that it was not made manifest during the first two years of its existence? I can not believe that this deplorable condition is to be attributed to an act which increased the circulation of this country more than three millions of dollars a month in good, sound currency; and I can not believe that labor has been driven out of employment and into the street because of the bad character of our money. I do not believe the people hide money, as they are doing now and have been for the last sixty days, because they have any suspicions as to the soundness of that currency.

I do not believe that great business enterprises have been abandoned, once prosperous industries shut down, because of a suspicion that our money was not secure. The fact is that at this very moment our entire volume of currency, whether of gold, silver, or paper, is worth one hundred cents on a dollar, every dollar being kept at a parity with every other dollar. [Applause on the Republican side.] I am constrained to believe that the real cause of this widespread business depression is attributable chiefly to the hostile attitude of the Democratic party toward our protective policy, under which for the last thirty years the nation has wrought its marvelous industrial independence. [Applause on the Republican side.] This money stringency, which is of recent date, was, it will be remembered, preceded by business paralysis all over the country.

As soon as the result of the last Presidential election was known and that the people had actually affirmed the declaration of the Democratic platform, that a protective tariff was "unconstitutional," and that hereafter we were to have a "tariff for revenue only," with no element of protection it, that moment the manufacturers put out their fires, labor was reduced in its employment or wholly discharged, men abandoned great business enterprises which they had in contemplation, and in every way curtailed their expenses that they might save something from the general wreck which was sure to follow the inauguration of free trade in this country.

I have heard it suggested that this could not be the cause, for the reason that as yet there had been no change in our tariff law. Neither has there been any change in our financial policy, and yet the President declares that there is an "apprehension" as to our financial situation which is the "fruitful source" of our present disorder.

So I say it is the "apprehension" of a change in our industrial policy that has brought this general suspension of business and universal distrust. Apprehension of danger is sufficient to put prudent men on their guard. Would it be necessary for a person to actually go over Niagara Falls to be convinced that the expedition is attended with disastrous consequences? [Laughter.] If a party in this country to-day should declare in favor of the enslavement of the black race and that party receive the indorsement of the people on that issue, would it not occasion much trepidation among the people of color? The people are not ignorant of the results which would follow the inauguration of free trade in this country. We have had three periods of a low-revenue tariff during our national existence—1816, 1832, 1847, and each one of these eras was attended with general distress and bankruptcy, supplemented with the most serious panics this country has ever seen.

Well did President Harrison say in his message, to which I have already alluded, referring to a revision of the tariff: "It is a matter of regret that this work must be delayed for at least three months, for the threat of great tariff changes induces so much uncertainty that an amount not easily estimated of business inaction and of diminished production, will necessarily result. It is possible also that this uncertainty may result in decreased revenues from customs and duties, for our merchants make cautious orders for foreign goods in view of the fact of the prospect of tariff reductions and the uncertainty as to when they will take effect." Fear and apprehension are the most potent of all influences governing mankind.

As another well said: "All enterprise is on the spring of the prospective. It is not what to-day is, but what to-morrow shall bring forth, that governs its impulses and ventures. Hope is capital because inspiration is power."

I hold, therefore, that it is the threatening attitude of the Democratic party toward our industrial system that has brought upon us, in a very large degree, the present deplorable condition, and I much regret that the President should have assured the country that tariff reform was only held in abeyance, that it was soon to be prosecuted with vigor; for by so doing he has added fuel to the flame and has increased rather than allayed public apprehension.

But whatever the cause, the situation is before us, and we must deal with it as best we can. It is unfortunate that the House in all its membership is not free to legislate. The President in his proc-

lamation convening Congress invited "all those who are entitled to act as members of the Fifty-third Congress to convene in extra session," but under a rule adopted by the majority, without consultation with the minority, no member of the minority is permitted to offer any amendment to the propositions suggested by the majority. So far as legislation is concerned, or any suggestions from the minority, we might as well have remained at home. We can only vote with one or the other of the warring factions of the Democratic party, and only on the propositions which they in their wisdom have seen fit to submit.

What are these propositions? First, the repeal of the act of 1890, known as the Sherman law; second, the reënactment of the law of 1878, known as the Bland-Allison law; and third, the free and unlimited coinage of silver upon some agreed ratio from 16 to 20 to 1.

Upon the first proposition, to repeal the purchase clause of the Sherman act, I have no hesitancy in giving it my support, for the reason that it is unsound in principle, and in its practical workings it has disappointed its friends, and if continued would, in my judgment, result disastrously to the country. What is this law and its workings? Under it the Secretary of the Treasury is required to purchase every thirty days not less than 4,500,000 ounces of silver and give in payment therefor the notes of the Government known as Treasury notes, payable on demand, in coin. In the execution of this law all Secretaries of the Treasury have redeemed these notes in gold. The practical workings, therefore, of this measure result in exchanging the gold in the Treasury for silver bullion.

The gentleman from Mississippi [Mr. HOOKER] the other day suggested that these Treasury notes ought to be redeemed in silver dollars, and that the Secretary of the Treasury has erred in insisting on their redemption in gold. A moment's reflection, Mr. Speaker, I am sure will satisfy the gentleman that his position is not tenable. In the first place, every one of those Treasury notes was given for silver upon its gold valuation, and the very day the owner of $5 worth of silver sold the same to the Government and received a Treasury note for $5 he could have exchanged that same silver for $5 in gold. These notes, therefore, represent gold values, and for the Government of the United States to redeem them in silver dollars worth 57 cents, would be a piece of financial dishonesty which ought to discredit a Government, as it would certainly disgrace an individual. In the next place, if the present Secretary of the Treasury had carried out what was reputed at one time to be his intentions—to redeem these Treasury notes in coined silver—he would have at once landed this Government on a silver basis, and seriously impaired its now unquestioned credit. And I venture to suggest, in passing, that the rumored purpose of the Secretary of the Treasury in this regard sounded the note of alarm in our great money and business centers.

Now, what has been the resultant effect of this purchase clause of the Sherman act? We made our first purchase of silver under it on the 13th day of August, 1890, and from that day until August 13, 1893, a period of exactly three years, we purchased 162,102,772 ounces of silver bullion, equal to 5,558 tons, and we issued in payment therefor notes of the Government, to-day outstanding, of $151,081,492, every one of which must be redeemed by the Treasury of the United States in gold. Does it need any argument to show that the continuation of such a policy as that would result in depleting the Treasury of the United States of every dollar of gold we possess, and putting in its stead a mountain of uncoined silver bullion? When the paper given for this bullion must be redeemed in gold, is there any question that gold will disappear from the Treasury as fast as these notes are presented for redemption? It needs no argument to show that this policy can not be continued as a permanent financial system. It must be abandoned sooner or later, and the sooner it is abandoned the less will be the loss sustained by the Government.

This silver bullion in the Treasury of the United States is absolutely useless. We can not coin it, because the law does not permit it; neither can we sell it, and if we were to sell it at the market price of silver bullion to-day—of 72 cents an ounce—that for which we paid $151,081,492 would bring only $116,713,895, entailing a loss upon the Government of $34,367,597; but the loss, however, would probably far exceed that, for if we should authorize the Secretary of the Treasury to put this silver on the market and dispose of it, that moment silver would decline to a point hitherto unknown in its history, and the loss to the Government would be simply incalculable.

It was argued in favor of the passage of this law at the time of its enactment that the reason why silver had declined was because the Government had discarded it in a large measure, and was only coining it in limited quantities, and it was contended that if we would utilize more of the silver that it would advance its price and more readily bring it to a parity with gold, whereby its free coinage could be safely authorized. But time has demonstrated that this assumption was without foundation, for on the 13th day of August, 1890, we paid for our first purchase of silver under this act $1.13 an ounce, and on the 13th day of August, 1893, we paid 73¼ cents an ounce, showing a decline in three years of 40 cents an ounce, while during this same period the highest price we paid for silver was on the 27th of August, 1890, when we paid $1.20¼, and the lowest on July 24, 1893, when we paid 69¼ cents per ounce, a difference between the highest and lowest price of 50 cents an ounce.

But this law, it is said, serves to increase the currency. We purchase silver and give our notes, which are made a legal tender, and which pass into the monetary circulation of the country.

While this is true, I venture to say that that is an unwise financial policy which runs the Government in debt for a product it can not use for the purpose of increasing its volume of money. No government on the face of this earth ever adopted such a policy as that but our own, and I doubt if a like policy can be found in all history. We might as well buy copper, or iron, or wheat, or any other product that the Government can not use, store it in Government warehouses, and issue our promise to pay therefor to be used as money. We certainly ought to be able some way to supply the people of this country with a sufficient volume of currency without resorting to a method so questionable as this. We ought to be able to increase our circulation without increasing our debts. I shall, therefore, vote cheerfully for the repeal of the purchase clause of the Sherman act, because I believe it to be unsound in principle, and if continued will be attended with disastrous results. But the gentleman from Iowa [Mr. HEPBURN] would not repeal this act because it would be a confession that it was the cause of the present disaster. By no means. I am aware the Democratic party attributes the present condition to the Sherman law, and that is an additional reason why I would repeal it. I would tear down this shelter and drive the Democratic party out into the open, where it will be confronted with the evidences of its disastrous tariff policy.

I have heard it intimated, and by the gentleman from Nebraska, himself a member of the Democratic party, that this ought not to be repealed until something is agreed upon to take its place, and the gentleman from Nebraska announces that the message of the President favoring the repeal of this law is the "burial of silver," and then exclaims: "Abandon hope, all you who enter here!" Let me say to my young friend that that is an old sign that has been hanging on the outer wall of the Democratic party for over fifty years, and I am surprised he has just discovered it. But seriously, has he lost confidence in his own party? Is silver to be buried? Did he not make the people believe in the last election that the Democrats were the friends of silver?

The Democratic party in its platform not only declares the act of 1890 to be a makeshift, and demanded its repeal, but they further affirmed "We hold to the use of both gold and silver as the standard money of the country and a coinage of both gold and silver without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and interexchangeable value." Does that look like the burial of silver? More than that. There is now pending in this House, to be voted on next Monday, the following proposition offered by the gentleman from Missouri [Mr. BLAND].

A bill for the free coinage of silver, and other purposes.

Be it enacted, etc., That from and after the passage of this act all holders of silver bullion to the amount of one hundred dollars or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

SEC. 2. That the silver dollar provided for in this act shall consist of 412½ grains of standard silver; said dollars to be legal tender for all debts, dues, and demands, both public and private.

SEC. 3. That the holder of the silver dollars herein provided for shall be entitled to deposit the same and to receive silver certificates in the manner now provided by law for the standard silver dollars.

SEC. 4. That so much of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the monthly purchase of 4,500,000 ounces of silver bullion, be, and the same is hereby, repealed.

Does that look like the burial of silver? There is now pending in the Senate of the United States, reported from the Committee on Finance, the following proposition:

A bill discontinuing the purchase of silver bullion.

Be it enacted, etc., That so much of the act approved July fourteenth, eighteen hundred and ninety, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of four million five hundred thousand ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding one dollar for three hundred and seventy-one and twenty-five one-hundredths grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed.

And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

Does that look like the "burial of silver"? If the Democratic party does not continue both gold and silver in our monetary sys-

tem, and maintain that money at a parity, then they are false to party pledges and will be rebuked by the people. The Republican party is in favor of bimetallism—of the use of both gold and silver in our monetary system; and it not only believes in it, but it has legislated so as to secure it. For fifteen years we have maintained gold and silver at a parity and to-day we have four hundred and nineteen millions of coined silver dollars; one hundred and fifty-one millions of Treasury notes representing silver purchased, or nearly six hundred millions of silver currency which we are maintaining in our circulation on a parity with gold and propose to maintain it as a part of our monetary circulation, thus utilizing both gold and silver and keeping them at a parity.

In the face of this legislation on the part of the Republican party, the gentleman from Nebraska [Mr. BRYAN] I have no doubt, joined his party in the last election in denouncing this policy of the Republican party as a "cowardly makeshift," and appealed to the people to overthrow that party in the interest of a party pledged to establish a wiser and safer financial policy. The opportunity is now with you to redeem your pledges and continue to utilize both gold and silver in our monetary system and maintain bimetallism as we have safely established it.

The next proposition submitted by the majority is the restoration of the act of 1878. I shall not detain the House long with a discussion of this proposition. That was an act which directed the Secretary of the Treasury to purchase at least two million dollars' worth of silver bullion every month and coin it into standard silver dollars of 412½ grains. The only material difference between that act and the act of 1890 is that the former required the silver purchased to be coined, and the act of 1890 does not. And if there are degrees of evil, then the act of 1878 is worse than the act of 1890; for under it we were coining 371¼ grains of pure silver into a silver dollar, and with the stamp of the Government certifying it to be a dollar, when intrinsically it was worth much less. Under the operations of that act we coined $378,166,793, and that, together with the coinage of the trade dollar and the coinage under the act of 1890, makes a sum total of silver coinage already stated of $419,294,835.

Yet of this vast sum of coined silver dollars the Secretary of the Treasury advises us that the 1st day of June, this year, only $58,000,000 of it was in circulation, the balance being in the Treasury of the United States and represented in our circulation by silver certificates. If the coin will not circulate, as seems to be the case, why convert the bullion into coin? Better continue the present law, purchase silver and issue our notes therefor. But one of the most effective arguments used at the time in favor of the passage of the act of 1878 was that we demonetized silver in 1873, and that act caused silver to depreciate, and that if we would remonetize it even in part it would at once advance the price of silver and bring it to a parity with gold.

It has been demonstrated that this assumption was without foundation, for while the value of the bullion in the silver dollar in 1877 was 92 cents, after twelve years of coinage, in 1889, the silver in the silver dollar was worth only 72 cents, or the value of the bullion in the silver dollar at the end of twelve years had declined 20 cents.

When this bill was passed in 1878 President Hayes promptly vetoed it as being unwise financial legislation, but it was passed over his veto, and I shall have no hesitancy in voting against its reënactment.

The third proposition submitted is the free and unlimited coinage of silver upon a ratio of somewhere between 16 and 20 to 1. I have but a word to say in relation to this proposition. None of these ratios represent the commercial ratio. Coin your silver dollar in the ratio of 16 to 1 or 20 to 1 and you have a dollar intrinsically worth less than the gold dollar, and coin such a dollar as that—permit the owners of silver bullion to bring to the mints of the United States, and have manufactured into dollars, a certain number of grains, worth in bullion much less than when they are coined, is a proposition to which I can not give my assent.

But it has been stated in the course of this debate and repeatedly asserted that the present silver dollar is the "dollar of the fathers." That statement is not true. It is not the "dollar of the fathers," and the fathers if living would repudiate such an assumption as a reflection upon their integrity and sagacity. The silver dollar of the fathers was intended to be and was in fact exactly equal to the gold dollar in intrinsic value.

When Hamilton and the men of his time were considering the establishment of the United States Mint, in 1792, the question presented was whether we should coin silver or gold, or both, and having determined to utilize and coin both gold and silver the only remaining question was just how much silver should be put in the silver dollar and how much gold in the gold dollar, and it was agreed on all hands that there must be just such an amount put into the silver dollar and the gold dollar as would make them exactly equal in commercial value, for there was no man living at that time outside a mad house who entertained the idea that you could coin dollars of unequal intrinsic value and make them circulate side by side in any monetary system. For it is a law as old as monetary science and as inexorable as the moving of the spheres that if you have two dollars of unequal value the cheaper will be the only one that will circulate and the more valuable will be driven out of circulation.

Mr. Barring said upon this subject: "A very slight difference of one-tenth or one-quarter of 1 per cent would determine the use of one metal or the other."

Our own history demonstrates the truth of this law. Under the ratio of 1 to 15, established in 1792, the two coins separated in a few years, because it was found that the commercial value and the monetary value did not correspond, and gold went out of circulation and our coined silver was the only money remaining in circulation. In 1834 the ratio was changed to 16 to 1 but it was soon discovered that the commercial ratio did not then correspond with the monetary ratio and the result was that silver was more valuable than gold, and went out of circulation, while gold became our only circulating metallic money. When the owner of 371¼ grains of pure silver could get more for that silver uncoined than he could by having it coined into a silver dollar certainly he would not take it to the Mint of the United States to have its value lessened by being coined into money. So silver dollars went out of circulation.

In 1861 we were flooded with a depreciated paper currency less valuable than either gold or silver, and the result was that it drove both gold and silver out of circulation, and they remained out of circulation until we resumed specie payments in 1879. This people have not forgotten the battle for the resumption of specie payments, and they do not care to repeat that experience. It was a long journey, frought with hardship and disaster to many individuals, and had to be pursued in the face not only of Democratic opposition demanding the repeal of the resumption act and the continued nonpayment of our unredeemed promises, but parties sprang up in favor of fiat money and the wildest financial vagaries which, for the time being, threatened the credit and financial integrity of this nation. Must we fight that battle over again?

This contest for the free coinage of silver began in 1874, and it has been prosecuted with unceasing vigor ever since. Why? Up to that time the silver dollar was worth more, intrinsically, than the gold dollar, being worth in 1873 $1.03 as compared with gold.

Up to that time the coinage of silver dollars in this country had been very limited. One would think from the tenor of this discussion that all at once a great outrage had been perpetrated upon silver, that it had been stricken from our monetary system at a blow, by the force of law, when the fact is that from 1793 to 1805, a period of twelve years, we coined but 1,439,517 silver dollars. From 1806 to 1836, a period of thirty years, we did not coin a single silver dollar. From 1836 to 1873, a period of thirty-seven years, we coined only 6,606,321 silver dollars. In eighty years we only coined a total of 8,045,838 silver dollars. So long as silver remained more valuable than gold there was no clamor for the free coinage of silver, but in 1878, when resumption was an assured fact, and the people had decreed that they would keep faith with their creditors and pay their unredeemed promises, then the champions of cheap money turned their attention to silver, finding it had declined in value from $1.03 in 1873 to $0.89 in 1878.

Then the cry went up for the free and unlimited coinage of silver dollars, of 371¼ grains, worth 89 cents, and we entered upon the course of coining silver and continued it for twelve years, and during that period coined 419,000,000 silver dollars, while in the eighty years previous we had coined only 8,000,000. After continuing this for twelve years the silver in the silver dollar declined from $0.89 to $0.72, and we found ourselves with 419,000,000 silver dollars worth, intrinsically, but 72 cents each. In 1890 when it was believed that our volume of silver then in circulation was as great as could be maintained at a parity with gold and avoid the danger of a silver basis, then the Democratic party again clamored for the free and unlimited coinage of silver. The battle is now renewed under the plea of bimetallism, and the advocates of the free coinage of silver seek to delude the people by asserting that they are in favor of bimetallism while its opponents are not. We have bimetallism to-day.

We have not only the 419,000,000 silver dollars coined, the 151,000,000 Treasury notes given for silver bullion, but we have 5,558 tons of silver bullion uncoined, and let it be remembered that the repeal of the purchase clause of the Sherman act does not demonetize a single dollar of this nearly 600,000,000 of silver. On the contrary, in the interests of bimetallism we propose to maintain the whole volume of this silver coin and paper at a parity with gold. We who favor the repeal of the act of 1890 are the only real bimetallists, and we are pursuing the only course in my judgment by which bimetallism can be maintained. The free and unlimited coinage of silver at any of the ratios named will destroy bimetallism and will reduce this country to a single standard, that of silver, and that depreciated, and I am suspicious that for this very reason some gentlemen are anxious for its triumph. The opening of the mints of the United States to the unrestricted minting for individuals of silver into legal dollars at any ratio to gold less than the

commercial value of both metals, under the pretense of aiding the cause of bimetallism, or for the purpose of establishing or maintaining bimetallism in the United States, is simply playing upon the sentiment and credulity of the American people. [Applause].

Bimetallism means the joint use of gold and silver as money and the history of our country prior to 1873 has shown, what is admitted by all the great authorities on bimetallism, that so long as there is a variation of one-half of one per cent between the commercial value of the pure metal contained in the standard coins and their face value the one which has the commercial value in excess of the other will not circulate side by side with that other. For this reason, prior to 1834 gold coins did not circulate in this country, and after the change of ratio in 1834 and 1837, silver did not circulate. Of course the silver dollar now is practically credit money, sustained at par with the more valuable dollar by Government redemption in gold; but with the free and unlimited coinage this would necessarily disappear. There would be no gold redemption, so that free coinage of silver at this time really means the adoption of silver monometallism. The real issue, then, is not between bimetallism and gold monometallism, but between bimetallism and silver monometallism.

Let the people but once understand that all this talk about bimetallism is simply a cover to hide the obnoxious fact that it is silver monometallism that is the real purpose, or at least the certain result, and they will have none of it. There is no considerable portion of our people who would vote to place this country on a silver basis. The argument between the advantages of the two systems is a real, living one. Turn your eyes to the countries having the silver standard alone—Mexico, South America, Asia—and those having the gold standard with a silver circulation maintained on a parity with it, like England and all Europe, and there is no room for argument. The latter countries are prosperous, intelligent, and progressive; the former embarrassed, poor, and ignorant.

As was once said by another, "I think I see clearly through this day's business." It is the old fight for cheap money, and the people are deluded with the idea that if money is cheap they will be prosperous. A farmer is in debt $200; he can sell his horse for $100 in the money of to-day, which, applied to his indebtedness, would discharge one-half of it. Now, if by some process he can cheapen these dollars until they are worth but 50 cents, he can then sell his horse for 200 of these 50-cent dollars and then discharge his indebtedness of $200. This is the milk in the cocoanut of this whole business.

But let me say that cheap money is a delusion, and a depreciating, fluctuating currency cheats every man who touches it. It cheats both ways—when it is declining and when it is appreciating. In war times the man who loaned $1,000 in gold was obliged to take his pay in paper worth 33 cents. The farmer who gave a mortgage for $1,000 on his farm when we were on a paper basis of 33-cent dollars felt it to be a hardship when he was obliged to pay that mortgage in paper dollars worth 100 cents. But that is the inevitable effect of an unstable currency. I affirm that whenever we have a vacillating, depreciated currency it injures all classes and all conditions.

But labor is sought to be deluded with the idea that it is in their interest, somehow, to have cheaper money. Labor does not want cheaper money, but good money—money that will be good to-day and to-morrow, for money is not only the measure of value, but it is the storehouse of values; and when a laboring man has completed his day's work he wants to be paid in a coin that will be not only the full measure of the value of that day's work, but in a dollar that will preserve the value of that day's work. [Applause.] The laboring people of this country having to-day $1,700,000,000 in the savings banks, every dollar of which is worth its face in gold, do not want to be paid in a cheap currency worth one-half that amount; and yet the appeal is made here and elsewhere that all this struggle for cheap money is in the interest of labor!

It was once said, "Liberty, how many crimes are committed in thy name!" and it might be as truthfully said to-day, how many crimes are committed in the name of labor.

At one time a practice prevailed in England of clipping the coins and thereby depreciating their value. The English Government made that practice a felony punishable by death. Women were burned at the stake and men were dragged to the scaffold for clipping the coins of the realm. But it is now seriously proposed in the national House of Representatives of the American people to legalize an unlimited issue of debased currency. It is proposed that this great Government, which through all its perilous history of the last thirty years kept faith with all its creditors and stands to-day with a credit matchless and unimpaired, shall now enter upon the shoreless and fathomless sea of depreciated coinage, whose only harbor is national repudiation and individual bankruptcy, to the utter destruction of the nation's credit and the prosperity of the citizen.

Rather than do this, you might better at once invoke the policy of a Solon, and scale all public and private debts, and have done with it at once.

But it is said by some, I must vote for free and unlimited coinage of silver at one of these ratios because it is the sentiment of my district. Gentlemen, do not deceive yourselves. The honest sentiment of your district demands an honest currency and will sustain you in voting for nothing else. [Applause.] Your vote and my vote upon this great question, your speech and my speech, will be tested not in the hot furnace of the passions of to-day, but they must stand the crucial test of the sober judgment of to-morrow. [Applause.]

The gentleman from Nebraska [Mr. BRYAN] tells us that we can enter upon this policy of unlimited coinage with perfect safety, independent of the nations of the world, and, repeating the story of "Liberty Bell," which sounded the birth of a nation, conjures us to break away from English domination; and yet that same gentleman, before the Fifty-third Congress shall have closed its labors, will be the first to toll the bell of a nation's dead industries and demand that the United States shall surrender its industrial supremacy and independence and the prosperity and hopes of its laboring millions to the unrestricted domination of British greed and power under the merciless policy of free trade. [Applause.]

I regret Mr. Speaker, more than words can express, that in the course of this debate gentleman have seen fit to employ language the effect of which, whether intended or not, is to arouse and ferment dissensions among the various classes of our people. The impression is sought to be made upon the public mind that there exists some monstrous conspiracy somewhere or somehow on the part of capital to oppress and outrage labor. I remember that the gentleman from Nebraska spoke of capital as "imperious, arrogant, compassionless;" and that "labor, work-worn and dust begrimed, makes mute appeal."

Let me say, sir, that he who seeks in this country at this time or any other to inflame public passions and array one class of our citizens against another is an enemy to his country and to his race. [Applause.] He who seeks to incite labor against capital not only does himself, but his country, a grievous wrong. Such a course may serve the ends of party or some personal ambition, but it will be at the expense of the peace and good order of the State. [Applause.] Capital and labor are the two pillars upon which the superstructure of our industrial greatness and civilization are reared, and when you weaken or destroy either you involve all in a common ruin. The gentleman knows, however, the potency of such appeals, and they serve many times to arouse a storm of passions upon which some men are carried temporarily to power. May I be permitted to quote the words of Daniel Webster in this connection:

> I know full well, sir, the power of such prejudices. I know how easily they may be excited and how potent is their agency. Efforts to excite them and calculations on their efficacy when excited have sometimes succeeded, and must be expected sometimes to succeed in popular governments. They are among the means by which little men occasionally become great. But they are not among the means by which lasting character is to be attained any more than they are among the means by which substantial and important service is to be rendered to the country.

Instead of inflaming the public mind, let us rather by every means in our power seek to harmonize these conflicting forces, allay all public apprehension, and so legislate as to maintain the national credit unimpaired, restore public and private confidence, preserve the peace and good order of the State, and promote the happiness and prosperity of the citizen. [Prolonged applause.]

Mr. MARSH. I have not sought, Mr. Speaker, to occupy the time of this House, and I have had no desire to occupy its time until this morning. I then consulted with the Speaker, and was informed that I could have but five minutes. I requested twenty or thirty minutes in the time to be devoted to general debate to-morrow, and was informed that that time was under the disposal of my friend from Maine [Mr. REED], my friend from Missouri [Mr. BLAND], and the distinguished gentleman of whose acquaintance I have not the honor [Mr. WILSON of West Virginia].

Inasmuch as upon this pending question my friend from Maine and myself are not in accord, I did not call upon him; but learning from the magnificent speech of the gentleman from Missouri [Mr. BLAND], and from newspaper reports that he had planted himself finally upon the ground in favor of the maintenance of Republican legislation upon the silver question, which was in harmony in part with my own views, I called upon him and was assured by him that he had no time at his disposal during the general debate for Saturday, that it had all been given out, and he very politely expressed his regret that I had not called upon him earlier. However, through the courtesy my friend [Mr. BLAND] and to the indulgence of this House, I am entitled, I believe, to more than five minutes. Mr. Speaker, will you kindly inform me how much time I have.

The SPEAKER *pro tempore* (Mr. RICHARDSON). The Chair understood the House to give the gentleman thirty minutes.

Mr. MARSH. I understood that the House gave me forty minutes. If I am mistaken, please correct me.

The SPEAKER *pro tempore*. Thirty minutes was the time the House gave the gentleman.

Mr. MARSH. I do not know, Mr. Speaker, that I will need over five minutes. Not being very much accustomed to public speaking, and never accustomed to be limited as to time in the great Western country where I live, I have no conception as to the time that I may need to say what I desire to say upon this occasion.

To quote a much used phrase on this floor "we have been called together in extraordinary session." If anybody doubts that proposition, whether he be a Republican, a "gold bug," a silver bug, or a Populist, let him rise on his feet and say so now.

Mr. HENDERSON of Iowa. No one dares to.

Mr. MARSH. The President of the United States, for whom I have a profound respect, has, in the exercise of his constitutional right, convened Congress. He says he has done so because of the deplorable condition in which the country now is, and he suggests as a remedy and the only remedy the repeal of the bullion-purchase clause comprised in the bill known as the Sherman act of 1890.

He informs this body and the American people that the cause of the prostration and paralysis that now afflicts the business interests of this country, which extends from the centers of trade to the extreme circumference of this land, which enters into the great marts of the country, and is felt in every hamlet and neighborhood in our broad land—that the sole and only cause of this condition is the purchasing clause in the silver enactment of 1890.

That legislation, Mr. Speaker, was placed upon the statute book by the united vote of the Republican representatives in this end of the Capitol and the other, and received the approval of the Republican President of this country. And, Mr. Speaker, I want more than the declaration of the present Executive before I will vote for its repeal. I have been an attentive listener to the long and able discussions that have taken place on this floor, and what I have been unable to hear I have endeavored in my room to read, and for one I answer that I have found no adequate reason to comply with the request of the Chief Executive.

It was well said yesterday by the gentleman from Maine [Mr. DINGLEY] for whom I have high regard and great respect, although he loses his temper on occasions, which I am apt to do myself, and consequently I overlook it—it is well said by the gentleman from Maine that the policy of purchasing bullion by the National Government and converting it into coin and making it the basis for paper circulation did not originate in the act of 1890. It originated in the act, if I remember correctly, of February, 1878.

I had the honor at that time of occupying a seat on this floor; and that legislation received my vote and my hearty approbation. Then it was, Mr. Speaker, that the American Congress inaugurated the policy of furnishing the people with silver money coined from bullion purchased by the Government. And with the construction which was given to that act by the Republican Administration, that silver money and silver certificates based upon silver money were maintained upon an equality with the best money in this country. And when I say the best money I mean the highest money.

In 1890 a substitute, known as the Sherman law, was enacted for the legislation of 1878, and this law of 1890 was, in my opinion, vastly superior to the Bland-Allison law which it substituted. It was superior to it in more ways than one. It was superior to it because it gave to the circulation of this country more money than did the Bland-Allison bill, thereby keeping in line with the advanced prosperity and business demands of the country. It was superior to it in another respect, and a very important one.

By every Republican Administration from 1878 to 1890, without explicit statute power, the silver cirtificates issued upon the silver dollars that have been coined under the Bland act have been maintained upon a parity with gold by their redemption upon demand in gold. And the second distinguishing feature of the Sherman act that was an improvement over the Bland act was this, that the faith and honor of this Government were therein pledged to the maintenance, substantially, of all the money of this country upon a parity.

That which had been the practice of the Republican Administrations from the years 1878 to 1890, in the face of all denunciation and opposition from the Democratic side of this House, was ratified, indorsed, and fixed in the statute law by the Sherman bill.

Since 1890, and every day since 1890, it could be said and truly said by everybody in this broad land of ours, Mr. Speaker, that every single dollar of the circulating medium in this country, as the result of Republican legislation, that every dollar of the $1,600,000,000 in this country was equal to each and every other dollar; that there was no difference between them.

Now, Mr. Speaker, the policy of this Government having been for fourteen years to maintain this parity in our money, during all that period of time this policy having been pursued, and efficiently, in this country, with all of the money that it had in circulation during these years, such having been the course of legislation owing to the efforts of the Republican party, the Government having monopolized, if I may use that term, the business of furnishing the people with a currency for all business transactions, it was their pride that the Republican party could point to the existing condition of affairs and say with truth that everywhere in this broad land there was not one dollar of any character or of any kind of money in circulation that was not equal to every other dollar in value.

But, Mr. Speaker, it has been said on this floor, it has been said by the Chief Executive of this country that this trouble that now exists all over the land is caused by this very policy. It is alleged that the present financial distress is the result of a policy that maintained our money at an absolute parity for a period of at least fourteen years, and still maintains it.

I ask, in view of these facts, what there is in this charge that the money that has been authorized by the Bland-Allison law and the money that has been authorized by what is known as the Sherman law, supplemental to the Bland-Allison law—what is there, Mr. Speaker, in the character of the money issued under these laws, in face of the prosperous condition of the country that prevailed up to within the last few months, that has caused this terrible depression?

I can remember back previous to 1860 when the people of the country did not have any confidence in the old Democratic money that was furnished for circulation. I remember that period very well; and there are many gentlemen on this floor whose memory carries them back to that time, and some to an even earlier date. When the people then became afraid of the money in circulation what did they do with it? Did they hoard it up? Did they draw it out of the banks and then refuse to lend it to their neighbors or those who wanted it? Nothing of the kind. But the moment that a farmer, or a business man, or a professional man received fifty, a hundred, or five hundred, or a thousand dollars of that old Democratic money he immediately went to work to get rid of it.

Why, Mr. Speaker, a neighbor of mine, a farmer, a very estimable gentleman with whom I was talking, if you please, before I left home, said to me that in 1859 he received between eight and nine hundred dollars for some of the products of his farm which he had sold. He said that he hurried up a little about the collection of it, because he understood the business man to whom he had sold was in failing circumstances.

The eight hundred and some odd dollars was paid him. He lived about four miles out of the town where he received the money. He told me that before he went home that night he paid his little store debt, and hunted for his neighbors who wanted to borrow $50, $100, or $150, taking their notes for it, and went home that night without a dollar of the money in his pocket. That is the condition of things when people are afraid of the currency of the country.

To-day what is the condition? Every man who is fearful, every man who is panic-stricken, every man who is timid is drawing his money, his greenbacks, his gold, his silver, his silver certificates, or his Treasury notes; and if he lives in the great cities where they have safety vaults he is paying from twenty to fifty dollars a year for a little drawer and key in which to lock up his money and keep it safely. And the farmer in the country and the mechanic in the town is drawing out his little savings he has laid up and hiding it away in some place in his house.

Does that indicate, Mr. Speaker, that the people of this country are afraid of the money now or prospectively? If they were afraid of it now they certainly would not hoard it up; if they were afraid of it prospectively they certainly would invest it somewhere and put it into something in which they would have some confidence.

The SPEAKER *pro tempore* (MR. RICHARDSON). The time of the gentleman has expired.

Mr. MARSH. I would like, Mr. Speaker, the indulgence of the House for about ten minutes longer.

The SPEAKER *pro tempore*. The Chair will submit the request to the House.

Mr. MARSH. I served for six years in this House and did not consume an hour of the time of the House.

The SPEAKER *pro tempore*. The question is not debatable. Is there objection to the request of the gentleman from Illinois for an extension of his time for ten minutes?

There was no objection.

Mr. MARSH. Mr. Speaker, I am very much obliged to the House for the courtesy it has shown to me. I was speaking of the want of confidence that has been alleged on the part of the people in the money of the country. In view of what I have stated, Mr. Speaker, it can not be that this trouble now existing comes from the want of confidence in the ability of this

Government to maintain its money on a parity. There is nothing in this country that the people, rich and poor, have as much confidence as in the paper money—greenbacks, silver certificates, Treasury notes, and national-bank notes—and gold is being offered everywhere for this so-called discredited paper.

Propositions are being made by gentlemen to cut off thirty millions or thirty-five millions annually of the additional Treasury notes to the circulating medium of this country. The proposition that is involved in the bill offered by the gentleman from West Virginia [Mr. WILSON] proposes to repeal that clause of the law, and the only law that is upon the statute books of this country which increases from month to month the circulating medium of the country. And yet gentlemen who are in favor of doing that are at the same time in favor of extending the power of the national banks of this country to issue additional circulation. They are proposing to authorize the national banks to increase their circulation many millions of dollars without the depositing of one dollar of additional security.

That question I do not care to discuss to-day, or in the remaining ten minutes. I thought when I got up here that five minutes would answer me, but I think now it would take me three hours to get through this whole question, if I were allowed to occupy that much time. I want to say, Mr. Speaker, as a citizen of Illinois, as a representative of an intelligent constituency, this much for this policy inaugurated by the Republican party in 1878, and indorsed by the Republican party in 1878, maintained by the Republican party in 1890, supplemented and buttressed by the united vote of the Republican Congress in 1890. If this policy under which this country has flourished, under which the poor man and the rich man has been able to do well, is to be abandoned upon the behest of gentlemen upon the other side, or by the votes of its former friends upon this side, then I give you notice here for what it is worth, no more, that when this policy of purchasing bullion and supplying this country with a silver currency side by side with gold, when that policy shall have been abandoned, or when I see unmistakable evidence that it is the purpose and the intent of the American Congress to abandon it, then, Mr. Speaker, I will join the ranks of those gentlemen in this House and of those magnificent people whom I represent on this floor, in favor of the free and unlimited coinage of the silver dollar upon a ratio that may properly be agreed upon. [Applause.]

If I believe on Monday next, when this vote is in progress; if I shall then have evidence satisfactory to my own mind that this Wilson bill, which knocks out forever in this country the future use of silver as a standard money, that that measure will carry in this House and at the other end of this Capitol, I, individually, on my own responsibility, for which nobody is responsible except myself, will favor the doctrine of the free and unlimited coinage of silver and gold in this country, and I will favor a coinage based, as nearly as reasonable men can ascertain the point, upon the relative value of the two metals composing the coins and put the two metals side by side in circulation, and let each take care of itself; and then I hope the country will be done with this trouble, and turmoil, and perplexity, and demagogism on the subject of gold monometallism on the one hand, and the free and unlimited coinage of silver on the other. [Laughter and applause.]

I would, in the language that is popular on the banks of the Mississippi River, where I reside, "let the longest pole knock the persimmon." [Laughter.] And I want to say further that I am not sure but that is the course we ought to have pursued in 1878.

Yet, Mr. Speaker, it is said here in opposition to that—it is said on both sides of this House by gentlemen who differ with me—that you can never have the free and unlimited coinage of silver because the two metals will never float side by side upon an equality. That, Mr. Speaker, was the argument that was used in 1878, the argument that induced gentlemen upon this side of the House and upon the other side of the House to vote for the Bland bill.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. MARSH. I would like to have five minutes more, and then I will not ask this House for another minute for two months.

The SPEAKER *pro tempore*. The gentleman from Maryland [Mr. COMPTON] is entitled to the floor.

Mr. DALZELL. I ask unanimous consent that the time of the gentleman from Illinois [Mr. MARSH] be extended five minutes.

Mr. COMPTON. I hope this will not come out of my time.

The SPEAKER *pro tempore*. What is the request of the gentleman from Pennsylvania?

Mr. DALZELL. That the time of the gentleman from Illinois [Mr. MARSH] be extended five minutes.

The SPEAKER *pro tempore*. The gentleman from Illinois [Mr. MARSH] asks that he be allowed to proceed for five minutes longer. Is there objection?

Mr. STONE of Kentucky. I object.

Mr. COMPTON. I regret exceedingly that it should have seemed just and proper to the gentlemen in charge, under and by virtue of whose suggestion this House agreed to give two weeks to debate of this proposition. I believe to-day the question is upon the lips of every man, woman, and child in America, from the richest capitalist in the land down to her whose blanched cheeks and withered lips hardly give strength to cry for more bread for her perishing children, "When will Congress act, and why does not Congress give us relief?"

And if, Mr. Speaker, the protraction of this debate for one second longer by me would defer that result I am ready and willing to take my seat. But, sir, since I know that that result would not follow, and since so many gentlemen have seen fit to express their views, I ask the indulgence of this House for a very brief space, while I simply do two things; first, give a short explanation as to my own position on this question, and secondly, something of a reply which I think can be made to the suggestions which have fallen from the lips of our Republican friends.

Mr. Speaker, I have no concealment to make. Two years ago, during the Fifty-second Congress, I was ready at any moment to vote for the coinage of the product of the American mines at an increased ratio. I believed then that, notwithstanding the fact that I believed that commerce and business and the commercial intercourse between this nation and others would be hampered, restricted, and injured by the further operation of the McKinley bill and other legislation fastened upon the statute books by acts passed in the Fifty-first Congress, yet I had such faith in the power of production of my country that I believed that the demand of other nations for our cereals, our pork and meat products, for our coal oil and other products, both crude and manufactured, would so arrange things that the balance of trade would still remain in our favor, and that when foreign countries came to settle with us the payment would be in gold and that we could remain upon a firm basis.

But, Mr. Speaker, that vision has been wiped out; that opinion has been done away with. I have lived to see a condition of things which I did not then dream could come about; and in the face of these conditions I am ready here to-day unhesitatingly to say that my opinions and convictions have changed, and that I shall vote for the unconditional repeal of the purchasing provision of the act of 1890. [Applause.]

Mr. Speaker, our friends upon the other side have tried from the very inception of this debate down to to-day, and by no one more eloquently and forcibly, that I have heard at least, than by my distinguished friend from Michigan [Mr. BURROWS] to persuade this House and the country that this condition arises out of the fact that the Democratic party has come into possession of this Government. Why, Mr. Speaker, do our friends suppose that our memories are so short, and that the memories of the people of this country are so short, as to believe such a declaration as that?

Do not they know or have they forgotten, and if they have, let me tell them that the people have not forgotten, that at the close of Mr. Cleveland's Administration a degree of prosperity and happiness and a condition of things, in so far as the welfare of every interest in America is concerned, existed as this country had not known for thirty years. There was peace all through your land. There was plenty and prosperity everywhere. There was not a class oppressed nor an interest depressed because of anything that had occurred during the administration of the Democratic President for four long years.

The SPEAKER *pro tempore*. The time of the gentleman from Maryland has expired.

Mr. FITCH. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended five minutes.

There was no objection.

Mr. COMPTON. I thank the gentleman.

Now, Mr. Speaker, we all know, and they know how it was and why it was that in the succeeding Presidential election the people were duped to voting the Republican ticket, and how the election of the Republican President came about. Now, sir, judging the tree by its fruit, I have stated the conditions that existed after the expiration of Mr. Cleveland's first Administration, and I defy successful contradiction. It is simply history, no more, no less. Sir, the Republican party came into power in 1888, and they had four years of undisputed control, not only of the Executive office, but for two years in this House, and during the entire time in the Senate.

Everything, sir, that was placed upon the statute books, and everything that was done and all the results accruing from that action, lie at their door and not at ours. Have gentlemen forgotten that before Mr. Harrison vacated his seat that in four States of this Union soldiers, uniformed and armed, were called to suppress riots of laboring men demanding a slight increase of wages. Homestead, notably, the most remarkable case of the lot? Have they forgotten that when Grover Cleveland left the

Presidential chair he left the Treasury full to overflowing, with $100,000,000 in excess, and that when Mr. Harrison left the chair he left the Treasury actually, absolutely, if the sinking fund had been paid, bankrupt.

And yet I say, Mr. Speaker, our Republican friends would have the country believe that the present financial distress and conditions result from the fact that the Democratic party has control of the Government. How came the Democratic party to obtain control of the Government. Only after very fair and exhaustive discussion of all the subjects controlling in this Government, chiefly hinging upon the tariff. Sir, when gentlemen make this accusation they charge it not properly upon the Democratic party, but on the people of this country, who gave power into the hands of the Democratic party. The plurality of Mr. Cleveland was 382,956 on the popular vote.

His electoral plurality was 132 and his electoral majority 110. No, sir; we are to-day under the baneful influences of the legislation which the Republican party has put upon the statute books. We have nailed our flag to the mast, Mr. Speaker, and they need not suppose for a moment that they will fright the souls of their adversaries by any such declarations or declamation. We have declared, and the people have indorsed the declaration, that we will give to this country a proper financial basis and conditions fitting for the successful execution of business enterprises by virtue of that financial condition. We have pledged this to the people, and we propose to carry out our pledges. We have pledged ourselves to pass a tariff bill which, like the dews of Heaven, shall bear equally and evenly upon every individual and every class in the country, and we will do it.

And, Mr. Speaker, before that gavel shall fall and this Congress shall be declared adjourned *sine die*, there is one other thing that will be inscribed on the statute books, and that is the repeal of the odious Federal election laws, which have done such injustice to the people of this country. [Applause.]

[Here the hammer fell.]

On motion of Mr. FITCH, by unanimous consent, Mr. COMPTON'S time was extended three minutes more.

Mr. COMPTON. Now, Mr. Speaker, I simply desire to say, in conclusion, a word to my silver friends. It is useless, gentlemen, to talk to me about reconstructing and refurnishing and repolishing the corners of the temple while the building is on fire. [Applause.] I believe that the outrageous purchases of silver under the provisions of the act of 1890 have brought us to the conditions which exist to-day, and, believing that, I regard it as my first and highest duty to vote for the repeal of that act. When the fire has been extinguished, then I will stand with you to polish the corners of the temple with silver, and, if necessary, to cover it all over with that shining white metal. [Applause.]

Mr. ALLEN. But you will tear down the temple in the meantime. [Laughter.]

Mr. COMPTON. In the meantime the temple must be preserved from the conflagration which menaces it, and to do that will require a concentration of all our powers. If that is not done the day will come when you will have neither a gold nor a silver basis, but fiat money, and when you will be the laughing stock of the commercial world. [Applause.]

Mr. MONEY. Mr. Speaker, for two weeks I have watched the tide of discussion as it has ebbed and flowed from one side to the other in this Hall, sometimes in storm and sometimes in calm, and I have heard statements made upon this floor intended, perhaps, as arguments of persuasive power addressed to Democrats, conjuring them, in the name of the President, to stand by him in his policy. Mr. Speaker, if a stranger to our institutions could have heard this debate he would have pertinently asked in what capacity are these men assembled in this Hall? Are we here as the representatives of a great people to declare law, or are we here as a degenerate Senate to record the rescripts of the emperor?

Gentlemen have been complimented by the monometallists on this floor for the courage of expressing their convictions, and of changing from the bimetallic standard of the people. I think that the plaudits which those gentlemen have elicited here are but a poor exchange for offended constituencies. [Applause.] Sir, I am here to twit no man for any change of purpose, because I myself will not vote as I intended to vote when I first came into this Hall. I came here standing upon the Democratic platform. I believed it to be an enunciation of political principles not only intended to declare the policy of my party, but handed to us as a letter of instruction for our guidance in legislation.

I can not subscribe to the sentiment of my eloquent and distinguished friend from Maryland [Mr. RAYNER] when he speaks of its declarations as "glittering generalities." They are not a group of postulates, handed down to the people to be afterwards reasoned out to correct conclusions. They do not glitter like the milky way, that "meeting of gentle lights without a name," but each separate, distinct proposition stands forth a complete orb blazing as a great fountain and center of political light. The people who met in Chicago through their representatives meant what they said, and I would like to inquire of my friend from Maryland whether in the canvass which he prosecuted with such distinguished ability, he told his audiences that he was talking to them about "glittering generalities"? [Laughter].

The people had met there in convention and they knew what they wanted, and every man who sits in this Hall as a Democrat to-day stands pledged upon his honor as a Representative to carry into full effect and force every pledge made in that platform. The convention rejected a proposition on a vital question—the tariff—because it was a false echo to the popular demand. For what purposes, with what intent, were "glittering generalities" placed in a national platform? Was it for the purpose of deceiving the voters? No, sir; that platform was but an expression of the popular will, as voiced by the representatives whom they sent to that convention. If those generalities were put there at all as generalities, they were put there to induce, by persuasive power, the people who held the ballot to support the candidates nominated upon that platform.

Would those candidates have been nominated and elected unless it was thought that they reflected the wishes and the will of the soverign people of this country? Mr. Speaker, I came here announcing in the newspapers, which did me the honor to interview me, that I was for the prompt, immediate, and unconditional repeal of the Sherman act; but I added that I stood upon the Democratic platform, and wanted all the things to follow that had been nominated therein. But when I ascertain from the President's message, when I learn from the debates in this Hall and from private conversation with monometallists, that it is not intended that this Congress shall perfect any measure that will secure bimetallism, then I, perhaps the only one in this House, have changed my front without changing my views.

I intend now to vote against the repeal of the Sherman law. [Applause.] I intend to carry out, so far as my vote and my speech can do so, every declaration and every promise made by the convention of my party.

[Here the hammer fell.]

Mr. KYLE. I ask unanimous consent that the time of my colleague [Mr. MONEY] be extended five minutes.

There was no objection.

Mr. RAYNER. I would like to ask the gentleman from Mississippi a question.

Mr. MONEY. I yield to the gentleman.

Mr. RAYNER. I wish to ask whether in the Democratic convention at Chicago free coinage resolutions were not voted down?

Mr. MONEY. I was not a member of that convention; I never heard that it did. I am speaking of the platform as published to the people of the United States, the platform upon which you and I made our canvasses, and upon which Grover Cleveland was elected President of the United States.

Mr. RAYNER. If free-coinage resolutions were voted down do you not think that shows what was the intention of the convention?

Mr. MONEY. I do not know the terms of the resolution to which the gentleman refers; I do not know that there was such a resolution, though, of course, I do not question the gentleman's statement. But whatever may have been voted down it is to be assumed that the convention carefully weighed every resolution which was adopted. I am not talking of resolutions which failed. I am talking of those upon which the convention impressed the stamp of its authority and delivered to the people of the United States as a pledge of the performance of the members of that party here and at the other end of the Capitol and at the other end of the avenue. There is not a member now on this floor, whether he be Democrat, Republican, or Populist, who was not pledged to bimetallism in one shape or another.

Gentlemen speak of the platform of the Democratic party demanding the repeal of the Sherman law. Is there any such proposition before this House? That platform did not ask for the repeal of only a single section of the Sherman law; it asked for the repeal of the whole law; and that demand was embraced in the seventh section of the platform, which was intended to cover this whole money question as a unit, not in fragments. That platform declared for the rehabilitation of silver, and all of our platforms have so declared. We said last year, gentlemen, that we had not had the power to carry out the will of the people in this particular, but that if a Democratic administration should be placed in power by their suffrages they should have the use of silver at some ratio to be afterward determined.

Why was the repeal of the Sherman law demanded by the convention at Chicago? That law was not condemned on account of its positive demerits—not condemned *per se*—but because it was a "makeshift" substitute for a free-coinage act; and the gentleman from Maryland knows that fact. Why, sir, the author of the Sherman act has declared that his only excuse for pre-

senting such a measure was to prevent the passage of a free-coinage act. And in that view every Democrat on this floor voted against that act and every Republican for it. We believed the Sherman law bad, but not worse than nothing; bad compared with free coinage, which is good and which we demanded. The repeal is demanded in order that we may make way for free silver, not to make way for the destruction of silver. That is the obvious, the fair reading of the resolution, according to my rule of construction. The voters so understood it and received it and voted for it. The canvassers and candidates so understood it, expounded it, and spoke for it. Mr. Cleveland so understood it and indorsed it in his letter of acceptance, and although a makeshift for free coinage, and bad in comparison, yet it does give each month to the country $4,000,000 in Treasury notes—better than greenbacks, because they pay import duties; because it coins $2,000,000 a month of silver dollars; because it aids to keep down the rising price of gold, which, as it appreciates in price, depreciates all products of human industry, and in that the wages of labor, and makes more grievous to be borne the burden of every debt in the land. The Sherman law had another value: the purchase of 54,000,000 of ounces of silver each year, which it orders, is the basis of every proposition made in international conferences for the restoration of silver to its ancient use as one of the money metals of the world.

Now, I can not charge inconsistency upon the other side of the House because they rush forward so readily and anxiously to slay their own bantling. They have pursued a persistent opposition to the use of silver as money. They voted for the Sherman act, not because they wanted such an enactment, but to prevent the free coinage of silver. They are monometallists; they wish to enhance the price of gold, to increase its purchasing power; they want the single gold standard; every law against silver was their work. And when they see the chance to take another step in the direction of preventing such coinage, they come out like men and do it.

I care nothing about the charge of inconsistency. The greatest English statesman of this century has said that the vanity of consistency is the vice of statesmen. We all know the maxim that he is a fool who never changes his opinion. But, gentlemen, we are too fresh from our pledges to the people now to prove recalcitrant to the trust which we received at their hands. No man can escape the force of a moral obligation; it bears just as heavily upon the Kaiser as upon the peasant. We are told, too, that we shall be treasonable to the President if we do not yield to an intimation of the Executive pleasure in this matter.

Gentlemen, I do not associate the President with any such statement as that. I have too much respect for him as an individual and for his office; but I respect him for those qualities which I respect in other men. We are told that we shall be untrue to the President if we do not stand up here and vote to repeal, not the Sherman law, but a particular section of it. Well, are we to be untrue to him, or to the people of the United States? Fourteen million votes were cast at the last election, and every one of them was cast for a candidate standing on a platform that demanded the free coinage of both metals.

Our duty here is to those who sent us here. We are not sitting in a house of lords where a member represents himself and his own interests. We are here simply as the proxies of constituencies; and those constituencies have spoken in such tones that no man can misunderstand them unless he chooses to do so. We do not want to hear anything, then, about the persuasive power of the Executive in matters of this sort. I do not believe it has been exerted: it has only been talked about, and I believe without the President's approval.

[Here the hammer fell.]

Mr. STOCKDALE. I ask that the time of my colleague be extended for ten minutes.

There was no objection.

Mr. MONEY. It may be true, Mr. Speaker, that there is a higher sense of duty than that which the Representative owes to his constitutents; but when I take at the desk here an oath to support the Constitution of the United States I take it as a Representative, not as a mere individual subject to change of conviction and likely to present my own private views instead of those which the program of my party may have laid down for me. I do not take any personal oath of allegience to the President of the United States, or any other man.

I say, sir, that suggestions of this character are improper in this Hall; they are an affront to the dignity of this body. We are part of a great coördinate branch of this Government; and we ought to be presumed to be not only capable of acting, but determined to act independently of any suggestion whatever that may come from any quarter, and last of all from the Executive. Subserviency is the most dangerous quality of which Congress can be capable, and more disastrous in its consequences than any possible settlement of the silver question.

It was the care of those sages, patriots, and heroes who founded this Government, and who thought they had devised a new method by which popular institutions could be perpetuated, that there should be an absolute divorce between the three branches of this Government and the absolute independence of each.

It was never intended that the President of the United States should do more than suggest in his message to Congress what measures he thought demanded its attention. That he has done, Mr. Speaker, in a clear, forcible, and manly way. He has presented his views upon this question to us. And we are also told here, and I am astonished at the statement, coming as it did time after time from the lips of gentlemen on the other side of this question, that we had no business nominating Mr. Cleveland with our knowledge of his previous standing on the question of silver.

Is it true, Mr. Speaker, that antecedent statements or expressions of a candidate are to abrogate the force of party platforms? Is it true that when you select a candidate that he is to be his own platform unto himself, and the great masses of the Democratic party and their declarations are to go for naught? Is one man to step into the scale and then the balance of his party to fly up in the other end?

But, Mr. Speaker, it is not true; because Mr. Cleveland gave his indorsement in his letter accepting the nomination to the proposition for the coinage of both metals, silver and gold, at a parity to be fixed by Congress—he, too, declared that the readjustment of the relations between the two metals was the policy of the Democratic party. So that part of the excuse for repeal fails.

We hear a great deal of talk about what the people of the country demand. Who is to judge what they want? Every man believes his constituents to be the people, and I have heard distinguished gentlemen here, over and over again, detailing the direful results which would follow to the members of this House who dared to depart from the will of the people, which will was the repeal of the Sherman act. Well, Mr. Speaker, the latest we have heard from the people of the United States in regard to that question was in the November election, and I repeat it, sir, that every man who cast a ballot at that election for the platform of the Democratic party cast a vote that demanded the free and equal coinage of both silver and gold on some ratio to be fixed by legislative enactment.

Then we are told that terrible results will follow if we do not repeal this law; that there is a great panic in the country caused by the Sherman act. I deny that it is the cause. There is a panic prevailing; that no man can deny, but it does not necessarily follow that it comes from the Sherman act. There is a depression in industry not only in this country, but all over the world, in every land, in every industry, in everything except gold. Do you mean to contend that that is because of the operation of the Sherman act? If gentlemen will read the monetary history of Christendom for the last twenty years they will be able to trace its origin and cause.

When silver was demonetized by the United States and Germany in 1873 the ablest minds in the world, who had made a study of financial questions, predicted that the very things which have happened would happen. Their prophecies have been verified as fully as any recorded in Holy Writ. Mr. Ernest Seyd, Wolowski, Molesworth, Allard, Mr. Balfour, and all the able publicists of the time, declared that the demonetization of silver would be followed inevitably by falling prices all over the globe, by the appreciation of gold, and by the necessary ruin and commercial distress that would follow from it. That declaration has been fulfilled to the very letter.

So deep was the distress, so universal the depreciation of prices, that the English Government thought it of sufficient moment to appoint a royal commission in 1885 to inquire into the depression of prices. The commission was composed of the ablest men in England. Much evidence was taken, and all available statistics were carefully examined, and they came to these conclusions: That the depression dated from the year 1873, or thereabouts; that it extended to nearly every branch of industry, not only in England, but to all the industrial countries of the world; that it appeared to be closely connected with the serious fall in general prices; that the duration of the depression had been unusual and abnormal, and that no adequate cause was discoverable unless it was found in the general dislocation of values found in currency changes.

This commission recommended that another commission be appointed to inquire into the relative value of gold and silver. The last commission indorsed the findings of the first, and further added, that the destruction of the old relative value between silver and gold had practically turned legitimate commerce into gambling.

They tell us that things have gone down, but gold has not

gone up. Why, we were asked the other day if we could point to a man, in all of this discussion, who could prove the appreciation in the value of gold.

Mr. Speaker, we are asked to prove a self-evident proposition. It is just as if I should take you to that window, invite your attention to the magnificent landscape that spreads its glorious beauties under the sun, and then be asked to prove that there is a Potomac River or a Washington Monument. You do not prove things obvious to the senses. Not only has the enormous appreciation of gold been proven by the fulfillment of prediction, but by the royal commission appointed by the Imperial Government to make an inquiry into the matter and to report upon these things, as well as by every monometallist in Europe, as well as the bimetallists.

Mr. Balfour said that in fifteen years it had appreciated 35 per cent. Every delegate who debated the question of silver on either side in the international conference said that gold has appreciated; some that the appreciation was 50 per cent. How prove it? By showing you the cause and effect. It is a fact well attested that there was a depreciation of prices and an appreciation of gold following the demonetization of silver; it was a synchronism so striking that they themselves are put upon explanation to show that the two things do not stand in the relation of cause and effect. But it can be proved strictly by the rules of logic, because every man knows when you strike down silver in any country in the world, when you deprive it of its functions as money, you have increased the demand for gold. You know how even the gentlemen who favor this repeal have told us that the earlier we began in the scramble for gold the sooner we would get our share of it. That has been stated over and over again by the advocates of repeal. Then, if it is true, according to the natural law of trade, the law of supply and demand, when you increase the demand for anything you increase its price.

Then there has been an increasing demand for gold and there has been an appreciation of the price of gold. Then if we strike down silver to-day, continuing the decline in the price of silver which followed the closing of the mints in India to free coinage, where will the price of silver go? You make your condition worse by this act, for not one single advocate of the repeal of this act has indicated in any speech in this House that those who favor this policy are willing to take upon themselves the task of adjusting the ratio between gold and silver and providing for its coinage.

My distinguished colleague [Mr. CATCHINGS], who, I think, made the ablest speech that has been made on that side of the question in this House, distinctly announced that he would not, at this time, vote for the free coinage of silver at any ratio.

In the international monetary conference last year, Mr. Rothschild, a delegate of Great Britain and the highest representative of the creditor class in the world, declared that England must be true to her interests and remain monometallist, because she was the creditor of the world and London was the banker of the world, for all bills of exchange were naturally payable in gold. He gave this warning: "If this conference were to break up without arriving at any definite result, there would be a depreciation in the value of silver which it would be frightful to contemplate, and out of which a monetary panic would ensue, the far-spreading effects of which it would be impossible to foretell." Mr. Goschen, a British delegate, made substantially the same statement in the Paris conference of 1878.

The closing of the mints of India to the free coinage of silver was hastened, if not caused, by the apprehension of the action now proposed. The first proposition submitted by Great Britain at the last monetary conference was that the United States should continue the purchase of the amount of silver provided by the Sherman act, as a basis of any international agreement to be made for the rehabilitation of silver as the money of the world.

If, by this proposed legislation, you destroy this prerequisite of international agreement, it is idle to talk here or elsewhere of trusting the fate of silver to future conferences. We are about to strike the last blow that destroys one-half the money metals of the world, that dangerously narrows the basis of all credit, that fetters all enterprises, hampers all commerce, discourages industrial energies, lowers wages, and increases all debts. We take a dreadful responsibility, and upon our action hangs the welfare of the millions of this country and of the world.

The gentleman from Michigan [Mr. BURROWS] who spoke so forcibly an hour ago on the other side of this question, declared that there were two great uses of money; that one was as the standard of value, and the other as a store of value; and he said, "Does a man want to store his values, the reward of his labor, in a money that is constantly depreciating?" That, he said, would be a great hardship. So it would; but he takes only one view of the case, and sees one side only of this silver shield. I will call his attention, and the attention of the House, to the fact that there is a third use of money, more important to the masses than either of those he mentioned, and that is, that it is the standard of value of deferred payments.

That is where the shoe pinches. That is where the hardship is to be affixed upon the toiling millions of this land. It is true that a man does not want to store the reward of his efforts in a coin of falling value, but it is much harder that the man who is in debt to-day should be compelled to store the wages of his labor, present and future, to meet the amount of his indebtedness in a coin that is constantly appreciating, as the record shows, at a rate that would make it impossible for him to ever deliver himself from the burden. [Applause.]

[Here the hammer fell.]

Mr. DURBOROW. Mr. Speaker, I do not rise to address the House in the expectation that I may add anything new to this debate, already distinguished by great learning and eloquence; but in this crisis, the greatest since the days of reconstruction, it is the duty of every man who has clear convictions to express them.

On the one hand we have heard of the advantages to accrue to the debtor class and the miner by reason of the free coinage of silver; and on the other hand charges of extortion are made against the banker and the merchant by reason of their advocacy of a single gold standard. I represent neither of these classes, but, believing the object of legislation to be the greatest good to the greatest number, and that the banker, the merchant, the farmer, and the miner is each entitled to his due, I shall know none of the interests of the one except in relation to those of the other.

If there is one consideration more than another which makes me a Democrat it is the fact that the Democratic party is the party of the people, because its legislation has always been in the interest of the masses as against those of any class or section. The responsibility of our party was never greater than it is to-day. It is called upon to supply the country with a sound currency, equally adapted to all classes and conditions of the people.

We suffer to-day more from impairment of credit than from scarcity of money. Commercial experience teaches that sound money will carry twenty or more times its value in credit. It is the quality rather than the quantity of money which forms a sound financial system. Our trouble arises not so much from a lack of money as from a lack of confidence in the quality of the money we have. Confidence is the measure of credit. Confidence is therefore far more important than money; but only the soundest money can give stable credit.

The history of money is the history of civilization. Pebbles, arrows, and skins sufficed for the aborigines. As trade increased a metallic money appeared. Later commerce demanded that the medium of exchange should be made of certain metals everywhere recognized to have distinct value. Where a sufficient quantity of these precious metals could not be obtained it was necessary to supplement them with other articles. In the early days of our own history merchandise like tobacco was frequently used as money, and within a few years the fees in the Supreme Court of the United States were calculated on the basis of the value of this staple.

In Massachusetts, at one time, it was permissible to pay the public taxes in cows, and true Yankee thrift soon sent to the tax gatherer the lean and scrawney kine, while the good ones were retained to increase the possessions of their owners. Even such a system of money as this was much less serious in domestic trade than in foreign. No foreign tradesman wanted such money; he would accept nothing but coin. The foreigner always insists upon the best money or its equivalent.

Some gentlemen affect contempt for the foreign tradesman. My eloquent friend from Nebraska asks, "Are we an English colony or an independent nation?" Mr. Speaker, I say that in trade we are neither. We are nothing less and nothing more than a great and powerful state in the world's confederation of commerce. Let us not mistake isolation for independence. The Chinese wall is no fit emblem for Democracy. Such a policy means a step backward to the civilization which only needs a money that will circulate at home.

Exclusion enriches no one. Nations, like individuals, grow rich through trade. In our colonial days England tried to shut us off from commerce with all nations save herself; but when we became independent the wise men who established this Government favored the greatest freedom of trade. And when in time the nations of Europe were engrossed in wars and in destroying the commerce of one another, the liberal policy of the United States enabled us to make exchanges with all Europe; and it is a fact that the miraculous enrichment of this country in the early years of the century was almost entirely due to our extensive commerce.

We are told that England is able to maintain a gold standard because she is a creditor nation. Shall we now, by legislation, render it impossible for our country to attain that same high position? London is the center of the world's exchange, because the English standard does not vary. All nations, at all times, know the value of the pound sterling.

Where England is strong, see how weak we are to-day. Had the American silver dollar the certain value of the pound sterling, we should never have known the present crisis. But our coin has lost the confidence of the people, and unwise legislation has increased their distrust. Confronted by this situation, we already know that the people demand the repeal of the law which requires our Government to furnish a market for the product of our silver mines.

In the whole course of this debate no one has ventured to champion the Sherman law. All admit that its obnoxious silver-purchase clause should be repealed, but as yet neither we nor the people know exactly what legislation will best meet future needs. Whether justly or not, the masses believe that the Sherman law is mainly responsible for our financial distress and that its unconditional repeal will bring a measure of relief. But if we add a condition to this repeal, we must not expect that the present hoarders of money will open their coffers before the full effects of the new measure shall be ascertained. Until they do this, stringency will surely continue and commerce and industry stagnate.

In 1876, as to day, the Democratic party was divided on the question of relieving the then distressed financial condition of the country, and while many of its members were affected by the fiat craze, yet our national convention of that year placed before the people that great son of New York, Samuel J. Tilden, known to all as an earnest supporter of a sound medium of exchange. Such was his strength with the people and such their confidence in him that the fiat idea was discarded, and we won. The situation of to-day is strangely similar. Our party is again divided; it needs a staunch defender.

At a critical moment in French history the assembly sent for a young lieutenant named Napoleon. When asked if he could protect them from the mob of Paris, he replied, "I always do what I undertake." We now have a leader who has never lacked courage or success. With that keen perception and sturdy advocacy of what he believes to be right he has already pointed out to us the path of honesty and safety. We really won in 1876 because Tilden stood for sound money and because we were wise enough to support him. Let us not fail to support our leader now. [Applause.]

[Here the hammer fell.]

Mr. SPRINGER was recognized.

Mr. RAYNER. Mr. Speaker, I ask unanimous consent that the gentleman from Illinois be given one hour in which to complete his address.

There was no objection.

Mr. SPRINGER. Mr. Speaker, Congress has been called together in extraordinary session by the President of the United States for the purpose of considering the present financial condition of the country. This session has been called in midsummer, at a time when legislative bodies are rarely convened, and when ordinary avocations are suspended, and those whose circumstances will permit it take a vacation for rest and recuperation. The time fixed for our convening suggests an extraordinary occasion, an emergency imperatively demanding remedial legislation.

Now that we are assembled as representatives of the people in this body and as representatives of the States in the other Chamber, it is our duty to consider calmly and dispassionately the present condition of the country, to take into consideration the cause of the present financial depression, and to apply, if possible, a remedy. It is our duty, as the chosen representatives of the people, to afford such relief as may be in our power to grant. It remains to be seen whether we will rise to the importance of the occasion, meet fully the expectations of our constituents, and afford the fullest measure of relief that legislation can bring to bear.

We have already devoted in this House, when our day's deliberations have concluded, fourteen days continuously to general debate upon the financial condition of the country. The present depression, amounting at times to a panic, and at present to a complete paralysis of business, demands and should receive a most patient, careful, and patriotic consideration. Mere partisan considerations should be laid aside; all selfish ambitions should be discarded, and the people's representatives should arise to the high plane of statesmanship which such an emergency demands.

Since I have been in public life no such condition of things as now exists has been experienced. Whatever may be the causes of the present depression—and I shall refer to them later on—the evil hour is upon us; the disaster is widespread, the ruin almost universal. It is not a financial crisis affecting the capitalists of the country alone; it is not a Wall street panic; it is not the throes of Lombard street when the house of Baring Brothers tottered to ruin.

The business interests in every part of the country are prostrated, and even paralyzed; thousands upon thousands of men are out of employment; factories are closed; riots are threatened, and the red flag of the anarchists is flaunted in the presence of public assemblies. Workingmen are demanding employment in all parts of the country. Those still retaining positions are subjected to great reductions in compensation. In the city of Chicago the newspapers inform us that one hundred and fifty thousand men are out of work, and the suffering is great. Mass meetings are being held to take measures for relief. At Milwaukee a mob of two hundred men marched through the street to the court-house and called for the mayor, but a few days ago, and demanded work, amid cries of "Bread."

In New York City the number of the unemployed is increasing daily, and are now estimated at over 200,000. The papers inform us that bloody riots are threatened. Fully 3,000 longshoremen are idle, striking against reductions of pay. Hundreds of banks have failed, the liabilities aggregating many millions, and the assets insufficient to satisfy the demands of the depositors. Since July 14, 1892, more than 150 national banks have failed. Others are trembling upon the brink of ruin. In fact, so far as banking is concerned in the great cities of the country, there is an actual suspension of currency payments.

Only a few days ago a member of this House having over $13,000 on deposit in a New York bank was refused at the counter of the bank $200 in currency on his own check. Whether these conditions be fancied or real; whether they are due in part to the fault of those who would coerce legislation by threatened financial disaster; whether they be the result of conditions brought about by legislation heretofore, or merely imaginary, still, they do exist, whatever the causes may be, whatever the objects may be, and we are called upon as representatives of the people to afford such legislative remedies as may be in our power to do.

Much has been said during this debate as to the causes of the present financial depression. It has been attributed to nearly every fact which has occurred in the history of the country during the past thirty years. I attribute the actual condition which now exists in the country to three controlling and fundamental causes. Others have contributed collaterally, but these three are enough of themselves to have produced the result: First, the tariff legislation since the war, the protective tariff laws which are imposing enormous burdens upon the people of the country to protect favorite interests.

These enormous burdens have aggregated hundreds of millions of dollars every year, which have been extorted from the toil, from the sweat, from the labor of the producers and turned over to the favored few, the capitalists and the money power of the country. This drain upon the people's resources, this making of the rich richer and the poor poorer has been going on, year after year, for more than a quarter of a century, and it would be strange, indeed, if it could go on continually without impoverishing its victims. I estimate the burden upon the people during the last thirty years, caused by the protective-tariff system of this country, at more than $500,000,000 a year.

This legislative bounty to the favored classes has unnaturally stimulated production in many directions, and caused enormous enterprises to be entered upon, only in the end to disappoint the expectations of their promoters. There has been overproduction by this unnatural stimulant; there has been overborrowing, over trading, overdrafting, and thus inevitable disaster. It is therefore the duty of this Congress, and among the first and the greatest of its duties, to apply the remedy which can come by the repeal of all the laws which have contributed to these conditions and to establish, as the Democratic party has pledged to bring about, a policy of tariff for revenue only. That the Democratic party will keep that pledge I have not the slightest doubt; and the sooner the country is advised of the details of that great measure, the better it will be for all concerned.

The second cause, in my judgment, for the present financial condition is found in the demonetization of silver in 1873; and the third cause, the authority given by the Sherman act to purchase 4,500,000 ounces of silver each month, and issue Treasury notes thereon, which Treasury notes, under the ruling of the Treasury Department, were redeemable in gold. The collateral thus held for the redemption of these notes, namely, silver bullion, was discredited even as a collateral, and the sole basis for the new issues of Treasury notes was the faith of the United States for their redemption in coin; and when presented for redemption,

they become a charge upon the $100,000,000 of gold reserve funds for the redemption of greenbacks.

The operation of this law caused an apprehension in the minds of investors, both in this country and in Europe, that if it were continued as a part of the policy of the United States, it would inevitably result in precipitating silver payments and bring our country to a silver-bullion basis. This apprehension, whether well founded or not, has contributed largely to precipitate the present financial crisis, the conditions for which were made possible by the other causes to which I have referred. There are, of course, other causes which might be referred to, but these three, it seems to me, are those most responsible. The effect of the act of 1873, which demonetized one-half of the money of the people, was not realized until 1878 when the United States resumed specie payments.

From early in the war until 1878 the Government of the United States was neither on a gold basis nor a silver basis nor a bimetallic basis. Our sole currency was paper, depending for its ultimate redemption upon the faith of the United States. After the resumption of specie payments in 1878, it became apparent that one-half of the money of the people had become obliterated by acts which took place at a time when the people scarcely knew that such a thing was contemplated. In fact, it is charged that the act of demonetization passed both Houses of Congress without the knowledge of more than half a dozen of its members; without the knowledge of the Speaker of this House or the then President of the United States who approved the measure.

Gentlemen, since this debate began, have often stated that we must not demonetize silver; that to demonetize silver would produce this and that direful consequence. This statement is misleading. Silver has been demonetized for twenty years, and the acts that have been passed since that time have had but little or no effect as measures of remonetization. The first act passed authorized the Secretary of the Treasury to buy, at its market value, not less than $2,000,000 worth or not more than $4,000,000 worth of silver bullion, and to coin the same each month into silver dollars; and provided for the issue of silver certificates upon the deposit of such dollars in the Treasury.

Each Secretary of the Treasury since that time has exercised his discretion by causing the lowest amount of silver which the law provided to be purchased and coined. This act remained in force until it was repealed by what is known as the Sherman law of July 14, 1890. The number of standard silver dollars heretefore coined under the acts of February 28, 1878, and of July 14, 1890, up to August 16, 1893, amounted to $419,332,450. On the same day there were in the Treasury, purchased under the act of July 14, 1890, 133,161,375 ounces of fine silver, which cost the Government $121,217,677. On the 1st of August, 1893, the Secretary of the Treasury reports that there were in the Treasury 363,108,461 silver dollars and $2,843,114 in silver certificates. He also estimated that upon that day there were 56,000,000 standard silver dollars and $64,000,000 in subsidiary sliver coins and $330,000,000 in silver certificates in circulation.

These statements will serve to show the important results which have been brought about by the passage of the Bland-Allison act of 1878. Let us contemplate for one moment what would be the present condition of the country financially if these silver certificates now in circulation, amounting to $330,000,000, and the standard silver dollars, amounting to $56,000,000, were withdrawn from the money of the country. In the midst of the present currency famine, who can estimate the extent to which it would be aggravated and the enormous depression which would result if nearly $400,000,000 of money, now in circulation, were withdrawn from the channels of trade and destroyed?

It must be remembered, however, that this enormous addition to the circulating medium of the country has had no effect upon, and has in no way conduced to, the remonetization of silver as a part of the money of the country. The price of silver bullion has continually fallen in the market until it reached its lowest depth on the 24th of July last, when it sold at 69 cents an ounce. This enormous depreciation can only be realized when we remember that silver at a parity with gold on a ratio of 16 to 1 is worth $1.27 an ounce. The currency which has been furnished to the people by the Bland-Allison and Sherman acts could have been issued as currency, as the greenbacks have been, without the intervention of silver, and based upon the faith and credit of the United States.

The fact that silver is held as a collateral for their redemption has added nothing to the face value of the silver certificate, it passing at par with the paper obligations of the Government and depending for its money power and purchasing capacity on the pledge of the United States that its parity should be maintained with gold, and that it should be received for all dues to the Government and be a legal tender in the payment of debts. These acts, therefore, were not the acts of remonetization. They have not given us a bimetallic standard. We are still, and have been since the resumption of specie payments, upon a gold basis, and all the silver which has been purchased and coined was purchased at its value in gold in the markets of the world; and all of our values in this country, since the resumption of specie payments, have been gold values and based upon a gold monometallic standard.

If, instead of the Bland-Allison act of 1873, we had remonetized silver, instead of $330,000,000 in silver certificates and $56,000,000 in coin in circulation, the coinage of the silver dollar and the maintenance of its parity at the existing ratio of 16 to 1 would have enormously increased the money of the country, and would, in my judgment, if passed at that time, have maintained silver at par with gold at the then existing ratio. The demonetization of silver by this country and the other countries of the world has deprived the people of one-half of the money which would otherwise have been obtainable in the payment of debts. Hence, I reiterate that the three great causes of our present depression were, first, the protective tariff laws, which have exacted millions of dollars of tribute from the people; second, depriving the people of one-half of the money which they otherwise would have had for bearing these burdens and paying these exactions; and, third, the Sherman act of July 14, 1890.

I have voted for every measure which has passed this House in the direction of free and unlimited coinage of silver. I voted for the original free-coinage bill, which passed this House in 1878. I voted for the Bland-Allison amendment, which became a law during that year; I voted for its passage over the veto of the then President of the United States. Since that time, whenever an occasion has presented itself, I have stood with those upon this floor who have demanded the largest possible use of both silver and gold as a part of the money of the people. I voted also against the Sherman law, as did every other Democrat upon this floor. No law ever passed by Congress has degraded silver more than has that act.

The demonetization of silver in 1873 did not destroy silver as money as much as has the Sherman act. The average price of silver bullion for the fiscal year 1890 was $0.968 per ounce, and the value of the bullion in our silver dollar was nearly $0.75. Since the passage of the Sherman act, July 14, 1890, silver has steadily declined, until in July of this year it sold for $0.72 an ounce, and the value of the bullion in the silver dollar was only $0.56. This shows that the depreciation of silver in the three years since the passage of the Sherman act has been greater than it was during the sixteen years which cover the period from the time of demonetization until the passage of the Sherman law.

The depreciation during the first period of sixteen years was 24.4 per cent, and for the second period of three years it was 25 per cent. The Sherman law is in no respect an aid to remonetization of silver. Its continuance upon the statute book is not only a menace to the business of the country, but an insurmountable obstacle in the path of perfect remonetization.

Mr. Speaker, I stand unequivocally upon the seventh section of the Democratic platform, adopted at Chicago in June, 1892. That section is as follows:

SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discrimination against either metal, or charge for mintage; but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted by international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the market and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

This platform has been so often quoted during this debate and so variously commented upon that its terms have become perfectly familiar to the members of this House and to the whole country. I will be pardoned, however, for calling attention to the fact that the first obligation which it imposes upon the Democratic party, the first pledge which it gave and which it must keep, is to repeal the Sherman act of 1890, which is denounced as a "cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal."

We have promised, Mr. Speaker, in this platform "a speedy repeal." That does not imply that we are to postpone repeal until we can devise a comprehensive financial system for this country which will meet the requirements of business for all time to come. It does not imply that we are to incorporate in this repeal bill any other provisions than that of naked repeal itself. It does not require that we should, in the same act, re-

monetize silver, or incorporate provisions revising the tariff, or repealing the 10 per cent tax upon State bank circulation, or repeal the national election laws, or carry out any of the other pledges of the Democratic party in the same act of legislation. It is not the custom of Congress to incorporate in one bill all the measures of legislation which it is incumbent upon Congress to enact.

We have been called together by the President in extraordinary session for the sole purpose of effecting the repeal of the purchasing clause of the Sherman act. The whole business interests of the country are demanding its immediate repeal. All parties in this country, all parties represented upon this floor, are agreed that the purchasing clause of the Sherman act should be repealed. All propositions pending before this House include its repeal, and it is the consensus of opinion throughout the whole country that repeal is demanded. Shall we answer this universal demand for repeal, a demand which meets with no negative response throughout the length and breadth of the land, with the statement that we will not repeal the purchasing clause of the Sherman act until Congress agrees to do something else on some other matter.

The matters especially pressing upon our attention to be incorporated in the same bill, are the various propositions which are to be submitted by the honorable gentleman from Missouri [Mr. BLAND]. Those proposed amendments provide for the remonetization of silver and its free and unlimited coinage at various ratios, from 16 up to 20 to 1. These measures, however meritorious they may be of themselves and in separate bills, were not, in a parliamentary sense, even germane to the repeal bill, and it was only by agreement of all parties upon the floor that they were to be moved at this time. We are under no more obligation to do this than to insist upon the incorporation of a general revision of the tariff into this measure, and insist upon that before repeal shall be granted.

Why not incorporate the tariff into the repeal bill? Because all will agree that it is a subject of infinite detail and should be considered by itself and on its own merits. Is not the great question of the revision of the tariff as important to the people at this time as the remonetization of silver itself? And shall we leave one of these great measures out and insist upon putting the other in? Or shall we leave them both to stand upon their individual merits, and receive that due and deliberate consideration to which the magnitude of the subjects involved entitles them? What is the pledge of the Democratic party in reference to these two measures, the tariff and silver? I have already read the platform in reference to silver. In reference to the tariff our platform, passed in June, 1892, says:

> We denounce Republican protection as a fraud; a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.
>
> We denounce the McKinley tariff law enacted by the Fifty-first Congress as the culminating atrocity of class legislation; we indorse the efforts made by the Democrats of the present [the last] Congress to modify its most oppressive features in the direction of free raw materials and cheaper manufactured goods that enter into home consumption, and we propose its repeal as one of the beneficent results that will follow the action of the people in intrusting power to the Democratic party.

Our pledges to carry out these two propositions are equally sacred, and must be kept in both cases to the very letter. It is just as parliamentary, just as reasonable, to insist that the tariff bill shall be included in the bill for the repeal of the Sherman act as to insist that the measure for the remonetization of silver shall also be incorporated in that act.

In reference to silver, our platform declares that "we hold to the use of both gold and silver as the standard money of the country, without discrimination against either metal or charge for mintage?" So far there is no difference of opinion anywhere as to the meaning of the Democratic platform.

It is so clear and free from ambiguity that no one can misunderstand its meaning. But there is something else promised. What is it? "The dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value." How can this be secured? Two ways are pointed out. One provides that it may be adjusted "by international agreement;" the other, "by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the market and in the payment of debts." I have already referred to the great disparity which exists at this time between the bullion and coinage value of the silver dollar.

The depreciation of silver has, in my judgment, resulted from two causes: first, its demonetization by the United States and other great powers of the world; and secondly, by the enormous increased production of silver bullion since demonetization took place. I will incorporate in my remarks a statement, which I have received from the Director of the Mint, of the production of gold and silver in the world during the past one hundred years. Between 1792 and 1848, the estimates are given by periods of years; after that time, the production of each year is stated separately.

This statement shows, so far as silver is concerned, the number of fine ounces produced and its coining value in separate columns. The coining value referred to is that which existed in the country where the production was coined. It will be seen that, during the past one hundred years, $5,600,000,000 worth of gold was produced, and over $5,100,000,000 worth of silver, estimated at its coinage value, or $500,000,000 more of gold than of silver. The coinage value of the silver produced since 1873 would be as much less, as is stated in this table, as was the difference at the time between the coinage and the bullion value of the silver. It may be worth stating in this connection, by way of digression, that if we were to draw from the world's supply of precious metals during the past hundred years, and were required to choose between a gold basis and a silver basis for our money, the supply of silver would be much less than that of gold.

But it is possible that more of the gold has been used in the arts than silver. The Director of the Mint has furnished me a statement, showing the stock of gold in the principal countries of the world, and I have requested that the countries should be classified so as to show the countries having the double standard and those having the single standard. I will incorporate that statement in my remarks. It will be seen that the aggregate gold coinage of the world is over $3,600,000,000, while the aggregate silver coinage is about $4,000,000,000.

If we should remonetize silver in this country upon the ratio of 16 to 1, one of two conditions would inevitably follow: Either the United States would at once or within a brief period of time pass from the present gold standard of values to the silver standard, or the price of silver bullion would appreciate in value to the coinage value of the silver dollar. The coinage value of the dollar would depend upon the ratio which would be established. If the ratio should be 16 to 1, the coinage value of an ounce of silver would be $1.27. If our Government should pass from the present standard to the silver basis, there would result at the same time a financial crisis in this country with which the present financial depression would be an evening zephyr to a western cyclone.

The hundreds of millions of dollars of foreign capital invested in this country would be immediately withdrawn, or withdrawn as rapidly as possible, from all the channels of our trade and industry. Our credit would be destroyed and we would be remitted to the condition of Mexico, of India, and China, and those other countries now upon a silver basis. We would be thrown out of harmony with the great commercial powers of the world, those nations that buy nearly $800,000,000 of our products every year and from which we receive almost as great an amount of their produce in return. All kinds of business would be prostrated; all classes of industry would be crippled, and in a time like that the greatest sufferers and the most defenseless victims would be the farmer and the laboring man, who depend upon their own sweat and toil for their existence.

Surely, no gentlemen upon this floor desires to take that leap into the dark; desires to plunge our country into an abyss, the horrors of which will tax the wildest fancies of the imagination. The advocates of silver do not desire or expect such a result to follow. They believe that the remonetization of silver will result in its appreciation to its coinage value, if a proper ratio is adopted. What that ratio should be presents a subject of vast importance, and one which requires the most careful and exhaustive investigation. There is no doubt but that the present depreciation of silver bullion is attributable to two causes, as I have heretofore stated, to its demonetization, and to its enlarged production.

In 1860 the value of the gold production of the world was $119,000,000. The coinage value of the silver produced was $40,000,000, and the number of ounces of fine silver 31,556,000. In 1873, when demonetization took place, the world's production of gold amounted to $96,000,000 and the coinage value of the silver produced was $81,000,000, and the number of ounces of fine silver 63,267,000. In 1892 the value of the world's product of gold was $130,000,000, the coinage value of the silver product of the world $196,000,000, and the number of fine ounces aggregated 152,000,000. In this large relative increase of silver production as compared with gold is to be found one of the causes of the depreciation of the bullion value of silver. I doubt whether, in view of the present depression of silver bullion, the United States Government of itself could maintain its parity with gold, with free and unlimited coinage at a ratio of 16 to 1.

There seems to be a general consensus of opinion in the coun-

try at this time that we can not maintain the free and unlimited coinage of silver on that ratio. The advocates of free coinage generally concede this fact, and in this House opportunity will be given, when we take a vote upon the amendment submitted by the gentleman from Missouri, to vote on separate measures from 16 up to 20 to 1. The minority report in the Senate, submitted by the distinguished Senator from Missouri, on the repeal bill pending in that body contains a provision for free coinage on the ratio of 20 to 1. At this moment I am not prepared to say whether that ratio is the correct one or so nearly approximates a just ratio, in view of all the conditions, that it could be maintained by this country alone without the aid of other governments.

The subject is one calling for careful and exhaustive consideration. We can not do it in the brief time in which a measure repealing the purchasing clause of the Sherman act ought to be passed. Let the friends of free coinage, therefore, and all others who desire to bring about by law the largest possible use of both gold and silver as a part of the money of the country, unite in securing the speedy repeal of the purchasing clause of the Sherman act; and when that is accomplished, let us devote our best efforts and energies and abilities to the passage of a measure through Congress which will crystallize into law the other pledges of the Democratic party, the tariff pledge and the silver pledge alike.

But we are told that if we allow this repeal bill to go through without incorporating into it a provision for the free and unlimited coinage of silver that some of our Democratic friends upon this floor and in the Senate, and even the President of the United States, will desert us and call a halt upon silver legislation. I do not believe it. Who is prepared to say that the Democratic party, as represented upon this floor and in the other branch of Congress and as represented in the Chief Executive of the United States, will be recreant to the solemn pledge made to the people of this country, the pledge upon which we secured at the polls in November last an unprecedented majority of the popular votes of the country.

There is just as much ground for stating that we will not carry out our pledges in reference to the tariff or to the election laws as there is for stating that we will not carry out all our pledges in regard to silver. As soon as this repeal measure is adopted I trust that the lawmaking power of the Government will enter upon the consideration of this subject, and the members of this House will put forth every effort in their power to investigate thoroughly, and afterwards to formulate properly, such a measure as will meet fully the expectations of the American people upon this subject. He who falters in that work will receive the just condemnation of his constituents.

If the faltering be upon this floor; if there be members who shall be recreant to this trust, they will find very soon that the places that now know them will know them no more forever. Some have charged that President Cleveland will not cooperate with the representatives of the people upon this subject; that he will not sign his name to a measure giving relief to the people and carrying out our pledge to make the largest possible use of gold and silver as a part of the money of the country. If it be that he will prove false to his trust, it were better for him that a millstone were tied about his neck and that he were cast into the sea.

No, Mr. Speaker, I do not believe that any gentleman upon this floor contemplates such treason. I do not believe for a moment that Grover Cleveland would, in the slightest respect, prove false to the pledges he has made. At no time in the past has he shown a disposition to shrink from the responsibilities of his station or to go back on his solemn pledges to the people. I believe, Mr. Speaker, that the representatives of the people upon this floor, the Democratic party as represented in the Senate, and the President of the United States will unite in making good the promises that we made to the people, and upon which we secured the election of a large majority of this House, a majority in the Senate, and an unprecedented majority of the electoral college in behalf of the candidates of the Democratic party.

I shall, therefore, vote for the pending bill, and in doing so I want to say to this House and to the country, and especially to the constituents that I have the honor to represent, and who have so many years confided their interests to my charge, that so far as I am concerned there will be no faltering step; there will be no hesitation: there will be no step backward in the cause of the people. They have demanded at the polls, and are entitled to receive back the money of the people, the silver dollar. They are entitled to its largest possible use. I expect to labor to the best of my abilities as a member of this House until that end is accomplished.

Mr. PICKLER. If it would not interrupt the gentleman, I would like him to state, before he sits down, in view of his high party standing, what silver legislation he thinks the President will sign?

Mr. SPRINGER. I would be very glad to enlighten my distinguished friend from South Dakota, but that is a subject that will occupy the time of the House for several weeks or months, and I decline to enter upon its discussion at this time.

Mr. PICKLER. If we are to rely on that, we ought to know what it is now.

Mr. REED. Of course it will be satifactory.

Mr. SPRINGER. I hope my distinguished friend from South Dakota will learn something upon the subject before the discussion is ended.

I have seen a letter signed by the Secretary of the Treasury, Mr. Carlisle, addressed to the Senate Committee on Finance, under date of August 19, in which he states that, without allowance for abrasion and loss incident to melting, the value of the silver dollars heretofore coined at a ratio of 1 to 20 would be $333,000,000 (I state the figures in round numbers for convenience), or $84,000,000 less than their present face value. He also states:

To recoin these dollars at a ratio of 1 to 20 would require the addition of 81,000,000 ounces of new bullion, which, at the average price paid for silver under the act of July 14, 1890, ($0.9325) would cost $75,883,000.

He then estimates the loss by abrasion at about $3,000,000, and the cost of coinage at $3,500,000, including transportation, or an aggregate loss for recoining the silver dollars of $89,000,000. He also includes an estimated cost for recoining subsidiary silver coins amounting to $23,000,000, making a total loss, if you include the subsidiary coins, of $112,000,000. This statement is true as far as it goes, but it is somewhat misleading. I have received this day from the Director of the Mint the following letter:

TREASURY DEPARTMENT, BUREAU OF THE MINT,
Washington, D. C., August 24, 1893.

SIR: I have to reply to your letter of the 22d instant as follows:

1. The number of ounces of pure silver which the Government has purchased since the passage of the acts of February 28, 1878, and July 14, 1890, available for the coinage of silver dollars, is as follows:

	Fine ounces.	Average cost per ounce.	Cost.
Act February 28, 1878	291,272,019	$1.058	$308,199,282
Act July 14, 1890	161,521,000	.9328	150,669,459
Act March 3, 1891 (trade dollars bullion)	3,929,068	1.2777	5,020,362
Total	456,722,087		463,889,083

2. The difference between the cost of the silver purchased and coined, under acts of February 28, 1878, and July 14, 1890, to date, has been $76,944,599.

3. If the silver bullion on hand August 16, 1893—133,161,375 ounces, costing $121,217,677—were converted into silver dollars at the present ratio the gain would be $50,950,568, and if coined at a ratio of 1 to 20 the gain would be $16,420,953.

4. If the silver dollars heretofore coined were recoined at a ratio of 1 to 20, without any allowance for abrasion, they would produce $333,222,162. Adding to this the coining value of the bullion held by the Treasury (at same ratio), $137,638,630, would make a total of $470,860,792. The seigniorage on the gross amount purchased would amount to $6,991,709.

I believe that at least $3,000,000 or $3,500,000 of this would be consumed by abrasion, and loss in melting the silver dollars heretofore coined.

Very respectfully,

R. E. PRESTON,
Acting Director of the Mint.

Hon. WILLIAM SPRINGER,
House of Representatives.

It will be seen, Mr. Speaker, from the statement that has been read that the Secretary did not take into consideration the actual cost to the Government of the bullion now in the Treasury and the bullion in the silver dollars which have been coined. It also seems that he estimates the price per ounce of the silver which it would be necessary to purchase to supply the difference in passing from the ratio of 15 to 1 to 20 to 1 at the average price paid for bullion since the passage of the Bland-Allison act, namely, $0.9325 per ounce. If the cost of the bullion which it would be necessary to purchase had been put down at the average paid during the month of July last, namely, $0.724 per ounce, the estimated loss would have been much less.

The new bullion necessary for recoinage would, at the latter price, have cost only $58,916,000, or $16,966,000 less than Mr. Carlisle's estimate. The Director of the Mint, in the letter which has just been read, states that the seignoirage of the gross amount of bullion purchased under the Bland-Allison and Sherman acts, if recoined on the ratio of 20 to 1, would amount to $6,991,000. Thus it will be seen that if we should recoin all our silver bullion in the Treasury and all the standard silver dollars heretofore coined, at a ratio of 20 to 1, the Government would gain nearly $7,000,000 as between the coinage value on that ratio and the actual amount paid for the bullion in the new coins. This does not include the $5,500,000 which Mr. Carlisle estimates for the loss by abrasion, cost of coinage, and transporta-

tion: but if this amount were deducted from the $6,991,000 the Government would gain by seigniorage, it would still leave a balance of $1,490,000 as a net gain to the Government by the transaction.

It is possible that Congress may, before this session adjourns, reach the conclusion that the United States Government, of itself, can maintain free coinage upon a ratio of 20 to 1. I make this statement, therefore, to correct the impression which has gone abroad that the Government would be largely the loser by adopting that ratio.

Mr. BOATNER. Will it interrupt the gentleman from Illinois to ask him a question at this point?

Mr. SPRINGER. Probably not.

Mr. BOATNER. I would like to know of the gentleman from Illinois how he can expect that such legislation as he has described would receive his support could be had in this House when nearly every gentleman who has spoken on that side of the question is advocating and supporting this bill, and is opposed to the substitute on the ground that bimetallism and free coinage in this country at this time is impossible?

Mr. SPRINGER. Well, Mr. Speaker, I can not enter into a discussion of this at length. I will only state that I hope the eloquent gentleman from Louisiana and my other friends upon this floor will be able to convince them that when the Committee on Coinage, Weights, and Measures of this House and the Democratic party as represented in the Senate, shall have agreed upon a measure, that it is their duty as Democrats to act with the party and not desert it in its hour of trial.

Mr. BOATNER. If you will excuse me, just one more question.

Mr. SPRINGER. Excuse me. I will trust my colleagues on that subject as I have trusted them on every subject. I may be an optimist myself, but I never distrust a gentleman until he has shown himself unworthy of my confidence.

Mr. BOATNER. But they have declared they will not do it.

Mr. SPRINGER. I believe in the principle of bimetallism. I favor the free and unlimited coinage of both gold and silver upon such a ratio that every dollar coined will be of "equal, intrinsic, and exchangeable value," as we have pledged the country should be done in the Chicago platform. There is not enough gold in the world with which to do the business of the world. The honorable gentlemen from Maryland [Mr. RAYNER], who first addressed the House upon the pending bill, declared that there was not a "sufficient amount of gold in existence to supply the demands of commerce and the necessities of the world's circulation." No truer statement or one of more significance has been uttered during this debate. Let this fact be conceded and the duty of this Congress is plain and unmistakable.

Mr CANNON of Illinois. I would like to ask my friend a very important question at that point.

Mr. SPRINGER. I have no doubt several gentlemen would like to ask me important questions, but I hope my colleague will excuse me.

Mr. PICKLER. Since you are an authority on finances you ought to give us your views.

Mr. SPRINGER. We must restore silver as a part of the money of the country. I regret that some members upon this floor have reached the conclusion that bimetallism is impossible except through an international agreement. If we are to wait until the great creditor nations of Europe agree to bimetallism, the world's commerce and business must be transacted for many years to come with insufficient money. The Chicago platform does not concede that we must depend upon an international agreement for bimetallism, but, on the contrary, clearly points the way to remonetization through "such safeguards of legislation" as Congress may enact.

If a proper ratio is fixed the United States Government, of itself, can maintain the parity of the two metals upon that ratio; and although other nations may refuse for a time to accept it, our silver dollar, having behind it the faith and the credit of the United States, which are pledged in the pending bill to maintain its parity with gold, will be universally accepted at its face value. Let me remind gentlemen of the unparalleled wealth and resources of the United States of America. Her faith and credit having been pledged, there is no financial system which can be devised, based upon the nation's faith and credit, which will not prove successful.

Every promise made by our country will be kept in letter and in spirit. Those trembling capitalists of this country and in the Old World who may now be panic-stricken for fear that this Government will dishonor its obligations may at once banish their fears. There need be no apprehension of this kind at this time, or at any time in the future. This Government, the richest in the world, will keep all its promises and maintain its faith and credit at all times and under all circumstances. [Loud applause.]

I will have printed as an appendix to my remarks some tables containing statistics of interest in consideration to the pending question.

APPENDIX.

Production of gold and silver in the world, 1792–1892.

Calendar years.	Gold.	Silver.		Total.
		Fine ounces.	Coining value.	
1792–1800	$106,407,000	254,352,656	$328,860,000	$435,267,000

TREASURY DEPARTMENT,
Bureau of the Mint, August 1, 1893.

Mr. SICKLES and Mr. CATCHINGS addressed the Chair.

Mr. SPRINGER. Mr. Speaker, I promised the gentleman from New York five minutes of my time.

The SPEAKER *pro tempore*. For what purpose does the gentleman from Mississippi arise?

Mr. CATCHINGS. After the gentleman from New York shall have had concluded I would like to be recognized.

Mr. SICKLES. Mr. Speaker, the question before the House is, shall Congress obey the almost universal demand of the country for the repeal of the silver-buying clause in the Sherman act.

I shall follow the admirable example of President Cleveland, and consider the question without partisanship or recrimination. I shall not insist that the present condition of affairs is the fault of either party. I shall not contend that the advocates of a gold standard or of a silver standard or of a double standard are responsible for our present financial condition.

Nor is this the moment for defining the financial policy of the country. Large and difficult questions of finance can not be settled in a period of panic and distrust and confusion.

Nor will I affirm that the present crisis is the necessary and legitimate result of silver coinage or of the purchase of silver bullion.

We must look deeper than we have yet looked for the cause of our present situation. Meanwhile we must accept the general belief among business men that the mischief is done by buying too much silver and taking too many steps toward a silver standard for our currency.

My friend, the gentleman from Ohio [Mr. HARTER], told me a few minutes ago that the Board of Trade of New York had addressed the 1,300 boards of trade of the United States, asking their views as to the proper action in the case, and only one out of 1,300 answered otherwise than that the best thing that Congress could do would be to repeal the buying clause of the Sherman silver act.

This crisis may be a periodical epoch of liquidation, such as has occurred in this country half a dozen times during the present century, aggravated, perhaps, and possibly initiated in this instance by a fear that the legislation of the last few years has rapidly led us toward a silver standard, whilst Europe inclined toward a gold standard.

I must confess my obligations to the able champions of both sides of the question for the learning and eloquence they have displayed.

I am not for a single standard, either gold or silver.

The truth is, Mr. Speaker, I have tried a single standard myself for many years, like my gallant friend from Kentucky [Mr. STONE], and I have found it so inconvenient and difficult that I can not commend it to others. [Laughter and applause.]

I am for all forms of currency—gold and silver and paper, National and State—so far as each or either can be kept at par with the best currency, as the best currency shall be determined by the commercial world.

I insist that the wages of the laborer and the price of the farmer's grain and cotton shall be paid in as good money as the bondholder gets for his bond. [Applause.] Legal tender for one must be legal tender for all. [Loud applause.]

[Here the hammer fell.]

The SPEAKER *pro tempore*. The time of the gentleman has expired. The gentleman from Illinois is entitled to the floor.

Mr. SICKLES (to Mr. SPRINGER). Give me a couple of minutes?

Mr. SPRINGER. How much time have I remaining, Mr. Speaker.

The SPEAKER *pro tempore*. The gentleman has nine minutes remaining.

Mr. SPRINGER. I yield two minutes more to the gentleman from New York.

Mr. SICKLES. Mr. Speaker, if I might venture to suggest a measure of partial relief, I would advise that pensions due for the quarter ending October 1 be paid now—assuming that the condition of the Treasury permits this to be done without inconvenience.

We have often anticipated the payment of interest upon the public debt. Why not pay out now to this large mass of public creditors distributed all over the country—men, and women, and children, who have the most touching claims upon public gratitude—thirty millions in small bills and silver? The money will go where it will do the most good—among the brave men who do not hoard their pittance from distrust of the Government they saved, and who are to-day feeble and infirm, and unable to find employment to earn a living.

There are four good reasons for repealing the act that compels the Government to buy four millions and a half of silver every month:

First. Because the act should never have passed.

Second. Because we do not need more silver. We have already more than we want.

Third. Because the Government should not be compelled to buy silver or anything else without reference to the public needs.

Fourth. Because the people ask us to stop buying silver and issuing paper for it, that the Government can not redeem in gold.

No party can afford the responsibility of prolonging for one day the present condition of affairs in our country.

Let us do this good work of repeal, and do it quickly. And then let us go home, leaving matters of ordinary legislation to the regular session.

Let us answer the appeal of the people, forgetting party, and faction and discord, as we would do if we heard the cry that our soil was invaded and our national honor assailed. [Loud applause.]

THE RULES.

Mr. CATCHINGS. Mr. Speaker, I desire, on behalf of the Committee on Rules, to submit a report embracing the rules of the last House which were referred to the committee. I ask that the report be printed in the RECORD, and that the usual number be printed for distribution. I also give notice that I shall call up the rules for consideration as soon as we shall have disposed of the silver question.

There was no objection, and it was so ordered.

The report is as follows:

Your committee recommend the adoption of the rules of the last Congress, with certain changes which are here explained.

First. Rule 8, clause 1, strikes out the words, "on motion made before division or the commencement of the roll call, and decided without debate, he shall be excused, or unless." The effect of this amendment is simply to avoid a motion to excuse a Member from voting, and leaves it to the Member himself to determine whether he has such a direct personal or pecuniary interest in the question before the House as to relieve him of the duty of voting.

Second. In Rule 10 the Select Committees on the Columbian Exposition and the Eleventh Census have been dropped, there not appearing any necessity for their further continuance. Certain select committees have been made standing committees of the House. This rule had already been adopted by the House.

Third. The 52d clause of Rule II of the old rules (the 58th clause of the new) is so amended as to permit the Committee on Rules to sit during the sessions of the House.

Fourth. Clause 2 of Rule 13 is dropped from the rules as reported as being unnecessary. Clause 3 of Rule 13 as reported provides for the disposition of bills adversely reported.

Fifth. Rule XVII, clause 1, is amended by inserting a provision as to debate after the previous question where there has been no debate before it is ordered, and was, under the rules of the Fifty-second Congress, a part of the third clause of Rule XXVIII. This clause is further amended by permitting one motion for the previous question to operate on a bill to its final passage instead of requiring a separate motion for the previous question on the engrossment and third reading and on its passage.

Sixth. Rule XIX is amended by providing that amendments to titles of bills and resolutions shall not be in order until after their final passage and shall be determined without debate.

Seventh. Clause 3 of Rule XXII is amended so as to prohibit debate on questions of reference. Paragraph 4 of this rule was Rule XLVII of the Fifty-second Congress.

Eighth. Paragraph 2 of Rule XXIII is so amended as to make 100 members a quorum in the Committee of the Whole. Paragraph 6 of the same rule permits the committee at any time after the five-minutes debate has begun to close debate; under the old rules the House alone could do this.

Ninth. Paragraph 4 of Rule XXIV is so amended as to allow the House to consider in the morning hour bills on any of its Calendars. The old rule limited this right to bills on the House or Union Calendars.

Tenth. Rule XXVI, second paragraph, is amended so as to give the House the same power to proceed with the public business on the days assigned to District business that it now has to Friday in each week, which is assigned to business on the Private Calendar.

Eleventh. Rule XXVIII, clause 3, is amended by striking out so much thereof as provides for debate after the previous question is ordered, this provision having been made a part of Rule XVII.

Twelfth. Rule XXXIV is amended by according the privileges of the floor to the Secretary of the Smithsonian Institution, and by limiting the privileges of the floor to such ex-members of Congress only as are not interested either as party, agent, or attorney in any claim or bill pending before Congress.

Thirteenth. Rule XXXVI is amended so as to permit the Speaker to admit members of the press to the lobby in rear of the Speaker's chair, under such regulations as he may prescribe.

Fourteenth. Rule XLVII of the old rules has been inserted as paragraph 4, Rule XXII.

With this explanation, your committee recommend the adoption of the rules herewith reported.

SILVER.

Mr. SPRINGER. Mr. Speaker, have I any time remaining?

The SPEAKER *pro tempore*. The gentleman has four minutes.

Mr. SPRINGER. I yield that to the gentleman from New York [Mr. COOMBS].

Mr. COOMBS. Mr. Speaker, it has been stated upon the floor of the House that silver has never had a fair chance. I wish to say in reply that the Government has taken measures to circulate the silver dollar which it has never taken to circulate any other form of currency.

By going over the reports of the Secretary of the Treasury, I find that the freight which has been paid upon silver dollars sent out to various points for circulation from March, 1878, down to July 1, 1893, has been $1,439,614; that that has moved about 760,000,000 of silver dollars to points where they could be circulated, but that that silver has returned to the Treasury all except $56,233,989; showing that the people do not want the silver dollar. I wish to add one other remark, that the circulation of this $56,000,000 has cost the Government $25.60 for every thousand dollars which is now in circulation; in other words, over 2½ per cent. [Applause.]

Mr. PAYNE was recognized.

Mr. BURROWS. Mr. Speaker, I understand that the gentleman from New York [Mr. PAYNE] desires more than five minutes, and I ask unanimous consent that he be allowed to occupy thirty minutes.

There was no objection, and it was so ordered.

Mr. PAYNE. Mr. Speaker, representing, as I do, a portion of the State of New York, after hearing the remarks which have been made about New Yorkers as the "gold bugs of Wall street," and the "agents of Lombard street," and "Shylocks" and other like things—after hearing so many epithets of that description applied so freely to the people of New York, I feel as though I ought to introduce myself to the House before I commence my remarks upon the pending measure. [Laughter.]

I do not represent a Wall street district. Why, bless your souls, gentlemen, if I should try to run for an office anywhere below High Bridge I would not get votes enough to be returned even among the "scattering." [Laughter.] My district is 300 miles away from Wall street, and three-fourths of my constituents are tillers of the soil. They have the same interests that the farmers of the great West have. They get their living in the same way, and they are as intelligent as the constituents of members from the Western States are, and they know that their relations to the money centers of the world are as close as the relations of the merchant or the manufacturer can be.

They can not move their crops, they can not harvest their crops, they can not reach the markets, unless the money comes from the money centers. And these farmers, some of whom are in debt because they are enterprising men, because they are not always content with the few acres that they can pay for when they start out on the road to success, still realize that it is better for them to have a sound and stable currency, and they realize it as fully as any man from the money centers of the world.

Mr. Speaker, we have had here two long, weary weeks of exhausting debate. There has been some argument and a great deal of buncombe. There has been much of vituperation. We have heard a good deal about the "surreptitious crime" of 1873, when the Congress of the United States "secretly" passed an act to demonetize silver—a measure, by the way, which had been before Congress and the departments, and had been reported from the office of the Secretary of the Treasury time and time again for nearly three years. We have had stated, with great circumstance and detail, the story of Punic faith, and the mythican story about the drummer boy at Marengo, who taught Napoleon war, and christened him "sire" before he had become Emperor. [Laughter.]

The statement was given to the House with all earnestness, as though the gentleman from Nebraska had made a new discovery and was springing it on the House. But all this has little to do with the question of the repeal of the purchase clause of the Sherman act. I voted for the Sherman act in 1890 from a high sense of duty. I shall vote on Monday next to repeal the purchasing clause of the Sherman act, also from a high sense of public duty. [Applause.]

At the time when we considered the Sherman act we had upon the statute book a law which provided for the purchase of $2,000,000 worth of silver every month, to be coined into standard silver dollars of 412½ grains each, and added to the circulation of the country; and then, for fear that silver would not circulate among the people, there was a still further provision that the Secretary of the Treasury might issue certificates for the deposit of these silver dollars, and that such certificates should be taken for all public dues, taxes, and customs duties of the United States.

Gradually that silver circulation, that silver coinage, was getting to a dangerous point. No dollar had ever been dishonored, no dollar had ever been sold below its face value; but a point was gradually being reached where there was danger in continuing the coinage. And then our friends from the silver States who had studied the question of the production of silver, who knew about their mines and their capacity to yield silver, assured us that if we would purchase 4,500,000 ounces of silver each month we would take the surplus silver not of this country only, but of the world, and provide a market for it; and we could issue certificates at the market rate upon that silver. And if this were true, as they said with great reason, it would not be a great while before silver would be on a parity with gold; the price would advance, and then we could safely enter upon the free coinage of silver.

There were other features of that bill which I will not stop to refer to now. These were sufficient to induce me to vote for it. We got rid of the Bland bill, an infinitely worse measure, by taking this compromise and truce of 1890. There has not been a moment since that act was passed when I would not cheerfully have voted to repeal the purchasing clause of it.

Mr. Speaker, in some quarters the distress under which the country is now laboring has been attributed to this silver-purchasing clause. I think myself it has very little to do with it beyond the imagination of men who believe that this is the cause of the trouble. But had the Bland law been upon the statute book at this time, had the Sherman act never been passed, how much worse would have been the Bland bill in creating the very disturbance which we witness now? There would have been added to the currency from the time of the enactment of the Sherman law within about $40,000,000 of what has been already added up to the present time. And now the price of silver is so low that if we should substitute the Bland act for the Sherman law we would get a larger increase of circulation every month from this time henceforth. For this reason I should vote to repeal the silver-purchasing clause.

Mr. Speaker, we must have some standard for the measure of values. There must be some yardstick, some base from which we can calculate values. Since the civilization of man there has been chiefly one metal used as money. Other metals have been used, but this one metal seems to have had a stable character as to its value. It is light and convenient to handle. It is the only metal out of which you can make a five-dollar piece that you can carry about without a horse and wagon to help you. It has seemed to be adapted the standard of money.

When I say that this metal has been stable in character and value you may say that other commodities have depreciated, or that gold has appreciated. But you fail to take into account that every other commodity is produced with less human labor and less cost to-day than ever before in the history of the world. Go to your farms and you find that a bushel of wheat is raised at much less expense than formerly. Instead of the old-fashioned sickle, you now have the reaper; you have safe, convenient, and

easily operated machines to assist in the operations of farming, so that a boy of 12 years of age can now do the work which formerly required half a dozen men.

Follow the product to market, and you find the same thing. You have cheaper means of transportation—not the old ox team, not the horse and wagon, not even the slow and cheap canal boat; but you have transportation by rail, which has decreased the cost of transportation 75 per cent within the last twenty years. Where it cost two and six-tenths of a cent to transport a ton of grain one mile, twenty years ago, it costs to-day but six-tenths of a cent. Not only can the wheat be raised more cheaply, but everything made by the mechanic can be bought cheaper, because of the inventive genius not of the American people alone, but of the whole world. But when you come to compare gold with human labor, you find that the laborer can get more for his work to-day than he could twenty-five years ago. Labor has been appreciating in value in comparison with gold. And when you come to borrow money, how much have you to pay?

Mr. BANKHEAD rose.

Mr. PAYNE. I can not be interrupted; I have not the time. The rate of interest has been gradually and surely decreasing all over this country. Why, sir, it was only a few years ago when in my own State 7 per cent was the lowest rate at which money could be obtained; but for the last five years the people have been loaning all the money the farmers would take at 5 per cent per annum. In your Western States, where you at one time paid 10, 12, and 15 per cent, you now get money for 7, and even 6 per cent.

Mr. HENDERSON of Iowa. In my own county the farmers loan money to each other at 5 per cent,

Mr. PAYNE. As my friend from Iowa suggests, the farmers in his county do not exact more from each other for the use of money than 5 per cent. Money, you say, has been appreciating in value all this time; yet it can be hired in the markets of the world at a less per cent than ever before.

Mr. Speaker, there is a substantial reason why we should have another standard of value than gold, and that reason turns on the question whether there is enough gold in all the world to do the business of the world as a money basis. I believe there is not. I believe that of this metal which can stand the test of fire, which is light and convenient to be carried about, there is not enough to do the business of the world. There is another that appeals strongly to me as an American. There is another metal, the white metal, one-third of which is produced in our own country; and for this reason I am all the more in favor of honoring silver also as a standard of value.

I would like to see both metals, side by side, travel together as the standard of value in this country of ours. If I believed it to be possible I would vote to-day for the free coinage of silver or for the free coinage of both metals in order that they might go forward side by side at a parity. But, alas! Mr. Speaker, the history of the past shows us that this is not a possibility. There has not been in a civilized country the free coinage of both metals existing for a period of years where one has not become cheaper than the other.

So it was in France; so it was in our own country. Up to 1834 silver was the cheaper metal with us, and after that, at the ratio of 16 to 1, silver was a dearer metal. It then passed out of circulation. We were on a gold basis from 1834, practically, down to the present time. They did not travel at a parity. It is not in the nature of things that they should. Why, gentlemen give us as an illustration a couple of cisterns partially filled with water and connected together by the same pipe, and tell us that the water stands on a level in the two cisterns. And so it does. But the trouble with your cistern of gold and your cistern of silver is that they are not exactly alike. One is heavier than the other in the markets of the world. They do not stand on the same level.

When water in one cistern and oil in another cistern, connected by the same pipe, will stand on the same level, then gold and silver will do so, and not until then. They say also that they are like two metals in the pendulum, one expands and the other contracts, and so regulates the motions of the pendulum that it neither loses nor gains time. But the trouble with silver and gold is that you can not put them into the same pendulum. When you invent some process by which they can be put together in the same coin, and you can detect the counterfeits, you may have them traveling together, as in the pendulum, and the shrinkage of the one may counterbalance the gain of the other. But not until then.

Mr. Speaker, until all the civilized and commercial nations of the world resolve upon international bimetallic coinage on the same standard—at a common ratio—I do not believe that silver and gold can travel on exactly the same basis on any ratio. Why, the value depends on supply and demand. Supply is affected by the difficulty in getting one metal or the other.

The demand is affected somewhat by the amount of either metal used in the arts; and as this varies, the price will necessarily vary, not largely perhaps: but it does not require a very large amount in a single nation's coining of the metal to drive the one or the other out of existence. If the metal broker can buy the cheaper metal and put it into coinage and exchange it for the dearer metal, 1 per cent will be a sufficient margin to pay him well for the trouble, and in this manner the dearer metal would gradually disappear from circulation.

But if all of the nations were engaged in the system of bimetallic coinage it would not make so much difference if the dearer metal does disappear from circulation and the cheaper metal remain, because the cheaper metal becomes the universal standard of value between all the nations trading with each other and there is nothing to disturb the commercial ratio between them. And so when you can get the commercial nations of the earth to unite themselves together in the coining of both these metals, then we shall have a bimetallic coinage that will be as enduring as the nations in which they are used.

If we continue purchasing silver at the ratio now fixed, we put off the day when the nations shall come to an agreement. England has stopped the coinage of silver in India; the commercial nations of the earth have nearly all stopped the coinage of silver. Let us stop too, and let us show the world that there is not enough gold in existence to transact the business of the world, and the world will come to our standard and we shall have then international bimetallic coinage.

So, Mr. Speaker, I am in favor of the repeal of the purchasing act to hasten the time when the white metal, produced in our own mines, furnishing labor to our own miners, shall enter into the world's supply of money and with a steady market, and shall find and bring peace, happiness, contentment, and comfort to those sturdy miners of the West.

But they ask us can we show any instance where a silver dollar has not passed current at 100 cents. No; we have not yet reached that point. But go on with this purchase of silver to an indefinite extent; go on to the point where the people will not believe that the good faith and credit of the United States, with the means at their disposal, are sufficient to redeem it in the coinage of the world—the gold coinage of the world—and then you will find the silver at a discount.

Why, my friend from California [Mr. BOWERS] the other day brought in a Mexican dollar, and said he bought it for 60 cents, while he had to give 100 cents for the American dollar with the eagle on it. Now, did the eagle on the coin make the difference? It was not so much the coin or the inscription upon it as the nation which was back of it; because the people know when they see the American eagle on the coin of the United States that the faith and the fortunes of 65,000,000 people stand behind it, pledged in honor to redeem it. That is what made it worth a dollar.

While, on the other hand, the Mexican dollar with free coinage, free silver coinage, has found the level of the bullion value in it, and nothing more. But, Mr. Speaker, the American eagle and the American people could not protect the silver dollar were it not for the fact that the coinage of that American dollar is limited by law. They tell us that France has maintained her coinage of silver at a parity with gold for many years. In 1873 there were presented at the mints for coinage 154,000,000 francs' worth of silver.

That amount came into the mints to be coined against 5,000,000 francs' worth in 1871 and 1872. It frightened the French financiers, and they took steps to stop the free coinage of silver. The Latin union was called together, and they limited the nations forming the union to a coinage of 120,000,000 francs; and in 1876 France discontinued the coinage altogether and succeeded thereby in floating the six hundred millions of silver which they had in circulation.

But our friends say, "Adopt free coinage, return to the Bland law, or leave this statute upon the books." Whichever you do will frighten Europe; and the people who hold our securities will dump them upon our markets, and they will demand the gold and take from us the three hundred millions or four hundred millions of free gold which we now have in this country. It will increase the distress and the doubt and the discomfort of our own people.

Why, Mr. Speaker, in August, in the city of New York, a crowd of men willing to labor and earn bread for their families, carry a black flag through the streets with the words "Work" and "Bread." If this thing continues until the cold December, what will the harvest be to those men and to our country? We are spending two weeks in debate, fourteen days, when fourteen hours would have sufficed: fourteen days, when every man upon this floor had his mind made up and a verdict ready to render on the first day of the session. Why not do something toward relief?

Will the repeal of the purchasing clause do it? It may help to do it? A wise physician often meets a patient who is sick only in his imagination, and he administers bread pills, or the patient becomes a fit subject for the faith cure. Let us administer the faith cure, and to those men who believe that the purchasing clause is the only cause of trouble in this country, that will give some relief.

There are other causes, of which I will not now speak; but I have deprecated some thoughts which have been expressed by gentlemen on the floor of this House. Why, they have railed at bankers as though they were villains, fit only for the State prison. The gentleman from Nebraska [Mr. BRYAN] wanted the statute amended so that the man who stole a million dollars would get more than five years in the State prison.

Well, if a millionaire stole a million dollars from another millionaire it would not make much difference to the people of the country at large whether he went to the State prison for five years or for more than five years; but when a man steals a million dollars he steals it from more than a hundred individuals, and commits a crime as against each one; and five multiplied by a hundred would send a man to the State prison long enough even to satisfy my friend from Nebraska.

But I have thought, when I saw gentlemen upon this floor trying to steal each other's demagogic thunder, that there ought to be upon the statute book a law denouncing as a crime the larceny of demagogy, and I would like to see that statute rigidly enforced, even if it vacated some seats upon this floor. [Laughter.]

But it is said that we are invited to follow the lead of England, and to adopt the gold standard because England has it. Why, we have had the gold standard since 1834, all the time. Now, there are some gentlemen on this floor who are declaiming about following England, who do want to follow England in tariff matters, in the direction in which England wants them to follow. I am more willing to follow England in this direction of coinage, a direction in which she does not want us to follow.

Gentlemen have talked about the price of wheat in India, about English gold buying silver at bullion value and paying for wheat in the cheaper metal. What is the remedy? Why, they have stopped the free coinage of silver in India, and now these wise friends of ours propose that the American farmer shall take the place of the Indian farmer, and that England shall buy our cheap silver with her gold, and pay our farmers for their wheat with the silver thus purchased.

Then they talk about the debts of the farmer, and they want cheap money to help the farmer to pay their debts. I have never come across the farmer yet who was not willing to render dollar for dollar of the money that he borrowed, just as good money as he got when he borrowed it. But the farmers are not the debtors of the world. The debts of the farmers are as a bagatelle compared with the debts of other classes.

The savings-bank deposits amount to more than $1,700,000,000; deposits in other banks, $3,000,000,000; liabilities of insurance companies more than $9,000,000,000. These debts are largely owed to the poor people of the country, who deposited and paid in their premiums in good, honest money on a gold basis. But beyond all this the toiling millions of our people, before the incoming of the present Administration, every week drew for their wages more than $25,000,000. Who has the hardihood to propose to scale the wages of the laboring men of the country with a 60-cent dollar?

Mr. Speaker, pass a free-coinage bill at any of the ratios and you attract the surplus silver, for which there is little market elsewhere; you stimulate its production here; you add untold millions to our silver coinage; you force upon us the single silver standard; by driving out all our free gold you contract the currency by $300,000,000 or $400,000,000; you increase the cloud of distress and doubt.

It has been often asked in this debate why it is that a silver dollar is worth as much as any other dollar. Nay, it is claimed that silver dollars bring a premium of 3 per cent in New York; and one gentleman went so far as to claim that these dollars brought a premium in gold. He did not stop to reflect that the holder of gold coin in New York could go to the subtreasury and get all the silver dollars for which he could pay, else he would not have given currency to the statement.

It is true that a premium has been paid in New York for gold and silver and paper currency, but the payments were made in the certified checks of the bank, or the certificate of the clearing house. It was because of the scarcity of currency. By the statement of the Treasury Department made on the first day of the present month, it appears that there were outstanding greenbacks, $324,394,404; silver certificates under act of July 14, 1892, $143,774,138; subsidiary coin, $64,007,129; amounting to $532,175,671; all of which is redeemable in gold coin.

The gold reserve on that day was $99,202,933. But there is a still further draft on this gold reserve, because the silver certificates, amounting to $330,188,390, were receivable for customs and taxes, and have been used almost exclusively for many months in payment of governmental dues. With our small gold reserve drawn upon at each end, how long can we stand an increase of demands upon this reserve at the rate of $3,000,000 per month? Other gentlemen will do as their judgment dictates, but to me it seems extremely hazardous not to stop their drain at once.

Vote down the repeal of the silver-purchase clause and you further paralyze industry and enterprise.

You add to the countless throng that is already on the way begging for work and bread in this fair land of ours. Is not the threatened revision of the tariff laws, which unsettles values, distresses labor, closes factories, ruins business, and brings about the "change" from the prosperity, so truthfully described by a Republican President in December last, to the universal distress and misery and want, so truthfully described by a Democratic President in this month of August, sufficient, without adding to it a refusal to repeal the law which adds $3,000,000 monthly of uncertain value to our currency, threatening us with cheap and dishonest dollars, ruining our credit abroad, and increasing the distrust of our people at home?

Gentlemen upon this side of the House, the country, as always, expects you to do your duty. Be not disturbed by the taunt that you are following in the wake of a Democratic President. Why, the Republican party passed an act January 14, 1875, for the resumption of specie payment on the 1st day of January, 1879. They fought the greenback craze in the campaign of 1876, and stood firm as a rock against the oncoming waves of cheap money. They were for honest money before our Democratic President was born—politically! Yes, years before he was known outside of the limits of the city of Buffalo by his own party. Because, now, he desires to jump onto the band wagon, I, for one at least, do not propose to give up my seat.

When the roll is called on this measure it will be found that the great mass of the Republican vote is recorded in favor of making every dollar of our money as good as every other dollar. The attempt in this country to array class against class, section against section, the South and the West against the North and the East, will have proved a dismal failure. [Applause.]

Mr. TAYLOR of Indiana. Mr. Speaker, I am reluctant to take advantage of the opportunity afforded each member of this House to express his opinions on the matter under consideration (except as will be demonstrated by the vote which I will give) for the reason that there has already been a surplus of talk, and for the further reason that I am fully aware that I could add nothing to what has been so well said many times during the progress of this debate by able gentlemen who have given almost a lifetime to the consideration and study of economic questions. I have felt, therefore, up to this time willing to content myself with listening to others and at the proper time record my vote.

I am free to say that to a considerable extent I have enjoyed the debate and have been greatly edified by the learned arguments made by the gentlemen who have gone into the merits of the question under consideration. While this is true, I at the same time regret that anyone should have felt called upon to indulge in personalities, threats, or to impugn the motives of any member in defining his position either for or against any of the propositions presented in the pending measure.

I can not believe that anyone who possessed the confidence of a constituency to that degree that they gave to him their suffrage for the important and honorable office of Representative in Congress would permit himself in these enlightened times to be influenced by sordid motives of any kind or character. Several of the gentlemen from my own and adjoining States who differ from me on this question I have known nearly my entire life and have seen some of them in places where their honor, integrity, and manhood were severely tried; at times, too, when there was more at stake than the gift of a paltry office for a constituent or the hope of future political preferment for self, and I have seen them emerge from the ordeal without the smell of fire upon their garments.

By a few here it seems to be considered smart to attempt to smirch the fair name and character of those who happen to think differently from them, forgetful that it is easy to tear down what has required a lifetime to build up. I am happy to know, however, that they are a small minority, and that the great majority of the speeches here made have been characterized by a spirit of manliness, and a willingness to accord to others that which the speakers ask for themselves.

Mr. Speaker, each member, I take it, owes a duty to himself, his constituents, and his country, and if his own conscience is at peace he need not fear the jeers and uncalled-for remarks of men who carry unbridled tongues, and, speaking for myself, I pro-

pose that my own sense of right shall be my guide and not the opinions of any man or set of men upon this floor or elsewhere.

I believe, Mr. Speaker, that my views are in accord with the vast majority of the people I have the honor to represent; they are a well-to-do, thrifty, intelligent, and conservative people, and ask no more for themselves than they are willing to grant to others; they are principally engaged in agriculture, manufacturing, and mining, and as an evidence of their stability and conservatism I can say that up to this moment, although the district contains 186,000 inhabitants, there has not been a single failure of bank or mercantile concern within its borders since the commencement of the panic which is now upon us.

The great majority of our people believe in the silver dollar, and hope for the day when it will be rehabilitated as money along with gold, its equal in every respect before the law. Others there are, equally as honest, who think differently; but let me say to their credit that while I have been the recipient of many communications all have been couched in language indicating a willingness to abide by what this Congress may do. I do not fear a visitation of anathemas or slander from any of the people of that district after casting my vote, as I am sure that I have their confidence and esteem, and that they will do me the justice to believe that my vote was prompted by what I deemed to be right and for what I thought was for their interests.

There is no Representative on this floor who admires the President more than I do. I recognize in him a man of the strictest integrity and honor, possessed of an indomitable will and a deep sense of the grave responsibility resting upon him; but I have long since ceased to be a man worshiper, nor do I think any human being infallible. It would indeed give me great pleasure did my own sense of right coincide with his recommendations made to this House, but such is not the case, and the duty I owe to my people and myself are paramount to the will or wish of any man or set of men.

I can not refrain from casting my vote for any measure that looks to the rehabiliment of silver or that will tend to increase silver as a circulating medium. What we need in Indiana is more money, and are willing that our neighbors of the East appropriate to themselves most of the confidence they are so anxious to acquire.

It is my purpose, therefore, Mr. Speaker, while it is not in all things in accord with my views, to vote for that part of the substitute offered by the gentleman from Missouri [Mr. BLAND] which provides for the coinage of silver at a ratio of 16 to 1, as I firmly believe we can sustain it at that figure, if at any. The other ratios, as presented, would entail an immense outlay for the recoinage of the outstanding coin, or give us coins of different sizes—propositions that I can not see my way clear to give my support, which objections are fully amplified by the letter of Secretary Carlisle to Senator VOORHEES, which I shall here incorporate in my remarks in order to get the same in the RECORD:

COST OF CHANGING THE RATIO.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 19, 1893.

SIR: Referring to our conversation relative to the probable cost incident to the change from the present coining ratio between gold and silver (1 to 16 for standard silver dollars, and 1 to 14.95 for subsidiary silver) to a ratio of 1 to 20, you are respectfully informed that the number of silver dollars coined since 1878 aggregates 419,332,450.

Without any allowance for abrasion and loss incident to melting the same, the coining value of these dollars at a ratio of 1 to 20 would be $333,222,162, or $84,110,228 less than their present face value.

To recoin these dollars at a ratio of 1 to 20 would require the addition of 81,376,700 ounces of new bullion, which, at the average price paid for silver under the act of July 14, 1890 ($0.93½), would cost $75,883,700.

In addition to this, I estimate that there would be a loss from abrasion and in the melting of these dollars of at least $3,000,000, which amount, together with the difference in the face value of the coins ($84,110,288), would have to be reimbursed to the Treasury by an appropriation for that purpose.

From the fact that the silver dollars are distributed throughout the country, it would be necessary, as they are redeemed at the several subtreasuries, to transport them to the mints, and the expense of transportation for $300,000,000, the amount outside of the stock on hand at the subtreasuries and mints at Philadelphia, San Francisco, and New Orleans, would average at least 1½ per cent, or $4,500,000.

I therefore estimate the cost of recoining the silver dollars already coined, as follows:

New bullion to be added	$75,883,700
Loss by abrasion and melting	3,000,000
Cost of the coinage (labor, materials, etc.)	6,290,000
Copper for alloy	68,200
Transportation of dollars to mints	4,500,000
Total	89,741,900

The stock of subsidiary silver coin in the country is estimated at $77,000,000, which at full weight would contain 55,699,875 ounces of fine silver. This amount at a ratio of 1 to 20 would coin $55,843,802, or $21,156,197 less than the present face value.

To recoin $77,000,000 of subsidiary silver into an equal amount of fractional coin at a ratio of 1 to 20 would require the addition of 18,797,625 fine ounces, which at $0.93½ per fine ounce, the average price paid for silver under the act of July 14, 1890, would cost $17,528,785.

There would be a loss of about 2½ per cent by abrasion, from the face value, or about $1,925,000.

I would, therefore, estimate the cost of recoining the subsidiary silver in the country, at a ratio of 1 to 20, as follows:

New bullion	$17,528,785
Loss by abrasion	1,925,000
Cost of coinage (labor, materials, etc.)	2,500,000
Copper for alloy	15,636
Cost of transportation	1,155,000
Total	23,124,421

RECAPITULATION.

Estimated cost of recoining silver dollars	89,741,900
Estimated cost of recoining subsidiary silver	23,124,421
Total	112,866,321

Very respectfully,

J. G. CARLISLE, *Secretary.*

Hon. DANIEL W. VOORHEES,
United States Senate.

In case the foregoing are voted down, I shall vote for the reenactment of the so-called Bland-Allison law, and if that fails of a majority I shall then, feeling that I have kept faith with my people and complied with the pledges I assumed in accepting a nomination as a Democrat on the platform of principles we have heard read so often in this House, vote for the repeal of the purchasing clause of the Sherman law, an enactment that I have at every place in the district where I had the honor of addressing my constituents denounced as vicious in principle, an enemy to silver, born in deceit, and reared in iniquity. I shall do this for the reason that if I can not secure the whole of the promise contained in the platform upon which I went to my people I am willing to accept all of it that I can obtain. I have made this brief explanation in justice to myself for the benefit of my people, to whom I expect to give an accounting for my acts while their Representative. [Applause.]

[Mr. BAKER of Kansas addressed the House. He withholds his remarks for revision. See Appendix.]

Mr. BRAWLEY was recognized.

Mr. MCMILLIN. I ask that the time of the gentleman [Mr. BRAWLEY] be extended twenty minutes.

There was no objection.

Mr. BRAWLEY. Mr. Speaker, the history of legislation is the history of the repealing of bad laws. A list of the mistakes of legislators, of the evils produced or intensified by lawmaking unguided by adequate knowledge, of the statutes whose remote and indirect effects were the converse of those expected when they were enacted would abate the hopes of those fervid spirits who, believing in the plenary inspiration of majorities, would extend the limits of governmental interference; and it ought also, says Buckle, "to moderate the presumption of legislators and teach them that their best measures are but temporary expedients which it will be the business of a later and riper age to efface."

In the nature of the case this must be so, for politics is not an exact science, and in the rapidly shifting changes in our social and economic conditions, the best that we can do is to adapt temporary expedients to the exigencies that confront us.

The druggist's clerk who mistakes calomel for quinine and mixes a prescription which kills instead of cures is held guilty of manslaughter. Our mistakes are more leniently judged, and although they may bring no legal penalty, the consequences may be so serious and far-reaching that we can not devote too much care and thought to the consideration of every measure which is proposed to be put upon the statute book.

The immediate question now before us is whether we shall repeal the Sherman act. I have listened for two weeks to this discussion and have not heard one word in its favor on either side of this Chamber. By universal admission it is conceded to have been a failure in all the purposes for which it was intended. No single voice has been raised in its defense, and although opinions differ as to the extent of the evils to be properly attributed to this act, there is no difference of opinion as to its injurious effects and as to the propriety of repealing it. Its putative father disowns it. It has no defender. Our party has in express terms demanded its repeal. The Republican party does not sustain it. The great business interests of the country believing it to be the main cause of their distress, appeal to us, and our President recommends that it be wiped from the statute book as a necessary step to the restoration of confidence in the fabric of our public credit. The remedy proposed seems so simple that it is amazing that there should be one moment's hesitation in applying it.

Its very simplicity is urged as an argument against its effectiveness. So it was with Naaman when, sorely afflicted with leprosy, he went to the house of Elisha. "Go and wash in Jordan seven times and thou shalt be clean." He was wroth, and said to the prophet, "Are not Abana and Pharpar Rivers of Damascus better than all the waters of Israel? May I not wash in them

and be clean?" So he went away in a rage, but his servants said, "My father, if the prophet had bid thee do some great thing, wouldst thou not have done it?"

The repeal of the Sherman act may be no "great thing," but in the opinion of many it will be effectual to restore "confidence," that elusive thing, the loss of which has brought us to this pass. The very fact that people think so will in itself tend to work the cure, our disease being of the mind rather than of the body.

But our opponents say that they will oppose this repeal unless something favorable to silver is given in its stead, that they will use this act—misbegotten, hateful, and injurious—as a club to extort terms. One would think that the disastrous failure of all previous efforts in the supposed interest of silver would abate something of the confidence and silence the loquacity of its "friends," but writers on mental hallucinations tell us that there are certain forms of insanity where fixed delusions seize upon the mind and generate a firmer belief than any sane person is capable of.

That silver may by some legislative alchemy be transmuted into gold at a fixed ratio is a notion vociferously expressed by gentlemen who seem to be in all other respects sane and whose honesty is beyond question. The steady recurrence of this phenomenon would seem to indicate that it is due to some permanent cause, and the fact that this belief is strongest in those parts of our country that are in a backward stage of industrial development has led to the opinion, in some quarters, that it is due to the desire of debtor communities to get rid of their obligations on easy terms. This is unjust and untrue.

The time allotted to me does not suffice to allow any satisfactory analysis of the causes of the prevailing discontent.

An obscure difficulty is a pervading evil, and the essential condition of its removal is to make it clear. Trained and experienced thinking on monetary subjects is something rare in all communities, and there are certain erroneous opinions floating like a vague mist in the intellectual air which obscure and distort the vision.

CERTAIN PREVALENT DELUSIONS.

The first delusion is that all the available money of the country is in the hands of a comparatively few rich men and that their interest is to contract its volume in order to enhance its value. This error arises from the confounding of capital with currency; and men reading of the enormous wealth of a few individuals are told by those whose interest is apparently advanced by such deceptions that there is a conspiracy on the part of these rich people to oppress them by making money scarce. The truth is, that the wealth of the Vanderbilts, the Astors, the Goulds, and the like, is in property and not in money, and that nearly all of the available loanable capital of the country is in savings banks, insurance and trust companies, and belongs to the frugal poor and to people of moderate means.

The second delusion is that the maintenance of the gold standard tends to make money dear and that a double standard or a lower standard would make money more abundant. The truth is that the question of the standard has no relevancy in itself to the volume of the currency, and there is no quantitative relation between the volume of transactions and the standard that measures them. From 1834 to the suspension of specie payments in 1861 we had the gold standard, in effect, while the volume of currency was regulated by the States. The act of 1873 only enacted into law what was already a well recognized fact. As evidence of this we know that from the foundation of the Government up to that date only about eight millions of silver dollars had been put in circulation.

The third delusion is, that inasmuch as it appears that the gold and silver coinage of the world is about equal in volume, the discontinuance of purchases of silver would strike down one-half of the money of the world, thus doubling the wealth of the rich and doubling the debts of the poor. The truth is that the bill before us does not propose to drive out of circulation any of our silver coin. On the contrary, all of it is to be maintained with the pledge of the Government to keep it at par with gold—just as is the case in France, where a large amount of silver remains in circulation, notwithstanding the fact that for about fifteen years the coinage of five-franc pieces has ceased.

The fourth delusion is that England adopted the gold standard because she is a creditor nation, and that it is disadvantageous and unpatriotic for us to maintain such standard. Appeals to the "spirit of '76" have been unceasingly rung to resist this domination.

The truth is that England adopted the gold standard before the close of the last century, but in the stress of the Napoleonic wars she could not carry it into effect until 1816, when, so far from being a creditor nation, she was in the throes of a gigantic debt. The United States is the only rival for the larger commerce of the world that England has to fear, and she has more to gain than has any other nation from our abandonment of that standard of value which all the civilized people have accepted.

The fifth delusion, which finds the widest acceptance in the South, is that there is some occult relation between the price of silver, the product of the earth in Nevada and Colorado, and the price of cotton, the staple product of the South. Why cotton should be linked with silver rather than with gold, no one can intelligently explain. We were told last year when the antioption bill was under discussion that the main cause of the low price of cotton was due to the dealing in futures, but the great rise in price during the later months of that year, and the intelligent discussion of that measure exploded that fallacy. It was shown by figures which were indisputable that the range of prices from 1850 to 1860 was on the average 10.35 cents per pound and the average prices from 1880 to 1890 were 10.24 cents per pound.

The great increase of production, mainly due to the extension of its cultivation over the vast fields of the South and to the increased use of commercial fertilizers, would sufficiently account for a great fall in prices. The cotton crop of 1860-'61 was less than 4,000,000 bales, the crop of 1890-'91 was over 9,000,000 bales, and as everybody knows the bales of to-day are much heavier than they were thirty years ago.

If prices were affected by the quantity of silver money in circulation they would be greatly higher now than thirty years ago, for there is nearly fifty times more silver dollars in the country now than then. If they were determined by the amount of currency in circulation, as would seem to be natural, prices should be higher now than in 1873, when the alleged "crime against silver" was committed, for the circulation per capita in 1873 was $18.04, while in 1893 the circulation per capita is $23.80.

These facts, which can not be disputed, ought to teach us to look to other causes than to the alleged demonetization of silver or to the alleged contraction of the currency for the lack of prosperity among our agricultural people, which unhappily is a fact beyond dispute. While it is true that a large body of our people are greatly benefited by having cheap food and cheap clothing and that our farmers can buy a larger amount of those things which conduce to comfort with their products even at present low prices than ever before, yet the fact stares us in the face that they are not prosperous, and that the low range of prices for agricultural produce is one of the elements of their misfortunes.

The question of prices is one of the most interesting and difficult of problems, and no general theory on the subject is satisfactory. Until the commencement of the present financial disturbances the rate of interest on money has been abnormally low; wages have been high, agricultural products have been low, rents in cities have been high, all the products in which machinery and mere brute labor were important factors have brought low prices, while the products of intellectual effort have commanded higher rewards than ever before.

There has been no period in the history of the world when a great writer, a great painter, a great doctor, a great lawyer, a great preacher, a great engineer, a great inventor, could command such princely incomes for the product of his brain and hand. Nor are these very high prices confined exclusively to what may be called intellectual products. Fine butter, fine wine, fine fruits, in fact excellent things from the studio, from the workshop, or from the fields, all will bring to-day larger returns than ever before.

A few years ago a plain laboring man, a Frenchman, discovered that the low-lying lands around Charleston were well adapted to the cultivation of asparagus, which had not before been successfully cultivated in that latitude. He has lately retired with an ample fortune as the result of his acumen and industry. These illustrations are given for the purpose of showing that the standard of value or the volume of currency are not the only or chief factors in determining prices.

The sixth delusion is that there is a creditor class in this country seeking to oppress the debtor class. The common opinion is that this creditor class is in combination with the corporations for the purpose of reducing the remainder of the people to poverty and slavery. This belief rests upon pure ignorance, and prejudice which is the outgrowth of ignorance.

The truth is that the railroad corporations, the manufacturing and industrial corporations, are the largest borrowers of money. Their interest is that money should be abundant and easy to obtain at low rates of interest, and their interest, too, is that the farmer should have plenty of money to buy their goods and ship them and travel over their roads.

It is not my purpose to say anything in behalf of the money lender. I know that he is a very unpopular person, always spoken evil of and held in great disfavor. It has been always so. In the drama, in novels, and in real life our admiration is rather for the fellow who spends money than for those who

save it. The spendthrift is always the hero. It is true that when we want to borrow money the man who lends it is looked upon as a friend and benefactor; but when the money is gone and the evil hour of reckoning arrives he is the tyrant and the oppressor. Hateful as may be the man who saves, he is useful; therefore let him live in order that we may borrow from him. Demosthenes, in his oration against Phormio, says:

In the Athenian laws are many well-devised securities for the protection of the creditor, for commerce proceeds not from the borrowers, but from the lenders, without whom no vessel, no navigator, no traveler could depart from port.

I make no pretensions to be a financier or political economist, for my way of life has led me into other fields, and I have very little hope that I can add anything of value to this discussion. I therefore hesitated long before I concluded to take part in it, feeling that I could well apply to myself a story told of Napoleon. On one occasion, when a great battle was imminent, he was reviewing the Imperial Guard, and a soldier in the ranks, carried away by his enthusiasm, shouted, "Forward!" "It is not for you, young man," said the Emperor, "to cast the die of battles."

I have always felt that the business of making laws was a very serious one, and realize the unavoidable uncertainty which attends upon every measure of legislation, and I know that the multitudinous facts of all recorded experience tend to dispel the notion so vociferously expressed nowadays that all the sufferings of our people are removable, and that it is the duty of somebody to remove them. The hard-worked and overburdened people of our land are looking to us with eager faith. Their passions and desires have been inflamed. The builders of political air-castles have dilated upon the possibilities of relief, and have developed delusive expectations and groundless hopes. Men who have once tasted the flattery of knaves are ill-disposed to listen to those who, somewhat acquainted with the laws which govern human affairs, are habituated to consider their mandates and their limitations.

If there was ever a time when men should be tolerant with each other's opinions it should be now, for this is an age of doubt and uncertainty. The whole world seems out of joint. In the material world the vast changes wrought by the new inventions, with the accompanying displacement of labor and dislocation of capital, have unsettled everything; while in the moral world the foundations of religious belief have been shaken, and throughout Christendom there is an anxious sense of impending change. What is to be the character of the subsidence of these moral and material revolutions it is not given to us to know.

One of the wisest of men said, many generations ago: "If we begin with certainties we shall end in doubts; but if we begin with doubts we shall end in certainties."

Remembering, then, that intensity of belief is no sign of truth, and that it prevails most strongly among those who differ most, let us confine ourselves to the attempt to provide a temporary relief for an impending evil.

Amid the cloud of conflicting opinions one fact stands out clear, and that is that under the operation of the Sherman law gold has been driven out of our currency as silver has been infused into it, and that what any sagacious man acquainted with monetary questions would naturally expect to happen has happened, and by reason of this operation we are brought perilously near to the silver standard. The gold in the Treasury upon which the whole superstructure of our currency rests has steadily been going down, and the only source from which it can be replenished—the customs duties—has dried up. The following table of the receipts at the New York custom-house for the dates named tells the story:

	Gold.	Silver.	United States notes.	Treasury notes.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
January, 1889	83.1	6.3	10.6	----------
January, 1890	92.6	2.9	4.6	----------
January, 1891	88.6	2.1	4.1	5.2
January, 1892	66.2	4.3	15.0	14.5
July, 1892	13.9	15.5	28.4	42.2
January, 1893	8.9	15.8	42.1	33.2
February, 1893	9.2	20.7	33.3	36.8
March, 1893	7.8	15.7	28.0	48.5
April, 1893	3.0	23.3	41.0	32.7
May, 1893	0.1	37.8	26.2	35.9
June (20 days)	0.0	15.0	54.0	31.0

It is not surprising that, with the steady disappearance of gold receipts and the steady decline of the gold reserve, the public confidence in the ability of the Government to maintain gold payments has been shaken, and that this distrust in the integrity of our currency system should have spread in other directions.

That there is real danger that the country will slip from the gold to the silver standard, unless something is done to avoid it, is a fact so patent that no one here, so far as I have heard, has ventured to dispute it. We have listened to harangues against the money power, against England, against Wall street, against "gold-bugs," against everybody who is not supposed to be a "friend of silver," but the crucial question has not been touched.

We have had much declamation and more or less turgid rhetoric in favor of "bimetallism," but that is far and away from the real danger which impends, which is, that we are descending steadily from the gold to the silver standard—that we will have silver monometallism. Now, everybody knows, from the experience of other nations, that a great deal of silver remains in circulation when gold is the standard of value, while no gold remains in those countries where silver is the standard. If we should sink to the silver standard all of our gold will disappear and the currency will not only be contracted to that extent, which of itself would be an enormous evil in a country where it is claimed that the circulating medium is insufficient, but the still greater disaster would follow that the currency remaining would, in its purchasing power, shrivel up to accord with the intrinsic value of the silver dollar; the wages of labor, the deposits in savings banks, the policies of life insurance companies, would all be payable then in silver dollars, worth between fifty and sixty cents.

No words can exaggerate the magnitude of this calamity. The present troubles would be as a zephyr to a cyclone. Bimetallism is not, at this juncture, a practical question, for there is no proposition before the House which tends towards securing it. No one whose opinion is of any authority believes that bimetallism can be secured by the free coinage of silver in this country alone at the ratio of sixteen to one or of twenty to one.

There is a great confusion of ideas on this subject. To some, bimetallism means simply the use of both gold and silver in the currency. In that sense every country which has a gold standard is bimetallic, for all of them have more or less of silver, and in that sense everybody favors it; but bimetallism proper means a fixed relation established and maintained by law whereby both gold and silver may be coined without discrimination at a certain fixed ratio. In this sense, there is no nation to-day, either civilized or uncivilized, which is bimetallic. There is no reason inherent in the metal itself why the price of silver should be uniform any more than the price of copper or the price of iron.

Wherever and whenever bimetallism, properly so called, has existed, it has been due to the artificial regulations and manipulations of governments; and so long as there was comparative stability in the production and price of the two metals, the greater part of the world adhered to the bimetallic system, and this adherence tended to preserve comparative steadiness in the price of the two metals; but this stability in price, being due mainly to the action of governments, ceased when this practice ceased, and will not revive, and from the nature of things can not revive, until that practice revives, and it is this bimetallism that the Democratic party pledged itself to in its platform as I conceive that platform.

According to this pledge, we as Democrats are bound to make honest efforts to secure a bimetallic system, either through international agreement or by such "safeguards of legislation" as will secure that end. Our honor and our interest demands that we make an honest effort to secure this end, and I am much mistaken and shall be greatly disappointed if some well-digested plan is not proposed before the expiration of our term of service. When it is proposed it should be considered without passion and without prejudice. I do not conceal from myself the enormous difficulty in the way of its accomplishment, for the trend of events in the last twenty years has been against it, for it is precisely during this period that there has been such great economic changes that we may be said to live in a new world, and the appearances are that this new industrial world prefers silver to gold.

The exact date when the world began to discard silver for gold can not be fixed with absolute precision. Like all evolutionary processes, it was gradual in its operation. It is difficult to mark the exact line of demarcation which separates the animal from the vegetable world. There are many animals, amid the lower forms and types, that are apparently as devoid of volition and free movement as the higher plants, and so far as regards organic structure and mode of life, there is no absolute criterion which marks off the animal kingdom from the vegetable kingdom. The simple cell of contractile protoplasm affords the starting point equally for all organisms, vegetable and animal.

Equal debt paying power was for many years the quality of silver and gold alike; it was the only quality common to each, but just as surely as there has been a constant stream of tendency from the lower to the higher forms, so surely has the economic world been seeking after gold, the higher metal, and discarding silver. Our friends on the other side are constantly harping on the "scramble for gold" among the nations, and they

predict great evils therefrom. The nations seek it because they want it. They want it because it is the "money of the world." We hear of no "scramble" for silver, and this is a bad omen for the cause of bimetallism. The most civilized nations do not "scramble" for it because they do not want it. Why should we seek to load ourselves down with that which other nations discard?

Are we not as good as they, and entitled to the best? It is our pride and our boast that we have the best of everything else; why, then, should we not have the best money? Nobody disputes that gold is the best money—best for our men of business, because we are no longer an isolated people; the ancient modifying circumstances which separated us from the great commonwealth of nations have fallen away and we are among them as equals and as rivals for the world's commerce, and gold is the money of the world. It is best for the laboring man, for it is the wages of his toil.

> We needs must love the highest when we see it
> Not Launcelot nor another.

In the old days there was no question about it among our fathers. The gold standard was discussed and accepted as a proper monetary measure. Those who favored it were not vilipended as traitors to their country. There were no "silver kings" in those days who made life a burden with their harangues. Finding our people in the South and West suffering from real grievances, arising from causes which, although they lie upon the surface, are little comprehended, for we are a simple people, not much versed in monetary science, they have by constant iteration, by sophistries and falsehoods, propagated delusions which have so taken possession of their minds that they honestly believe that the alleged demonetization is the prime cause of all their troubles. Many of those who ought to know better were dupes at first and are now impostors, for finding the silver cult so firmly established they prefer to be its priests, and to perpetuate ignorance, lest they should be discredited when the people awaken to the truth.

Or I should rather call it a fetish worship than a religion, for it has its analogue among the savage tribes. Bastian, the German anthropologist, tells us that in Guinea a sick native who causes the fetish to lie by not recovering promptly is put to death, and anyone who is so audacious as to question the power of the fetish is sacrificed. And now any of us who speak disrespectfully of this political fetish are reviled and threatened with political extinction.

Such and so curious are the anfractuosities of the human mind.

It is loudly proclaimed that the public opinion of this country is overwhelmingly in favor of the free coinage of silver, and that it is now aroused and will sweep out of power the party or the man who opposes it. An enlightened public opinion is irresistible. It would be foolish to disregard it. That opinion in this country undoubtedly favors a bimetallic system, to be secured by international agreement, or by the safeguards of legislation. It does not favor the abandonment of that standard of value which has prevailed in this country for more than a half century and which prevails to-day among all the civilized nations, and the substitution in its stead of an inferior, an uncertain, and a fluctuating standard.

That there is an uninstructed public opinion that clamors for free coinage at any hazard; that men, blinded by extremes of misery, are ready for any desperate measures that promise relief, and that self-seeking demagogues are stimulating their passions to such a degree that their reason is, for the time, in abeyance is, unhappily, too true, and it is not without some peril that men resist these demands when the public mind is in a fever and ferment. But it is only the base and timid that are frightened by the threats that have been uttered here.

Majorities are not always right. It was the voice of the majority that cried "Crucify Him! Crucify Him! Give us Barabbas!" It was the majority that sent Aristides into exile and gave Socrates hemlock for his supper.

It is the minority, according to Him, who are the salt of the earth and who go in at the straight gate of wisdom and goodness.

My people are a borrowing people. They need capital to unlock the stores of nature, to develop to the highest degree their agricultural resources, to build factories, and to multiply all those industrial pursuits which in this day are the apparatus of civilization. The capital they need must come from the older communities. To obtain it we can not afford to juggle with the currency. Least of all can we afford to separate ourselves from the great nations where the greater part of our products find a market.

There is among those nations large accumulations of capital seeking investment. There is an international loan fund that goes wherever it is wanted, as mobile as beads of quicksilver. It belongs to no particular country. It went to Argentine, to Egypt, to Australia. It is going now to the heart of Africa. It will go wherever there is the best promise of profit. But frightened now by repeated and disastrous experiences it demands, above all things else, security. Any possibility of repayment in money of less value than that which was loaned will drive it from us. It would fly as men are flying to-day from plague-stricken Brunswick.

My people are by tradition and habit an honest people. They want no man's money without an equivalent.

They have suffered as few people have from the oppressions, the unjust discriminations, and the intolerable exactions of this Government, but their crowning misfortune would be the imposition of an unsound, a fluctuating, and a vitiated currency.

I know that there is a strong opinion among them opposed to the views that I entertain, and that my course here means either retirement from public life or another hard and bitter contest, and I am weary of conflicts.

But the duty seems to me so plain that I can not hesitate to save them if I can, in spite of themselves, trusting to time to moderate their harsh judgment of me. In the consciousness of such ultimate vindication I can, in my feebleness, adopt the language of the mighty Luther: "If there were as many devils in Worms as there are tiles upon the housetops I would go on," and when I render them my account I will say, as he did before the council: "Here I stand! I can not do otherwise. God help me. Amen!"

If I needed any other inspiration to right conduct than my own self-respect, I would find it in the example of our great leader. While other men were weakly yielding to what seemed a popular movement toward free coinage, he has always set his face against it. Rich in saving common sense, he has pointed out its follies and its dangers. Amid the stream of fluctuating opinions and conflicting views he has remained steadfast, immovable. When others cowered before the storm he stood "four-square to all the winds that blow." As Barnard Bee held his broken columns at Manassas by pointing to our immortal soldier—"See how Jackson stands like a stone wall"—so he has been the rallying-point for all the conservative forces of the country.

Holding duty to his country as higher than party or personal fortunes, the awakened judgment and conscience of his party has called him to its leadership, and his country, trusting the man, has heaped rich honors on the patriot.

So let his great example stand, that the faint-hearted among our public men may learn that truth and courage are often the highest statesmanship, and that our young men may know that—

> Because right is right, to follow right
> Were wisdom in the scorn of consequence.

[Loud and continued applause.]

Mr. BRECKINRIDGE of Arkansas obtained the floor.

Mr. MCCREARY of Kentucky. I ask unanimous consent that the gentleman from Arkansas [Mr. BRECKINRIDGE] be allowed twenty minutes.

Mr. HENDERSON of Iowa. I would like to supplement that request by asking that my colleague [Mr. DOLLIVER], who is to follow, may also have twenty minutes.

The SPEAKER *pro tempore* (Mr. RICHARDSON). The Chair will state one request at a time.

Mr. MCMILLIN. I suggest that the question of recognition is exclusively with the Chair, and that it would infringe upon the rights of the Chair if the House should undertake to designate what gentleman is next to speak.

The SPEAKER *pro tempore*. The Chair will submit the request of the gentleman from Kentucky, which is that the time of the gentleman from Arkansas be extended to twenty minutes. Is there objection? The Chair hears none. The gentleman from Arkansas will proceed.

Mr. HENDERSON of Iowa. Mr. Speaker——

The SPEAKER *pro tempore*. The gentleman from Arkansas has been recognized for twenty minutes.

Mr. HENDERSON of Iowa. Will the gentleman permit me——

The SPEAKER *pro tempore*. Does the gentleman from Arkansas yield?

Mr. BRECKINRIDGE of Arkansas. Yes, sir.

Mr. HENDERSON of Iowa. I ask consent that my colleague [Mr. DOLLIVER] be allowed to speak for twenty minutes.

The SPEAKER *pro tempore*. The Chair will state that the gentleman from Vermont [Mr. GROUT] is next on the list of those who are to speak in favor of the bill. But, of course, the Chair will submit the request. The gentleman from Iowa [Mr. HENDERSON] asks unanimous consent that the time of his colleague [Mr. DOLLIVER] be extended to twenty minutes. Is there objection?

Mr. ENLOE. I wish to say that if we are going to suspend the order of the House, I would like it suspended entirely. There are other gentlemen who want to be heard on this question.

The SPEAKER *pro tempore*. Is there objection to the request of the gentleman from Iowa [Mr. HENDERSON]?

Mr. McDANNOLD. I object.

Mr. BRECKINRIDGE of Arkansas. Mr. Speaker, does this come out of my time?

The SPEAKER *pro tempore*. It does. The Chair asked the gentleman if he yielded, and he said he did.

[Mr. BRECKINRIDGE of Arkansas withholds his remarks for revision. See Appendix.]

Mr. McRAE obtained the floor.

Mr. WILSON of West Virginia. I am informed by the Chair that the number of gentlemen desiring recognition is larger than can be recognized if the session of to-day be closed at 5 o'clock. Therefore, in the interest of gentlemen who desire to speak, I ask unanimous consent that the session be continued until 6 o'clock.

Mr. HENDERSON of Iowa. That is right.

Th. SPEAKER *pro tempore*. The gentleman from West Virginiaeasks unanimous consent that this afternoon's session be extended until 6 o'clock. Is there objection? The Chair hears none. The gentleman from Arkansas [Mr. McRAE] is entitled to the floor.

Mr. BAILEY. I ask unanimous consent that the gentleman from Arkansas be permitted to proceed for twenty minutes.

There was no objection.

[Mr. McRAE withholds his remarks for revision. See Appendix.]

Mr. DOLLIVER was recognized.

Mr. HENDERSON of Iowa. Mr. Speaker, I ask that my colleague's time be extended twenty minutes.

There was no objection.

Mr. DOLLIVER. Mr. Speaker, I am sorry that at the end of this long debate I am not able to bring to the consideration of the question the same enthusiasm that I had at the opening of the discussion. The current of the debate has at least given to those of us who are not trying to play the rôle of financial teachers or of evangelists, dealing with the emotions that is to say, the prejudices of men, an excellent leisure for reflection and an excellent reason for silence. It is to be regretted also that the debate, now nearly a fortnight old, has not gone very far in bringing us out of the chaos that originally surrounded us.

On the side of the free coinage of silver there is one central problem that includes the whole field of the controversy, and that is: Can a nation situated like ours, under circumstances such as obtain now, invite to its mints the whole silver product and the whole silver stock of the world without creating a coin that shall partake of the fluctuating and depreciated character of silver bullion? That question has not been answered.

We have had it said that the act of 1873 was a gigantic fraud and a gigantic crime; but that is not the question. We have had it said that the price of cotton and the price of wheat have gone down with the price of silver bullion; but that is not the question. We have had it said that celebrated students of this question, both here and in Europe, have given their judgment in favor of bimetallic coinage on an international field; but that is not the question.

The question is whether a single country situated like ours is able, under conditions that now prevail, to ignore at its mints the quotations of the bullion market without establishing for its commerce a basis of silver, excluding all other coinage and swamping American business under the burden of a currency both changeable and debased. That question has not been answered; and while we have enjoyed the eloquence that has been aroused by this subject, I trust we have not forgotten that this is a question that must be decided in the arena of judgment and reason, and not in the atmosphere of mere oratory. I confess that I have followed the silver voice of my friend from Nebraska [Mr. BRYAN] from the third Punic war down past the glorious victory of Charles Martel to the joint debate between Napoleon and the extraordinary drummer boy of Marengo, without getting light enough on this question to guide me from one figure of speech to another, and while I am not without admiration for the oratorical skill that can so attractively exhume the fallacies of fifteen years ago and give such persuasive shape and color to the vagaries of the Nebraska Populist of to-day, I will not conceal the disappointment with which a plain and perplexed man, anxious to be right and seeking to know the practical effect of the theory of free coinage on our monetary system, has sought in vain for that grain of wheat in the midst of so vast and entertaining a display of chaff. [Laughter.]

If it be true that a single nation by its own laws can abolish the bullion market and make its mints the undisturbed arbiter of the silver situation throughout the world, it seems to me that there ought to be some enlightened and faithful student of this problem, in some language of the earth, to express that opinion, even if it was not thought necessary to introduce some evidence to prove it. In a matter like this no prudent man can let go the hand of experience, unless he sees something to take hold of more tangible than dogmatic theories and incoherent predictions.

But what writer, what student in any language, including even the faithful friends of silver who made the Brussels Conference of 1892 famous; what American politician, not directly influenced by his own interests or by the clamor of local politics, has given that opinion? On the contrary, having been cast off by every government in Europe, including those that have most faithfully tried to practice it, it has found a final refuge in the silver-bearing mountains of our own country, and an intermittent shelter, good only between Presidential elections, in Missouri and Arkansas. [Laughter and applause.]

Now, Mr. Speaker, I shall not be suspected of caring very much what happens to the Democratic party of Missouri, but I can not forbear to point out that the leaders of that party do not seem to be disturbed very much by the "parting of the ways," in which my friend from the Eighth district of Missouri has so often stood. [Laughter.] Because everybody knows that when the Democratic party took Mr. Cleveland a second time for their leader, they took him with the absolute knowledge of his disposition to combat the prevailing views of the State of Missouri in regard to silver; and when we find him getting more votes in the State of Missouri than these silver Congressmen themselves, we can easily imagine that this periodical epilepsy of that State on the money question is not likely to very seriously disturb the comfort of the Democratic party. [Laughter and applause.]

Mr. Speaker, I come from a constituency employed mainly in farming. It is a constituency that understands perfectly well that without a safe, a uniform, and a stable system of money there can be no prosperity either in the field, in the factory, or in the market place; a constituency that fifteen years ago, as my friend Gen. HENDERSON, who sits before me, recollects very well—for we both were in that fight—heard every argument that has been heard at this session of Congress, weighed the cheap philosophy of cheap money in the balances of a sober judgment and of an upright conscience and found it wanting in both [laughter and applause]; a constituency whose debts stand for its enterprise and its investments, and not for its poverty and its misfortunes, and whose purpose is to pay what it owes in the legal currency of the country, without clipping a coin or depreciating a note or debasing a dollar. [Applause.]

Our people are a clear-thinking and a hard-working people, and they ask not one of their representatives, Democratic or Republican, to come here and urge legislation that shall disturb either the volume or the value of the currency of the United States. [Applause.] Both political parties are now agreed upon this, for I can not forbear to recall the fact that the Democrats of our State have suffered in the past few days an almost instantaneous conversion upon the silver question. [Laughter.] They stand now where the Republican party has always stood, and we hope that there will never be a Democratic relapse in this generation in the State of Iowa. [Laughter.] If there are those who think that we ought to show our disapproval of their conversion by ourselves backsliding, I can not agree with them.

I stand where I have always stood, for a national currency every dollar of which shall be equal in value to every other dollar issued by the Government. So that if a man works for a day he may know what he earns; if a man has a crop for sale he may know exactly what he receives for it; if a man has a little property he may know exactly what it is worth; if a man is receiving a little pension that has escaped the malice of this Administration, he may know exactly what the pittance amounts to; if a man has a little money laid up in the bank for a rainy day, he may know exactly what his balance is; if a man has insured his life he may die without having his last hours embittered by the prospect of his family being swindled by the depreciation of his little estate; and if a man, like myself, has spent nearly all his lifetime bearing the burden of debt, he may know exactly what he owes [laughter], and make up his mind before God and man to pay it if he can, as our fathers did, without inviting a relief expedition from Bedlam. [Great laughter.]

Mr. Speaker, representing such a people I would not dare to cast a vote here which might have the effect of destroying the prosperity of American business by an experiment which, for all that has been said, presents itself to my mind in the form of an unlimited manufacture of short-weight dollars. [Laughter and applause.]

The view which I now have is the product of many years of conscientious study of this subject. It may be wrong. I do not hold it as a final and unalterable statement of faith. I hold it subject to revision in the light of every new fact, every new experience of the world, every new discovery of political science. It is a disinterested opinion, for it violates not only original

prejudice on the subject, but also the judgment of many whose opinions I respect, and above all it violates my sympathy and good will toward that portion of our common country whose chief occupation has been injuriously affected by the decline of silver.

I am aware also that, especially now in these times of depression and gloom, we are likely to see a resurrection of all the miserable quibbles that fifteen years ago almost carried the country over to an organized system of depreciated currency. We are beginning to hear the old arguments, that those of us who had a hand in the fight before the resumption of specie payments remember perfectly well. I recall that last winter I was sitting over there by the side of the gentleman from Maine [Mr. DINGLEY] when some one asked my friend from Missouri [Mr. BLAND] whether the free coinage which he proposed was not likely to put a premium on gold. "A premium on gold," said Mr. BLAND, "Why, that is all right; that means a premium on wheat, a premium on cotton—a universal blessing and benefit to the country."

I represent a constituency which knows by experience that a premium on gold is the fatal exposure of every legitimate business of the American people to the speculation of the street and the jobbery of the gold table; and while I am not very old in the experience of the business world, I recollect the time when the legitimate business of the American people escaped from the last premium that we had on gold in the United States. And if I thought the judgment of the people in the midst of whom I live were not with me, I would resign my seat in this House very cheerfully before I would vote to bring American business back to the chaos out of which we escaped in 1879 [applause], because I believe that the people of the United States will in the long run respect a man who refuses to betray them even for the sake or their applause. [Applause.]

When I hear this Chamber filled with threats and long-winded declamations about what is going to happen to people who in the discharge of a high responsibility exercise their own judgment and obey their own convictions on this question, I very often recall the fiery words of old Thomas Carlyle, preserved in the memoirs of the late Lord Houghton. Carlyle wanted Edward Milne, afterward Lord Houghton, to obtain a pension for a struggling young poet, Alfred Tennyson. Mr. Milne presented the subject to Lord Palmerston, then prime minister, who told him that he had never heard of Tennyson, and advised him to let the matter drop for fear his constituents might think he was trying to load some relative onto the bounty of the government. Mr. Milne went to Carlyle and told him the situation, and Carlyle answered him thus:

> Edward Milne, it may be all right for you to excuse your failure by a reference to your constituents; but I tell you that there is coming a day when the question will be asked of you: "Edward Milne, why did you not get the pension for Alfred Tennyson?" and in that day it is you who will be damned and not your constituents.

[Laughter and applause.]

I wish now by the kindness of the House to say a few words about the repeal of the Sherman act. I have heard all that has been said on this subject, and have heard it with attention. Everybody will testify that I have taken a front seat and have endeavored to profit by every day of this discussion. I say to you that I am not convined by anything I have heard or seen that the Sherman act is the sole cause of the troubles that now afflict us.

I agree with the eloquent remarks of my friend from Michigan [Mr. BURROWS], who this morning attributed our troubles to the dread now lodged in the minds of those engaged in the great productive industries of the United States that an industrial revolution is at hand. And I desire to say to my Democratic friends who laughed with derision when that subject was first mentioned in this debate, that there could be no change in the tariff system of the United States, even for the better, without paralyzing for a time the prosperity of all the industries involved. How much greater is likely to be the disturbance of prosperity when the changes proposed are radical and revolutionary, and have already thrice in the history of the United States resulted in the total prostration of the prosperity of the American people?

It is recognized, however, that for better or for worse, the whole business community seems to believe that the silver act of 1890 is one cause of distrust. Nor can it be questioned that the daily purchase of 6 tons of silver may have given rise to a feeling that the time was approaching when the Treasury might be stripped of its reserves and the whole fabric of the national credit be exposed to suspicion.

Notwithstanding the strong hope we have had that the act of 1890 would aid in the solution of the silver question by arresting the degradation of the metal, we do not hesitate to admit that the act has failed to meet the expectation of those who framed it. It now stands, in the judgment of millions, as a threat in the way of restoring confidence, and I will not interpose my vote against the only remedy in which the business world seems to see a solution, or at least a mitigation, of the difficulties in the midst of which every American enterprise is now struggling for its life. [Applause.]

Either the repeal of this law will help us or it will not. If it does, we shall all rejoice. If it does not, we shall all be nearer knowing what the matter is, and the Democratic party will be brought face to face with the omens of the disaster that must follow their tariff policy, with no cover to hide them and no subterfuge of explanation to keep them from an open responsibility. Therefore, as a partisan, I am in favor of clearing this issue so that every man may know that whatever follows the tariff act of this Congress comes from that act, and not from imaginary sources in another field of legislation.

Again, those of us who favor the use of both gold and silver in our coinage, but are convinced that the question is an international one, look forward, not without reasonable hope, to the future efforts of the Brussels conference to restore the monetary status of silver. No man in public life in the United States knows more about this question than Mr. ALLISON, who was a member of the conference of 1892. No one can question his qualifications to speak with authority on this matter, and fortunately no man can dispute the fidelity with which his life has been devoted to the interests of the Mississippi Valley. Therefore, when we find him agreeing with Governor MCCREARY, of Kentucky, also a member of that conference and a lifelong friend of silver, that the suspension of the purchase of silver here will greatly expedite the work of the Brussels conference, we feel sure that the road to a larger use of silver in the coinage of the world lies through the repeal of that part of the act of 1890 which now compels this Government to bear the burden of silver alone. The very moment the United States declares its purpose to lay down the load, the commercial world will feel the pressure of necessity to unite in taking it up on equitable terms.

Mr. Balfour said, in his remarkable speech in London on the 3d of this month, speaking for international bimetallism:

> We have boasted, we have claimed for ourselves, that we lead the van of commerce because we are the great upholders of the single gold standard.

If some of the gentlemen who have spoken in this debate had been present they would have felt like interrupting the speaker to say that the United States had declared their independence of England and would not submit to having a conspiracy of London bankers force the gold standard on to us. But, unfortunately for this branch of the rhetoric of the silver cause, the words I have read from the London Times's report of Mr. Balfour's speech are only half of a sentence, which concludes as follows:

> And yet there is not a man, I venture to say, in the city of London this moment, not a single man who would not look with horror and with apprehension at every other nation following so good an example.

He goes on to say, "Let the United States go in for a gold standard and a tremor seizes every one of our commercial magnates," and finishes what I venture to say is the most significant speech of the year by asking the distinguished audience which crowded the Egyptian hall of the Mansion House "whether the great, the preponderating, the overwhelming influence of the city of London ought not to be thrown into the scale of those who desire to see some international settlement of this vast problem and the establishment of some system under which every great commercial community throughout the world shall contribute its share, at any rate, to maintaining the stability and the value of silver."

So that it seems to me certain that the friends of silver in the United States will enter the conference of 1893 with a more influential position if Congress authorizes them to say that the United States, having refused to longer carry the whole burden of maintaining the stability and value of silver, is ready to agree with the commercial community throughout the world to contribute its share.

It is to be remembered also that the bill proposed here, instead of destroying the present currency based on silver, preserves not only its volume unimpaired, but also secures by a pledge of the national credit the value of every dollar on a parity with all our coins and currency.

If anybody supposes that our decision here ends the controversy about silver, he is mistaken. It only transfers the question to the larger field, where it belongs. And if anybody thinks that our action in suspending the purchase of bullion is in any sense the "doom of silver," it only shows that he does not comprehend the movement of the mighty forces that are at work throughout the world. It is perhaps unfortunate that we are called to deal with this question in the midst of a financial convulsion almost without example in its waste and ruin. We have heard men try to explain this sudden misfortune. There is no use to try to explain a panic. By its very definition it is a thing without reason and beyond explanation.

I have already pointed out the underlying cause of the accom-

panying industrial depression, which in our own country has evidently emphasized the general depression visible on all sides in every country. For that the repeal of the silver act of 1890 is no remedy. There is, however, in this world a very large area for faith. A friendly correspondent, writing to me the other day on the silver question, more than once repeats the precept of the Scriptures, "We live by faith." And so we do, even in the field of business and finance. In voting to repeal the section of the act of 1890 requiring the monthly purchase of 180 tons of silver bullion I frankly confess that I am guided in part by what seems to be the prevailing belief of the business community. A friend in the city in which I live, in explaining to me his new views on religion and medicine, somewhat perplexed me by saying that a few months ago he "was caught in the elbow by a belief of rheumatism" [laughter], and, if I understood him correctly, his idea was that the way to handle it was to let the rheumatism go and pay attention entirely to the belief. [Laughter.]

I do not know how much there is in that idea, but I was not prepared to argue the matter with him; and in this situation in which we find ourselves, while we may not have the fullest confidence in the remedy suggested, I can not make up my mind that we ought to deprive the business world of such consolation as may come to it by a fair opportunity to try an application of the faith cure. [Applause.]

Mr. ENLOE was recognized.

Mr. McRAE. Before the gentleman proceeds I ask unanimous consent that he be allowed twenty minutes.

There was no objection.

[Mr. ENLOE withholds his remarks for revision. See Appendix.]

Mr. GROUT. Mr. Speaker, I have been represented by the newspapers, which are usually correct, but this time in error, as being opposed to the repeal of the Sherman purchase clause, so called, in the act of 1890. This feature of that act, as is well known, was accepted as a compromise, rather than have free silver coinage, to which it may be said to bear something of the same relation that varioloid does to the genuine disorder, perhaps not equally to be dreaded, yet certainly to be avoided.

The purchase of 4,500,000 ounces of silver per month and the issue of Treasury notes thereon has been looked upon by conservative men from the start as an extreme concession to the silver-producing interests of the country, and as carrying to the extreme limit of safety the silver element in our monetary system, and now that business and financial troubles are upon us, if we would tide over present difficulties and avoid a general panic, we should see to it, first of all, that we keep in circulation a sound currency. It should also be ample for the business of the country, and not suddenly contracted; but of that a moment later.

First of all, it should be sound, so that no one can have a doubt of the value of every dollar he may chance to possess.

Unfortunately for the double standard of the United States, the continued increased production of silver, not only in this country but throughout the whole world, amounting in fact to an immense overproduction everywhere, has so reduced the market value of that metal as to throw it out of relation to gold and make necessary such readjustment as shall keep the two metals on a parity. This is certainly necessary if we are to keep both along as money metals, and for one I am in favor of so doing. I am, in other words, a bimetallist.

But silver has become so plenty that a wide difference now exists between the bullion value of the gold and silver dollar. And in time of general apprehension and distrust, like that through which we are passing, when the overthrow of our entire industrial system is threatened, and mills and mines are shutting down and labor is hungry in the street, trade stagnant and capital, always timid and selfish, is slinking away and hiding itself, caring, as usual, only for its own safety, and never for the wants of the people [applause]—I say in such a time as this it is doubly important that there be no doubt as to every dollar of every kind kept in circulation by the Government as currency; for if any portion be under value it will surely contribute to the general disturbance. Now, this is just what the present silver dollar, which is to-day worth less than 60 cents, is doing, as is also, to some extent, the Treasury notes issued under the Sherman purchase clause, though payable in coin, because of the liability that they may be paid in the 60-cent silver dollar, which is one of the lawful coins of the United States.

Now, while I believe that our present financial and business depression is principally due to other causes, which I can not stop here to discuss, doubtless this silver business has something to do with it. At all events, there is an unsound element in our currency which should be displaced. I am, therefore, allowing me to correct the newspapess, in favor of the bill for repeal, and shall vote for it; nor have I ever said anything from which it could be otherwise understood or fairly inferred.

It is true, however, that on the day the order fixing the time for this debate and specifying the amendments that might be offered to the bill for repeal was forced through the House, I expressed surprise and dissatisfaction that by the terms of that order no provision was made for supplying currency to take the place of that to be cut off by the repeal of the purchase clause.

Not only is no provision made, but our hands are so tied that no amendment can be offered, even, looking in that direction, except several for the free coinage of silver at different ratios, and one to substitute in place of the purchase clause the Bland-Allison act of 1878, which was more essentially a silver law than the present one, inasmuch as it provided for the coinage of not less than $2,000,000 every month, and in the discretion of the Secretary of the Treasury $4,000,000, and the issue of certificates thereon payable in silver—not in coin, as by the present law, but silver.

Now, think for a moment, Mr. Speaker, of the absurd issues presented by this order! The Democracy tell us that the country is on the verge of ruin because of too much silver, and bring in a bill to repeal the silver law. They also, by the same order, authorize an amendment for the free coinage of silver. The complaint is too much silver, and strange to tell, the proposed cure is more silver, even free silver, upon faith in the vain superstition, I suppose, that, "the hair of the dog will cure the bite."

In other words, they prescribe an allopathic dose upon the homœopathic principle, *similia similibus curantur*. [Laughter.] Now, here is a strange bundle of contradictions and incompatibilities coming from the Democratic caucus at the same sitting, and this is a fair sample of the financial philosophy generated by our well-meaning friends of the Democratic party when left for a little time completely to themselves and wholly within their own atmosphere. [Laughter and applause on the Republican side.]

But what of the more serious objection that this repeal will take away from the people the large monthly addition to the currency now provided by the Treasury notes issued on the monthly purchases of bullion, aggregating, at the present price of silver, a little less than $40,000,000 annually?

What shall be said of the wisdom of thus contracting our circulating medium in this time of stringency, when currency—not current funds, but currency—is worth $40 per thousand in our large cities, as it has been since this debate commenced.

Why, many people will tell you that the chief cause of our present difficulties is an insufficient volume of money with which to do the business of the country. While I do not share this view fully, I am clear that it is not wise to cut off in this time of scarcity any supply of money which the people may have without making it good in some other way. But we have already seen that the only way the Democracy propose to do this is to make a larger use of silver—a larger use of the very metal which President Cleveland tells us is ruining the country.

Now, why not have allowed the Republican side of the House to propose an amendment for keeping good this supply of currency which the repeal will surely cut off? It would have been a very short and simple amendment, but would have been effectual to supply this deficiency with a sound and flexible currency, one long tried by the American people with no holder of it ever yet losing a dollar. That amendment would have been to allow the national banks to issue circulation up to the par value of their bonds.

This would furnish between eighteen and nineteen million dollars as soon as the bills could be printed—quite an item to begin with, especially in time of distress; and the banks, thus encouraged, many of which now have only a quarter of their capital in bonds, would put the whole into bonds and take circulation, to the certain relief of the business of the country. I think it perfectly safe to say that within a year $150,000,000 would be added to the currency by this means, and every dollar as good as gold, because behind it are the bonds of the United States, every class of which is at a premium and sought by investors the wide world over.

Room was made for the free silver men to make several amendments, and I repeat, why was not the Republican side permitted by the nonpartisan Democracy, who are just now saving the country in a strangely nonpartisan way, to propose this amendment? But, no; we were gagged by the previous question, and not a Republican member was allowed to say a word. [Applause on the Republican side.]

Now, this is what I was complaining of, perhaps scolding about, when some one, hearing, thought my position doubtful as to repeal.

I felt then—and am not entirely free from the feeling now—that the Republicans, who are nearly solid for repeal, but who stand now, as ever heretofore, for sound money and plenty of it,

would be justified in sitting silent till the tyranny of the majority in this House should so relax as to allow the sense of the House to be taken upon an amendment to keep our present supply of currency good, and with good money, too.

Can it be that all opportunity to extend the circulation of the national banks, which still linger as a distinguishing mark of the nationality of these United States, was accidental merely, or was it for the express purpose of keeping this question open and later supplying this additional currency, which every one admits the people ought to have, by the wild-cat currency of State banks, thus making good the State-bank plank in the Chicago platform?

If so, then the last will be worse than the first of the great change which the country is now enjoying.

Let us hope, however, that we may be saved from so great calamity. [Applause.]

Mr. CAMPBELL. Mr. Speaker, when called by the President of the United States to attend this extraordinary session of Congress I had no idea of making a speech upon the silver question, but the circumstances and conditions now existing in the city of New York, and particularly in the district that I have the honor to represent, impel me to express my views on the financial stringency which is now disturbing the country. In the city from which I come the workshops, the mills, and the other great industries have, to a large extent, ceased to do business; and thousands upon thousands of honest working people have been thrown out of employment and deprived of the means of earning bread for themselves and their families.

Mr. Speaker, in relation to this silver question, I believe that the commercial crisis through which the country is now passing, with financial ruin threatening all industries, with thousands of working men and women crying for bread because of conditions resulting from the dishonest monetary legislation of the past has had a sobering effect upon the industrial classes of the Southwest. It has awakened them to a realization of the true condition of affairs to such an extent that the familiar heresies of the radical silver men, while commanding a patient hearing in the Halls of Congress, will irritate instead of soothing the popular clamor for a speedy and prompt adjustment of our financial affairs upon the lines suggested by our able and patriotic President.

If I were asked to summarize a proper financial policy for the country to adopt, it would be briefly as follows:

1. Repeal the silver-purchasing clause in the Sherman law unconditionally. This is an absolute necessity, and should, of course, be the first step, since it announces to the world that the people of the United States intend to pay their debts in full, and not with the aid of a depreciated currency. This will undoubtedly have an immediate beneficial effect upon the country by substituting a feeling of confidence for the semipanic that now exists.

2. Stop issuing silver certificates of deposit of any denomination. The purchase of silver for coinage purposes is perfectly legitimate; but when silver bullion is amassed in large quantities it can not be regarded as money, but merely as merchandise, and such an accumulation of it is simply a perpetual menace to the market price of silver. To issue certificates of deposit against silver is no more defensible than it would be to issue similar certificates against a store of wheat, corn, or horses.

3. Coin all the silver bullion now owned by the Government.

4. Prohibit the issue of paper currency of a less denomination than $5. This would very soon put into circulation all the silver dollars now in existence, and before long an additional supply of them would be needed. The effect of this would be to put silver to its only legitimate use—that of a serviceable subsidiary currency—a use which it may furthermore be said never thoroughly to have attained in this country. The effect of a thorough circulation of silver, and an assured demand for it in the future, would have an immediate beneficial effect upon the silver-mining industry, which has long been suffering from the misguided efforts of its friends. People would soon become accustomed to using silver instead of small paper currency, the latter, indeed, having no real reason for being in circulation, as proved by the experience of England, where the smaller paper note is $25, and of France, where the smallest note is $10.

5. Provide that silver shall be legal tender to the amount of $10 only. For all practical purposes, silver is demonetized now, *i. e.*, so far as being a standard of value is concerned. The world, however, needs a positive assurance that our standard of value shall be forever the same as that of the civilized world.

6. In place of coining double eagles, coin a large number of $2.50 gold pieces. The latter would prove very valuable coin, coresponding to the English half sovereigns; whereas the former are too heavy for ordinary use, and their purpose can be better served by paper notes.

7. Allow national banks a circulation equal to par of their holdings of Government bonds.

This suggestion, which is now being widely urged, is undoubtedly sound, and would largely increase the circulating medium of the country.

8. Provide for the extension of the charge for pensions by issuing a number of long-term bonds to the extent of one-half of the expenditure of the preceding year for pensions. This would have the following good effects:

First. It would relieve the present generation from bearing an undue proportion of the awful burden of the present pension laws, and throw upon the shoulders of coming generations their equitable share of its financial responsibilities.

Second. It would increase the amount of national bonds, which forms the basis of our best national currency, and give speedy relief from the present monetary stringency.

Third. It would enable a reduction in the tariff to be effected, which otherwise seems impracticable. Iniquitous as the present tariff is, it is idle to think of attempting to relieve the people of its burden so long as it continues to be necessary to raise half a billion of dollars a year to meet the annual expenses of the Government, abnormally swelled as they are by the present pension charges.

I believe that a policy, such as that which I have just outlined, would result in a sound revival of trade, and in renewed prosperity to the country. It is only a question of returning to principles of ordinary common sense and honesty. It sometimes happens that Americans, because they populate the richest land on earth, are led to an exaggeration of its bounteous resources, and believe that they are, therefore, above all the elementary laws of commerce and finance. But when the country goes off into occasional daydreams, its awakenings are always somewhat rude and something of a shock.

Mr. Speaker, I hope that this obnoxious Sherman act will be repealed by such a majority in this House that public confidence will be restored throughout the land and that business will be resumed, so that the thousands of working people now seeking employment may again obtain it, and sunshine, happiness, and prosperity may again prevail throughout the length and breadth of this glorious country. [Applause.]

[Mr. SIPE withholds his remarks for revisioh. See Appendix.]

Mr. McETTRICK. Mr. Speaker, I suppose that when I rise and announce myself as another new member from Massachusetts who favors the repeal of the purchasing clause of the Sherman law, and at the same time claims to be an honest bimetallist, I may expect to receive some share of the same kind of abuse that it has been the fashion to heap on Massachusetts during this debate. I can not say that it was with any measure of surprise that I heard the other day upon this floor a well-worn sneer and denunciation of Massachusetts and New England as the home of the money-lenders and so-called "gold bugs" of the country. That, indeed, seems to be the penalty which thrift, industry, and enterprise is called upon to pay to those whose efforts in the accumulation of wealth have not been successful.

But when, in all her history, did Massachusetts fail to keep a solemn pledge or promise? At every great crisis in the national history her good strong arm has been the first of those uplifted, whether to repel the foreign invader, in defense of the Union of the States, or in maintaining the national honor by the payment of its just and honest debts. From the careful savings of her people, even from the time of the establishment of our national Union, streams of wealth have flowed, enriching every section of our common country.

The great West has felt the beneficent influence of Massachusetts and New England, since the time the first pioneers crossed the prairies to seek homes in the wilderness. Some of the best brawn and sinew and blood in that great section, of which the nation is justly proud, is of the old New England stock. As a fond mother nurtures her child, so has New England at all times listened to the call of her courageous sons, and by her assistance many splendid cities in the great West and Northwest have been made possible. Nor has the South been forgotten.

When the Father of Waters breaks away from the artificial barriers which encompass him, and spreads destruction and devastation to the homes and farms for hundreds of miles along his borders, who is the first to respond but Massachusetts? And when the fair Crescent City at his mouth looks up appealingly for aid, who is the first to come to her relief? And the same may be said when the fell destroyer strikes down the citizen of the South with the infectious fever. Who are the first to contribute to the alleviation of the suffering survivors? When fire destroys a city, the sad news reaches Boston. The wires of the country are none too quick to flash relief and sympathy and succor.

But, Mr. Speaker, I represent particularly a constituency who are not the bankers, the "gold bugs," and the money-lenders. I represent a constituency who are largely composed of men who

work with their hands for their daily bread. I represent a constituency who are joined together largely in a community of laboring men, whose sympathies are not confined to the little spot on the surface of our country which they occupy, but who are as ready to listen to the distressing appeals of the man who works in the mines in the bowels of the earth in Colorado as to those of their suffering neighbors.

To-day there are 25,000 men at least walking the streets of Boston out of employment, while the factory operatives of Lawrence, Fall River, and other manufacturing cities and towns are idle by thousands. The farmer of the West too is suffering; we admit that he is not getting a fair return for his labor, but he can look upon God's blue sky, he can look upon fair fields and breathe God's pure air. No stifling smoke shuts out the sun; no contaminated air of the tenement house and the workshop brings trouble, distress, and sickness to him and his. The stopping of the wheels of commerce means to my constituency absolute want and distress.

The farmer may be unable to market his product, but he at least has something to eat. The bounteous nature with which he is surrounded supplies him with something to sustain life. I desire to say to the unemployed miners and others of the far West, in behalf of my constituency, that we are not deaf to your appeals; we are not deaf to your call for help; but the question presented to us is, What is best for our common country?

Mr. Speaker, I came here determined to throw my vote and my influence for that which I believed was right, and for the best interest of the whole country. I have listened to the eloquent remarks of the gentlemen on both sides of the question, and I now feel that it is but right that I should declare myself. I say, with all earnestness, to the miner of the West, to those whose interests are with silver, I sincerely believe in bimetallism; I believe that silver should not be demonetized, but I am forced also to believe that the people of this country will not be benefited by the method suggested by our opponents, and that the United States can not alone bring about its restoration to the position which it has enjoyed.

This can not rightly be made a sectional question. It is not properly a national question. But, by the force of circumstances, it becomes an international question, and the United States of America should take every means to compel its sister nations to adopt the use at a proper ratio of that which is so largely one of her products and which should go to lend an increased volume to the currency of the world. I desire to say to the people who believe in silver that we are not of those who would brush aside your claims or your ideas without full deliberation. It is a question which requires statesmanship, study, and diplomacy in its treatment, and that is what it should receive.

But, Mr. Speaker, I might say that it seems to me, from what I have heard here expressed and from what I have been able to learn of the subject, that the soil of the mining State gives out more than an ample return for every dollar invested and labor expended in the production of silver. The Indians that our forefathers found on these shores, as well as the ignorant natives of Africa, used in their exchanges shells as a circulating medium, and we might as well to day return to their use and dig and gather the clam-shells on New England's rocky coast to tender as money, as to use a metal from Colorado valued at a figure which bears no relation to the labor and expense of procuring it.

By an overwhelming majority the people of these United States elected Grover Cleveland President. The President of the United States, with a full realization of the step that he was taking, has asked for an unconditional repeal of the purchasing clause of the Sherman law. The masses, I believe, are with him and have faith in him, and it is a poor argument to go home to our constituencies and say to them, "Oh, we knew better than he did; your trust in him was mistaken."

The Democratic party believes in the maintenance of the money of the country upon a parity. I will vote for any measure which will tend to do this, but I feel that it is my duty first to to be convinced that the measure here brought to us will tend to that end. The State of Nevada, represented by two Senators and a Representative, has barely a quarter of the population of the district which I represent, and which could be covered upon the map by the point of a lead pencil. In any question which arises they have a voice of two Senators and a Representative against my constituency's one vote in this House.

I want to arraign nobody. But I desire to ask the mine owners and the silver kings of that section, why is it that within forty-eight hours after your mills and your mining industry have closed that the streets are filled with miners with empty pockets, fairly crying for bread? Ask yourselves, have you given labor a fair recognition? Has there been an equitable distribution of the product as between your capital and their labor; or why is it that within the hour that your work stops they are found with empty pockets?

Is there no saving or accumulation? Where is all this money that has been dug from the bowels of the earth? Your workingmen have hardly seen it, except in the crude ore as they dug it out and picked it up with their hands. Why have you not divided more equitably with your workingmen that which comes to you only by their sufferance? Because they respect the law and protect you in your claim, why should you not give them a fair return of that which their labor has contributed to get? Then you might have come with better grace to the people and asked them to aid you.

Every man who works, by his daily toil becomes at night the creditor for his day's wage, and it is as essential to him that the money which he receives shall have its true and just purchasing power as it is that "money bags" shall get his cent per cent. He wants no debased currency with which to go to the tradesman to buy his next day's meal. His wage will remain about the same whether you pay him in a currency worth 50 cents on the dollar or whether it bears the full face value. How, then, can his interest be other that to receive what his labor has earned—something that will purchase its full measure of represented value.

The following figures have been taken carefully and impartially from the report of the Senate Committee on Finance, being Report No. 1394, Fifty-second Congress, second session, relating to wholesale prices and to wages. The table shows what a carpenter in New York had to pay for the articles named at wholesale prices in July of the years 1840, 1860, 1866, and 1891. During the month named in 1840 an ordinary journeyman carpenter earned $1.50 per day, or $9 per week of six days each, working ten hours per day. In 1860 he earned $2 per day, or $12 for the week, with the same hours.

In 1866 he could earn $3.50 per day, or $21 per week, the hours being the same as before. In 1891, working eight hours per day, he earned $3.50 per day, or $21 per week. The totals given in the table for each of the years named show exactly what these different weekly earnings would accomplish in paying the bill of items given. The table shows most emphatically what I have claimed—that when the currency is inflated prices rise much faster than the rates of wages, and that when prices fall the price of labor does not fall equally with the prices of commodities.

Wholesale prices of certain commodities in New York City in 1840, 1860, 1866, and 1891.

Articles.	July, 1840.	July, 1860.	July, 1866.	July, 1891.
5 pounds Boston crackers	$0.30	$0.43	$0.45	$0.25
5 pounds butter, fair	.85	.90	2.10	1.00
2½ pounds cheese	.23	.23	.43	.21
3 pounds coffee, Rio, fair	.19	.27	.46	.38
1 dozen eggs	.12	.14	.24	.18
¼ barrel flour, medium	1.75	2.25	4.06	1.63
¾ pounds meat, beef, medium	.40	.56	1.00	.68
4 pounds meat, bacon, clear	.32	.34	.63	.26
1 gallon molasses, New Orleans, prime	.26	.48	1.10	.32
5 pounds sugar, refined, crushed, or granulated	.60	.50	.84	.21
10 yards calico, Cocheco	1.20	.95	2.10	.60
¼ ton coal, anthracite, stove	2.25	1.93	3.75	1.95
1 week's rent, 5 rooms	1.75	1.75	4.50	4.50
Total	10.22	10.73	21.66	12.17

A carpenter was paid in New York City in 1840, $1.50 per day of ten hours; 1860, $2 per day of ten hours; 1866, $3.50 per day of ten hours; 1891, $3.50 per day of eight hours.

Mr. Speaker, we are told that this is a plot of the British Government. We are told that Lombard street dictates to this Congress its desires. If that were the question I would not be here advocating the course I do. I have not forgotten Bunker Hill, for if I did the lofty monument which stands upon that ground where the blood of our countrymen was shed that the shackles of oppression might be broken, throws a shadow upon my home to remind me of the causes that make that spot a hallowed one.

But that is not the question, however, Mr. Speaker. The wishes and desires of the London banker have no weight with me. I have not the slightest interest in what they want, but I have an interest in seeing that the currency of the people of the United States is not debased, but maintained at its full face value. I wish to see the humble wage-earnings of my constituency purchase as much of the product of the field or of the loom as they are justly entitled to. Mr. Speaker, I am in favor of bimetallism. I am in favor of this country taking such a position before the nations of the earth as will force them to accept silver as a circulating medium.

But this is an international question. It is a question that the United States must settle among the other nations of the world, and if they can not take the product of our silver mines and give it due recognition I would see to it that their products should be likewise discredited. The men of Massachusetts,

rather than drink the tea that had a British stamp upon it, deprived themselves of the pleasure and comfort which that tea might have brought to their homes, and ruthlessly threw it overboard. And, Mr. Speaker, I to-day would follow their example unless they give recognition to our silver; but I would at least present it fairly before them and give them a chance. I have no issue with Englishmen as Englishmen. It is with the British Government.

I have not, Mr. Speaker, gone into the question of statistics. The House has listened to them for a long time, but I can not fail to call attention to a few facts:

The total amount of gold produced in the United States from 1792 to 1891, was $1,904,881,769, and of silver in the same century, $1,073,172,000, a total of $2,978,053,769. In the year 1892 there were produced in the United States 1,596,400 ounces of gold and 58,000,000 ounces of silver, or about 24.11 times more silver than gold. The commercial ratio of silver to gold has steadily increased since the war from about 15½ to 1 to about 28 to 1.

In the year 1893, January 1, there were in the United States $651,330,763 in gold coin and bullion, and $592,519,721 in silver coin and bullion, or a ratio of about 91 per cent as much silver as gold. Of the actual coin in circulation there was in 1893, January 1, $530,064,099 in gold and $452,185,214 in silver, including certificates, or about 85 per cent as much silver as gold.

Now, Mr. Speaker, I have one word to say in regard to the so-called Sherman bill. The purchase clause of the Sherman bill, passed in 1890, has been variously and emphatically denominated a cheat and a makeshift. It was, in reality, a compromise, which is usually a bargain, and is defined by some philosopher a trade in which each party thinks he has cheated the other. The friends of silver, though claiming everything, were satisfied that its condition would be improved by a forced market, whereby the Government should become the purchaser to the amount of 4,500,000 ounces per month, confident that the Government could not long hoard and store the bullion, and that it would be speedily coined and placed in circulation, little dreaming that there is a limit to its use in the ordinary business transactions of the country and that its limit would be so soon reached.

The friends of gold saw in it a method of depreciating its value and the estimation in which it might be held by the financial world by its consideration as a commodity only. Both were satisfied, but, as usual, the capitalists had the best of the bargain, and both classes are now alike clamoring for its repeal. Everybody, including its author, denounce its method and effect, and the only opposition to its immediate repeal comes from those who hope to secure something more favorable by tacking on to the repeal measure other legislation in the supposed interests of silver.

Mr. Speaker, with the wheels of commerce stopped, with the loom idle, with the fires of the forge extinguished, with the unemployed everywhere, I feel that it is hardly right for any man to occupy the precious time—time which should be used for action—but I felt obliged to say to the people who have taken the other side of this question that there are constituencies in Massachusetts which are largely composed of men of toil, men of labor, men whose "brow is wet with honest sweat," men who are intelligent and sympathetic, men who study the questions of the day at their homes, and upon the street corners with empty stomachs discuss our national prosperity. As a representative of such a constituency I have to-day appealed to this House. [Applause.]

Mr. GEISSENHAINER. Mr. Speaker, the feeling of distrust now prevailing over our entire country, and which has brought disaster to business and financial enterprises, and which has occasioned this extraordinary session of Congress, has been virtually caused by the purchase of silver as authorized by the act of July 14, 1890.

From the day that the Sherman act took effect, August 13, 1890, up to the end of the present fiscal year, June 30, 1893, there has been purchased from the silver mine owners of this country the enormous quantity of 157,457,632 ounces troy, over 6,560 tons, of fine silver. During this period of nine hundred and three week days, therefore, the daily amount purchased was over 7 tons of pure silver, and the total amount paid for the same $147,676,749.12.

On the 1st day of July, 1893, the market price for silver was 70 cents per ounce for pure silver, so that the loss on this purchase was $37,456,406.72; in other words, the amount of $147,676,749.12 paid had fallen in market value to $110,220,342.40. According to the returns of the census of 1890 (House Document No. 340, Fifty-second Congress, first session, pages 68 to 95 and 163) the production of pure silver amounted to 41,703,527 ounces and the cost of producing the same is officially stated to have been $15,558,423, or 37.3 cents per ounce. The profits to the mine owners should be regarded as very satisfactory, indeed.

In 1886 the British Royal Commission ordered an investigation of the cost of producing pure silver. Prof. Robert Austen reported and proved that the cost of producing pure silver in this country was 51.1 cents per ounce, and for the whole world 40 cents per ounce. Dr. Kimball, Director of the Mint, doubting the accuracy of Prof. Austen's returns, in turn directed an investigation. The several agents of the United States reported the cost of production in the United States to be 52⅔ cents per ounce. (See report of Director of the Mint on the production of the precious metals for 1887, pages 80 to 116.)

At the return by Dr. Kimball of 52⅔ cents per ounce fine, the cost of production of the 157,457,632 ounces of fine silver sold to the United States was $82,507,799.16, thus netting a profit of $65,168,949.96 on the amount paid under the Sherman act of $147,676,749.12 of the people's money. In addition to this it is now asked that the mints of the United States shall be thrown open to the free and unlimited coinage of the entire productions of the mines, which, in 1892, amounted to 58,000,000 ounces of pure silver, and for which 74,989,900 silver dollars are to be paid. Our silver coinage being 16 to 1 of gold, there would accrue a profit according to the last census returns, at 37.3 cents per ounce, of $53,355,900, equal to about 249 per cent.

These are facts. These are the causes of the loss of confidence now hovering over us. Is it any wonder that our people are hoarding the gold coin, the gold certificates, and the legal-tender greenbacks? The $407,945,944 in gold coin, the $101,469,969 in gold certificates, the $319,022,323 in greenbacks that have disappeared from circulation since the 1st of June last, making a total of $827,438,236 out of $1,596,000,000 are causing the present distress and panic. Is it strange that our people are fearful lest they must exchange their substance for a shadow?

In 1804 Thomas Jefferson stopped the coinage of silver dollars, and from 1805 to 1836 no silver dollars were coined. In 1834 a change was made in our coinage laws, and two years after one thousand silver dollars were coined. None were coined in 1837 and 1838, while in 1839 only three hundred were issued. It will thus be seen that there was a very limited coinage of silver dollars, for from 1794, when the first silver dollar was struck, until 1873, when free and unlimited coinage became a law, not quite $5,000,000 were coined.

A very favorite assertion of the silver mine owners is that since 1873 prices for wheat and cotton have declined in consequence of the abolition of free coinage. Let us examine the truth of this statement.

We are constantly told by the free-coinage orators that price, of wheat and cotton have declined since 1873. They exhibit charts, diagrams, and even very adroitly arranged barometers by which they seek to prove the fall of prices for wheat, cottons and silver since 1873 in this country. They very prudently start their object lessons with the prices for wheat and cotton in 1872. If they dared to extend their charts prior to 1872 it would have been seen that in reality wheat and cotton joined in the general decline of almost all commodities in 1865, while silver reached its highest point in 1866. Here are the plain facts:

Average yearly prices for wheat, cotton, and silver bullion.

Year.	Wheat, per bushel.	Cotton, per pound.	Silver, per ounce.
1865	$1.90	$0.83	$1.33⅜
1866	1.40	.43	1.34
1867	1.27	.31½	1.32½
1868	1.89	.24⅝	1.32½
1869	1.38¾	.29	1.32½
1870	1.29	.23	1.32½
1871	1.32½	.17	1.32½

These facts our exhibitors fail to give us; they prefer to offer the following, beginning with 1872, viz:

Year.	Wheat, per bushel.	Cotton, per pound.	Silver, per ounce.
		Cents.	
1872	$1.47	19.3	$1.32
1873	1.31	18.8	1.29
1874	1.43	15.4	1.27
1875	1.12	15.0	1.24
1876	1.24	12.97	1.15
1877	1.17	11.88	1.20
1878	1.34	11.1	1.15
1879	1.07	9.9	1.12
1880	1.25	11.5	1.14
1881	1.11	11.4	1.13
1882	1.19	11.4	1.13
1883	1.13	10.8	1.11
1884	1.07	10.5	1.01
1885	.86	10.6	1.06
1886	.87	9.9	.99
1887	.89	9.5	.97
1888	.85	9.8	.93
1889	.90	9.9	.94
1890	.83	10.2	1.04
1891	.85	7.7	.90
1892	.80	7.3	.86

These charts, diagrams, and barometers, with doleful accounts of the misery and ultimate ruin of the farmer and cotton-planter, have been presented to the West and South until a general belief prevails that the decline in silver bullion and likewise in the prices of wheat and cotton are inseparable, and that only the free and unlimited coinage of silver bullion worth 72½ cents into $1.29¼ per ounce, or otherwise 58 cents' worth of silver bullion into 100 cents, or a dollar, would remedy prices for wheat and cotton and establish unlimited prosperity.

Now, when we examine the official returns of the Statistical Abstract of the United States for 1892, fifteenth number, we find on page 313 that in 1867 the total production of wheat in this country was 212,441,400 bushels. The figures for 1865 and 1866 are not given, while in 1892 the crop was put at 515,949,000 bushels. No returns being given for Dakota or California even for 1867 (see page 308), while in 1892 California produced 39,157,000 bushels and the Dakotas 66,765,000 bushels, showing an increased production of 105,922,000 bushels, or half the amount of the whole crop of the other twenty-one States and Territories in 1867. Is it remarkable that prices of wheat have declined?

In 1865 the crop of cotton in the United States was 2,278,000 bales; in 1866, 2,233,000 bales, and in 1892, 9,018,000 bales, or over four times as much as in 1865 and 1866. Is it strange that prices for cotton have been reduced? ("Cotton facts," Alfred B. Shepperson, December, 1892, page 2.)

The Report of the Director of the Mint on the production of precious metals (House Executive Document No. 274, Fifty-second Congress, second session, page 222) states that the production of silver in this country was in 1865, $11,250,000 worth; in 1866, only $10,000,000, and in 1892 it had increased to $73,697,000 worth, an increase of from 8,000,000 ounces of pure silver to over 57,000,000 ounces—over seven times the production of 1866, when the price of silver bullion was $1.34 per ounce, and the highest in this century. Has the population increased sevenfold? The census of 1860 gives the population at 31,443,221, in 1870 at 38,558,371, and in 1890 at 62,622,250.

While the population has only about doubled in this period of time, the production of wheat has been over twice as much, and of cotton over four times as great, and silver over seven times as large.

Our people have not lost faith in their wheat, nor in their cotton, but confidence in silver seems to have been very greatly disturbed, and to many minds the only remedy in this most oppressing crisis to restore confidence in all things is to act upon the recommendation of the President and repeal the purchasing clause of the Sherman act. [Applause.]

[Mr. RICHARDSON of Tennessee addressed the House. Sae Appendix.]

Mr. PICKLER. As no gentleman appears desirous now to take the floor, and as I see the gentleman from Illinois [Mr. SPRINGER] in his seat, I would like to ask him a question or two in relation to a subject embraced in the speech which he delivered to-day.

Mr. SPRINGER. I have no objection.

Mr. PICKLER. I have been considering seriously how I ought to vote on this question. Now, the gentleman from Illinois asserted very emphatically in his speech that if the Sherman law should be repealed unconditionally he had no doubt that some measure would be adopted by Congress and become a law relative to the currency. When I asked him as to the provisions of such a bill he very facetiously turned me off. Now, I would like him to state (and I am in earnest about this matter) what kind of a measure he would be in favor of, and whether he has any such measure digested, because upon what is to follow the action on the pending bill depends largely, I think, the votes of quite a number of gentlemen. I was in earnest in my inquiry to-day, although the gentleman seemed to think I was interrupting probably for the sake of interruption. I would like to know his opinion as to the kind of a measure which can be put through here and receive the approval of the President.

Mr. SPRINGER. At this moment I can not say what would be a proper bill to be enacted on this subject, but I will say that I will coöperate with the friends of free silver on this floor to reach a satisfactory conclusion; and when those who earnestly believe in the largest possible use of silver have reached such a conclusion I will go with them to secure the passage of such a measure. I believe that we could maintain a parity on the ratio of 20 to 1, though it is possible that it might be necessary to fix some larger ratio.

I believe, however, that we can reach some middle ground on which the friends of silver can unite; and I earnestly invite the coöperation of my friend from South Dakota with the majority of this House in reaching such a conclusion, and also the coöperation of our Populist friends who are so earnest in their desire for the largest possible use of silver.

Mr. PICKLER. I think the gentleman knows me well enough to know that I am in favor of an enlarged use of silver. I am in earnest about this matter. I am much obliged to the gentleman for answering my inquiries.

Mr. RICHARDSON of Tennessee. If no other gentleman desires to speak this afternoon, I move that the House now take its recess.

Mr. SIMPSON. Mr. Speaker, I would like to occupy the floor for a few minutes. I hold in my hand a communication from Mr. Frederick C. Waite, the special agent of the Census Bureau in charge of that portion of the Eleventh Census relating to the statistics of farm mortgages and other indebtedness of the people of this country. The time allotted to me, five minutes, will be too short to read this document; but in view of its importance and the general interest attaching to the subject I will incorporate it in my remarks for the purpose of giving information of reliable character upon this question. It is as follows:

WASHINGTON, D. C., *August 17, 1893.*

DEAR SIR: As has been well said, the President, in his message to Congress, "proposes to rehabilitate the crippled banks, to reopen the abandoned industries, to rescue from idleness and want the starving laborers, to restore securities to their former strength and affluence, and to set up confidence where fear and frenzy riot now, by the simple process of repealing the Sherman act, and thereby retaining in the Treasury the $3,000,000 or $3,500,000 which hitherto has been put into circulation each month through its operation." If, instead of seeking an opportunity to criticise, our desire is to find out the cause of this industrial depression, which has raised armies of the unemployed in many silver as well as every gold-using nation on the globe, we have but to investigate the affairs of that people among whom it has been most severe, namely, of the Argentine Republic.

According to Mulhall, the total wealth of the people in the Argentine Republic, before the collapse, equaled but $2,545,000,000 in gold, while, according to the last report of the Michigan Bureau of Labor, their debt equaled the incredible total of $2,191,000,000 in depreciated currency, or over 50 per cent of their entire wealth, including the inflated land values. It was this almost unprecedented amount of debt which caused the utter collapse. Moreover, every economist who has spent years investigating the subject is well aware that the "unearned land values," like bonds and stocks, are simply evidences of wealth, being, in the main, mere inflation based upon the results of the labor and the capital employed in building free roads, bridges, canals, and harbors, and furnishing light, sewerage, water, order, protection against fire, etc. Hence, it is very plain that the collapse in the Argentine was made all the more overwhelming by the fact that, when there was a need for a basis on which her mighty debt could rest, the land values fled, and public improvements, order, and protection against fire were things of the past. In other countries the crisis has not been so disastrous, but it has in every case been in proportion to the amount of debt.

From history we notice that, whether we turn our attention to the centuries of prehistoric human experience which the author of the Pentateuch had in mind when he penned the immortal twenty-fifth chapter of Leviticus, or to the dawn of Grecian or Roman history, the revolutions and rebellions in our mother country, or to the financial crises of modern times, such as those in our own country in 1818, 1837, 1857, 1873, and 1893-'94, or to famine-stricken Russia, the one great fact which in every instance towers above every other history-creating fact is debt.

Let us note the great increase during the last twelve years in the private indebtedness of our own people and contrast it with the modest increase of scarcely 60 per cent in our wealth, nearly half of which was but a fictitious rise in speculative ground values. As for the funded debts, those of the railroads increased from $2,392,000,000 in 1880 to $5,463,000,000 in 1892, according to Poor's Manual, an increase of 129 per cent, while the current debt has nearly doubled in the last seven years. The funded debts of other companies were very small in 1880, but many of them have since assumed magnitude, especially during the last few years; as, for instance, those of the telephone, telegraph, and street-railway companies, and public water, gas, and electric-lighting and power companies.

During the same time, the loans and overdrafts of national banks increased from $694,000,000 to $2,171,000,000, while those of other banks, exclusive of private banks and of real estate mortgages, increased from $378,000,000 to $1,189,000,000. The most astonishing increase of all, however, is in the real estate mortgage indebtedness, as disclosed by the investigations of the Eleventh Census. Let us remember that this is largely the debt of the hardest working and the poorest paid of all our American citizens, namely, the farmers and the laborers who are trying to obtain a home of their own by honest toil. In the twenty-one States for which the mortgage indebtedness has been tabulated the aggregate amount in force at the close of 1889 was four thousand five hundred and forty-seven million, with the great States of Ohio, Texas, and California and whole groups of lesser States yet to be heard from. The grand aggregate will be no less than six thousand three hundred million. The aggregate in 1880 was only about two thousand five hundred million. Last year, after turning the scale at eight thousand million, the mortgage indebtedness continued its upward flight, not being contented with an increase of 220 per cent, or nearly four times the increase in the true value of real estate.

In a word, the total net private indebtedness of the American people equaled in 1880, but $6,750,000,000. Last September it amounted to nineteen thousand seven hundred millions, an increase of thirteen thousand millions in the short period of twelve years.

These mute figures tell the tale. Our manufacturing and mining industries have been stimulated under the intoxicating influence of protection, while our farmers have been compelled to borrow to meet deficits. Our land values have been bolstered up by booms and ruthless real estate speculation all over the West and South. Railroads have been built to forestall competitors, to raise the value of land, and to build cities where none were needed. Bonds and watered stocks have been ruthlessly floated for the purpose of wrecking valuable properties. In order to indicate how universal such practices have become, I may say that my investigations in the Census Office forced me to the conclusion that the liabilities of the railroad companies equaled fully 85 per cent, or $5,000,000,000 more than their total assets. With this conclusion all experts practically agree. In short, things have been overdone, and the periodic settling day has come.

This is the giant fact that stares our country in the face to-day. The industrial depressions of over four thousand years, under every civilization known to history, have been, one and all, due to the innate power which debt has of piling itself up until it reaches a volume which the existing civilization can not support. Ten months ago our private indebtedness reached that awful climax. During seven months we reduced that mighty load of

debt by a few score millions, which, together with the reduction of the last three months, amounts to hundreds of millions.

The unpleasant fact which must be bravely met, is, that we shall not have prosperity again until at least a thousand millions of this indebtedness shall have been wiped out of existence, and probably not until property which is to-day valued at thousands of millions shall have passed at a great sacrifice from the hands of the poor and middle classes to the hands of the men who hold the money.

As yet we have but touched the outskirts of this world-wide commercial crisis. We are now beginning to sail through it. However, we shall not be called upon to pass through the black center, as have the golden republics of Australia, because the indebtedness of our people has not been piled up with such blind recklessness, and because, in general, there have been some bounds to the ficticious inflation of land values.

The total capital of all banks suspending during the three months ending July 28 aggregated for the whole United States only $38,951,033, while in the six weeks ending May 16 the liabilities of the banks of issue which were crushed to the wall in Melbourne alone amounted to over $300,000,000, a sum nearly equal to the total deposits in the sixty-four banks forming the clearing-house of New York City.

Melbourne is a city about the size of slow, pay-as-you-go Baltimore, which does not know what a bank failure is. Even before the crisis, merely as the result of the storm which preceded, Melbourne's population had been reduced by more than 20,000 and the land values were already disappearing beneath the assessed valuation and, in many quarters, even beneath the mortgaged indebtedness, when the city was suddenly overtaken by one of the most gigantic financial collapses in modern times—a collapse which shook the very foundations of credit the whole world around, locked up the gold of the East, and set England's surplus afloat for the rescue of the doomed continent.

Europe was already deep in difficulties on account of the Panama collapse and the unsettled condition of affairs in the Argentine. The guarantors of the Baring failure had just extended their guarantees to retide matters over. The continuation of the fight among the great banking houses for a sufficient supply out of Europe's insufficient store of gold compelled England to look toward America. Aided by the excessive trading of our over-hopeful merchants, England, by curtailing her purchase of our produce and by selling our securities, replenished her gold supply. Moreover, the floating of the gold bonds of Austria had shoved large bodies of American securities back upon our own market and increased the outflow of gold. This draining of our supply and the fall of prices led to hoarding money of every description.

One month after the crisis struck Melbourne, during the week of bank holiday proclaimed by the Government to give the people time to cool down; just as the collapse, which had been confined to Melbourne, opened its maw as though about to engulf the whole continent, New Zealand and all; then as the giant banks of Australia were falling right and left, the great commercial centers of the United States were shaken. Two weeks later flashed across the wires the added news that five banks with liabilities amounting to over $125,000,000 had gone down in three days. In certain of our Western cities, whose condition since 1888 has been that of a collapse-in-suspense, the banks and business houses began to close their doors, although their assets seemed to be large, at least to those who have not taken in the world-wide situation and have not given years to the study of fictitious land values as a basis of mortgaged indebtedness.

My only apology for not accepting the general explanation of the cause of this crisis, and for not falling in with the lovely little panacea, by which all nations that have either a Sherman act to repeal or silver to demonetize may enter into the millennium of prosperity, is that I find nothing to support such theories, whereas I have the facts by which I can demonstrate the accuracy of every statement made above.

Very truly, yours,

FREDERICK C. WAITE.

Hon. HENRY M. TELLER, *United States Senate.*

I am convinced, Mr. Speaker, that the increase of debt shown by this statement from $6,750,000,000 in 1880 to $19,000,000,000 in 1890 is due in large part, if not altogether, to an inadequate supply of money for the people of this country. It is because of the inflation of credits throughout the country, owing to the scarcity of money, that we have been put in this condition, and I believe that it largely arises from the desire of the banking interests of the country to have and retain control of the issuing of currency, so that they can inflate their credit at will, and in that way reap larger profits at the expense of the people. That this is the cause of great injury to the people no one can question.

I also believe that the banking institutions of the country are engaged largely in a conspiracy to overthrow the monetary system and put this country in a position where we must go to a single gold standard, whereby we will be thrown back on their issues of currency for our supply. I believe, Mr. Speaker, also that that conspiracy has extended so far that it has reached and is, in a certain sense, controlling not only the people but the Government of the United States. And, in view of that conviction, I send to the desk and ask to have read a resolution in my time, and after it is read I will ask unanimous consent for its consideration and adoption by the House.

The SPEAKER. The resolution will be read.

The Clerk read as follows:

That whereas, it being matter of general report and knowledge that the banks of certain Eastern cities, and particularly certain banks in the city of New York, are—

First. Below their reserves, and have not on hand an amount of currency equal to 25 per cent of their deposits;

Second. Have and are creating a fictitious money called clearing-house certificates;

Third. Are refusing to pay the lawful checks of depositors in money;

Fourth. Are indulging in that fraudulent method of finance known as "kiting;"

And whereas all these are infractions of the law, and are asserted to be known and countenanced in the case of said banks by John G. Carlisle, Secretary of the Treasury, and James H. Eckles, Comptroller of the Currency of the United States, it is hereby

Resolved, By the House of Representatives of the United States, now in session, that the Speaker be directed to appoint a committee of five members of this House to at once investigate all matters and things herein set forth, and particularly the conduct in office of the said John G. Carlisle and James H. Eckles in the premises, and report their finding to this body.

Mr. SIMPSON. I ask unanimous consent, Mr. Speaker, for the present consideration of that resolution.

Mr. RICHARDSON. Mr. Speaker, I submit that it is not in order. The gentleman from Kansas had the floor for debate and not for the purpose of offering a resolution.

Mr. SIMPSON. But I am asking unanimous consent.

The SPEAKER. The gentleman from Kansas, under the rule by which the House is now governed, and under which it is proceeding, has been recognized for debate only, under the five-minute rule, and not for any other purpose.

Mr. SIMPSON. But, Mr. Speaker, there have been resolutions read here and amendments presented that were allowed in the time of gentlemen to be presented to the House.

The SPEAKER. Resolutions read?

Mr. SIMPSON. Yes.

The SPEAKER. Read, of course, as a part of the remarks of the gentleman occupying the floor. But the Chair understood the gentleman from Kansas to ask unanimous consent to consider this resolution.

Mr. SIMPSON. That was my request, Mr. Speaker.

The SPEAKER. The Chair can not submit that request.

Mr. SIMPSON. May I ask how much time I have remaining?

The SPEAKER. A half minute.

Mr. SIMPSON. Mr. Speaker, I have offered this resolution in all sincerity and good faith. I believe that many of the evils from which we are now suffering are caused by the inflation of the credit of the banks and the speculation that has necessarily been brought about by reason of the stringency of money. I believe that the national banks are acting in concert largely in this matter, and that they are responsible for a very large part of the evils, and should be held to a strict accountability before the country for their acts. I regret that I can not submit the resolution at this time, because I think it is one that should be acted upon promptly by the House.

Mr. JOSEPH. Mr. Speaker, were I able to vote upon the pending bill I would vote to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon," and substitute it by an act providing for the free coinage of both gold and silver, without discriminating against either metal, upon the present ratio. This is, in substance, the distinct declaration made in the Chicago Democratic platform of 1892. On this platform the President was not only nominated and elected Chief Magistrate of the United States, but every Democratic member of this House was also nominated and elected upon this platform to their present positions in this House of Representatives. Consequently, we are compelled to keep our word and promises to our constituents, who will hold us to strict accountability for the nonfulfillment of the same. The further demonetization of silver will make all debts, public and private, harder to pay by cutting off half the means of payment. Silver has not only been the money the people for ages, but it was the only money the people of New Mexico, whom I have the honor to represent upon this floor, had for centuries prior to its annexation to the United States.

Gold and silver have been used as coin metals from time immemorial. Historians tell us that during the reign of Rameses the Great, in a royal palace of Egypt, there were depicted upon its walls in glorious colors the offerings to the gods of the products of the king's mines amounting to more than thirty millions of our currency, thus showing that Egypt in her palmiest days and at the height of her civilization used both gold and silver.

The country of Europe most productive of the precious metals, but especially of silver, in early times was Spain.

M. Chevalier calls the Spanish dollar "an universal coin." You all know that after the bold Napolitan had discovered a world whose mountains were gold and silver, a party of ambitious Spaniards, headed by Cortes, landed at Vera Cruz, Mexico, during the reign of the Aztec ruler, Montezuma, and proceeded to capture the historical and beautiful capital of the Anahuac Empire; they succeeded in their undertaking and they found there, in the temples and outside of them, real treasures, consisting mainly of silver, which metal was destined to form the greater part of the New World's production during the next three centuries, as some great writers have so wisely stated.

Coronado, one of Cortes's gallant generals who accompanied him in his expedition to this continent, convinced by what the Indians had told him of the territory which is to-day called New Mexico, made a trip to that section of the country the first part of the sixteenth century, accompanied by several as ambitious Spaniards as he himself was. A young priest, Fray Juan de Padilla, accompanied Coronado, not for the pleasure of seeing the country or with the object of obtaining a fortune, but for the noble purpose of civilizing the Indians. This young man re-

ceived the crown of martyrdom at the hands of the Quivirans; at the hands of the very people he was trying to save and civilize. Before he was killed he wrote several letters to a chief priest at Pueblo, Mexico, in which he speaks in glowing terms of "large bricks of silver that he saw everywhere he went about those pueblos" (meaning New Mexico).

New Mexico is, and has always been, a silver-producing country. It was a mining country when the Spaniards founded Santa Fe, in 1605, for the very first thing that called the Spaniards' attention was lots of goose quills filled with bright gold dust and many silver bricks which the Indians brought to their tents and tried to exchange for clothing and other goods. Soon afterwards the Spaniards made some Indians confess where they had obtained "that bright dust" and silver bricks, and then they forced the savages to work in the mines of gold and silver, reason for which the Indians revolted to the extent of decapitating several of Coronado's men. And from that day to this, Mr. Speaker, wherever you go in that Territory you will see the mark of the miner's pick and shovel, and the ruins or débris of some old Spanish mines, that were worked centuries ago.

As you plainly see, Mr. Speaker, the depreciation of silver affects New Mexico as much as any other silver-producing State or Territory in the Union, and because it affects my section of country so seriously I have grasped, with pleasure, this opportunity to show you what monometallism means to the great West. With your permission I will read the following facts, carefully prepared by a gentleman who has dedicated the greater part of his life to mining in the West. He says:

If the Sherman law is unconditionally repealed it would seem as if nothing could prevent a fall in the price of silver to 50 cents per ounce or less.

The writer believes, as a result of twenty-two years of active experience in precious metal mining, that 75 cents is considerably below the average cost of silver per ounce, and consequently that the present stoppage of the industry in the West will be permanent unless silver advances to at least 80 or 85 cents. If the price goes to 50 cents the business will be entirely wiped out.

In such an event, or, if simply the present state of depression and demoralization continues, what are to be the commercial results? Perhaps the following figures will show:

The far West, comprising the States of Montana, Idaho, Wyoming, Colorado, California, Oregon, Washington, and Nevada, and the Territories of New Mexico, Arizona, and Utah, contains an area of 983,000 square miles, a population of 2,700,000, and produced in 1890 raw material, as follows:

Mineral products	$128,657,898
Farm products	54,933,275
Lumber products	32,499,981
Live stock	13,053,242
Wool	10,257,493
Fishery	8,171,010
Total	247,572,919

Out of this it must pay its debts. It is not a manufacturing section of the Union; it is, on the contrary, a very heavy importer of manufactured articles, and as yet relies wholly on its raw material to meet its obligations. These are as follows, as far as I can ascertain:

Railroad stocks and bonds, 17,164 miles and equipments	$1,058,212,600
Water, gas, electric, and street-railroad stocks	52,362,485
State, county, municipal, and school bonds	43,488,790
Business building stocks and bonds	24,260,118
Telegraph and telephone stocks and bonds	10,850,515
Ditch and irrigation stocks and bonds	8,889,475
Smelting works	5,500,000
	1,203,563,983
Mortgages and individual investments	300,000,000
Total	1,503,563,983

Upon these the annual interest is $81,000,000, which is equal to about one-third of the total gross product of the district.

If the silver mines are to remain closed, the difference in the annual products will be as follows:

Practically all the silver, which in 1890 was 51,330,826 ounces, at $1.04 per ounce *	$53,384,059
About 30 per cent of the gold product †	9,534,142
The Montana copper product ‡	9,939,774
The entire lead product §	9,425,415
Coal, used in mining and smelting	8,500,000
Total	91,131,489

Does anyone believe that the West can meet its obligations under such a loss of revenue? If the East persists in clinging to the gold craze, and continues to insist upon the destruction of silver, and if the West can not secure very quickly the complete remonetization of the white metal, the East will surely pay for its stupidity and greed by losing every dollar of principal it has invested in the mining States and Territories.

Those few among us who think that the West can live and prosper without its silver mines can contemplate the following statement, which is carefully figured out from the data of the census of 1890.

Excluding those parts of California, Oregon, and Washington which depend wholly on agriculture, lumber, fisheries, and commerce for support, and are not interested directly or indirectly in mining of any kind, and considering all the balance of the States and Territories mentioned above, it is a fact that the miner, constituting but 28 per cent of the population, and occupying only 43 per cent of the area, produces 72 per cent of its annual output of wealth of all kinds, and of this total 41 per cent is silver.

*Average price for the year.
†Contained in low-grade silver ores,
‡Which is profitable only because of its silver contents.
§Produced as a by-product in silver mining.

Thus, you see, Mr. Speaker, at a glance, that the depreciation of silver would bring desolation and misery to the far West; for where a few days ago was a busy and thriving mining camp, as at Silver City, N. Mex., to-day there are not a hundred families, and those are there because they can not get away.

One of the principal scarecrows put forth by the enemies of silver money as a reason why silver should be demonetized is the claim that more silver is produced each year than can be used for the purpose of money, and that if freely coined by the Government all the silver product of the mines will be coined, as the best means of obtaining the highest price for the metal. Few of the people who are not familiar with the amount and the cost of silver mining have any means of knowing the truthfulness or untruthfulness of such claim.

The best answer to such barefaced misrepresentation of the facts is a statement that no more silver can be produced in any country of the world than can be made use of as money in such country or in others; and in our country the decrease of the metal has begun and will continue till no more is found or mined. There could be twice as much put upon the country as money without detriment to the business of the nation, and the whole world would be better off financially if it were so.

But few members of this House know, Mr. Speaker, the fact that gold can not be produced without silver; and for the benefit of those who are not aware of it, I here copy part of a letter of a gentleman who has taken a great interest in finding out where gold can be produced without silver, and which I believe my colleagues will find as interesting as I did. It reads as follows:

The Director of the United States Mint reports the production of gold in the United States for the calendar year 1891 to have been $33,175,000. Financial circles in the eastern half of the United States are of the opinion that this metal should continue the sole standard of American money; that too much silver has already been coined into dollars; that the present purchase of silver bullion should cease, and that our financial prosperity in the coming years depends upon the adoption of their opinion. Inferentially, if their views be correct, they depend upon the far Western States and Territories to produce the gold that shall sustain the credit of the United States and its ability to supply foreign lands, as has been done to the net extent of about $125,000,000 in the past three years. If the United States depends upon the mining States and Territories to do all this, then all the industries of these mining States and Territories, which enable them to meet this extraordinary demand, are deserving of the fostering care of the entire country, and particularly of those money-centered parts which are so strenuous in their advocacy of gold as the only standard of American money.

I lately addressed letters to the three great smelting companies of Denver for the statistical information upon the union of gold and silver in the ores which are mined, and which they buy and treat. Their replies are the basis for this brief paper, the object of which is to show that the gold necessary to sustain the United States upon a gold basis can not be obtained without producing the silver also; that there must be a steady and ready means of consuming silver, at a price substantially no lower than now, to insure the production of the gold.

First, it should be clearly understood that the supply of gold from the ground or placer diggings has diminished to such an extent in nearly all the mining States and Territories that it is not considered in this paper. The greater part of the supply of gold is now from mineral veins, which must undergo treatment.

The three great smelting establishments of Denver purchased in the year 1891 369,036 tons of ore. This ore contained $3,043,306 in gold and $19,081,104 in silver, coinage value. While there are considerable purchases of ores which contain no gold, there are no ores containing gold which do not contain silver. The Boston and Colorado Smelting Company say in their letter that they "have never had gold ore that did not carry some silver." The Globe Smelting and Refining Company say in their letter: "We have never had a lot of ore in these works which contained gold without any silver at all." The Omaha and Grant Smelting Company, in reply to the question, "How many lots of ore purchased by you in 1891 contained gold and no silver?" answered "None."

No gold is taken from any ores that come to Denver, or that ever have come, that have not also supplied silver. I can not say how many mines produce these Denver purchases of ores, but I do know that one of these companies purchased 5,513 different lots during the year, and another bought from Colorado, Idaho, South Dakota, California, New Mexico, Utah, Washington, Nevada, Montana, Arizona, and Wyoming, and that gold and silver came from all.

I have from good authority that such is the case at the Rio Grande Smelting Works, at Socorro, N. Mex., and also at San Pedro, N. Mex., and at the El Paso Smelting Works at El Paso, Texas.

The same authority I quoted above says:

I have shown that to sustain this industry * * * silver must have a market; and I have shown that to obtain gold, silver must also be produced. If silver be not produced, the supply of gold must fail. All mercantile interests in the West must suffer. Merchants would purchase less goods in New York, railroads would bring less merchandise across the country, receipts in every avenue of mercantile life would decrease, dividends would become smaller and fewer, and railroad construction would cease. The withdrawal of the annual production of the silver mines from the ten thousand channels of commerce would produce a commercial and financial stagnation that would financially ruin millions of people. It would affect the mining States and Territories first and the greatest, but it would sweep the country like a tidal wave across the ocean, and leave devastation in its path.

It is a fact that Eastern people know but little or nothing of what the cost of producing silver really is. Most every man you meet out here in the East thinks that every prospector and miner in the West is a "bonanza king," when the truth is they are everything else but "bonanza kings." To arrive at the cost of silver it is grossly unfair to accept as a criterion the cost of production in some phenomenally rich mine, such as the Mollie Gibson, for instance.

If the people of the East would take into consideration the fact that there are thousands of mines running at a loss where there

is one that is producing silver at a profit, and thousands of prospectors who fail to find anything, where one is sucessful, they would find that the cost far exceeds the present market price. Week before last the miners at Aspen, the greatest silver-producing district in Colorado, forwarded a memorial to Congress, showing that the actual cost of producing an ounce of silver in that camp was $1.02¼. And Aspen is the home of the Mollie Gibson, too. An Eastern paper recently quoted the famous Bimetallic mine of Montana, which has paid $2,300,000 in dividends, as yielding the white metal at the low cost of 8 cents. The paper deliberately said what it knew was not so, for Superintendent J. B. Risque, of the Old Abe Mine, of White Oaks, N. Mex., who for six years had the management of the Bimetallic, has stated that the cost was 63 cents per ounce.

The trouble about the depreciation of silver carries with it fatal results for the other industries of the mining regions. For instance, the crisis of to-day has brought with it a sad state of affairs to the door of the wool producer of New Mexico, who can not sell his wool at any price, because the moneyed people do not want to invest their money on anything to-day, and the result of it is that the people in that Territory who pursue the sheep-raising industry have to keep at home their wool and await with patience better times to dispose of it.

The same can be said of the live stock business and the raising of corn and wheat. And so it is, that if silver is depreciated and finally demonetized, it is not only the miner or prospector that suffers by it, but the other industries get as badly crippled, and consequently the farmer and the sheep-raiser, the cattleman, the gardener, and the wage-earner, will all suffer alike in this monetary revolution.

It is a sad picture, Mr. Speaker, the one that thousands and thousands of our American brothers present to-day in the West; people who went there with the hope of making an honest livelihood by extracting from the bowels of mother earth the precious metals, but who to do that had constantly to battle not only with the rigid weather of a mountainous country, but also with the savage Indians on one hand and the bandit that always inhabits the frontier sections on the other hand; and just when these people had commenced to get acclimated and to know the country and to build up their little homes, here comes a few men who have enjoyed the comforts of civilization and all kinds of luxuries in the East and raise a howl that brings misery to the West—the cry that silver be demonetized and that gold should continue the sole standard of American money.

Can it be possible that this august body will accede to the request of the gold bugs, or that the lips of the American miner will forever kiss the robed imposter's hand?

As a poet recently exclaimed:

> The despot, Gold, puts Liberty to scorn!
> The king of kings! Shall we supinely stand
> Beside our patriots' graves
> And let him rule us with an iron hand;
> Our happy country ruined and forlorn,
> Our great Republic evermore the land
> Of plutocrats and slaves?

As an American citizen who was born under the Stars and Stripes, and as the Representative of 200,000 free people, I sincerely hope that that day will never come to mar the happiness and prosperity of our glorious country.

Mr. RICHARDSON of Tennessee. Mr. Speaker, if no other gentlemen desires to address the House now, I will move that a recess be taken.

The SPEAKER. The Chair desires to present a personal request of a member.

WITHDRAWAL OF PAPERS.

By unanimous consent, leave was granted to Mr. CARUTH to withdraw from the House files papers in the case of Matilda Tisheaur, Fifty-first Congress.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed, without amendment, the joint resolution (H. Res. 4) to make the provision of the act of May 14, 1890, which provides for town-site entries of lands in a portion of what is known as Oklahoma, applicable to the territory known as the Cherokee Outlet, and to make the provisions of said act applicable to town sites in the Cherokee Outlet.

ORDER OF BUSINESS.

The SPEAKER. If there be no objection, the House will now take a recess until 8 o'clock. The gentleman from Tennessee [Mr. RICHARDSON] will preside at the evening session as Speaker *pro tempore*.

The House then (at 5 o'clock and 35 minutes p. m.) was declared in recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House, at 8 o'clock p. m., resumed its session (Mr. RICHARDSON of Tennessee in the chair as Speaker *pro tempore*).

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

[Mr. HERMANN withholds his remarks for revision. See Appendix.]

Mr. BRANCH. Mr. Speaker, I would not in the closing hours of this discussion endeavor to advance an original idea upon a subject that has commanded the serious attention of every interest of every section of our country and caused a feeling of fear to take possession of many of those who are by reason of their position as legislators called upon to pass their verdict.

I have listened carefully to arguments on this floor upon this all-important question: not as one whose mind was made up, but one who was open to conviction based upon argument not from an individual standpoint, not from a sectional standpoint, but from the standpoint of a legislator intrusted with the well-being of every interest of every section of this land.

I have been disappointed. I have heard it discussed from the standpoint of the banker, the bondholder, the silver-miner, the commercial centers, and the rural districts, North, South, East, and West, discussions made conspicuous by reason of their individuality, many reasons being assigned for the present depression, and a few ideas for relief suggested.

The gentleman from Massachusetts [Mr. MORSE] in his discussion of this question attributes the depression to the fact "that the people are getting ready for the low prices promised by Democratic speakers in the last campaign, the result of a tariff for revenue only. This he says has had a tendency to paralyze business, to throw thousands of workingmen out of employment, and drive thousands of men who are consumers into the business of last resort—agriculture." While this does not explain why Government bonds will not, as collateral, secure loans to but a fraction their face, those who are engaged in that industry will be glad to know that the gentleman from the great manufacturing center has learned this fact, and hope he will stand ready as a legislator for every interest known to this country, to lend his helping hand to these helpless victims engaged in this industry "of last resort."

Sad experience has taught them it is a business of last resort, resulting largely from selfish legislation.

The people I have the honor to represent directly on this floor are largely an agricultural people. A long series of legislative enactments tending to concentration and consolidation of money in one section and in certain interests, and not their want of devotion to their interests and extravagance, has caused their particular following to be spoken of as "the one of last resort."

It was this fact that contributed largely to the triumphant victory achieved by the Democratic party November last.

What did that victory mean?

It was the verdict of the people in favor of the principles set forth in the platform upon which we stood: a verdict against the legislation of the Republican party, so long in power; and they have a right to expect us to keep our pledges to them, to look to the interest of the great body of our fellow citizens whose interests have been so long neglected.

When the representatives of the Democratic party met in Chicago, July, 1892, they declared their position in a manner as to my immediate constituency in terms unmistakable for a bimetallic basis, and for an equal chance for both gold and silver.

> We hold to the use of both gold and silver as the standard money of the country, and the coinage of both without discriminating against either.

This, Mr. Speaker, is in accord with all the Democratic party has ever taught from its first existence to the present day—incorporated not only in its national but in most of its State platforms. I know not what views others may take upon this subject, but it seems to me the unconditional repeal of the Sherman law would negative this declaration and would be a violation of faith for which we would be held justly amenable; for this reason I shall oppose it. The argument has been more than once used in this debate that this particular financial legislation was not a party question. If so, why not eliminate it from our platform? If so, why was it that views that were supposed to be entertained and constantly expressed entered so largely into and controlled our nominations and made the basis of all our arguments before the people for the positions we hold on this floor? Convince them once that these solemn declarations are but meaningless expressions and the righteous indignation of an outraged

people will be visited upon those who presume to use this medium to impose upon their credulity and their confidence.

The existence of an alarming and extraordinary situation of financial distrust, of fear and failures, which have spared no branch of business, is admitted. I fail to see, from argument thus far advanced, that a purchase of $150,000,000 of silver bullion by this Government at the price for which it was selling in gold—which silver is represented by circulating certificates—could have caused hundreds of cotton factories, woolen mills, sawmills, and other manufacturing interests to be closed, and turned loose thousands of workmen without employment, shelter, or means of living.

Could it not be more reasonably attributed to the fact that the entire control of the circulating paper currency of this country has been placed under the concentrated money power, above the reach of the people and the power of the law?

Destroy silver as money, say, allow the national banks to issue more notes, encourage them by lessening the tax on them, issue more bonds that a corporate monopoly may be perpetuated to control the circulating medium to expand and contract at their will.

Does this give substantial and permanent relief to industrial interests? I think not, sir. Deprive any property of being the basis for credit and it will fall, just as land has fallen in value under the national banking act—saying it should not be any basis of credit—and, I may add, as silver has fallen since the act of 1873.

I can as well as others see the disadvantage in the Sherman law, but can not see why the enactment of some law can not be made in its stead which will have a tendency to protect and not destroy silver, and thereby enable us to carry out promises made to our people in good faith; for a bimetallic basis and for an equal chance at the mints of the country for both metals. Arguing from the standpoint that this would give to them relief so much needed, an idea may be entertained that subsequent legislation would be enacted; but have we the right as agents of the people to take this risk? It would be no less contrary to business principles to loan your money to a man and tell him to bring you the mortgage next week.

Our people, Mr. Speaker, want more money. The immense development of our country needs a corresponding expansion of our circulating medium, because a certain portion of debts must be paid in cash, and as debts increase so does the need for more money. Our population is increasing at the rate of 2,000,000 annually; our industrial interest quadrupling, yet we find our agricultural lands depreciating and depreciated 50 per cent; our products the same, though the demand has increased, according to the statement of the gentleman of Massachusetts. It has been truly said upon the floor of the American Congress that it is a business of last resort. Let me call your attention to the historical fact that after a splendid career of prosperity, filling the world with her fame, Rome culminated and declined. History proves that the great cause of that decline was the laws enacted affecting real estate and the products of labor. Nations that desire permanent prosperity and power should protect both capital and labor, and thus encourage industrial interests.

A competency drawn from and reinvested in the soil encourages love of country, and should bring to it independence. Accumulation of wealth by unnatural and unhealthy speculation can but in time produce panics, want, and suffering, such as we witness on all sides of us to-day. I realize, Mr. Speaker, that no arguments can be more dangerous, coming from a Representative intrusted with legislation, than arguments based upon individual interest or arguments calculated to array one section against the other.

The great agricultural sections South and West ask no special legislation for this infant industry of last resort. They simply ask an equal chance in the race of life, to be allowed to join the grand procession, and go forward to the development of our country, and to the accomplishment of a grand destiny for all. [Applause.]

Mr. BYNUM. Mr. Speaker, I feel like making an apology to the House for the very short time that I shall occupy its attention to-night. I should not occupy your attention at all were it not that I have been very seriously distressed during the last twenty-four hours; in fact, I did not rest well last night. I returned to the Capitol this morning to see whether I had been guilty of such a grievous wrong as the gentleman from Colorado [Mr. PENCE] had accused me of on yesterday.

The gentleman from Colorado was born and reared in Indiana. At what age he left the State I am not informed; but he claims he imbibed his Democracy in the good old Hoosier State. I believe he claims he was born in Bartholomew County, surrounded, as it is, by the Democratic counties of Jackson, Brown, Johnson, and Shelby, the home of Mr. Hendricks and other prominent Democratic lights in that State; not only from them, but from Senator VOORHEES, Mr. COOPER, and myself.

He said that I made a speech in Denver in 1891; that he had accepted the sentiments I had expressed as those of the true faith, but on coming here he found me advocating the other side of the question. I know he impressed the whole House with the belief that he had been misguided and misled, and that his confidence had been misplaced; that I had probably been the cause of his backsliding. I got up this morning to look over the Rocky Mountain News and see exactly what the political principles of the gentleman were and the platform upon which he came to Congress. I had been under the impression from what he stated that he was an enthusiastic, straight-out Democrat.

In looking over this paper I find that the Democratic party in that State held a convention on the 14th of September last, and it purports to have been the simon-pure Democratic party who held it, but by some means they nominated the Weaver electoral ticket and bade farewell to Cleveland and to Harrison electors as well. I find in the paper of that date a declaration of the convention, as follows:

The official and individual utterances and known publications of ex-President Cleveland and President Harrison have demonstrated that they are alike opposed to free coinage at the existing ratios, and if either again becomes President he would veto such a measure should Congress pass one.

Now, the convention at that point seemed to have divided. A portion went off and nominated a straight Democratic ticket and adopted a straight Democratic platform. But the gentleman from Colorado seems to have allied himself with the other wing of the party, although under a Democratic banner it had nominated the Weaver elector I ticket.

A Congressional convention was called, in a short time, of the Populists, and the Democrats, and of some other parties—I believe, the White Wings—for they seem to have a number of parties out there. The Rev. Myron W. Reed was nominated by the Populist party, but after a time that gentleman refused the nomination, and at this point the gentleman from Colorado [Mr. PENCE] seems to have appeared upon the scene. This was an unusual convention.

It was not like our Democratic conventions in Indiana, where the delegates come forward, a platform is adopted, and some one puts in nomination, and a nomination made and acceptance of the nomination, because no one ever declines. The gentleman from Colorado, however, was waited upon by a committee before the nomination was made. They hunted up the gentleman to ascertain if he would stand on the platform they had made as their candidate, and I wish to read what it was.

Resolved, That it is the sense of the convention that all candidates whose names are presented for the consideration of this convention, be requested to come before this convention and state their position upon the following planks in the national platform, to wit:

First. Are they in favor of the issue of money direct to the people without the use of banking corporations and of a volume of $50 per capita.

Second. Are they in favor of the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1?

Third. Are they in favor of the Government ownership of railroads, telegraphs, and telephones?

Fourth. Are they in favor of raising the revenue to defray the expenses of the Government by a graduated income tax?

Fifth. Will they support the principles contained in the Omaha platform, and the platform adopted by the convention, and in Congress vote for the People's party candidate for Speaker, and act with the majority of the People's party Representatives upon all questions of legislation which may come before Congress, should they be elected?

Now, I might have been mistaken as to the gentleman that was called before that committee, but the Denver News accompanies all of its references to distinguished individuals with a photograph, and I find here a very excellent photograph of the gentleman which you will all recognize. [Laughter.]

A MEMBER. Put it in the RECORD.

Mr. BYNUM. I will insert it in the RECORD hereafter.

Mr. PENCE. I would like to make an agreement now that both of these photographs may go in side by side.

Mr. BYNUM. I want to read now what the gentleman said and the position that he took at this particular time. The committee conferred with Mr. Pence, and made their report.

This report goes on:

Mr. Simmons reported that the conference committee was not likely to reach any conclusion for an hour and an informal recess was taken. After fifteen minutes Lafe Pence was escorted in and was applauded as he walked up to the platform.

The chairman read to him the resolution previously adopted.

Mr. Pence said, with respect to the first clause of the resolution: "Yes, so far as I am concerned. I can not speak for the others, but I favor it." On the free-silver clause he said it was hardly necessary for him to be asked. He was as strong a silver man as any on God's green earth, and he answered, "Yes." With regard to the third proposition, he said it was fraught with more difficulties than the others.

Many years ago he came to the conclusion that Government ownership of telegraph lines was the proper thing. To this view he was converted by the arguments of Nathaniel P. Hill of Colorado, to whom he felt indebted, though that was the only question on which Mr. Hill was absolutely right. He said he would favor the people taking control of the railroads, but that a constitutional amendment would probably have to be made.

That was a small matter of course. [Laughter.]

The SPEAKER *pro tempore*. The time of the gentleman from Indiana has expired.

Mr. PENCE. I ask most sincerely that unanimous consent be given to the gentleman to continue.

Mr. BYNUM. I would like to have three or four minutes.

The SPEAKER *pro tempore*. If there is no objection the gentleman's time will be extended four minutes.

Mr. BYNUM (reading):

"Whenever it is legal," said he, "I believe in it, not with the limitations you have fixed in these interrogations, not with the limitations of speakers here, but with the limitations made by the Omaha platform upon which Gen. Weaver was nominated. I am in favor of it. If I am not explicit enough I hope questions will be asked me now, and not after I have gone."

The gentleman complained yesterday of so many coming up to the "pie counter," and sustaining the views of the President. He had not reached the pie counter at that time. He was only taking crow. I want you to see how he took it. He seemed to hanker after it.

Upon the income tax clause—

and so forth. I will not quote the gentleman upon that.

Upon the last section of the resolutions he said he would support the principles of the Omaha platform whether nominated or not. He would also support the platform adopted by the convention. He asked for explanation of the concluding sentences regarding future action if elected to Congress. Mr. Staunton took the resolutions to make them clear. Mr. Van Dyke thought time was being lost. Chairman Mills said he thought himself that the resolution was entirely too sweeping, as it was binding a man too broadly.

Even the committee were afraid he would break down, but their fears were groundless.

Mr. PENCE was enthusiastically applauded when he said he wished to be exact, because what he was saying was a matter of record.

Mr. PENCE asked any man who wished to ask any questions to do so. Capt. Ezekiel asked how he stood on lead tariff. He replied: "Upon lead and wool and other interests of Colorado I would ask the same protection as for the interests and products of other States."

Lead, wool, and silver, I believe, take in all the interests of Colorado. [Laughter.]

The tariff plank of the platform, with that exception, the gentlemen was willing, I believe, to accept.

Mr. PENCE replied:

Upon lead and wool and other interests of Colorado I would ask for the same protection as for the interests and products of other States.

[Applause on the Republican side.]

Another question was this:

Have you cut loose from the Democratic party?

Mr. PENCE replied that heretofore it had been his tenet that the Democratic party represented those principles of government which were for the good of the people. This year he had studied the platforms and the candidates presented at Omaha, Chicago, and Minneapolis. He continued, "And having studied them I am compelled, for 1892, to leave the Democratic party and to join with the party that represents my principles."

Mr. Speaker, this is not Indiana Democracy. [Laughter.] I know how eager the gentleman must have been to secure the nomination. I know how anxious he was to answer all questions. He was willing to turn his back upon those grand old principles of Democracy that he had imbibed in his youth in Indiana, not for the purpose of getting pie, but for the purpose of getting an office. [Laughter.]

The SPEAKER *pro tempore*. The time of the gentleman from Indiana [Mr. BYNUM] has expired.

Mr. PENCE. Mr. Speaker, just a word of personal explanation.

The SPEAKER *pro tempore*. The gentleman from Washington [Mr. WILSON] is entitled to the floor.

Mr. PENCE. On a question of personal privilege I trust it will not be denied me.

The SPEAKER *pro tempore*. The gentleman from Washington [Mr. WILSON] is recognized.

Mr. PENCE. I will take not the fraction of a minute.

Mr. WILSON of Washington. Mr. Speaker, of course it is right and proper for the gentleman from Colorado [Mr. PENCE] and the gentleman from Indiana [Mr. BYNUM], who are both trying to sustain their Democracy, to have a chance to be heard, and I hope they will have the opportunity. [Laughter.]

The SPEAKER *pro tempore*. The gentleman from Washington is entitled to the floor. If he yields the floor——

Mr. WILSON of Washington. Then I ask unanimous consent that the gentleman from Colorado [Mr. PENCE] have four minutes to reply to the gentleman from Indiana.

Mr. SMITH of Illinois. I object.

The SPEAKER *pro tempore*. Objection is made, and the gentleman from Washington [Mr. WILSON] is recognized.

Mr. WILSON of Washington. I have promised to yield to the gentleman from Ohio [Mr. GROSVENOR] two minutes.

Mr. PENCE. Can not the gentleman spare me thirty seconds?

Mr. WILSON of Washington. If the gentleman from Colorado will pardon me, I would be very glad to yield to him, but I promised the gentleman from Ohio [Mr. GROSVENOR] to yield two minutes to him. I have a half an hour's speech here myself that I have been holding for several days [laughter], but if I can do so, representing as I do a State that has had no opportunity to be heard on this floor as yet, I will try to yield one minute to the gentleman from Colorado.

Mr. PENCE. May I ask who made the objection to the extension of four minutes to me?

The SPEAKER *pro tempore*. The gentleman from Illinois [Mr. SMITH] objected.

Mr. PENCE. I understand the gentleman from Washington [Mr. WILSON] yielded to me one minute?

Mr. WILSON of Washington. I meant after the gentleman from Ohio [Mr. GROSVENOR] had concluded.

The SPEAKER *pro tempore*. The gentleman from Colorado [Mr. PENCE] is not in order. The gentleman from Ohio [Mr. GROSVENOR] is recognized for two minutes.

Mr. GROSVENOR. Mr. Speaker, I had the honor at the opening of this debate to speak first upon the Republican side, and to present a few suggestions tending to discredit the commonly accepted theory in certain localities that to the Sherman act, so called, was to be attributed all, or nearly all, our current troubles.

I add here a few testimonials of the correctness of my position.

The State of Ohio is, or was, one of the great sheep and wool producing States of the Union. In 1892 Ohio farmers owned nearly or quite 4,000,000 sheep, and the reduction of nearly 10 cents per pound in the selling price of our wool has been prospectively destructive of our best cash-bringing industry, and this condition of one agricultural industry is but a specimen of all.

The Times-Recorder, of Zanesville, Ohio, one of the live Republican papers of Ohio, recently stated the case and produced the proof, as follows:

DEMOCRACY AND WOOL.

The Signal is talking considerable about wool now and is making a desperate attempt to again fool the farmers as was done last fall by systematic calamity howling. One peculiar thing about it is that ten years ago the Signal was clear over on the other side of the fence, and was telling the farmers that the proposition of the Republican party at that time to make a small reduction in the tariff on wool practically reduced the price of wool 5 cents per pound. Read the following:

"This Republican reduction of the tariff on wool practically reduces the price of wool 5 cents per pound.

"Taking the number of pounds of wool produced in this country in 1880, this tariff reduction on wool by a Republican Congress robs the American wool-grower of $11,775,000."—*Signal*, August 18, 1883.

Now let us do some figuring on this basis. If this statement of the Signal was true in 1883, the application of the same principle must produce the same result to-day. Figuring on the same basis, with a decrease of 8 cents per pound instead of 5 cents, we find that the farmers have lost $18,856,000 by the Democratic promise to reduce the tariff on wool. The fact is that they have lost much more than this, but we are now figuring on the Signal's basis.

Let us make a personal application of the loss sustained by farmers:

Joseph Norman, of Falls Township, last year had 400 pounds of wool which he sold at an average of 27½ cents, amounting to $110. This year he had the same amount, selling it at 20 cents, amounting to $80. His loss chargeable to the Democratic party is $30.

J. H. Johnson, of Hopewell Township, last year sold his wool for 26 cents, this year for 20 cents. His loss on 200 pounds is $12.

Joseph George, of Hopewell Township, last year sold 450 pounds for 26 cents. This year he sold the same amount for 20 cents. Democracy cost him a loss of $27.

John George, of Hopewell Township, last year sold 400 pounds for 26 cents This year he sold the same amount for 20 cents. Democracy cost him $24.

S. J. Perry, of Hopewell Township, had 700 pounds, which he sold for 28 cents, amounting to $196, and got his money for it without difficulty. This year he has the same amount which he sold for 20 cents, but has been unable to get a cent on it because of the tight money market. His loss on account of the Democratic victory is $56, and besides this he is unable to get the money, which he would have had under other circumstances.

Samuel Johnson, of Hopewell Township, lost $24 on 400 pounds.

Samuel Morgan, of Hopewell Township, lost $18 on 300 pounds.

George Kreager, of Hopewell Township, lost $30 on 500 pounds.

Stephen Francis lost $27 on 450 pounds.

G. W. Redman, of Hopewell Township, lost $56 on 800 pounds, selling last year for 27 cents and this year for 20 cents.

To this loss on the wool must be added the loss of $1 per head on the flock. Just take your pencil and figure out how much the Democratic victory last fall cost you on your sheep alone, to say nothing of 45-cent wheat and the difficulty to sell any of the products of your farm and get your money for them. Having done this make up your mind which way you should vote this fall, and then vote that way. If it be for Larry Neal, the candidate who stands for free trade, then vote for him. If it be for William McKinley, who stands for the protection of home industries against the industries of the world, and for the protection of your wool from the cheap Australian wool, then in the interests of you and yours leave your party, if need be, and vote for him.—*Times-Recorder*, Zanesville, Ohio, August 22, 1893.

In this same connection I here produce and place in the RECORD a most able and conclusive statement of this wool question, which came to me from a Democrat of Ohio. The writer is a gentleman of more than State reputation, and the Democrat who sent it has been an active, reliable, and influential member of the Democratic party. He but stands where thousands of that party stand.

This is the letter in full:

——, OHIO, *July 15, 1893*.

DEAR SIR: You and I are Democrats of the old school, farmers and wool-growers. The present low price of wool has induced me to inquire into its causes, the remedies, and the duties of Democrats.

First of all, it is evident that a protective tariff on wool is beneficial to American woolgrowers. The McKinley law of October 1, 1890, requires the woolgrowers of Canada and all foreign countries, before they can have their wool brought into this country for sale, to pay a duty of 11 cents a pound on unwashed merino wool, double on washed, treble on scoured, and 12 cents on washed or unwashed long wools, and treble if scoured. Our woolgrowers have this advantage. They do not have to pay any duty.

This is illustrated by the following actual case as reported by a Philadelphia wool dealer August 27, 1891, as follows:

"A Pennsylvania woolgrower wanted some Shropshire sheep. He knew of a flock that had been imported into Canada from England. The importer in Canada was unwilling to part with all his young sheep, but where there were twins he divided his stock, letting the Pennsylvania woolgrower have one and he kept the other, so that they could both have the same blood. The Pennsylvanian sheared those lambs and sent the wool to us, some of which sold for 30 cents per pound unwashed. The wool from the twins that remained in Canada sold for 18 cents washed. The Pennsylvania man, who is a Democrat, told us as a rule he was a free-trader, but he believed in the McKinley bill with its duty on wool, and explained that the above circumstance has convinced him."

If the duty is high enough, foreign wool can not come in, and our woolgrowers will have the privilege of supplying all.

The woolgrowers of Canada, Australia, and other countries are, for their own benefit, not for ours, opposed to our tariff on wool.

That fact should open the eyes of our Democratic woolgrowers. Protection, then, is beneficial to us, injurious to foreign woolgrowers.

Second. Why, then, while the McKinley law is in force, is wool so low? Washed merino wool is now selling on farms at 18 cents per pound, unwashed at 12 cents. Last year the price was 25 and 18 cents. Why the decline in price? I read Democratic newspapers, and I find one of them, the Boston Herald, of June 16th, gives the reason by saying:

"The probability of reduced tariff on wool unsettle the woolen-goods market to the extent that manufacturers are at a loss as to what they shall do. The possibilities of free wool also make it imperative that dealers shall buy the new clip at figures that will admit of its being sold on the basis of free wool."

The same paper of June 2 said, "The tariff agitation (for free wool) hangs like a cloud over the market, and with the prospect of free wool, more or less remote, neither dealers nor manufacturers are eager to buy wool even at present prices."

Any person can see that manufacturers will not pay much over free-wool prices, because before they can manufacture and sell their goods free wool will come.

WHAT ARE FREE-WOOL PRICES?

On the 14th of June, 1893, Hon. George H. Wallace, United States consul-general at Melbourne, in a letter, said, "Australia wool can be put on the wharf at New York, whole fleeces, in the grease, for 6*d.* (12 cents) per pound. This is what American growers must face."

Australian wool is good merino wool, which, unwashed, shrinks in scouring only 50 per cent, just about the same as our Ohio washed merino wool. Australia merino sheep are bred from American sheep, but owing to the climate their wool has less grease than our Ohio wool. The present prices in Ohio are simply a foretaste of free-wool prices.

WILL WE HAVE FREE WOOL?

I regret to say that the Democratic party is pledged to change the McKinley law, so as to put wool on the free list. The House and Senate in Congress have each a Democratic majority, pledged, as is President Cleveland, to free wool.

On April 7, 1892, the Democratic majority in the House in Congress passed the Springer free-wool bill, but it was not passed by the Senate, then having a Republican majority. All the Ohio Democratic members voting on the bill voted for it.

THE POSITION OF THE DEMOCRATIC PARTY.

It is now for free wool. That is modern Cleveland Democracy. It is not the Democracy of the fathers of the Democratic party.

Through the influence of Thomas Jefferson, sheep was first imported into Virginia, and he said: "We should encourage home manufactures to the extent of our own consumption of everything of which we raise the raw material." (See volume 5, page 416, Jefferson's Works.)

And he believed it the duty of every good citizen "to use no foreign article that can be raised within ourselves." (United States Agricultural Department Report on Sheep, 1892, page 174.)

Gen. Jackson, in his letter to Dr. Coleman, of April 26, 1824, said: "Providence has filled our mountains and our plains with minerals, and given us climate and soil for the growing of hemp and wool, and they ought to have extended to them adequate and fair protection."

The act of Congress of March 3, 1883, reduced, a very little, the higher duties on wool in the tariff act of March 2, 1867.

In 1883 the Ohio Democratic executive committee issued a circular declaring: "That as protection has thus far proven highly beneficial to the farmers of Ohio, this protection should not be withdrawn as long as a protective policy is pursued.

On April 7, 1884, every Democrat in Congress from Ohio voted for a bill to restore the wool tariff of 1867.

This was indorsed by the Ohio Democratic State Convention June 25, 1884.

I prefer to stand by the Democracy of the fathers and of the Democratic party until the advent of Grover Cleveland, with his free-wool notions.

THE RUIN OF WOOL.

Ohio, in 1892, had, besides the spring lambs of that year, 3,886,824 sheep. Our sheep now, including lambs, must reach near 4,500,000. If free wool comes it will destroy the wool industry of Ohio. This will compel our farmers to devote lands now occupied with sheep to raising more wheat and corn and oats, and thus by overproduction still farther reduce the price.

Our wool will be imported from Australia, and take gold out of the country to make payment. The import of wool is in effect the import of the grass, hay, and grain that makes it, and that into our country where there is already an overproduction of all these.

The National Grange is not a political organization, but it has a tariff policy announced by its authorized lecturer, who, in an address published in the American Farmer of August 1, 1892, said:

"The Grange opposed the tariff of the Mills bill because it placed 33 per cent of articles produced on American farms upon the free list to start with, and the average tariff for farmers in the whole bill was less than one-half the average tariff it gave the manufacturer.

"The bill lately passed by the House of Representatives (the Springer free-wool bill) placing wool on the free list entirely ignored the rights of the farmer guaranteed under the Constitution, and the Grange will never indorse such action while a single cent of duty remains upon manufactured wool. Wool is not a 'raw material.' Wool is a complete manufactured article for the farmer, the result of his investment of labor and capital, and it should stand equal before the tariff law with woolen goods."

I stand with Jefferson, Jackson, the Democratic party of 1883 and 1884, and will vote for McKinley for governor.

A REMEDY IN SIGHT.

The present Congress will put wool on the free list unless warned against it by a popular uprising of the people.

The overwhelming election of McKinley in Ohio will serve notice upon our representatives in Congress that they must not do this thing. Forty thousand majority for McKinley this fall will paralyze the efforts of the free-wool men in Congress.

Let us waive party considerations for once and stand by our own interests.

Yours truly,

Mr. Speaker, the eloquent gentleman from Michigan [Mr. BURROWS] to-day introduced into his speech an extract from the message of Mr. Harrison to Congress, dated December 6, 1892, less than one year ago, as follows:

To the Senate and House of Representatives:

In submitting my annual message to Congress, I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

The total wealth of the country in 1860 was $16,159,616,068. In 1890 it amounted to $62,610,000,000, an increase of 287 per cent.

The total mileage of railways in the United States in 1860 was 30,626; in 1890 it was 167,741, an increase of 448 per cent; and it is estimated that there will be about 4,000 miles of track added by the close of the year 1892.

The official returns of the Eleventh Census and those of the Tenth Census for seventy-five leading cities furnish the basis for the following comparisons:

In 1880 the capital invested in manufacturing was $1,232,839,670.
In 1890 the capital invested in manufacturing was $2,900,735,884.
In 1880 the number of employés was 1,301,388.
In 1890 the number of employés was 2,251,134.
In 1880 the wages earned were $501,965,778.
In 1890 the wages earned were $1,221,170,454.
In 1880 the value of the product was $2,711,579,899.
In 1890 the value of the product was $4,860,236,837.

I am informed by the Superintendent of the Census that the omission of certain industries in 1880, which were included in 1890, accounts in part for the remarkable increase thus shown. But, after making full allowance for differences of method and deducting the returns for all industries not included in the census of 1880, there remain in the reports from these seventy-five cities an increase in the capital employed of $1,522,745,604; in the value of the product of $2,024,236,166; in wages earned of $677,943,929, and in the number of wage-earners employed of 856,029. The wage earnings not only show an increased aggregate, but an increase per capita from $386 in 1880 to $547 in 1890, or 41.71 per cent.

* * * * * * *

Another indication of the general prosperity of the country is found in the fact that the number of depositors in savings banks increased from 693,870 in 1860 to 4,258,893 in 1890, an increase of 513 per cent, and the amount of deposits from $149,277,504 in 1860 to $1,524,844,506 in 1890, an increase of 921 per cent. In 1891 the amount of deposits in savings banks was $1,623,079,749. It is estimated that 90 per cent of these deposits represent the savings of wage-earners. The bank clearances for nine months ending September 30, 1891, amounted to $41,049,390,808. For the same months in 1892 they amounted to $45,189,601,947, an excess for the nine months of $4,140,211,139.

* * * * * * *

The value of our total farm products has increased from $1,363,646,806 in 1860 to $4,500,000,000 in 1891, as estimated by statisticians, an increase of 230 per cent. The number of hogs January 1, 1891, was 50,625,106 and their value $210,193,925; on January 1, 1892, the number was 52,398,019 and the value $241,031,415. On January 1, 1891, the number of cattle was 36,875,648 and the value $544,127,908; on January 1, 1892, the number was 37,651,239 and the value $570,749,155.

BENJ. HARRISON."

I now want to offer some testimony corroborating the message of Mr. Harrison. It comes from the Cincinnati Enquirer of December 31, 1892. That great newspaper, between times, prints and publishes a great deal of news, and never, between times, sacrifices news to party, and especially on each recurring last day of the year it can always be relied upon to give a truthful résumé of the business of the year past.

Here are the headlines of the résumé of 1892, published in the issue of that paper, as stated:

Over R. G. Dun & Co.'s "Review of trade for the year 1892," published in the Cincinnati Enquirer of December 31, 1892, that paper head-lined the report as follows:

BEST

Ever Known in Business.

The Glowing Record Made by the Passing Year.

Strongly Favorable Indications for Future Prosperity.

Trade of All Kinds Enjoying a Veritable Boom.

Its Volume was the Largest in the Country's History.

While Commercial Failures were Remarkably Few.

Mr. Speaker, is it not marvelous that only six months later Mr. Cleveland is compelled to state to Congress as follows:

To the Congress of the United States:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged, present evils may be mitigated and dangers threatening the future may be averted.

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources, nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With

plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer to loan, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

* * * * * *

GROVER CLEVELAND.

Mr. Speaker, I shall vote against all pending amendments to this bill, and vote without hesitation for the passage of the bill. The result will be only and simply to cause the cessation of the present practice of buying silver and paying gold for it, and I call attention of the House and the country to the fact that silver will not in this way be demonetized, nor yet driven from circulation or legal-tender quality, for this same bill for which I shall vote declares—

But this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

Thus silver becomes money and not a commodity. We shall cease to degrade silver by buying and cording it up like pig iron, and its value as money will be enhanced.

I will vote thus because:

First. The purchase of silver under this and the Bland-Allison act has had the effect to debase the coins of the country and unsettle values and confidence.

Second. The repeal will benefit the country by restoring confidence, at least in some degree, establish silver upon a better basis than now, and enhance the value of all the currency of silver in the country.

Third. The repeal will place this country in such a position among the nations of the world as that an international agreement can be reached, so that out of such agreement bimetallism can come, and both gold and silver can be coined upon equal terms, free of charge.

Fourth. I am in favor of bimetallism upon such terms as will end this controversy, and I am sure that the repeal of this section will be a grand movement in that direction.

Mr. Speaker, my constituency is made up of agriculturists, miners, laborers, manufacturers, and business men. They all work, and are all honest and intelligent. My first duty is to my own people, who sent me here. I will cast no vote in this House to make heavier by even a slight degree the burdens of life they have borne so long and so patiently. I will not fail to vote, God giving me wisdom, in such a way as to make their burdens lighter.

If I can, I will vote so that each dollar in this land shall be of equal value to pay debts and buy goods as every or any other dollar. The dollar of the rich man shall, if I can effect it, be as good and not better than the dollar which pays for the labor of the poor man.

Because I believe that the repeal of this clause will tend to all of this, with a solemn realization of the responsibility of this hour, I will vote for this bill, and trust to the same overruling Providence, which so long has aided our people, that the future will vindicate the wisdom of the act.

Mr. PENCE. Mr. Speaker, in the minute which has been given to me I want to inform the House respecting the action of the political parties in Colorado. In a few seconds permit me to say that the Democratic party of Colorado unanimously, through its regular organization, indorsed and approved the course taken as read by the gentleman from Indiana [Mr. BYNUM], and that Mr. Cleveland, the Democratic candidate, through his emissaries, sent to Colorado and made a demand and command upon what was called the "White wing" of the Democracy to take down the Democratic electors and support the Weaver electors. However, I had no part in that.

I shall not in this minute break in, but shall save what I might say for another time, when the gentleman will be sufficiently entertained, I hope; but I will say, so that it may go into the RECORD to-morrow (and I do not want any of this suppressed), that I make no denial of the utterances that have been read, and acknowledge and father every word of them; nor am I the man at any time to shrink from any responsibility. I distinctly want it understood that I said what was quoted, and when I said it I was as sober as a judge. I want that to go in the RECORD in the morning. [Great laughter and applause in the House and in the galleries.]

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. BYNUM. Mr. Speaker——

The SPEAKER *pro tempore*. The Chair desires to appeal——

Mr. BYNUM. I rise to a question of personal explanation, Mr. Speaker.

The SPEAKER *pro tempore*. The Chair appeals to members to preserve order, and will state to the occupants of the galleries that such demonstrations will not be allowed. They are contrary to the rules of the House, and can not be permitted. The gentleman from Washington [Mr. WILSON] is recognized.

Mr. BYNUM. I rise to a personal explanation.

The SPEAKER *pro tempore*. The gentleman from Washington is recognized.

Mr. BYNUM. I demand the floor for a personal explanation.

The SPEAKER *pro tempore*. The gentleman can not take the floor on a question of personal explanation.

Mr. BYNUM. Of personal privilege.

The SPEAKER *pro tempore*. The gentleman may be heard on a question of personal privilege.

Mr. BYNUM. It is a question of personal privilege I mean.

The SPEAKER *pro tempore*. The Chair will hear the gentleman.

Mr. WILSON of Washington. Mr. Speaker, is the gentleman from Indiana recognized?

The SPEAKER *pro tempore*. The gentleman states that he rises to a question of personal privilege.

Mr. BYNUM. I will not retain the floor more than a moment. On yesterday I jocularly made a remark which possibly could have been construed that I might have been entertained in a manner that would render me unable to make a speech. I want to say, Mr. Speaker, that that was uttered in a jocular way, and I think so understood. Those who know me know, and the gentleman knows, that on that occasion there was not a soberer man in Denver.

Mr. PENCE. I have said so; and I went to your friends last night and suggested making such a statement.

Mr. BYNUM. Then you ought not to have cast any insinuation here.

The SPEAKER *pro tempore*. The gentleman from Washington.

Mr. WILSON of Washington. Mr. Speaker, at the present time all our national obligations are paid in gold or in greenbacks which are redeemable in gold, or in silver dollars, or silver certificates which up to this date have been kept equivalent to gold. The gold dollar of 25.8 grains is by law the standard of value in the United States. Because the gold dollar is the standard of value, we are enabled to make our domestic and foreign exchange with ease and certainty and without discount for inequalities of value in money. The maintenance of a uniform standard of value is a matter of primary concern to society and one of the fundamental principles of good government and national prosperity. Any disturbance in the standard of value unsettles business, destroys confidence, and restricts the area of employment. No physical calamity, not even earthquakes nor famines, produces such disastrous results as a fluctuating standard of value.

Mr. Speaker, briefly, the history of our silver coin is as follows: In 1792 our silver dollar was required by law to be exactly equal to the Spanish milled dollar. It contained 416 grains of standard silver, and the smaller coins were all of exact equal proportionate value (see United States Statutes, volume I, page 249). In 1837 the silver dollar was changed in weight, so that it contained only 412½ grains standard silver, but the smaller coins were still kept of equal proportionate value with the dollar piece (see United States Statutes, volume 5, pages 137–139). Up to 1853 our silver coins were all legal tender in the payment of debts to any amount.

On June 1, 1853, the Democratic party, then in control of Congress, debased the silver coin, reducing the half dollar from 206¼ grains down to 192 grains, taking from each half dollar 14¼ grains of silver, and also taking from the smaller coins in like proportion and limiting the legal-tender quality to halves, quarters, dimes, and half dimes, and to an amount not exceeding $5. This limit of $5 was fixed by the Democratic Congress after having debased the smaller silver coins. The legal-tender quality of the dollar piece was left unchanged, because it was not regarded as of any consequence in our circulation, from the fact that not a silver dollar piece was coined from the year 1805 to 1839.

The total number of silver dollars coined from 1793 to 1877 is only 8,045,838. The result of debasing the smaller coins was, of course, to drive the dollar piece out of circulation and prevent it from being coined, because if the Government could make two half dollars with 28¾ grains less of silver than it would take to make one dollar piece then it would not be good financial policy to coin silver bullion into dollar pieces. In 1873 an act was passed authorizing the coinage of the trade dollar containing 420 grains, the other silver coins remaining substantially unchanged. The act of 1873 did not demonetize the dollar piece

then coined and in circulation, but simply dropped the standard dollar from the coinage act and placed the trade dollar in place of the standard dollar, leaving the legal tender limit the same on the trade dollar that had been imposed by the Democratic party upon the silver coin, excepting the old dollar.

The coinage of the trade dollar was authorized to answer the demand of commerce coming to our Western coast, and was placed under the legal tender limit already existing as to the smaller coins, for the expresr purpose of confining it to the foreign commerce for which it was originally designed. There has been no substantial change made in regard to the smaller silver coin. In 1878, the Bland-Allison silver bill was passed, which provided for the coinage of the old 412½-grain dollar and restored its legal tender quality in full. The Fifty-first Congress enacted the law known as the act of July 14, 1890, by which we purchased 4,500,000 ounces of silver each month, and issued thereon silver certificates redeemable in coin. It is for the purpose of repealing this act that the President of the United States, taking into consideration the financial stringency, has convened Congress into extraordinary session, and in his message to the Senate and House of Representatives has recommended the unconditional repeal of the act of July 14, 1890.

I had hoped, Mr. Speaker, that having at his command all of the avenues of information, the President, taking into consideration the conditions that exist and the almost universal desire upon the part of the people for an increase of circulation, might in his wisdom have recommended to Congress in that message some plan or some way to accomplish this purpose. Perhaps he thought the chasm between one school and the other was too wide to bridge, and perhaps there was no material at hand to have enabled the most skillful engineer to construct one.

Mr. Speaker, passing from this question of finances for a few moments, and for the purpose in as few words as possible of correcting as far as I can an error of the public mind to those unacquainted with the facts, that in a large measure the vast country west of the Mississippi River and the Missouri River is an arid plain, valueless in its soil and principally made up of mining camps that are seeking by legislation the advancement of the price of the product of their mines, I quote.

Writing on this subject, the Spokane Review, one of the leading papers of the Pacific Northwest, said:

> Charles Sumner's oration in Boston on July 4, 1845, ranks with the foremost efforts of American statesmen. In his fervid plea for universal peace he denounced the policy which finally resulted in the Mexican war, and further declared: "By a presumptuous assertion of a disputed claim to worthless territory beyond the Rocky Mountains we have kindled anew on the hearth of our mother country the smothered fires of hostile strife."
>
> What was this worthless country of which Charles Sumner spoke? It included the lands and waters of North America between the Columbia River and 54° 40' north latitude. It embraced more than one-half of what is now British Columbia, besides the present State of Washington. The Canadian Pacific now traverses that territory, and had the claims of the United States been fully allowed the city of Victoria would have had an American name, the Fraser been an American river, and serious obstacles would have been placed in the pathway of Great Britain across the continent.
>
> Even to-day broad-minded statesmen of the East fail to discern the future of the Pacific Northwest. Their blunders are worse than crimes. Their talk is fraught with peril. Their wisdom is rot.
>
> The Pacific Northwest does not ask of the Government at the national capital to overlook conflicting interests presented by the various sections of the country, and legislate for its own special benefit. To live and let live is a policy which finds more believers right here than in the East. What the Pacific Northwest does contend for is that her manifest future shall not be ignored. In balancing the relative benefits and injuries of national measures, as regards the various portions of these United States, the Pacific Northwest rightfully demands that her future as well as her present shall be put into the scales. Charles Sumner himself would be far from calling it a worthless territory were he alive to-day, but the followers of Charles Sumner may make the same mistake he did. They may for years defer that which will in no mean degree add to the prosperity of the whole country by refusing to give the Pacific Northwest the opportunities which she deserves.

Mr. Speaker, I have lived many years in the West, and I know something of its capabilities, of its products, soil, and of its people. I have seen what was a few years ago considered an arid plain pass from a sea of grasses to a great land of schools, colleges, civilization, and wealth. Of all of the twenty-five States and Territories west of the Mississippi River, only three are as small as New England. Montana would stretch from Boston on the east to Cleveland on the west, and would extend from Boston south to Richmond, Va. Idaho, if laid down in the East, would touch Toronto on the north and Raleigh, N. C., on the south, while its southern boundary line is long enough to stretch from Washington City to Columbus. California, if upon the Atlantic seaboard, would extend from Massachusetts to South Carolina. New Mexico is larger than the kingdom of Great Britain and Ireland. Dakota might be carved into half a dozen kingdoms of Greece, and Wyoming is ninety-seven times as large as Rhode Island.

Counting all of Louisiana and Minnesota west of the Mississippi River for convenience, we have, according to the census of 1880, 2,115,135 square miles on the west and 854,865 square miles on the east. That is to say, for every acre east of the river we have nearly 2½ acres west.

Mr. E. B. Smalley, who in the summer of 1882 traveled the line of the Northern Pacific road before its completion, said:

> The whole country on the north, through all the Territories to the coast of Washington, is a wonderful country. For the entire distance the whole country is valuable for stock-raising, farming, or timber-cutting. There is absolutely no waste land from the settled regions of Dakota to the dense forests of Washington. Even on the top of the Rocky Mountains there is good pasturage, and the vast timber country, including Clarks Fork and Lake d'Oreille and the regions of the Cabinet and Cœur d'Alene Mountains, are more valuable than an equal amount of arable land.
>
> West of the Cascade Mountains, in the State of Washington, lies the great forest of the West and the densest growth of time in the known world. The western Washington forests contain 32,500 square miles. It averages 10,000,000 feet to the square mile, and that produces the enormous amount of 325,000,000,000 of feet of merchantable timber, and all within 25 miles of the finest harbor in the world.

In fact, sir, this country west of the Mississippi River, which within the memory of many within hearing of my voice was considered an arid belt, is now contributing annually to the markets of the world 600,000,000 bushels of cereals. California from the discovery of gold has produced $1,300,000,000 of that metal. Idaho has produced $200,000,000 of gold and silver, and in the Cœur d'Alene Mountains of that State, that were thought worthless less than seven years ago, except for the timber, are to-day producing over 40 per cent of all the lead produced in this country.

Montana, not taking into consideration her great flocks and herds, is producing from twenty to twenty-five millions of precious metals per annum. In twenty years Nevada poured into the Treasury of the United States almost $70,000,000 of bullion. The output of Colorado is $25,000,000 per annum. Wyoming, to say nothing of her great cattle and stock ranges, has immense deposits of valuable minerals. Washington, with her vast timber interests, which W. H. Seward has said would make her the shipbuilder of the world, with her coal, iron, silver, lead, wheat, barley, oats, hops, and fruits, her patriotism and her civilization, stands sentinel upon the rock-bound coast of the Pacific.

I had thought, Mr. Speaker, that when the rule and order of business were adopted for this debate, that the great majority of this House would, in view of the fact of their vociferations and declamations in the past, yield to the minority some right or some opportunity to offer some amendment upon the proposed measures to be adopted. I well recollect how in the Fifty-first Congress many of the majority party to-day were vociferous in their denunciation of the Republican Speaker and the majority by what they at that time denounced as gag rule with all the eloquence and declamations they are distinguished for. I call to mind the scenes enacted in the first session of the Fifty-first Congress, and I look for some of those who at that time were so eloquent in their denunciation to again rush frantically down the aisles of this Hall and appeal for what they had all so clamorously struggled for.

I had thought that inasmuch as the distinguished Chief Magistrate of this nation and the leader of their party had in his message held out a flag of truce to the Republican party, that they would be willing to adopt some rule that would give that party, the minority, some right to offer some amendment that they might be interested in upon this question. The President had said, when he classified the Sherman law as a truce, that he had indirectly said to the Republican party upon this floor, "'Help me Cassius, or I sink!' and after you have enabled me to adopt the single gold standard in this country, then watch me kick the stuffing out of you upon the tariff."

This order of business that we are to proceed upon next Monday was agreed upon by and through a few favored of the majority party. No opportunity will be given to vote upon any other propositions than those that have been agreed upon and adopted by the vote of the Democratic party in sustaining the order for the previous question. No opportunity was given to the minority when that order was adopted. The distinguished gentleman from Missouri demanded the previous question, and upon a roll call of the yeas and nays many of those who have since stated in their public utterances that some opportunity should have been given for other propositions are recorded as having voted in the affirmative.

Mr. Speaker, I am in favor of bimetallism as the basis of our monetary system because in the course of a series of years the average of production of gold and silver will furnish to the commercial world a more just and equitable measure of the value of human labor than either of the metals can possibly furnish. It is a notorious fact that the production of gold has been more spasmodic and uncertain than the production of silver. Between 1846 and 1870 the yield of pure gold from the placer mines of the Pacific Slope was phenomenally large, while the production of silver during that period of time was comparatively very small. Between 1873 and the present time the production of silver has been comparatively greater than the production of gold.

Between the first-mentioned dates gold monometallism would have been unjust to the creditor class of the country; but on the

other hand it is equally clear that gold monometallism, with comparatively diminished production of gold since 1873, has worked great injustice to the debtor classes. The use of the two metals during the two periods would have furnished a compromise line which would have proven more equitable and just to both debtors and creditors throughout that period. As a Republican I am in favor of the use of silver as well as gold in our monetary system, because I am in favor of protecting every article of American production; and I think it to be un-American and unpatriotic to discredit or discountenance the use of any product of this country, either in the markets at home or abroad.

For this reason I am opposed to any proposition looking to the discontinuance of the use of silver in our monetary system, and on the contrary I have been heartily in favor of constantly increasing the use of silver with a view of bringing into action the great commercial force found in the law of supply and demand, to the end that the commercial value of silver might be brought to something approximating the proposed coinage value.

The most casual observation will suffice to convince anyone that the vast majority of the people of this country, East as well as West, are in favor of maintaining both gold and silver as the coins of the country. A very small fraction of the people of the East are in favor of gold monometallism, and I hold that any legislation having for its object the utter exclusion of silver from our monetary system is repugnant to the judgment and contrary to the desire of 90 per cent, at least, of the voters and taxpayers of every State in the Union. The people of this country desire such legislation as may tend to restore silver to its place in the money of the world rather than to destroy it utterly.

The present law when enacted was but the inauguration of a policy, as I understand it, looking to the continued increase of the use of silver on safe lines, with a view to its final restoration to free coinage at the mints at an agreed ratio. In the second session of the Congress which passed the Sherman act the then Secretary of the Treasury, Mr. Windom, favored an increase of the purchase of silver to six million ounces per month. He was satisfied that the law had worked well and had given material aid in carrying this country safely over the financial stringency caused by failures in South America and embarrassments in Europe.

One of the vices, born of enthusiasm, no doubt, on the part of the advocates of immediate free coinage deprived Congress of the privilege of considering Mr. Windom's proposition. It was erroneously assumed that the Secretary of the Treasury was seeking to injure silver and that by rejecting his proposition the free coinage of silver would be brought about. Thus the new policy inaugurated by the Sherman act was practically abandoned by the Congress which brought it about, and in consequence the policy was not given a fair test. I have many friends on this floor and throughout the State I have the honor in part to represent who sincerely believe that the free coinage of silver at the ratio of 16 to 1 can be brought about and bimetallism maintained in the United States without drawing to the aid of the Government any commercial or other force save the mandate of the law itself.

Not undertaking to contest this view of the matter, it has been apparent to me that, whatsoever virtue there may be in the proposition, it is impracticable, because a majority of the whole people of the country believe that free coinage at such ratio would result in the instant disappearance of the gold of the country from circulation and cast us immediately upon a silver basis, and that this proposition would be attended by violent commercial and financial disturbances, from which the people generally, but the toilers of the land particularly, would suffer serious injury.

As long as the majority entertain this apprehension, whether it be well founded or not, it is obvious to me that free coinage by a single act of Congress can not be obtained; and I have therefore believed, and do now believe, that it is more wise and prudent to consult this conservative sentiment of the majority, and to propose a ratio which can be maintained without the apprehended danger of being called upon to recoin the silver coin of Europe which it is possible might be sent here for coining in exchange of our gold at the ratio of 16 to 1. I have heretofore opposed the free and unlimited coinage of silver at a ratio of 16 to 1, for the reasons:

First, that the discrepancy between the coinage and commercial value of the silver and the silver dollar at that ratio seemed to me so great that this country could not be induced to adopt it, and it was therefore futile to advocate free coinage at that ratio; and

Second, because the difference between the ratio of 16 to 1 and the European ratio of 15½ to 1 was so slight that Europe would probably send over its accumulated stock of silver to our mints for recoinage in exchange for our gold to such an extent as to injure our own silver-producers by overstocking our mints for many years to come. I favored, instead, the increased use of silver in our monetary system with a view to enhancing its value, so as to ultimately bring to light the proper coinage ratio.

Now it is proposed by the majority to either fix the ratio at some point between 16 to 1 and 20 to 1, or to continue the present law, or else abandon silver altogether. Believing that this country can maintain bimetallism by coining silver at the rate of 20 to 1, I am cordially in favor of adopting that ratio, and on that basis I favor the opening of our mints to the free coinage of silver, and my vote shall be recorded in favor of that proposition. Feeling that to discard silver utterly would be an injustice to the whole people, and particularly to those burdened with debt, I shall resist it as an invasion of the rights of the people. Finally, I am unalterably opposed to the repeal of the existing Sherman law unless we can secure in its stead a free coinage of silver at what I believe to be the safe and just ratio of 20 to 1.

Mr. Speaker, we hear frequently upon this floor that we should return to an unlimited issue of greenbacks and paper currency. I hope this never will be adopted. The country for a long time struggled to get over the effects of an overissue of paper money, and the effect of an overissue of that paper has always been disastrous in whatever country it has been tried. It was so in the time of William and Mary, it was so in France under John Law's scheme, although he had all the property of France behind him, yet it bankrupted France. Take the history of Rhode Island immediately after the Revolution; the farmers, finding themselves in distress, established a paper bank for the purpose of lending money upon farms.

The merchants and business men refused to accept the money, and finally the Legislature had to repeal the law that sent Rhode Island into bankruptcy and disaster. Then we have what was known as the Mississippi crop-moving scheme, the flush times of Alabama, where everybody issued money, everybody had a bank, but which finally left upon the State of Alabama, if I am not mistaken in the figures, a debt of forty-two millions for the farmers of that State to pay. Then we had the Michigan wildcat money; then we had throughout Indiana, Illinois, and Ohio what is known as blue-dog and yellow-pup, where every man had to carry a detector with him.

The only advantage a man had was that he rushed frantically to pay his debts for fear the money would be worth nothing in the morning. It was a re-establishment of these State banks that the Democratic party in their platform demanded. I do not believe that they will ever be re-established, because there are too many men now living who have sad cause to remember the losses they sustained by institutions of this character.

Mr. Speaker, I have sometimes thought at this time, when everybody is submitting some plan for the cure of the present financial distress, that had an opportunity been offered me under the rules and order of business as adopted, I would have submitted a proposition along the following lines: First, repeal the Bland act, including the clause providing for a dollar of 412½ grains; then repeal the Sherman law, including the purchasing clause, and then do four things. Call in all one, two, and possibly five dollar bills, and issue instead the silver dollars now in the Treasury. While this would not have a tendency to increase the per capita circulation, it would have the effect of bringing into use a vast amount of siver now in the Treasury, and I believe that if the world was convinced that we would take care of our stock on hand they would provide a way to take care of the annual production of silver.

Again, I am one of those who believe that you can never make silver popular as long as you decline by your laws to give it an opportunity to circulate among the masses of the people. The present generation know but little if anything of the use of silver money. They have used at all times and under all circumstances the representative of it, and, I believe, it is far better for the future of silver that the one, two, and even five dollar notes be called in and let the actual silver money itself circulate among the people. I believe it would be for the best interests of the people themselves; and I believe it would have a tendency, as it has had in France, to cause the laboring people to hoard it in their houses and use it at such times as their necessities might require.

I believe it is not a good principle as soon as one of our laboring people obtains $20 in paper money that he shall rush to some bank and deposit the same. I believe it will encourage more thrift and economy to that class of people who need protection in their monetary affairs to have some means whereby they retain some of their money about them. The French peasant takes his money, puts it about his house, and when he is at labor he has it about him to purchase the necessities of life. In France, the thriftiest country in the world, a sufficient amount of the medium of exchange is kept in the woolen stockings of the people, and the percentage of money that is withdrawn from

circulation by the hoarding of the people during the periods of no confidence represents the percentage which the commerce of the United States has no right to count upon during periods of prosperity and confidence.

A sum equal to the deficit in the money circulation at this moment represents the commercial factor of safety, without which the business of no country could be conducted.

Second. Coin the product of the American mines.

Third. Make a mintage charge upon all imported silver.

Fourth. Limit its legal-tender quality to $50 or $100.

It seems to me, Mr. Speaker, that if some measure could be adopted along these lines it will have a tendency to increase the volume of currency. I do not know that I entirely agree to the last three propositions myself; but the first, the pushing out into active circulation among the people of the silver dollars now in the Treasury, I think, can not be successfully controverted as not having elements of benefit to the people of the country.

Mr. Speaker, while we have heard upon all hands the denunciation of the Sherman bill, and while the Democratic party have denounced it as a cowardly makeshift, I have never been able to find anyone among the plain people of the United States, or with whom I have come in contact, who declined to take that money and were not satisfied with it.

During the two years that it was administered under a Republican Administration, increasing from month to month the volume of the currency going out to circulate among all the people, there was circulated over one hundred and six million of the silver certificates, under the Sherman law, of small denominations of ones, twos, and fives, and the people received them gladly and carried on their exchanges; and while it is my judgment that the purchase of 4,500,000 ounces of silver per month by the Government, which is a nonconsumer of silver, had a tendency to diminish the price, because as the Government continued its month-to-month purchases and added to the visible supply, it being a nonconsumer, this necessarily diminished the price.

But the certificates that were issued were gladly received by the people, and not until the great Democratic party not only denounced that law but other laws, and made an effort to make everything cheap as they always have; and by their continued calamity howling they have forced upon us the present panic. But many have said to me, Mr. Speaker, not only in my own section, but since my arrival here, what do you people desire?

Speaking somewhat for them as well as myself, we are in favor of using all the silver money that can be circulated without debasing the value of a silver dollar. What we would like to see is the two metals flowing side by side with each other as they do in France. That country carries the largest amount of silver and the largest fund of gold, being seven hundred millions of silver and eight hundred millions of gold. France is a country with a gold standard: that is to say, that country having a double basis does not necessarily have a double standard.

Again, we have eight hundred and thirty millions of paper money, not taking into consideration the national-bank currency, all of which is redeemable by the Government. When the Government placed one hundred millions in the Treasury it was for the purpose of redeeming three hundred and forty millions of greenbacks, not eight hundred and thirty millions of paper. Since then we have been adding to the paper supply and increasing the per capita circulation until we have the amount named, and the Government is compelled to keep its paper on a parity with gold. But suppose the Sherman law is repealed? Do reason and probability or either of them warrant the proposition that the repeal of the law will restore confidence, set mill wheels in motion, build up commercial credit, repair the crumbling fortunes of railroads, bring back to banks the moneys how hid in safes?

The mills of the country are now idle, the iron furnaces have closed down, thousands and thousands of people are out of employment, millions of capital have been withdrawn by manufacturers—all owing to the uncertainty of the Democratic party in regard to the tariff. When the McKinley bill was being enacted the mills were not idle, the men were busy at the furnaces and consuming the products of the farms, because there was no uncertainty or "ifs" or "ands" about the position of the Republican party upon that question, but now things are very much changed.

The great aurora borealis of the Democratic party which was to spread itself all over the country and give us peace, happiness, and financial prosperity, and which was so instrumental in electing Mr. Cleveland to office, is no longer visible to the naked eye. During the Harrison Administration the people were constantly assured by Mr. Cleveland himself that the country was drifting to ruin by a tariff adjusted by Mr. McKinley and adopted by the Republican party. No one told us that the silver policy of the Government was destroying values and sending banks and commercial houses into bankrupcy.

Now, the crisis is upon us. It may not be the same crisis that Mr. Cleveland predicted as the result of the McKinley tariff, but the crisis is undeniably upon us. We were told last year that the success of the Democratic party would prevent it; we are told this year that the repeal of the Sherman law alone will effect it; it was the tariff before the election, it was the silver question after the election.

Upon these propositions, Mr. Speaker, the great Democratic party itself is not harmonious and united. I send forward to have printed and to have read by the Clerk the following extract.

HAS COST US A BILLION.

For four months a Democratic Administration has been in control at the national capital. Behind it has stood a party vehemently demanding the abolition of all protection and the reissue of State-bank currency. The industries of the nation have taken alarm at the spectacle of their enemies in power. The free-trade President has used the authority of his office not to protect, but to assail and ruin the business interests of the country. The result has been the obliteration of more than a billion of dollars in the value of property held by American citizens.

The shrinkage in values has embraced inactive as well as active securities; State, city, and county bonds, the capital stock of limited corporations, manufacturing companies, and business firms. It has destroyed credit and plunged hundreds into bankruptcy. Banks have been carried down by the score. Thoroughly established business reputations have been hopelessly wrecked. The abundant prosperity of the country has been changed into stringency and panic.

The Fifty-first Congress appropriated $1,000,000,000 in two years, and made provision for distributing it among the people. The Cleveland Administration has taken $1,000,000,000 from the pockets of the people in four months. It has diminished the wealth of the nation by an amount nearly equal to the entire sum of money in circulation in the United States to-day. It has cost the people of the United States three times as much as the colossal swindle of the Panama Canal—which shook France from center to circumference—cost the French people. It has taken enough money from the people to build the Nicaragua Canal ten times over. These are appalling figures, but they show the truth. They demand the earnest consideration of every American citizen on this anniversary of the nation's birth. Bluster and prevaricate as they may, the mouthpieces of Democracy can not obscure this tremendous fact: In four months Democratic rule has robbed the American people of $1,000,000,000.—*New York Sun* (Democratic).

This is not an indictment of the Democratic party by the Republicans, it is not the indictment of any individual by the Republicans, but is from the great metropolitan journal of the city of New York—the New York Sun, Democratic.

Mr. Speaker, in the closing portion of the President's message he states that it was his intention to have called Congress together in September to commence the great work of what is known as tariff reform. Unquestionably the leading issue is to be the tariff, and all laborers, mechanics, and farmers are vitally interested in the question. Upon its solution, in my judgment, depends for them comfort or calamity, plenty or want, and homes or hovels.

To solve the question as has been indicated and demanded by the President in his message will accomplish, as is already the fact, the closing of factories and the driving of thousands and thousands of wage-earners from honorable toil to idleness and want. A single word in that contest defines the position of the Republican party; its watchword is still protection—protection to every smokestack that lifts its black mouth toward the sky, protection to every hammer that trips to the music of steam, protection to every fire that burns on the forges of toil, protection that lifts every matter into higher and better forms of value, protection of the ballot box from fraud and crime, protection of every man in the open to cast a free ballot and have it counted just as he cast it, protection to every American citizen at home and abroad, protection from all infringement of the Monroe doctrine, protection to American homes, protection to American laborers, protection to American farmers, protection to American industries, protection to American commerce, protection to American miners, protection to American prosperity, and the protection of the Union soldiers of the United States.

I will print with my remarks, Mr. Speaker, a letter addressed to me by Mr. Paul F. Mohr, of the State of Washington, in which he submits for consideration some views upon the monetary question, together with an argument accompanying the letter:

Hon. JOHN L. WILSON,
House of Representatives, Washington, D. C.:

MY DEAR SIR: I submit to you an argument on the subject of the monetary complications of this country at the present time, which is to serve the double purpose of an appeal to you and a means of creating an intelligent support by the people of Washington for the position which I trust you may take in disposing of the bill repealing the Sherman act. I am well aware that the sentiment of a large portion of the people of our State, as well as elsewhere, is in favor of any kind of an expedient, however lame, in the present monetary dilemma, in the hope that it will, in a measure, protect silver. My treatment of the subject will convince you of my earnest advocacy of silver, and especially of a bimetallic standard which shall be thorough and permanent.

I object to an exaggerated ratio of, say, 1 to 20, because the evils we are now suffering from, while they may be ameliorated to a slight extent, will not be a benefit to silver. If a ratio of 1 to 15½ or 1 to 16 was a legitimate ratio until 1873, it is so now. That this ratio can be maintained now as legitimately as a ratio of 1 to 20 is a question beyond a reasonable doubt. The loss of its value is due to arbitrary discrimination against silver by depriving it of its legal-tender qualities by other nations. By reinvesting it with legal-tender qualities, which can not be done by this nation alone, it will regain its lost value.

A statement by the Secretary of the Treasury shows that it will cost $97,000,000 to remint the silver coin of the United States. Not only is the cost an important consideration, but the time it would take to remint our coinage would be a very great obstacle to the usefulness of silver. The necessity of recoinage might deter the foreign nations from joining in an international agreement, and as they all would have joined in such an agreement with the exception of England, and as England will no doubt yield her mono-metallism the moment the United States threatens to become a competitor for the gold of the world, it would be, to my mind, exceedingly unwise to block the way for a thorough rehabilitation of silver by indiscreet legislation at this time. Indeed, the present ratio of 1 to 16, even under the present unfortunate law, would so far as the permanent interests of silver and of the people are concerned be better than a new ratio of 1 to 20.

I have written the accompanying treatise especially for your use and indirectly for the benefit of the public of our State. I trust you may be able, even if your views should not be in line with mine, to bring the subject-matter before our people for their enlightenment, as I am satisfied it will serve as a means of enlightening them upon this complicated question of our national finances.

Yours, very respectfully,

PAUL F. MOHR.

INTRODUCTION.

Before giving my manuscript to the printer it was submitted to a number of friends, some literary, some of them business men, and others men of the world without special occupation. The criticisms being instructive, I concluded to mention them. They said:

"You are ranging yourself against the capitalist, who will resent it; being engaged in enterprises which require their aid, you will find it unwise to attack a system of finance which is to their advantage."

"What is your object in adding to the education of the masses, when the result is that it will only make it more difficult for us to succeed?"

"You will lay yourself open to the attacks of the newspapers, whose owners are largely of the wealthy class."

"The 'masses' (no more reasonable than the capitalist), wanting more than they are fairly entitled to, will not be satisfied with any essay which, while it points out the faulty conditions of the economics of the country, and especially of our financial policy, at the same time shows more clearly their own limitations."

In justice to myself I wish to say that I not only do not "range" myself against the property-holding class, but that, like nearly every other person, I am striving to belong to it with all the energy at my command.

The increase of knowledge among the masses does not make it more difficult to achieve success for any individual whose capacity entitles him to it.

The newspapers which attack the effort of any man who aims to advance the solidarity of mankind would suffer far more than the person attacked, no matter who owns them, and to the extent that they favor fair weapons and equitable conditions in the great economic duel, they will themselves survive.

In classifying the economic world, and when I speak of the 98 per cent class or the 2 per cent class as representative of labor and capital, the terms are not intended to be invidious.

I utterly abhor the communistic theory, which seeks to reduce to the lowest common level all mankind. There must always be two classes, or several gradations of society, and so far as the uppermost class merely represents the superior brain, industry, self-denial, or prudence of mankind it is entitled to its reward.

It is safe to say that no system of practical economics and no legislation can be devised which will ever prevent the operation of the law of the survival of the fittest, for it is a law of nature, nor would it be well, were it possible. The improvement of the race depends upon the weeding-out process, by which the weakest must succumb. Indeed, if it were possible to subvert this law, it would only result in our ultimate extinction.

What I do, however, maintain is that it is necessary to have free play for this great natural law, that no individual or class should be cramped by unequal legislation or unfair economic conditions. With "a fair field and no favors," all of us can confidently bend to the task before us—that is, of joining the winners. A state of affairs is desirable in which social gradations and the successes of individuals shall represent only the degrees of superior fitness on the one hand or of self-imposed or natural limitations on the other.

In adding my small efforts to those already being exerted in all parts of the world, for the creation of an intelligent understanding of true economics by the masses, I feel that I am adding something, at least, to the stability of our form of government—a form of government which depends essentially upon the intelligence of the public voice, because the representatives of the people, being also human and subject to the law of self-preservation, find it more to their interests to follow than to lead the public will and sentiment. Even were the wisdom of a representative unquestionable, his opposition to the will of the people on any particular questions, in the knowledge of which he was far in their advance, would scarcely make the sacrifice of his interests to those of the people of any service to them; his prompt retirement would destroy his value. Again, the idea that the representative is the product of the superior will of those who elect him is largely a fiction, because his position is due, generally, to the superiority of his will and the adroitness of his methods over those possessed by any others in the community which he represents; it is rarely due to the superiority of his wisdom or knowledge over that of his constituency.

Such economic disturbances as we are now passing through are dangerous, because, in the absence of a correct understanding of the causes by the people, feeling as they do only the pressure of distress, they are likely at any time to seek relief by the instinctive recourse to the terrible expedients of organized physical violence. It must always be remembered that any given social condition only exists by the consent of the millions, whose power of organization has advanced in the last few decades with such giant strides that governments can no longer maintain themselves by statecraft or military force against their wishes or their interests.

Intended as this essay is for those who have but little time and opportunity for study, it purposely commences with the primary elements of monetary science, leading the reader up to the wider and more complicated field of monetary diplomacy, the manipulation of the entire mass of money, instead of at retail. I claim no new discoveries in monetary science; in fact its fundamental tenets are so old that I have not deemed it necessary, except in a general way, to quote many authorities, especially as I have been obliged to simplify and condense many of them, in order to preserve a reasonable degree of brevity.

Enterprise generally is dying from monetary anæmia. In this extremity, when the causes of our economic ailment seem to be more or less of a mystery, we are apt to call in the doctors of different schools in the hope that one of them may correctly diagnose the disease and suggest the proper remedy. In such times even the empiricist has his opportunity. Thus far our financial Paracelsians have failed almost signally in diagnosing the exact disease and, of course, in suggesting the proper remedy. They are like the famous doctor who said, that while he could not tell what was the matter with the patient, he did know one thing, *i. e.*, that he could throw him into fits, that he was "irresistible in a struggle with fits," and could bring him out of these sure.

This is the condition of our financial patient, and we are nervously waiting for our legislative doctors to bring us out of the monetary fit they threw us into in July, 1890. But the original disease will nevertheless remain undiagnosed after the fit has been cured; we still have the original malady to cure which is altogether separate and distinct from the Sherman act. The difficulty with the main financial disorder is that it is not merely national, not confined to the United States alone, but that it extends over the entire world; it is an international monetary circulatory disease, in which the proportion of the yellow and white corpuscles has become sadly deranged. Hard as it is to admit it, we are still only the tail of the financial dog and the subcutaneous injection of white corpuscles into his tail, does not seem to cure the dog, for the circulatory center is over in London.

Our legislative doctors now have little to do except to get us out of the "fit" which they threw us into in 1890; after that has been accomplished we must wait until there has been a consultation with the doctors of the other nations and an agreement as to the exact remedy has been arrived at. Thus far these international consultations have been fruitless because the English doctors who control the patient refuse to administer the medicine which the majority prescribes. The main body of the patient, comprising about 98 per cent of the world's population, does not understand this ailment, but when these millions do once comprehend the matter they will rise in their might and demand the proper relief or destroy those who refuse to administer it. At the suggestion of some friends I undertook to write a financial primer; it appeared to me that this would be easy, and four months ago I wrote the first line; then followed a long period of reflection, and the more I thought the less simple it seemed, until finally I reached a point where I was ready to abandon it.

I began the tedious process of swallowing and assimilating a library on monetary economics, on monometallic and bimetallic standards, on composite and compound standards with variable ratios, etc. In spirit, the advocates of each school began by saying, "The truth of my theory is so patent that the mere statement of it is its own demonstration." The chasm between any one school and the other, however, was too wide to bridge; and, besides, there was no material in sight to enable the most skillful engineer to construct one. Again I was in a state of perplexity. Each scholastic casuist had exhausted his state of the case; it was worse than useless, therefore, to join either of the sides of this polygonal economic contest.

At this juncture I picked up an interesting volume by Edward Clark Lunt, A. M., entitled "The Present Condition of Economic Science and the Demand for a Radical Change in its Methods and Aims." Among other things he quoted Macleod, who said: "The political economy of Adam Smith, Ricardo, and Mill is now exhausted; it is a *caput mortuum*, from which no further good can be extracted" * * * "A few years ago the proposition was made to remove economics from its position in the course of the British Association for the Advancement of Science, on the ground that economic science had never shown itself worthy of the name."

A recent writer in the North American Review declares that "the works of Malthus, Ricardo, and Mill are read, not so much because they teach the truth, as because they stand as mile-posts which serve to measure the distance by which thought has passed them."

According to Ruskin "the acceptance of the current doctrine of political economy is a standing disgrace to the human intellect."

Daniel Webster has recourse to arithmetic, and finds that if we take from political economy, first all the truisms and then all the doubtful points, our remainder will be a quantity closely approximating zero: while Prof. Cairns says that "political economy has no small proportion of faulty material," lamenting the confusion and contradictions in which the science is involved.

Max Nordau speaks of the science of economics as having condescended so far as to be the court jester of the present arrangement of the economic world, founded upon egotism and plutocracy.

The Duke of Argyle is the only representative of the class which has been manufacturing British economics, who is sawing off the limb it sits upon, by means of his recently published book, entitled The Unseen Foundations of Society; An Examination of the Fallacies and Failures of Economic Science due to Neglected Elements.

From this it must seem that the effort to effect an entrance into the edifice of true economic wisdom, by means of the guidebooks of economic science, is useless. To borrow a simile from a brilliant writer on jurisprudence, economic science reminds me of a magnificent balustraded staircase of carved stone which I recently saw on Fifth avenue, the building to which it once belonged having been burned away. There stood the staircase intact, well worn, but leading to—nothing.

Those who recorded the evidences of the dominating wills of the world's ruling families and classes and called them "economic statistics;" the professors of Oxford, Heidelberg, Gotha, and elsewhere, who elaborated from these their economic theories to guide into and keep mankind in the lines laid down by their masters, are all, whether consciously or unconsciously, part and parcel of one conspiracy. At a trial at law the testimony of mutually interested confederates would have no weight; on the other hand in economics, upon evidence no more credible, it is sought to build up a system for the cure of our economic ills. Logic, it is true, has been allowed to follow this so-called economic evolution, but not until its teeth had first been drawn.

To seek economic wisdom from the views and opinions of capitalists is as futile as it is to seek it from the laborer or producer. As a general thing neither understands nor cares to consider anything more than his direct and immediate interests. I asked, for instance, three bankers, five brokers, two physicians, three lawyers, two merchants, six railroad officials, three civil engineers, two professors of physics, and several farmers, politicians, tradesmen, and others, these questions:

What is money?
What its origin?
What its functions?
Why are gold and silver precious?
Why is metallic money better than other money?
Why is monometallism better than bimetallism?
What is the standard of value?
What is a monetary ratio?

I am not exaggerating when I say that none of these could answer all the questions. Most of them could answer but few, and the majority none at all intelligently, yet all were willing to express an opinion, the profuseness of which usually bore an inverse ratio to the knowledge of the person giving it. Of course the banker knew how to manipulate money, regardless of what it was essentially, and the farmer knew he wanted it; but outside of the play of the underlying primary instinct of self-preservation, there was no directing intelligence at work upon this subject.

A great mistake, made by nearly all writer sand legislators in formulating theories on monetary economics, is that they aim to conduct the study as if it were a natural or exact science, the elements of which were certain im-

mutable laws of nature, and as if each successive economic state was the necessary evolution from a logical previous condition. Congressman HENDRIX, for instance, in an able speech represented such a school of economists, applying Darwinian methods, sought to show that the present process of eliminating silver from the coinage of the world was simply due to the progress of evolution. As a matter of fact "involution," and "arbitrary" at that, would be a much better term applied to monetary economics.

It is a comparatively easy matter to solve a mathematical equation with certain fixed factors, but different to solve one where your unknown factors preponderate, where they constantly shift and change their proportions and values according to the exigencies of the times, the arbitrary will of rulers and classes, and the national characteristics of the people. Then, too, the material interests of the professional economist come into play. It is quite a different thing whether a number of professors are discussing, for instance, the "fourth dimension" or the law of gravitation, or whether they are discussing a subject where their opinions would logically carry with them a reduction or increase of the value of their securities or the cost of their food, clothing, and shelter; whether a professor at a State university in England or Germany expresses views running counter to the financial policy of his sovereign, or with it.

The professor who rides the economic Pegasus is very often in the position of the boy at the exchange stable, whose father forgot to give him "the wink" when he ordered him to ride a certain horse which had just been brought in. The boy disobeyed the order, but, placed as he was, could not give a reason; he was ordered again, and again he disobeyed; whereupon the father administered a sound drubbing. When the father and son were alone the father's curiosity prompted him to ask the reason of his son's disobedience, when the latter replied: "Father, you did not tell me whether to ride the horse to buy or to sell." Substitute money for the horse, the Government for the father, the producer for the buyer, the capitalist for the seller, and the political economist for the boy, and the simile is nearly perfect. The economist rides either for capital or labor. Generally he rides for the side which pays most for the service.

In monarchical countries the government is of and with the capitalist; in constitutional monarchies the same; in republics it is supposed that the government is of and for the people at large; that its executive head is not only the supervisor of the economic processes comprising the life of the nation, but that he is likewise the umpire who shall see that these processes are equitably conducted, and who shall cancel, if necessary, by his veto power the results of an unfair "riding."

It is evident that to enable even the educated man to understand the question of the hour he must brush aside all the scholastic detritus which has been accumulating for ages and then confine himself to the study of a few broad, fundamental facts, and of human nature, which, in spite of all the mutations of civilization, remains much the same as it was at the dawn of history.

Much as we pride ourselves upon the difference between the genus homo and the remaining groups of animals, the instinctive basis upon which human actions depend is common to all, to-wit, the instinct of self-preservation and the instinct of race preservation. Of course, man has complicated the conditions of his existence to such a degree, his wants have become so numerous and his methods so involved, that it is difficult to discern this foundation, yet an analysis will show that all of these can be reduced to the very simple desires for food, clothing, shelter, and the increase of the species. These comprise the organic wants of man, and these are the wants which are the source of the impulse for individual proprietorship, the motive force of the poet and peasant, of capitalist and laborer, of kings and professors of political economy.

Every animal must supply itself with nourishment and many also require a shelter or hiding place. The food and the nest or den which it has found or made for itself is considered by the animal as its sole property. It feels that these things belong to it and will not submit to being deprived of them. A life that makes foresight and provision for the future a necessity leads to the extension of this feeling of proprietorship and the development of the impulse for the acquisition and increase of individual possessions. A beast of prey which lives upon fresh meat, fixes the limit of his proprietorship upon the total amount of fresh meat in existence, as the quantity which he requires for a single meal; but the animal which lives upon a vegetable diet in a region where there is winter and a cessation of vegetation helps himself from the common storehouse of nature to far more than is necessary for his immediate wants. In this way squirrels, marmots, etc., become capitalists and unscrupulous egotists. It is in the extension of these instincts in man that we must find the fundamental concepts of political economy, the rules for an orderly struggle for individual and racial existence.

Property existed before money. The squirrel, or prairie dog, or ant, or bee, which stores its food, need give none of it in exchange for any other necessity; nature furnishes its clothes, and it is so adapted to its environment that it needs no food of an artificial nature. Man in his primitive form required no exchange, hence no money. In my mind's eye, I can see man, when he reached a point where, having killed a cave bear and broken his club, he meets another of his species who has two clubs, but who has been unsuccessful in killing a bear. With the latter existed a superfluity of club and hunger and need for meat, while the former had a superfluity of meat and a necessity for a new club wherewith to obtain his future supplies. Could we but have a record of just what happened then and there, it would show the beginning of barter, which is the beginning of the necessity for money.

Let us follow our primitive man a little further. He already possessed in common with all other animals the two primary instincts of self-preservation and reproduction, and was subject likewise to the law of sexual selection by which alone the improvement of the species was possible. In common with other animals, and even flowers, reflected light and color were important factors to enhance the attractiveness of the sexes. Our primitive male and female ancestors used gaily colored feathers, vegetable and mineral pigments, stones, shells, and metals which reflected the light for purposes of ornament. Gold and silver, being metals found in virgin form, could not fail to play an extensive roll in barbaric æsthetics. These metals, being malleable and ductile, could be hammered or drawn into rings, disks, etc., to be worn on the arms or fingers or suspended from the ears or nose.

This use of metals for purposes of ornament no doubt long preceded their use as media of exchange. As man's wants increased and became more varied, the barter of commodities became more difficult, partly by reason of the want of coincidence in barter, *i. e.*, where the disposable possessions by two persons did not suit each other's wants; by the want of a measure of value, by which the length of a piece of rope could be measured in pounds of meat or numbers of eggs; by the want of the means of subdivision, by which for instance a garment could be exchanged for other necessities of less value.

At this juncture ornaments, which, on account of the universal passion for adornment, were always in demand, came in as a medium of exchange. The individual who, after satisfying his hunger and thirst, had a surplus of food and drink and did not for the time being wish more, was no doubt always ready to exchange these possessions into gold or silver rings or bracelets, which in case of need could again be converted into other commodities. Where the metals did not exist, wampum, amber, cowrie shells, certain colored beans, brilliant feathers, etc., were substituted and were extensively used as current media of exchange and measures of value.

Thus, then, commenced the natural history of money, and with the progress of social evolution the use of those articles which most perfectly fulfilled the requirements of money, to wit, gold and silver. Rings, bracelets, and spangles gave way to more convenient forms, at first bars and spikes, then by degrees to round discs, such as we use for coinage at the present day. Gold, being yellow, appealed more to the barbaric taste than silver, which was white. Had there been a scarlet metal of equal brilliancy and indestructibility that would, no doubt, have been in greater demand than gold. The rough, barbaric ratios between gold and silver represented, first, their choice of color; second, the permanency of luster, and, third, the relative abundance of the metals. These ratios varied according to the æsthetic taste and estimates of utility by various tribes, races, or nations.

In Japan, for instance, the rate was about 4 of silver to 1 of gold until about the middle of this century, while it averaged as much as 20 of silver to 1 of gold with some of the ancients. With the extension of intercourse and trade between the various peoples of the earth these ratios were equated, so that by the end of the last century the ratio stood at about 15 to 1, which represented the æsthetic ratio plus the added value which these metals obtained from their uses in technical and scientific processes, and their use as media of exchange in the meantime. About the year 1803 the French, always close observers and reasoners, convinced that the world would be benefitted by the establishment of a permanent ratio, crystallized the current ratio as they found it into a permanent and legal one of 15½ to 1, which was maintained for many decades in spite of the fact that England, at the instance of Lord Liverpool, in 1816, took unfair advantage of this great and most beneficent legislation for the solidarity of mankind.

Before our prehistoric ancestor reached the point where he selected a metal for a medium of exchange and measure of value, he had groped about many centuries. While in the hunting state he used skins and furs for currency; in the pastoral state, cattle; in the agricultural state, corn, etc.; and in the next phase of development, ornaments, and so on by degrees to our present currency. Prof. Stanley Jevons snows that oxen were exclusively used in Homeric times. The Latin name for money, "pecunia," is derived from "pecus," cattle. Our common expression for the payment of money, "fee," is nothing but the Anglo-Saxon "feoh," meaning alike money and cattle, a word cognate with the German "vieh," which still bears only the original meaning of cattle. Being counted by the "head," the kine were called "capitale," whence the economic term "capital," the law term "chattel," and our common English name "cattle."

From the Agamemnon of Æschylus we learn that the figure of an ox was the sign first impressed upon coins. Slaves were used in New Guinea as currency and as a measure and unit of value. In 1649, long after a metallic currency was used by the civilized world, the court of Massachusetts made wampum a legal tender, and as late as 1732 the Legislature of Maryland made tobacco and corn legal tenders.

Before passing to what might be called "monetary diplomacy," or what has been called the "battle of the standards," let us prepare the foundations for a proper understanding of what money is, and what its principal uses are. For this purpose I will use the following, drawn from the works of Jevons and others;

MONEY.

The qualities required of money are—

1. Utility and value.
2. Portability.
3. Indestructibility.
4. Homogeneity.
5. Divisibility.
6. Stability of value.
7. Cognizability.

1. UTILITY AND VALUE.

Since money must be exchanged for valuble goods it should itself possess value, and it must therefore have utility as the basis of value.

2. PORTABILITY.

The material of money must not only be valuable, but the value must be so related to the weight and bulk of the material that the money shall not be inconveniently heavy on the one hand nor too minute on the other.

3. INDESTRUCTIBILITY.

If it is to be passed about in trade and kept in reserve, money must not be subject to deterioration and loss.

4. HOMOGENEITY.

All portions or specimens of the substance used as money should be homogeneous; that is, of the same quality, so that equal weights should always have exactly the same value.

5. DIVISIBILITY.

The material of money should not only be capable of division, but the aggregate value of the mass after division should be exactly the same as before,

6. STABILITY OF VALUE.

Currency should not be subject to fluctuations in value; the ratios in which money exchanges for other commodities should be maintained as nearly as possible invariable on the average.

This would be a matter of comparatively little importance were money used only as a measure of value for the moment and as a medium of exchange. If all prices or values were altered in like proportion simultaneously with the variation of money values, no one would lose or gain; but money is employed as a standard of value for long contracts, and the purchase price of gold in weight, for instance, may vary greatly between the time the farmer borrows it and the time he goes into the market with his wheat to purchase it for repayment to the lender.

To illustrate this: Cash wheat sold in Chicago at 56 cents in the month of August, 1893, and the farmer who was obliged to buy money with wheat for the repayment of a loan had to give about twice the usual number of bushels to obtain it.

By a habit of thought with most people, they consider the dollar as a measure of value in the same sense as they regard a yardstick, a pound, or a gallon as measures of dimension, weight, or volume. As a matter of fact, to use the yardstick simile would only be proper in the sense that a draftsman uses his scale in the preparation of a map. It is well known that the paper upon which he draws his map expands and contracts according to the humidity in the atmosphere; consequently, if he were to use a wooden scale, or any scale the length of which does not vary with the expansion or contraction of the paper, the proportions in his map would vary from day to day, and, indeed, from hour to hour. To prevent this he uses a scale made of paper, which is lengthened or shortened in the same degree as the paper he works upon.

The smaller the volume of money in circulation is, the smaller are the

prices of all commodities. During the last six months the mass of money in circulation has shrunken very much; so have the values of all commodities and securities. This law is understood by but few, although felt by all.

The late J. S. Moore, known best under his *nom de plume* of the "Parsee Merchant," in speaking of gold as the measure of value, uses the yardstick simile. He says, comparing gold, the standard measure of values, with the yardstick, and the value of the commodities to be measured to a bolt of cloth, that if he were to measure a bolt of cloth one day and found it measured 50 yards, and measuring the same bolt of cloth the day after found it to be but 49 yards, the conclusion would naturally be that the cloth had shrunken two per cent: that it would be absurd to say that the yardstick had expanded. And yet that is exactly what happens with money as a measure of value. The measure of money is affected inversely as the mass of it in circulation.

7. COGNIZABILITY.

Money should be easily recognized by its color and its impressibility, namely, the capability of receiving such a stamp, impression, seal, or design as shall establish its character as current money of certain value.

THE FUNCTIONS OF MONEY.

As already shown, it is of the utmost importance to one who wishes to comprehend any discussion such as is now agitating Congress to discriminate carefully and constantly between the four functions which money fulfills. Money must serve—

1. AS A MEDIUM OF EXCHANGE.

In this form money is simply any commodity esteemed by all persons; any article of food, clothing, or ornament which any person will readily receive, and which, therefore, every person desires to have by him in greater or less quantity, in order that he may have the means of procuring the necessities of life at any time. By common consent we have selected gold and silver, the original value of which was based upon their use as ornaments.

2. AS A COMMON MEASURE OF VALUE.

Although many commodities may be capable of performing this function of a medium more or less perfectly, some one article will usually be selected as money, par excellence, by custom or the force of circumstances.

By common consent and custom the same material was selected to perform the second function as the first.

3. AS A STANDARD OF VALUE.

This third function of money soon developed itself, as commerce could not advance very far before people began to borrow and lend. Thence arose the convenience of borrowing and lending in one generally recognized standard or commodity, of which the value varied but little. This commodity was generally the current money, and thus became to perform the functions of a standard of value.

4. AS A STORE OF VALUE.

A substance was necessary into which a person could condense his other property, which was very valuable and of small bulk, the value of which would be recognized in any part of the world; a substance which could be hoarded and which could be easily transferred to a distant country. Current metallic money fulfills this condition better than anything else, although diamonds, plate, rare works of art, etc., are frequently used.

EXCHANGE.

Exchange has been called the barter of the superfluous for the necessary. It is clear that the exchange of commodities depends upon the obvious principle that each of our wants taken separately requires but a limited quantity of some article to produce satisfaction. Hence as each want becomes fully satiated we turn to the satisfaction of some other want, the whole being influenced by the desire for variety. The man who is supplied daily with three pounds of bread will not desire any more bread but he may have a strong inclination for beef, tea, or alcohol. If he meet with a person who has plenty of beef, but no bread, each will give that which is less desired for that which is more desired.

RATIO OF EXCHANGE.

Every act of exchange presents itself to us in the form of a ratio between two numbers. The word "value" is commonly used, and if at current rates 1 ton of copper exchanges for 10 tons of bar iron, it is usual to say that copper is ten times the value of iron, weight for weight. When we say that gold is more valuable than silver, we mean that, as commonly exchanged, the weight of the silver exceeds that of the gold given for it. If the value of gold rises compared with that of silver, then still more silver is given for the same quantity of gold. But value, like utility, is no intrinsic quality of a thing. It is an extrinsic accident or relation. We should never speak of the value of a thing at all without having in our minds the other thing with which it is valued. The very same substance may rise and fall in value at the same time.

[If in exchange for a given weight of gold I can get more silver but less copper than I used to do, the value of gold has risen with respect to silver, but fallen with respect to copper. It is evident that an intrinsic property of a thing can not both increase and decrease at the same moment. Therefore the value must be a mere relation or accident of a thing as regards the other things and the person needing them.

This is a most important factor to be kept in mind in estimating the relative virtues of gold or silver monometallism or bimetallism now being discussed to the exclusion of all other topics. The silver price of gold has risen enormously recently, and likewise the wheat price of gold. The wheat price of silver and the silver price of wheat, however, have kept much more closely together, which is a fact having a curious relation to the monetary question of the day.]

COINAGE.

Coins are ingots, the weight and fineness of which are certified by the integrity of the designs impressed upon the surface of the metal, the form of coins being simply for convenience. Coin is simply a commodity, the value of which is governed by the bullion value of the same metal in the open market.

LEGAL TENDER.

Coin becomes a legal tender when by legislation a creditor is obliged to receive it in requital of a debt. If a debtor tender to his creditor the amount of a debt due in legal-tender money and it be refused, the creditor may indeed apply or sue for it afterwards, but the cost of the action will be thrown upon him. A coin may be made full legal tender or legal tender for a limited amount.

THE STANDARD UNIT OF VALUE.

This must consist of a fixed quantity of some concrete substance, defined by reference to the unit of weight or space. The expression "standard unit of value" will almost inevitably be misunderstood as implying the existence of something of fixed value. Value merely expresses the essentially variable ratio in which two commodities exchange, so that there is no reason to suppose that any substance does for two days together retain the same value. All that a standard of value means is that some uniformly exchangeable substance is chosen, in the terms of which all ratios of exchange may be expressed or calculated without any regard whatever to the feelings or mental phenomena which the commodities produce in men. For reasons already stated, either gold or silver or copper has usually been considered most suitable for constituting the standard substance.

The absolute weight or magnitude of the unit of money is a matter of little or no importance, provided that all people agree upon the same unit, that it be permanently and exactly defined and afterwards adhered to. It is only requisite that every contract expressed in money shall enable us to ascertain exactly how much gold or silver is due from one person to another. Those who use coins in ordinary business need never inquire how much metal they contain. All we can say, then, is that the standard unit of value is some entirely arbitrary weight of the standard metal, the exact amount of which, being a matter of indifference on general grounds, should be fixed as seems most convenient in reference to the habits of nations or other accidental circumstances.

CURRENCY.

The unit of value need not necessarily be made into coin. All that is necessary is that the current coins shall be multiples of the unit or expressible in the terms thereof.

STANDARD COIN.

The standard coin is one of which the value in exchange depends solely upon the value of the material contained in it. The stamp serves as a mere indication and guarantee of the quantity of fine metal. We may treat such coins as bullion, melt them up, or export them to countries where they are not legally current, yet the value of the metal being independent of special legislation, will everywhere be recognized.

[NOTE.—If the same coinage were permanently, legally current in all countries, it would not matter what its commodity value was.]

TOKEN COINS.

These coins take their value from the fact that they can by force of law or custom be exchanged in a certain fixed arbitrary ratio for standard coins within certain limits. Token coins may have more or less bullion value and the difference between that value and the nominal value is necessary to keep them at all times within the country minting them, to facilitate the small daily exchanges of life, *i. e.*, for pocket money.

GRESHAM'S LAW.

Though the public do not generally discriminate between coins and coins, provided there is an apparent similarity, a small class of money-changers, bullion-dealers, bankers, and goldsmiths make it their business to be acquainted with such differences and know how to derive a profit from them. These are the people who frequently uncoin money, either by melting, it or by exporting it to countries, where it is sooner or later melted.

By far the greater part of the standard coinage is removed from circulation by people who know that they shall gain; for this purpose they cull out the new and heavy coins most recently issued from the Mint and pass the worn and garbled coins into circulation, or if the ratio of gold and silver in the coinage differs only 1 or 2 per cent from the commercial ratio, it becomes profitable to export one metal rather than the other, or to hoard that which has the greatest commercial or bullion value. This tendency has reached the importance of a general law, which was first clearly perceived by Sir Thomas Gresham three centuries ago, and was named in his honor by Mr. Macleod, a well-known writer on economics.

At first sight there seems to be something paradoxical in the fact that when beautiful new coins of full weight are issued from the mint the people still continue to circulate in preference the old worn and depreciated coins. Many well-intentioned efforts to reform the currency have failed by reason of the perplexities of statesmen who had not studied this principle of monetary science.

In all other matters everybody is led by self-interest to select the better and reject the worse, but in the case of money it would seem as if they paradoxically retained the worse and got rid of the better. The explanation is very simple. The people as a general rule do not reject the better, but pass from hand to hand indifferently the heavy and the light coins, because their only use for the coin is as a medium of exchange. Those who are going to melt the coin, as the maker of gold leaf and jewelry, or the exporter or the hoarder, are the ones who cull these coins, keeping for their purposes the heavier ones.

[NOTE.—With an international standard Gresham's law would cease to be a factor and not before.]

Having thus prepared the way, we can proceed to the consideration of the various monetary systems.

THE SINGLE LEGAL-TENDER SYSTEM.

This system was naturally adopted by the first coiners. Coins of one kind of metal, or even a single series of coins of uniform weight, were at first thought sufficient. Iron in small bars was the single legal tender in Lacedæmon; in China the sole measure of value and legal tender consists of brass "cash" or "sapeks," strung together in lots of a thousand each. In England up to the time of Edward III silver was the only metal coin, and in Russia during part of the last century copper was the sole legal tender.

THE MULTIPLE LEGAL-TENDER SYSTEM.

Out of the single legal tender naturally grew up systems of double or even multiple legal tender. The Plantagenet kings of England, for instance, finding that though they coined only silver, the people made use of gold, eventually began to use gold coins and fixed the rate at which they should be exchanged for silver coins.

THE COMPOSITE LEGAL-TENDER SYSTEM.

This is the remaining possible system in which coins of one metal are adopted as the standard of value and principal legal tender, and subordinate token coins of other metals are furnished for the purpose of subdivision, being recognized as legal tender for limited amounts. The value of these token coins now depends upon that of the standard coins for which they are legally exchangeable, and care is taken to make their weight such that their bullion value will always be less than their legal value. No profit can ever be made by melting such coins and removing them from the country, and their ratio of exchange with the principal coins is always a simple ratio fixed by law.

The composite system of currency comes into existence automatically, whenever coins of gold and silver are current at rates fixed by law or custom, but the silver coins become reduced by abrasion or clipping below the corresponding weight.

[It will be noticed that the law of Gresham depends for its operation principally upon the variations of the ratios between gold and silver in different countries, upon the variations of weight in the same country by abrasion or through reduction of weight, and upon the differences between the legal and bullion values of coins.]

Several principles governing money, which have been named, hold good only so long as different nations use different ratios and different standards of value. The entire subject of money is dependent upon the common consent of the people of a particular nation in relation thereto. The reason why the legal-tender acts of a particular nation do not hold good with individuals or governments outside of the nation making them, is on account of the absence of this common consent.

It is now proper to consider the arguments for the various standards. For this purpose I shall quote bodily from the work of S. Dana Horton, entitled Silver and Gold, published by Robert Clarke & Co., Cincinnati, 1877; chapter 3, page 29:

THE ARGUMENT FOR THE GOLD STANDARD.

Money is a measure of value, and there can be but one standard measure of value, just as there is but one standard measure of length, weight, or space.

The superior value of gold, compared with the same bulk or weight of silver, gives to gold an even more than corresponding advantage in fitness for use as money.

1. It is more portable, giving great values with a minimum of weight, and hence is best adapted for facilitating international exchanges, as well as to be carried on the person.

2. It costs less to coin gold, and gold is in general less destructible than silver.

Again, its intrinsic qualities and its history guarantee to gold a permanence in value greater than that of silver.

This is shown by the fact that while the value of both metals has fallen greatly in the centuries that have elapsed since the discovery of America, yet silver has fallen more than gold. In Germany, for example, it was 1 to 10.50 in 1500; 1 to 16.25 in 1813.

The superiority of gold to silver in its general use in the arts secures to it a permanent demand, which guards against its depreciation; it would oust silver from use as it is, if it were not for its high price.

The cost of the production of gold remains permanent, while that of silver is progressively diminished by the invention of new processes.

The time will come when the only limit to the production of silver will be found in its extreme cheapness.

Gold can not fall without dragging silver with it. Silver, on the contrary, may fall without seriously affecting gold.

ANSWER FOR SILVER.

Gold can not be coined in values minute enough to be of use as change. There is no gold coin that can take the place in social economy which the five franc piece, the piaster, or dollar have occupied.

Freight charges for transportation of gold and silver are calculated on the value and not on the weight.

For deposit the difference in bulk and weight is of little moment.

The history of the precious metals shows wide variations which can not logically be charged to the inate variability of one factor alone. Among the Greeks, about 400 B. C., the relations stood 1 to 10; in Rome, in the time of Cæsar, 1 to 18; a few years ago in Japan it was 1 to 4.

In this century changes of price have been chiefly due to the causes affecting gold alone, viz: war demand andthe gold discoveries; or are due to demonetization of silver, which signifies also an abnormal demand for gold, and, properly speaking, is excluded from the argument on variability.

To quote the effect of demonetization to show the "variability of silver" is to repeat the child's puzzle of the man who, being accused of having killed a sheep, showed that the sheep was dead, and so asked how could he have killed it?

The question at issue in reference to silver or gold is: "Supposing that neither be demonetized for the benefit of the other, which metal will be likely to vary most in purchasing power?"

The cost of production of gold is largely a matter of luck in finding nuggets or placers, which are fields of small nuggets, and a series of discoveries may therefore, at any time, completely unsettle its value.

Its admitted excellence as money subjects gold to more sudden and general fluctuations of demand than are likely to affect silver. History supplies many instances of a specific "war demand" for gold as preferable to silver.

The gold standard necessitates a subsidiary coinage of silver tokens, and under this system the wages of labor are paid in debased money, the profits of capital in real money.

BIMETALLIC MONEY OR DOUBLE LEGAL TENDER WITH FIXED RATIO.

(The expression "double standard" and its substitutes the alternative, compound, or optional standard are purposely omitted as leading to confusion of thought.)

This system, in supplying full weight coins of every denomination, combines the substantial advantages of both the single gold and the single silver standard, and thus meets all the possible requirements of exchanges of the world.

Either metal being, to a considerable degree, available as a substitute for the other, the local fluctuations of supply and demand of either simply arouse the other to retore equilibrium, and hence this system secures a stability of value of money which is otherwise unattainable.

ANSWER BY THE SINGLE STANDARD PEOPLE.

It is essentially a "double standard."

It is an absurdity outside of the pale of economic science; it results simply in an alternation of "standards."

The measure called money can not be based upon two unequal units.

The double standard organizes disorder.

It exposes business to the fluctuations of two metals instead of one.

The debtor always pays in the cheaper metal, hence the creditor always loses.

The "double standard" is instituted for the benefit of bullion brokers, money changers, bankers, ("bonanza jobbers" also in this country), who reap the profit of the fluctuations of the price of the two metals.

Pretending to give two standard measures of value at the same time, it in reality confuses twodistinct measures, and shortly leads to a simple alternation of "standards;" now silver, now gold, according as gold rises or silver rises above the relation established between the two by law.

The double legal tender with proportion fixed by law and payment in either metal optional with the payor, is merely the transition stage from a crude and amorphous state of commerce to civilized dealing with an international money.

The true solution of the question of international money is the adoption by all nations of one standard of value, and that standard can only be gold.

The adoption of the gold standard reduces the friction of exchanges to the minimum, and introduces certainty and stability into the business of the world.

Gold has long been in practice the chief standard of the civilized nations, and its universal adoption by them is only a question of time.

REPLY BY BIMETALLISTS.

The history of modern commerce proves beneficent results from the use of double legal tender, which exclude the idea of there being any "absurdity" in it.

He who thinks it is outside the pale of economic science requires only a careful study of its history in order to learn what economic science really is.

The argument from metrology, as is shown by economists from Say to Roscher, has no place in the sciences of value.

The French system of weights and measures is based on the constancy of nature; on the belief that the circumference of the earth remains the same; that gravitation remains constant.

Value being a mere relation between commodities, which is determined by the ever variable desires of man, is incapable of producing a unit which can attain a constancy like that of nature and strip off its innate variability.

The adjustment of gold and silver under the double legal-tender system in such a way as to correct the fluctuations of either metal, is the best available approach to the desired steadiness of value of money.

As for the asserted loss of creditors and gain of debtors: if both metals rise unequally in value, as compared with other commodities, the creditor can not lose, nor does the debtor gain.

If both metals fall unequally in value, the so-called loss of the creditor is only a loss of anticipated profit; while to the debtor, to pay in the dearer metal would be positive loss.

But even in case of a direct fall of one, while the purchasing power of the other remains constant, it is erroneous to say that the creditor loses, for the contract is supposed to be an option, and so understood by both parties.

The profit of money-changers inures to the country whose metal is exported, and is but a small tax—and that, too, paid at home—for stability in the value of money.

The alleged "alternation of standards" does not often take place. Silver and gold remain legal tender, and are used as such; and where this alternation does take place, it is due to demonetization in other nations; and if all nations supported the double legal tender at one and the same ratio, it could not take place at all.

Both the doctrine of chances and the history of the production of the precious metals show that fluctuations in amount of the total annual product of both metals are a much smaller percentage upon the total stock than the percentage which is given by fluctuations of either metal compared with the total stock of that metal, even if we reënforce the stock of one by an additional tenth for subsidiary coins. * * *

The conviction is forced upon any thoughtful mind that the value of gold and silver is almost entirely due to a transmitted habit of thought. The original basis of value for gold and silver was their use for ornamental purposes. In the progress of civilization this use has decreased, until now the personal decorations of a century ago would be considered exceedingly vulgar.

Again, the employment of these metals for use as money has utterly outgrown the proportions which originally existed between gold and silver used as money and the same metals used for purely personal ornamentation, the latter use originally forming the basis for the valuation of the same metals employed as money. While originally the value of gold and silver consisted entirely of their use for ornaments, this now consists almost wholly of their use for money. At the present time the annual consumption of gold and silver for ornamental purposes is much less than 1 per cent of the total stock of gold in the world, and while the proportion is a little larger for silver, that is also exceedingly small. It is less than 30 per cent of the annual production of both of these metals. If gold and silver were both demonetized and their value readjusted to the demand for ornamental, technical, and scientific purposes, they would certainly fall more than 60 per cent. The reduction in the value of silver by successive demonetizations exemplifies this fully. Each fall in silver represents the percentage of value by which it was appreciated from time to time by its increased use as money. If it should finally be demonetized by all nations, its value would not be very much above that of copper.

This opens up an interesting vista of speculation as to the necessity of what is commonly, though erroneously, called the intrinsic value of a substance to be used for money. If the value of gold and silver was originally purely subjective, and if the present valuation is merely the survival, by hereditary transmission, of a form of thought, the very basis of which has even disappeared, then it would seem unquestionable that some other substance agreed upon universally as a medium of exchange would answer as well or better.

The value of gold and silver coin in the eyes of the hoarder, whether consciously or unconsciously, depends upon the theory that the source and cause of the original demand will continue to give it value until he again desires to exchange it for some commodity. If it can be shown that the only demand upon which the value of gold and silver has been based has largely ceased to exist, and that their valuation is already largely imaginary, then it becomes plain that if we use gold and silver at all for money it is a matter of utter indifference what the ratio may be between them, and that the ratio which most nearly corresponds to the average ratios of the minted coins of the world is the proper ratio to be reëstablished, if for no other reason than that it saves labor and the inconvenience of recoinage of a vast mass of metal.

In this era, when the only national boundaries are of a purely political nature, and when commercially all the peoples of the world form practically but a single community, it is, of course, patent that the media for a world's exchanges must be established by the world's consent; and furthermore, that this consent gives to money its value and establishes the ratios between the different materials composing it, regardless of the supposed intrinsic merits of the material employed; provided, of course, that the quantity so employed is always kept within the control of all the agreeing governments. Wampum not only served all the purposes of exchange and of a measure of value among the Indians of Massachusetts, but it was legalized by the early settlers, and within the limits of that community, for white and red alike, it answered the requirements until the inventive Yankee destroyed the utility of this currency by counterfeiting wampum. What we now need is some universal wampum, adopted by the laws of all the nations, and which shall be regulated by scientifically adjusted proportions to the commerce of all the world, and which can not be counterfeited; this may be of gold and silver or some other substance.

It appears that, in the first place, the quantity of money which is needed to conduct commerce must bear a certain proportion to the amount of business done; and, secondly, that, having arrived by approximation at the amount per capita necessary for this purpose it should thereafter not be changed, except by consent to cover the increased needs by the increase of population or to maintain the proportion between the mass of money and the work it has to do in the mechanism of exchange. It is certain that people having once formed a habit of thought, or established a custom by which the exchanges are conducted by means of a certain medium, that habit of thought becomes in course of time automatic, so that in the absence of that medium it seems impossible to do the same work by equally efficient methods. I have observed during the present crisis a number of instances

where the simplest and most direct operations of barter did not take place on account of the absence of the means usually employed. This is no doubt one of the underlying reasons why the theory that the value of money is in an inverse ratio to the mass in circulation is true.

If by reducing the mass of money in circulation, its power to purchase commodities can be raised, and there seems to be no doubt of this, then it becomes perfectly plain why that class which largely controls the money of the world should wish to limit the portion put in circulation.

That the mass of money in circulation must bear a certain proportion to the commerce done, regardless of the direct value of the medium of exchange itself, is clearly shown by every panic. It is estimated that the actual business of the world is done with from 5 to 7 per cent of actual money; the remainder being effected by individual or corporate paper evidences of confidence. Can a business system be called good in which from 93 to 95 per cent of the mechanical means for effecting the exchanges can be destroyed, either by the arbitrary will of a few or the emotional distrust of the creditor class?

In France, the thriftiest country on earth, a sufficient amount of the medium of exchange is kept in the woolen stockings of the people to make them independent of the 95 per cent of the "confidential medium" of which we so blindly boast in our country. The percentage of money which is withdrawn from circulation by the hoarding of the people during the periods of "no confidence" represents the percentage which the commerce of the nation should not count upon during periods of prosperity. The sum required to offset the deficit in the money circulation at this time, represents the smallest monetary and commercial factor of safety with which the business of this country should be conducted. An engineer who designs a bridge always adopts the widest possible factor of safety as a precaution against emergencies. Why should our legislative engineers, who design the financial bridge which is to carry the national traffic, always assume the narrowest factor, except for the reason that it is more profitable to the creditor element?

It is argued that it is inconvenient to have a larger per capita circulation. What if it is inconvenient for the people to carry a little more financial provender in their knapsacks than seems necessary in flush times, during which they can pick up what they may require by the wayside, provided it will save them from starvation in times of monetary famine? Any thoughtful observer of the times can not avoid the conclusion that it is the withdrawal of this fiduciary medium of exchange, which clogs the business of the country. It is not due to the sudden collapse of national prosperity nor to industrial decadence. Why should the power be left in the hands of a few, through an exaggerated credit system, which in itself is illogical, to withdraw the tokens, which from blind custom we have come to regard as the paramount instrumentality of commerce, by simply saying: "We have no confidence?" What confidence? None can answer who would and none will answer who can.

M. Rothschild need only whisper this sentence, and presto! the contraction commences, which squeezes the savings of a lifetime from the millions who have labored for them. Could this be done without constantly discouraging and preventing the masses from preparing themselves against such a process of constriction?

We are fond of pointing to England as having a less circulation even, per capita, than the United States. Is it wonderful, with the more perfect control of the governmental machinery in the possession of the English, that this should be so? Does not the distress of the productive classes in England sufficiently show that they have not enough per capita circulation? Does it not seem that the people of France, in spite of having paid a colossal war indemnity, are prosperous for the very reason that it has nearly twice the per capita circulation of the United States and nearly three times that of England?

The defects of a fiduciary currency, as against an abundant legal-tender money, are clearly brought out in the following clipping from the New York Evening Post of August 16, 1893;

"The Corry, Pa., Flyer of a recent issue said: 'Mr. ——, of West Chester, Pa., the well-known stock-buyer, is here and stranded for want of currency. He has a carload of cattle and a carload of sheep, and a New York draft for $2,000. But there is no way to split up the draft. The New York bank that issued the draft wired him this morning that they could not send the currency at present, although he paid currency for the draft.'"

(Also shown in the premiums on currency ranging as high as 7 per cent.)

This leads us to the consideration of the diplomatic side of the money question. We have already shown that having once agreed upon what money should be, the minor questions upon which economic writers love to dilate, such as the weight of the metal used, and other details, are really insignificant. It is the diplomatic and legislative tampering with standards and coinage which is at the bottom of the economic distress and misery from which the world periodically suffers.

To understand the question, let us go back for a moment to the fundamental basis of all economics—that is, the law of self-preservation and of race-preservation, out of which again grows the law of the survival of the fittest. We will never understand the question in any other way.

In the fierce and originally promiscuous struggle of comparatively evenly matched individuals, a point was finally reached where by selection a few persons acquired intellectual and physical qualities superior to those of the great majority. Naturally these became the leaders of the remainder, and finally resulted in the absolute subjection of the majority. As time progressed the power of the sword was augmented by the control which it was found could be exerted through the religious instinct, in itself an extension of the instinct of self-preservation. The cross was welded to the sword for a handle, and thus the power of the governing families was made permanent and hereditary. All this for the purpose of more effectually appropriating the labor of the multitude to the use and enjoyment of a small minority.

In the first instance religions were established for no other purpose than to serve as an auxiliary for the maintenance or the power of the ruling classes. The multitudes were made to believe not only that the potentates ruled by the grace of God, but were educated to think that it was a virtue to forego the individual possession of property, and in lieu thereof to accept the pleasures and riches of a post-mortem existence, where they would find everything they had been deprived of in this world, restored to them with compound interest. By the time the intelligence of the people had increased to a point where they no longer believed in this fiction, and when the knowledge of their power and the capacity for its organization had so developed that they no longer submitted to be ruled by the sword and cross, they found that the power of money and of organized and inherited wealth had been largely substituted. Thus at the present day monarchical governments are practically plutocratic, while constitutional monarchies and republics, although based upon the pretense of government by and for the people, are likewise plutocratic.

Using Bellamy's simile, the same class is found on the top of the coach, and only their nomenclature has been changed. It would be misleading and untrue to divide the world into two distinct classes, as capitalists and laborers, without adding the further qualification that individuals may now belong to the one and then to the other of them. Still, while the elements composing the classes change, the classes themselves do not, but continue to exist more or less sharply defined. The one class represents somewhere between 2 and 3 per cent of the world's population, while the other comprises the remainder.

The monetary struggle is first between these two classes within the same nation, and then between the two classes of any one nation collectively, as against the remainder of the world. If the governing classes of the world did not hesitate to maintain their advantage over the multitudes by the use of the sword and the cross, it would be folly to imagine that they would hesitate to use the no less effective agency of the money power to continue it; and indeed the financial history of the world is a succession of monetary manipulations for that purpose. It is useless to review these performances as a guide for the establishment of an ideal system of economics, in spite of the fact that our political economists and statisticians delight in using the tabulated results thereof as a basis for future monetary reforms.

It will be sufficient for our purposes to confine ourselves to the history of English finance during the present century, not for the purpose of learning how, but how not to legislate for the future. (See Horton's Gold and Silver.) About the close of the year 1810, after a period of almost uninterrupted wars on continental battlefields, during which England suspended specie payments and fluctuations in prices, vast issues of paper money and tremendous speculations disturbed its trade and finances; among the results of Waterloo was the necessity imposed upon Great Britain of abandoning inflation in its various forms and returning to coin and convertible notes. An enormous war debt of about £750,000,000 had been rolled up, the bonds representing this debt being held almost exclusively by British capitalists, principally of the nobility. During this time England enjoyed a double standard.

In connection with the movement for the resumption of specie payments in 1816, the first Earl of Liverpool addressed a letter to King George III, recommending the abolition of the silver standard and the establishment of a monometallic gold standard. The new system of coinage was introduced, the quality of being a "genuine pound sterling" was taken away from silver, and a new coin, the sovereign, of gold, was made the new pound sterling, the monetary unit and sole and unlimited legal tender. The purchase of gold was vigorously pushed. England increased its possessions between twenty-five and thirty millions pounds sterling, of which some twenty millions had to be obtained from foreign countries.

The effect of this policy of the financial magnates of Great Britain is shown in a memorandum to Parliament, in which it was stated: "This great supply of gold could only be purchased by the reduced price of commodities."

In a parliamentary debate in 1819 Ricardo himself said "they had no real interest in depreciating the currency; it would rather be to their interest to raise it to double its value; they were in the situation of creditors, not debtors, their whole capital being in money or in securities representing money." By "their" he of course meant the government, that is to say, the 2 per cent class.

In other words, the 2 per cent class proposed that the debt of the nation should be paid by the 98 per cent class in a currency which the 2 per cent class was willing to double in value by demonetizing silver. Mr. S. Dana Horton estimated that the average fall of prices for the principal commodities by the time gold had been substituted was about 23 per cent. Whatever the pretended reasons were which were offered at the time for this act, it increased the debt of the people at large to this 2 per cent class, by a change of standards, at one stroke, about £112,000,500, it does not require a very acute comprehension to discover the real reason which guided the secret counsels of King George and his ministry, but it might be well to remember in this connection that in the demonetization that metal was selected which was least abundant; likewise again drawing attention to the fact that the value of money is inversely as its mass.

If the increased demand for say twenty millions of pounds sterling in gold raised its value so considerably, and caused so enormous a depreciation in commodity values, at a time when the remainder of the world was on a silver basis, and before all but a very few understood the motive for this "move" of England's on the economic chessboard, it is certainly not a mystery that the prices of silver and commodities should have had the fearful depreciation which they did, following the monometallization of Germany and practically so of France and the Latin Union.

In a letter written by William Leighton Jordan, F. R. S., to the Prince of Wales, dated July 18, 1882, he calls the recommendation of Lord Liverpool to abolish the silver standard "a mistake." It is refreshing to see that his English patriotism was so strong that he believed that the most selfish class of the most rapacious nation on earth made a *coup de finance* by which it increased the value of its securities at one stroke £112,000,000 by a mere "oversight" or "mistake," especially when the remainder of the century, to this very day, has been filled with the clamor of the 98 per cent class for a rehabilitation of silver as a legal tender.

However, while the governing class of England is always ready to enrich itself at the expense of the nation, it is equally ready, as a whole, to have the nation enrich itself at the expense of the world, and in this way to make a partial *amende*.

If the establishment of a gold standard was a brilliant piece of parliamentary finesse for the 2 per cent class as against the 98 per cent class of England, it was likewise an advantage, while shifting the wealth of one class to the other within the nation, to use the same method for shifting the wealth of the world to England as a whole, and, indeed, this process has been very successfully carried out, as its statistics of trade and finance and its control of the world's money market clearly show. The almost uninterrupted success of the English financial policy for nearly a century, in its struggle with the balance of the world, is no more due to accident than was the success of its 2 per cent class as against the nation at large during the same period. England has been the stumbling block in every monetary conference convened for the purpose of establishing an international standard. Why? Because the advantage of its policy would be ended with the adoption of an equitable international policy, whether that be on a monometallic or bimetallic basis.

The maintenance of the "*status quo*" of the financial policies in all the other nations was necessary for the advantage of its own.

The following from Henri Cernuschi's "Monetary Diplomacy in 1878," page 21, is instructive:

"Who would believe it? England, who means to remain monometallist under any circumstances, implores the nations not to follow her example. Listen to Mr. Goschen (president in 1876 of the Parliamentary committee of inquiry into the fall of silver):

"'It is clear that one or two States may demonetize silver without this involving very serious consequences, but if all did so where find buyers? How avoid an unlimited fall? It is here that all States are interested in the value of silver. If the demonetization of silver were carried out everywhere at once, is it certain that the quantity of gold in circulation would suffice for the needs of circulation? Would there not be reason to fear on the one hand a fall in silver and another in the augmentation of the value of gold and a corresponding fall in the price of all merchandise? And, moreover, would it not be more difficult for paper-money countries to return to the metallic circulation if the single gold standard were everywhere adopted? They would be obliged to have recourse to the already much diminished supply of gold to resume specie payments. There are many consequences to

consider before entering on the path of the universal gold standard, which is a Utopia altogether visionary.'

"Mr. Goschen, turning from the general interest, spoke also of the English interest:

"'A campaign undertaken against silver would be very dangerous, even for the countries which have only made gold legal currency. England, for example, although she has the single gold standard, has a great interest in maintaining silver as a monetary metal. Our monetary system rests, and will continue to rest, upon the single gold standard; but India, which is one of her dependencies, has the single silver standard. For five years everybody in India has been suffering, private individuals as well as functionaries. All have been undergoing enormous losses on the exchange and the government also. England has given proof of good faith in the silver question by the patience with which she has resolved to wait until it recovers its value.'

"In July, 1876, the Bengal Chamber of Commerce addressed a petition to the viceroy, tending to the prohibition or limitation of the coinage of the rupee. The government replied February 9, 1877, rejecting the petition on the ground that it could not be done without opening the Indian mints to the free coinage of gold."

Why not open the Indian mints to the free coinage of gold? Because it would force the English to send large quantities of gold to India to pay their commercial balances, always considerably on the debit side, and this could not be done without snatching from the Bank of England twenty or twenty-five millions of gold sovereigns annually, which are the monetary palladium of the realm.

The motives of nations are the aggregate of the motives of the individuals composing them. In gaining control of India, England did so to advance her own interests. Of course she has a delicate and precarious undertaking on hand to control 250,000,000 of foreign subjects. She can only do it by preventing through the most adroit statecraft the organization or unification of this vast population. As recent events show, India, seeing that the United States was likely to be lost as the safety valve for silver, did the exact thing which the Bengal Chamber of Commerce petitioned the viceroy to do in July, 1876.

Until Germany demonetized silver in 1873 the world was about equally balanced between gold and silver money, and France for nearly a century could afford to and did act as the clearing house between gold and silver countries at a ratio of 1 to 15½. For nearly a century the par was preserved, what fluctuations there were being the equivalent of freight and transportation charges on the metal. This is shown in the following table taken from Ernest J. F. Seyd's Bimetallism in 1886, page 17:

Average for five years.	Gold, per cent weight.	Silver, per cent weight.	Year.	Highest.	Lowest.	Average, Dr. Soetbeer.
			1851	61 5/8	60	61
			1852	61 1/2	59 5/8	60 1/8

a Discoveries of gold in California and Australia.
b Period during which the largest amount of gold was produced.
c Gold production falling off.
d Demonetization by Germany.
e Panic in silver in July and quick recovery.
f Limitation of silver coinage in India.

(I have not the time to obtain the statistics from 1885 to date, but give the present price of silver, August, 1893.)

Germany, after the collection of the enormous war tax from France, felt itself in a position to follow the example of England. She had to sell a vast quantity of silver, of course, but there was France through which to clear that metal. So thought M. Soetbeer, Germany's great authority. To quote Henri Cernuschi:

"M. Soetbeer does not ask for monometallism to become general. He is anxious that France and the United States should issue bimetallic money. But we wished to hear from M. Soetbeer himself, and so we paid him a visit two years ago at Göttingen. Germany had calculated, he told us, that the coinage of silver would remain free at Paris, and that she could then get all her silver coined into 5-franc pieces, then exchange the silver francs for gold francs, and lastly mint the gold francs into marks. The demonetization thus effected would have cost little or nothing—but behold! France coins no more silver. It is treachery! he exclaimed. Germany, however, is pledged; she will shrink from no sacrifices."

At the monetary conference of 1867 all Europeans and Americans pronounced for gold monometallism. At the conference of 1875 bimetallism had but one opponent with whom it was necessary to reckon—England. In 1878 England demanded, indeed, that her internal monometallism should be spared, but she unceasingly condemned the monometallist propaganda going on abroad. The result of the monetary conference of 1892, at Brussels, was that England maintained its status of 1878.

It is safe to say that England, in spite of the fact that the present extent of the demonetization of silver is an unmixed evil for the world at large, will insist upon maintaining the policy under which she has been shifting the wealth of the world to her coffers, so long as any considerable portion of the world uses silver or a double standard. She now controls the finances of the world by reason of a policy adapted to such a situation, and until that situation becomes much worse for her than it is, by further demonetization on the part of other nations, she will continue that policy; and why not? The survival of nations and of races is but the extension of the law of the survival of the fittest as applied to individuals. If by superior monetary adroitness the 2 per cent class of England has taken advantage of its 98 per cent class, why should not England as a whole, holding about the same relation to the family of nations, sustain the same advantage by superior monetary diplomacy with the remainder of the world, so long as the world will stand it?

Enormous standing armies are established to maintain national life. National life is of paramount interest to maintain the various 2 per cent classes governing each nation. Why should England, having maintained its advantage, give up its greatest auxiliary engine—its exchange—which has a wider range even than its cannon, without a struggle.

The monetary diplomacy of money which rules the economic field, like the diplomacy of politics or religion, is understood by but a few of the ablest and shrewdest heads in the world. The high priests of ancient Egypt did not envelop their "cult" with more secrecy and mystery than do these diplomats of finance, and the information which is given out by them is only the pretended, never the real essence of their work. It has never seemed likely to me that financial crises are accidental, for the reason that the monetary policies of the ruling governments are always formulated by men who have achieved distinction for their consummate adroitness and ability to adapt the means to the ends of their particular policies.

The present panic, it is true, seems to affect both rich and poor, but I am satisfied that the priesthood, this inner arcanum, composed of emperors, kings, prime ministers, and a few others, does not take the ordinary capitalist into its counsels; it has its degrees, however, like Freemasonry. The methods by which they absorb wealth do not operate directly or exclusively upon the masses. Comparing the 98 per cent class to the producers of the economic honey; the 2 per cent class to the sponge which absorbs it, it is the high priests who squeeze from the sponge the absorbed wealth into their coffers.

Someone compares crises to the piston strokes of a vast diplomatic machine, which pumps the savings of the multitude into special reservoirs.

The position of England in this great financial contest can be best understood by one who has tried to organize a "pool" or "trust" in commodities. The one who can succeed in staying out has a vast advantage, provided he is well equipped for the struggle in his particular line, for he dominates all the others who combine.

We have had during the last year reams of paper printed with the views of persons of various economic schools, representing that many different interests. We have had the opinions of bankers, of silver men, of gold bugs, of socialists, and of representatives of labor organizations. Each have contributed their full share. As a general thing, if the writers had simply made an honest admission of their real occupation and interests, I could have written their articles for them. I have yet to see an article from a nonpartisan man or from an honest philosopher; and, indeed, there are but few who understand the subject beyond the pressure of their immediate interests.

We have the capitalist, who knows that his securities are depreciated; the manufacturer, whose "plant" lies idle; the banker, whose deposits have run down; the farmer, whose grain is being dumped at ruinous prices upon an apathetic market; the silver miner, whose metal in spite of a forced purchaser is depreciating from day to day; the legislator, whose main object is to "size up" the number of his constituents composing one faction or the other, and then to orate for the biggest crowd; and lastly the professional economist and statistician, these "Prophets of the Past," who range themselves with their own interests or those of their supporters—each class careless of the interests of the remainder, intent only upon benefiting itself and leaving the devil to take the hindmost. To quote the views and theories of each of these, or to hope to equate their tenets with a doctrine which shall be equally just to all, would be useless.

Yet, if all these parties only understood their own interests they could safely unite upon the kind of legislation needed at this moment; that is, for Congress to undo all its monetary legislation since 1878, for the reason that all this legislation has been passed with the object of correcting a monetary situation, which up to the present time is absolutely outside the jurisdiction of the United States, to wit, in London.

If we were a closed country, as Japan was in the first half of the present century, without commercial relations outside of our territorial limits, we could, like that Empire, establish and maintain even so eccentric a ratio as 1 to 4, or 1 to 20, or any other ratio upon which we could all agree.

We could pass any other monetary laws, and, if they were equitable, they would stand so long as they served their purpose. For that matter, if we were but honest and unselfish, we could establish a bimetallic standard of our own at a ratio of 1 to 16, or 1 to 20, and use our gold for foreign commerce while the cheaper metal served for home consumption; but the moment gold became more valuable than silver even the silver miner would not resist the temptation to hide it away, and thus again put the law of Gresham into operation. After all, we would all of us have to believe or agree that 16 ounces of silver were worth 1 of gold, in addition to saying so, before a domestic double standard fixed at that ratio could be a success.

COST OF PRODUCTION.

A great deal has been said about the cost of production influencing the value of metallic money. It certainly does when the metal is not a legal tender, but not at all when it is. An aërolite of solid gold, weighing, say a thousand pounds, would have its value stamped upon it before it reached the earth. There is no doubt that legislation largely creates the value of the metallic money, which again establishes the value of the metals composing it for scientific, technical, and other purposes. The moment its value is established by legislation it ceases to come under the operation of the law of supply and demand, but, of course, always and only within the limits bounded by the common consent, which limit becomes universal only by universal consent.

The basis of the value of gold and silver for monetary purposes is really the faith that the primary cause of the demand and proportions to supply, which originally gave to these metals their value, not only continues to exist, but is permanent, at least permanent enough to enable us to exchange them for the necessities of life within the space of individual existence. The only explanation for the continued existence of this belief is that the world, with the exception of a few, is ignorant of the philosophical kernel of the subject, and hence the original conception has been transmitted from generation to

generation unchanged as a habit of thought, which has indeed become almost as automatic as an instinct.

Essentially gold and silver money does not maintain its value for any other good reason, except that it will permanently exchange hereafter into the commodities which are exchanged for it now. Critically considered, the value of the present mass of gold and silver, if measured by the present demand exclusive of its monetary uses, is largely imaginary. Even considering their technical and scientific uses, both of these metals are overvalued about 60 per cent. Practically considered, 60 per cent of the value of gold and silver exists purely by reason of its service as a mechanical means for effecting exchanges between commodities of real value.

If this instinctive imaginary estimate of the worth of the precious metals be destroyed by the object lessons of demonetization, in relation to silver, the attempt to maintain it in relation to gold by restricting the metallic money mass to that metal alone will be found useless eventually. In the meantime it is attempted by throwing the demand for a medium of exchange (which is one function only) from gold and silver upon gold alone, to compensate the loss of its commodity worth. Noting the intellectual progress of the people in other directions, the high priests of finance foresee the time when the world will understand this condition, and to protect their interests in advance a maneuver is resorted to which will make silver bear the real depreciation of both metals. England hopes to avoid this loss by maintaining silver as money in other countries, so that when the work of realization of the true worth of the metals is completed the resulting loss will fall upon other countries in proportion to their stock of silver. This is the reason why England does not wish to be the creditor of a silver country whose finances she can not control.

I have been asked what difference it would make if the mass of metallic money was reduced from gold and silver jointly to gold alone, even if that shrinkage was one-half. Then the farmer would receive 50 cents per bushel instead of a dollar for his wheat, and that 50 cents, having twice the purchasing power of the same sum under a double standard and double volume of money, would answer exactly the same purposes. Laying aside the doubling of existing fortunes, let anyone figure out the results for a farm of, say, 160 acres, producing 25 bushels per acre, and mortgaged for ten years at $10,000, with interest at 10 per cent per annum. Then let him increase the purchasing power of money in yearly stages of 10 per cent, or what is the same, reduce the price of his wheat in stages of 10 per cent, from year to year, and the kernel of the theory will rapidly reveal itself. Aside from this, the reason already given that the mechanism of exchange is itself interfered with, to the detriment of general prosperity, when the money in circulation is out of proportion to the commerce done by its means, holds good.

The annual production of gold in 1853 was more than four times, and the average product from 1852 to 1876 was three times that of 1846, and yet the relative volume of the metals was disturbed by only insignificant percentages. The present production of silver, while large, would not be excessive if it were not that the production was continued in the face of its demonetization by nearly the entire commercial world, otherwise the probable increase of production would scarcely offset the loss by abrasion and the added needs by the increase of the world's population.

It has already been shown that the cost of production is not an important element, considered in connection with an international ratio; but even taking the other ground, it can, I think, be fairly shown that while a few mines are very profitable at even the present commodity price of silver, yet all the mines, good, bad, and indifferent, have swallowed up more value than has ever come out of them. The same is true of gold mining. If it were not for the large speculative element in mining no one would care to go into it. To show that the very men who complain of the silver-miner's profitable business do not really believe what they say, it is only necessary to offer to sell them either a silver or gold mine. No matter how brilliant the promises are, it will always be found that the capitalist will consider the great risk of failure as an offset and will rarely invest. For this reason capital will cease to flow into mining ventures the moment this very large speculative profit disappears.

In this respect mining is very much like a lottery; for your ticket you may draw the capital prize, but the chances are diluted by the total number of tickets in the "drawing."

Reverting to the position of England; the rules governing the financial question are very much like the rules which control the game of whist. It does not matter what the intrinsic merits of the rules are, so long as they all play by the same rules. No matter how superior the arguments may be for the exceptional rule by which one of the party persists in playing, he will promptly be invited out of the game.

Undoubtedly, as sometimes happens in mining camps, a bully may be big enough and brutal enough to compel the other players to continue the game while he is playing by his own rules. Of course, the persuasion would have to be augmented by a good-sized revolver. The bully, however, would cease to take any interest in the game after all the remaining players had either adopted his rules or lost their money; his advantage would be gone in either case.

England occupies precisely the position of the bully; she has been powerful enough and adroit enough to compel the world to play with her by unequal rules. She said, in effect: All you other nations play with silver counters, or with silver and gold counters jointly; I shall play with gold ones alone; at the end of the game I will "cash in" my counters at such rates in yours as I please, and exchange them into the commodities you own, at such ratios as may suit me best; and in the mean time I will regulate the rate of exchange from London.

While England has been playing this game for nearly a century with the millions of the earth, misleading the minds of mankind meanwhile with works on economics written at Oxford, there has nevertheless been a considerable degree of education going on. When Germany became unified, and strengthened herself at the expense of France, she insisted upon "standing in" with England, and did "stand in" on the sole "yellow chip" basis. Then France, getting tired of its own philanthropy, said: While we will play with double-standard nations with double-standard counters, we will play with single-standard nations only with yellow ones. As long as there is an important country left which will play with England by unequal rules she will persist. The moment she ceases to be able to convert her yellow counters into white ones and make the others take them in exchange for commodities at prices of her own "fixing," and at rates of exchange of her own making, her rules will become useless and she will be ready to drop them.

In the case of this country the game had somehow gotten a little awry. We suddenly changed the rules in 1890, and England, on the supposition that we might be strong enough to turn the tables and beat her by her own rules, became frightened, and ever since then has been withdrawing from our securities. The result we have seen during the last year.

What are we going to do about it? Manifestly the only thing to do is to "stand in" with England's game, play the international game of commerce by her rules, become a competitor for the world's gold, join the other nations which preceded us, and all be on a gold basis. Of course, like a trust or pool which desires to bring a fractious concern within the "ring," we must make England lose.

We are strong enough to do it with the help at our disposal; we will have to "sell down" our commodities in order to buy gold; we will have to suffer, of course, and the 98 per cent class, as usual, will have to do the suffering in all of the countries interested in the international "pool." It may be that the 98 per cent class at some time will realize its position and exert its vast power. The moment this happens all the governments will be forced to an equitable code of monetary rules, from within. The United States must demonetize silver in order to remonetize it. Of course, there is a hope that England will not let silver drop to near the price of copper before it is reinvested with its legislative value. It would be dangerous to furnish an object lesson to the world at large concerning the purely subjective value of gold and silver coin. The transmitted habit of thought of regarding it as intrinsically valuable once broken, would be difficult to reëstablish. England, which has stood out at every monetary conference, must plead for international bimetallism before it will be established.

Pending this, to make the silver dollar unlimited legal tender at an arbitrary par, would cause our gold to leave our shores by the operation of the law of Gresham; to make it unlimited legal tender, without an arbitrary par, would bring us, under the operation of the same law, within our boundaries; in either case we would soon be on a single silver basis. To increase the ratio now would make it difficult to return to an international standard, which would have to be 1 to 15½ or at most 1 to 16, to conform to the approximate ratio of the minted coin of the world. our coinage at say 1 to 20 would be overvalued, with the existence of any probable international ratio, and be exported or hoarded, leaving us on a single gold basis.

Free coinage without a forced par with gold, even at a ratio of 1 to 20, would be below the commodity ratio, and subject it to Gresham's law, with a forced par at a ratio of 1 to 20 it would be worse than a limited coinage, with compulsory purchases at a ratio of 1 to 16 as at present. A standard with variable ratios would not be adapted to "time contracts," and as a pure medium of exchange the changeability of ratios would serve no purpose. In short, the only serviceable legislation which can be done for silver is to increase the legal-tender limits of the silver dollar, to leave it for the present to serve its functions as a token coin, these limits to be within the danger limit where it would drive out gold.

To provide relief for the people is by furnishing temporarily a medium of exchange independent of gold or silver; the way for this has been pointed out by the expedient used recently by banks, by their system of clearing-house certificates, by increasing the uncovered paper circulation temporarily, or by a very considerably increased issue of Government bonds. As already stated, the only way to give to silver its lost prestige is by an international agreement, which will fix its status for all ages, and, together with gold, form an almost invariable measure of value regardless of production. Universal consent will establish universally the value of silver; its fluctuation now merely represents the various defaults in this consent. If silver had fallen only by the dissent of the United States, its consent only would suffice to restore it to its value, but anything we may do will not suffice to balance the dissent of other nations. Metallic money is not a national but always an international thing, because no amount of patriotism will make people forget their individual interests, at least in money matters; they would never consent to hoard a dollar, as a dollar, which was worth only 50 cents in London.

PAUL F. MOHR.

Mr. McKEIGHAN. Mr. Speaker, I shall not attempt to conceal my disappointment caused by the message of the President. However patriotic in his motives, his recommendations point to the conclusion that the platform upon which he was elected is an interesting document, not on account of what it sought to reveal of the intentions of his party, but for that that it sought to conceal.

That the situation is grave enough to warrant this special session of Congress, no one denies. Productive industry lies prostrate from the strangulation of administrative monometallism; enforced idleness has filled the land with men and women that are asking us for an opportunity to earn their bread; shall we "give them a stone?"

This is no time to scold or criminate, no time to mete out to political parties the share of blame belonging to each of them. Sir, in this discussion Pilate and Herod have been made friends on this floor, and the political Judas has shown no disposition to go out and hang himself. But there is a to-morrow for political parties in this country, a to-morrow that will bring condemnation and death to any political party that turns a deaf ear to the just demands of our people.

There is a God that rules over the destinies of men and nations; a God that is not deaf to the earnest appeal of his humble poor; a God who will see to it that the desire of the people of this great nation shall "not fail," but shall come to bloom and fruit not alone for those who dwell in a brown-stone front, but, sir, for those whose dwelling place may be in the log cabins among the mountains or in the sod-built homes of the Western settlers.

My Democratic friends, it is to you that the people of the country appeal for protection against the encroachments of organized wealth as a political power that to-day threatens the subversion of our Government. Our people have been taught to rely on their inherent sovereignty as the only true basis of human government, and they are not willing that power and dominion should have any other foundation. To your care they have intrusted this country for the term of four years. I warn you that if, flushed with you great victory, you forget that you are and ought to be the servants of the people to crystallize their wishes into law, they will forget you, and in that day when you will again ask their continued support they will judge you by your works and approve or condemn you as you deserve.

Mr. Speaker, I am indisposed to trespass upon the patience of the House by any extended argument for a bimetallic constitution of money. I am content for my own part with the presentation made on this floor in my speech of March 23 last year.

I have read with diligence, have listened with eager attention to single standard discussions and to those who hold that action without European coöperation would be disastrous, and have been unable to discover any feint, even, of attempt at an answer of our arguments or denial of our facts—hardly any appearance of their comprehending the first principles of monetary science from the standpoint of statesmanship.

Nowhere in their deliverances can be found any propositions of elementary doctrines or guiding principles, except the wishes and interest of foreign creditors and that we should have stability in the value of our money.

The first of these desiderata simply reflects the selfish interest of security-holders. The second, while perfectly sound, pertinent, and elementary doctrine, is rendered utterly empty by the idiotic assumption that stability of gold is proven and shown by the fact that 25.8 grains of it, which under compulsion of the law the Mint certifies into a dollar by gratuitous coinage, has the same value in bullion as in coin.

Is it the infatuation of bigotry, of selfishness and stupidity, or is it sheer hypocrisy, that these gentlemen do not understand that this much-vaunted "parity" of coined with uncoined metal is purely legislative, and will accrue to any metal to which the statute would give freedom of coinage?

Consider a moment the emptiness of this logic, 25.8 grains of gold by coinage becomes the instrument by which gold is priced. Under such legal conditions, gold can have no other than the mint price, and that is pricing gold by itself. A pound of putty or a peck of beans can be shown to be constant in value if measured by itself.

But the crowning logic of lunacy is reached by the claim that since that piece of gold was worth 100 cents last year and the year before, "and is still worth exactly 100 cents," therefore no change has taken place in its value in the meantime. It would be difficult to find a more palpable piece of nonsense than that.

If pig iron were fashioned gratuitously into cook stoves there would be parity of value between a stove and the iron in it, and there would be constancy in the value of iron estimated in stoves. But such necessary relations would be useless as a guide to the larger question as to whether iron and stoves together had not greatly changed in value as estimated in something that was not iron. Nowhere is the imbecility of our adversaries more conspicuous than in this notion that the alleged stability of a money metal can be demonstrated by comparison to a money unit, constituted by law, upon itself.

In our advocacy we emphasize this feature of stability and constancy in the value of the unit of money and make it the Gibraltar of our defence of silver. We go further, and explain exactly what constancy of value is, and deduce proof of such constancy in silver, and nobody tries to controvert our definition or our demonstration. What respectable writer denies the over and over proven fact that gold and all money at a level with gold will buy 50 to 60 per cent more than it would prior to 1873? They tell us, "Oh, yes; gold will buy more, but the value change is in products," on account of improved processes of production.

Industrial development has been more rapid in British India the last twenty years than anywhere else in the world, but prices have not changed there. These gentlemen are ignorant of the nature of value, and do not know what a value change in money is, and they confuse their thinking by the notion that value is something intrinsic, and that gold is the only thing that does not change in value—because their case falls to the ground without the support of that absurd dogma.

The question "What is the rate at which goods swap for money?" constitutes the heart and sinew of this whole subject. It is prices, prices, and forever prices. The value of money is constant when prices are stable. This proposition is fundamental, and is as vital and central to a sound and tenable theory of money as it is the one determining force of success in business, of the beneficence of commerce, and equity in time contracts. Any constitution of money under which a protracted fall of prices year after year is possible is a vicious one, though all the money-mongers of the world grow hoarse in calling it the "best money."

Not in the countinghouse, not among money-changers, not in loan agencies, can be learned whether money is behaving well, is serving beneficially or injuriously in its high office. Not there can you study the dynamics of value. It is at those collisions of contending interest known as the "higgling of the market," where money exchanges with products under the all-powerful dominance of supply and demand, *i. e.*, the quantity of things for sale playing against the quantity of money obtainable for their purchase, where the value of money as well as the value of goods is determined. The final outcome of those infinitely varying conditions and estimations of men is exactly registered in price; and the same market report which records a change in the general price range indicates as well the precise change in the value of money.

It is error, gross and misleading error, to suppose that stability in the value of money can be anything else than stability of prices, or that there is any other mode of finding its variation than to learn the change in prices. It is betrayal of incompetence for this whole discussion not to understand that a confession of a one-third fall in prices is confession of an appreciation or rise in the value of money of 50 per cent; that those two confessions state one single incontrovertible fact. Yet current utterances defending the dogma of gold infallibility are but verbose revelations of that fatal imbecility.

To those who have given a systematic study to this subject, the theories propounded by financiers and officials as to the causes of recent economic phenomena is a standing amazement. Since the famous discussion between the wolf and the lamb, there has not been foisted upon a credulous people a more bald imposture than this pretense that the present fall of prices is due to the Sherman silver-purchase act, nor ever an apter illustration of the wolfish animus than this distortion of plain facts to justify a predetermined slaughter of innocence. A popular apprehension of the precipitation of all our money down to a "debased silver standard" drove money into hiding and broke down all prices just as much, no more, no less, than the drinking by the lamb down in the valley polluted the water in the wolf's mountain home.

Remember that every kind of paper money afloat (excepting a few gold certificates), including Government bonds, are by law redeemable in silver coin. It is perfectly clear, therefore, that if the country were apprehensive that our money was about to be debased by resort to silver for redemption, hoarding of money is precisely what people would not do. They would unload it rapidly, as we used to do in wild-cat days, lest our money became depreciated on our hands. There is no discoverable discrimination in the hoarding as to the different kinds of money. This is perfect refutation of that theory of causes, if these bigots were accessible to reason.

If men really believed money was going to depreciate, they would hasten to buy property with it and realize in the rise of prices which depreciated money would compel. Those wiseacres who prate about "intrinsic value" of the material of which money is made might learn that not the material of which it is made, but the difficulty of getting it after it is made—demand and supply, control the value of money as of all other things.

If I am asked for a diagnosis of the stringency, my answer is, monometallism. The act of 1873 in an evil hour gave us a single standard and the panic of 1873, other conditions conspiring to the same end. The Bland act broke the integrity of the policy of 1873 and gave us a crippled bimetallism. The act of 1890 was a still longer step toward the double standard, both in what it did and what it promised. But the single standard was all these years doing its deadly work in lowering prices, and held the western world in a state of strain as to its money supply.

But the finishing stroke was dealt when it was given out that the Government regarded silver as debased and unfit to offer in redemption of any of our paper. Such a policy in effect converted all our paper, yes, and even silver coins as well, into the rank of a secondary money, money that must be "made as good as gold" by redemption in it upon presentation. This placed the whole burden of redemption upon the slender basis of the gold reserve, instead of employing silver in that office as the law contemplated and the business interest of the country expected. This was noticed by the Administration, that the volume of money must shrink, and all prices must fall to conform to such a policy.

I aver that the panic and the business prostration (assuming that policy as a factor) was not groundless and artificial as many suppose. At its basis was a perfectly sound business instinct that under such conditions prices must fall and the volume of money shrink, and a stopping of silver purchases must intensify the stringency.

It is the weak platitude of unclear and empty thinking this talk of "want of confidence" being the source of our trouble, when no hint is given as to confidence, in what? As well say it is only fear that makes a man rush out of a burning building. It is indeed want of confidence, but that want is born of a want of money and a plentiful lack of confidence in prices—in other words, a well grounded assurance that property can not be converted into money except at prices that will bring ruin to business which under ordinary conditions would be perfectly sound.

Prices, prices, I repeat, is what is the matter. Insistence by these gentlemen "upon best money" is simply a crusade against fair prices, and that prices shall forever become lower. To arrest that lowering of prices is to "depreciate" our money, and that is a very wicked thing, you know. Great Britain does not

want that. These creditors want dollars that are "worth 100 cents." Well, our decimal notation as taught in our school books will make sure that dollars will still be worth 100 cents, quite regardless of how they are constituted. Our anxiety is as to how much products go to make a "dollar's worth."

We say that a dollar worth 3 bushels of wheat in Nebraska, 5 pounds of wool in Ohio, 100 pounds of steel rail in Pittsburg, 15 pounds of cotton in New Orleans, 4 gallons of turpentine in North Carolina, 1½ ounces of silver in Denver, etc., is an extortionate and iniquitous dollar, and if that has come about by legislation, then that is wicked legislation, which our prostrate industries cry aloud for the repeal of. That all these financial evils have come upon us by the legislation of 1873 is plain enough. Had the spontaneous and rapidly increasing flow of silver to the Mint for coinage into standard money not met that interdict of February 14, 1873, we should have resumed in silver and our dollar of account could never have risen above the commercial value of 371¼ grains of silver. Refusal to repeal that act is complicity in the guilt of the actions of that great wrong. The enforced beggary of hundreds of thousands of brave hearts and strong arms cries aloud for repeal.

That continuing wrong must be redressed. As God lives, it shall be redressed. It is in the air; the stones of the field are in league with us; time is the great champion of our cause; the conscience and rapidly growing intelligence of a stricken people is becoming enlisted; the resolute purpose of the bravest and most enterprising portion of this proudest nation on earth will not be balked by chicane and subterfuge already planning to circumvent us by a new ratio, by which the weight of our silver dollar shall be increased so as to make it "honest" as gold is "honest."

It is proposed by pretended and weak-kneed bimetallists that this sacred landmark be now quite removed, and by increase of the weight of silver coins to rivet forever upon us the deadly iniquity contrived in 1873. That unrighteous thing shall never get my vote, even though this Congress shall, as the alternative, stop silver coinage and purchase entirely. There will be a Congress after this one to which the people can appeal. I will not be a party to a scheme which will inject for all time a new meaning into that great word "dollar," which measures billions of obligations, past and to come.

I will allow no man to go farther than I do in reverence for the power and authority of the American Congress. I maintain that under the stress of a great emergency it may override or annul all contract obligations; but where the exigency is simply the clamoring greed of great creditors, I boldly challenge the right under high heaven for Congress to make that thing dollar a different thing from what it has always been, and make it retroactive.

Can it be possible that honorable gentlemen understand what this means? Consider; I beg of you to consider what it is you are proposing to do.

The silver dollar was no invention of the Revolutionary fathers. They found it here, fully intrenched as the instrument of valuation by immemorial custom, by deep-down habit, conscious and subconscious, as the norm of all value estimation. Consult all our legislation up to 1873; consult your dictionary; remember the Stanley Matthews resolutions, and the Bland law reinstating as definition what the law of 1873 tried to destroy. Bear in mind that this habit of valuation by silver is as old as history, and covers the whole globe and embraces to-day three-fourths of the people of the world as their exclusive pricing tool; remember that every great money word and unit was, and still is, at bottom silver, and that the value and office of gold is derivative—always was (with only slight and very modern exceptions) a subordinate money.

There is a quite tenable theory that a money unit is a definite coin, and when it suits the interest of great creditors they uplift holy hands at the sacrilege of lessening the weight of standard coin. Remember, also, that upon the other theory of a money unit, viz, that it is incumbent on Congress to maintain our money at some traditional and customary value or purchasing power, the silver dollar is by that test, too, a sacred thing. Remember, especially, that, as has been over and over again proven, the value of 371¼ grains of silver is still, as uncoined metal, true to the traditional dollar value, equitable to all the past and more likely to remain stable than gold.

To use the vicious terminology of our opponents, if free coinage will convert a "60-cent dollar into 100 cents, then it will make 60-cent wheat dollar wheat, and 6-cent cotton 10-cent cotton, and other things in the same proportion." I know it will be said such a change will be only nominal and fictitious. If it is a fiction to restore wheat, reduced by legislation to 60 cents, back to $1, every wheat-grower will rise up and bless the fiction. The money definitions of England and the prices made in their money in Liverpool is real and sincere, but our money and the prices made in it is false and fictitious. Out upon such treasonable and contemptible toadyism!

With free coinage, silver will be worth $1.29 an ounce all over the world as priced in United States money, and such money will go in Europe at the same value that it goes at here—will go at "100 cents to the dollar" as measured by itself, the favorite way of measuring gold, and can, like gold, be melted up in London without loss to the satisfaction of those who account that of supreme importance.

If a silver standard discourages credits into investments it will be an added benefit, the chief one being improved prices to our great staples come to stay.

No competent authority has ever tried to show that prices made in silver can go too high for industrial health. On the contrary, Mr. Robert Giffen, a frantic monometallist, argues against the enlarged use of silver by England upon the express ground that such use would only temporarily check the fall of prices inevitably under any metallic constitution of money.

But, it will be asked, how about parity?

Before considering that branch of the subject, I must enter my protest against this false emphasis and studious ignoring of the paramount consideration in the legal constitution of the money standard. The conveniences of exchange brokers should cut but a small figure in this matter. The bugaboo of a gold premium continually held up by foreign loan agents frightens some people out of their wits, and they can not recover their composure for a calm consideration of the really vital points.

The beneficence of the double standard does not depend upon a parity of coins. It consists in equality, if legal privilege be granted to both metals in the constitution of primary or standard money, leaving their market relation to automatic adjustment under such legal conditions. Its beneficence arises from the guaranty of constancy through the years in the purchasing power of money, which is thus at liberty to temporarily retire from the valuing office the metal that should tend to rise unduly in value.

Parity, of course, as now maintained, is a spurious bimetallism; as well our present system quadro-metallism, upon the ground that our copper and nickel tokens are at par with the standard. The Treasury administration is out and out single gold standard; but the pretense that the metallic parity policy declared in the act of 1890 is warrant for such administration is a palpable subterfuge. It is treating a statute of the United States as politicians treat their party platforms, and it is incumbent upon us with all due respect to a coördinate branch of the Government to caution the Executive against such Wall street interpretations of the laws of the country.

If some one would only deign to give us a coherent and reasonable statement of just how a gold premium would harm any honest vocation, any useful industry, or wealth-producing activity, I might abate some of my zeal in this advocacy. But over and over have we begged for an explicit and definite explanation of how any harm can come of it, only to be put off by the claim that the dollars constituted, if freely coined in silver, would not be "intrinsically" worth 100 cents, and as a result of that some nebulous, vague calamity and dishonor would come of it, because we would be out of harmony with England. All which means, so far as it means anything, that creditors would lose by it, and the business of local agents be discouraged.

I repeat, if even the least harm would come to any meritorious interest in this country from a gold premium there would be occasion to open again and loss account and strike a balance; for I frankly confess that while many matters in this general subject are capable of some construction as absolute as mathematics, I am unable to frame a demonstration that such a premium could not possibly in any event accrue any more than I can prove that silver would not gain to a premium over gold.

The data for such a request are, first, the quantities of the metals, respectively, that would be offered for certification into money, and, second, to what extent would the volume be expended by credit currency. If this second factor would be kept within reasonable limits, there is, to my mind, what we call a moral certainty, a high probability against it, quite sufficient for practical guidance, assuming that a premium would be a serious harm. Silver can not come in such disproportion as to countervail the force of this country's legislation to hold the metals to our legal ratio.

The solicitude of some people lest we shall not have gold to pay adverse foreign balances, in so far as it is not hypocritical, is a puerile and ludicrous anxiety. When the importer finds it difficult to meet his sterling bills, my advice to him would be, better stop buying abroad. A money that brings good prices come to stay is better for this country than so-called "best money," regardless of the relation it may have to foreign money.

I am convinced that the present high purchasing power of

gold is sinister, stilted, and artificial, and is sustained by sheer force of this international gold combine, which it is easily in the power of this country to break, to the great relief of the debtor and industrial classes of the entire world. That is where the shoe pinches. It is not a gold premium in the sense pretended which the great creditors dread. It is the loss of the virtual premium they now enjoy in the artificially manipulated increase in the purchasing power of money.

Let us test the sincerity of their pretenses that the legal and the commercial ratio must stand together in order to the proper working of the bimetallic principle, and that such parity can be maintained only by conformity to the "natural" one of about 20 to 1; that, then, you can maintain in concurrent circulation both coins at their bullion value. I suggest, to that end, that we make the double-eagle weigh 412½ against instead of 516 of standard gold. I do this not at all as a bluff; I do it in the most solemn sincerity as the only decent mode of manufacturing a new ratio.

There is no sanctity or prescriptive right in perpetuity of the relation of $4.86 to the pound sterling, nor can there be any objection in law, in equity, or in public policy in making the gold dollar weigh 20.612 grains of standard gold, so that $6 would go to the pound sterling; at least there could not be, provided the change be made not retroactively. Let there be the most scrupulous regard for contract obligations. Let such contracts be construed upon that theory of money which is most to the interest of creditors, and so let the lightened coins have a paying power of but 80 cents on gold contracts outstanding at the date of the change.

When 6 per cent was abstracted from our gold coins, carrying the ratio of 15 down to 16.1 the fathers (to their honor be it spoken), with a punctilious regard to all rights, gave the new coins a less paying power on old contract.

I can not find the decorous words that will adequately express my reprehension of the reckless immorality, the wanton disregard of high and most sacred equities in this proposal of increase of the weight of our standard coin, so easily assented to by pliant and week-kneed bimetallists. There is no precedent in all history for such an iniquity.

In the Middle Ages when spendthrift monarchs defended against the rapacity of creditors and a diminishing money volume, the English shilling which was at first one-twentieth of a pound, troy weight, became by successive debasements so reduced as that a pound was made into 66 shillings. Yet the great writers tell us that such a process of lessening the weight of coins was wholly beneficent to society in partially staying the downward tendency of prices.

I can not bring myself to believe that honorable gentlemen in this august Council Chamber have duly considered the ethics of the legislation they propose. Have not our people suffered enough from this "best money" legislation? When shall the end be of our concessions to creditor dictation? I caution you, gentlemen, as I have before on this floor in discussing this subject, against traveling further on that dangerous road.

I am moved in this appeal to an earnestness that comes from a higher source than the wishes and special interests of my own constituents, dear as they are to me. You are sowing the wind, and it will return to you in cyclones of wrath. Do you not see what a precedent you are setting us by using your power to increase the size of the instrument which measures and defines the effective meaning of all commercial contracts in the world, and that in the interest of creditors? It will go hard if our people, when they come into power, do not improve upon your instruction and legislate such attenuated import into that great word dollar as will make those heaven-kissing mountains of credit wealth shrivel and waste away like an ice palace before a southern sun, and history with a sigh of pity will record its verdict of approval. [Loud applause.]

Mr. DOOLITTLE withholds his remarks for revision. [See Appendix.]

Mr. HULICK. Mr. Speaker, until yesterday it was not my intention to engage in the discussion of the issue that is now brought before this extra session of Congress. Having listened, however, during this debate with intense interest, I had hoped that I could come to a conclusion that would be satisfactory to my mind when I should be called upon next Monday to cast my vote. But I regret to say, Mr. Speaker and gentlemen of this House, that I doubt whether the result of the repeal of the purchasing clause of the so-called Sherman law will be what the people of this country hope for.

This discussion, so long continued, does credit to this House and to the gentlemen who have engaged in it. It has proven a revelation to our people that will give them new ideas, new thoughts, new inspirations, and will educate them to better understand the financial system not only of our own country but that of foreign nations as well.

I can not, at this stage of the discussion, at this late hour of the night, and within the limited time allotted me, enter into a consideration at length of the questions of "facts, figures, ratios, and rates," and of the principles that should govern in the settlement and solution of the great questions of finance that are agitating the minds of the American people, and which are exciting an intense interest throughout the civilized world. Nor will I give data or quote from tables of finance. They have been furnished by those more skilled and better versed in finance, and are published to the country in the reports of the proceedings of this House.

If, now, at this late hour I were satisfied that, when the vote shall be taken, the result and the effect would be what the President hopes it may be, what the people of this country without reference to their party affiliations hope it will be; if I could be satisfied that, when the vote repealing the Sherman law shall be published to the world, the machinery now idle will be started, the unnumbered thousands who are now out of employment will be given labor; that the banks will open their doors to their depositors and invite them to come and get their money and their business accommodations; if thereby confidence in the Government will be restored and the terrible forebodings of the unemployed shall be changed to hope, then can we go home and feel that this extra session of Congress has not been called in vain. I fear, however, that such will not be the result.

When that law shall be repealed, as I have no doubt it will be, what then? The President has called this extra session to repeal that law, but has suggested no substitute, and no other remedy for the evil times that are upon us; why, we can not tell. It will be for Congress, in its wisdom, to determine, unaided by any suggestion of the Chief Executive, to provide a remedy.

The radical difference of opinions and contrariety of sentiment expressed upon the floor of this House by the party that will control legislation for the next two years gives little hope for satisfactory results. And why? Mr. Speaker, I, in common with very many of my countrymen, do not believe the Sherman law is the primary cause of the panic that now prevails so alarmingly in this country. I do not think the President thought so when he was elected in November last. He certainly did not think so when he was inaugurated, else he would have said something about it in his inaugural address, and would have called the attention of the country to the threatening cloud of distress that was fast settling down upon this country.

During the Presidential campaign the people were warned by the Republicans of the danger of placing in power a party with the record the Democracy had made and the threatening pledges in their platform concerning the repeal of the "robber tariff," as they designated it. In the great State of Ohio, protection to American industries was the all-absorbing issue. In the Sixth district of Ohio the Sherman law was not mentioned in the press or on the stump during that campaign.

Our people were not disturbed about the money they had in their pockets, whether it was gold, silver, or greenbacks. The great question uppermost in their thoughts was how to honestly make money, how to keep that money good, how to keep it on a parity in its purchasing power, and with which of the two great political parties, the Republican or Democratic, should be intrusted the administration of this great nation; with which of these two organizations we should intrust the welfare of the poor and the rights of the rich; with the interest of the miners of the West and the rights of the manufacturers and bankers of the East; with the interest of the corn and wheat growers of the North and those of the cotton-growers of the South; and above all, with which of these two parties should be intrusted the pensions of our noble, brave, worthy, and never-to-be-forgotten soldiers, who saved our country from defeat and ruin. These, and not the Sherman law, were discussed. Nine-tenths of the people did not know that such a law was on the statute book and the other tenth who did know had no fears about it.

The Democracy had declared in the Chicago platform, that—

We denounce the Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. And further, that the Federal Government had no constitutional power to impose and collect tariff duties.

Every Democratic newspaper and every Democratic stump orator emphasized these assertions and made their party followers believe that they were being robbed by a fraudulent and unconstitutional tariff law, that was the "culminating atrocity of class legislation." They made their appeals to the poor working people, exciting their prejudices, and promised them "its repeal as one of the beneficent results that would follow the action of the people in intrusting power to the Democratic party."

They further declared that—

Since the McKinley tariff went into operation there have been ten reductions of the wages of laboring men to one increase. We deny that there has been any increase of prosperity to the country since that tariff went into operation.

And at the very hour when that platform was written the country was never before in so prosperous a condition, and had been since the enactment of the McKinley law and so continued until the first Tuesday of November, in the year of our Lord 1892, closed with the election of Grover Cleveland as President, and placing in full power in this Government the Democratic party.

Then, and not till then, did confidence give way to distrust. From that hour came forebodings of disaster; business men began to take on a serious look; they started later and walked slower to their places of business. Thoughtful men everywhere began to seriously examine the record of the party that was so soon, ah, Mr. Speaker, too soon, to enter upon the administration of this Government. They began with Sumter and followed it to Appomattox. They reviewed it from 1861 to 1892; they sought in vain among the statutes of our land for any law that party had ever enacted, or any measure it had ever advocated for the good of our country. They found nothing but ante-election platforms, that opposed every measure for putting down the rebellion, or furnishing money to prosecute the war, and to pay the soldiers their pensions, and, last of all, when the principles and pledges upon which that party came into power was considered, distrust took the place of confidence, and for the first time in thirty years did the business men of this country realize the perilous situation in which the business interests of this country were placed. The shadows of a Democratic Administration were beginning to fall upon the people, and they became nervous; failures followed failures; banks were suspended; men who were rich to-day were paupers to-morrow; distrust on every hand.

Still, there were those who had faith to believe that all was not lost. "The wish was father to the thought." No one seemed more hopeful than President Harrison, who had given this country one of the very best administrations on record—clean, honest, free from all scandal, dignified, statesmanlike, and for which "future generations will rise up and call him blessed." In his message to the last Congress, in December, he says:

In submitting my annual message to Congress, I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

* * * * * * * *

There never has been a time in our history when work was so abundant or when wages were as high, whether measured by the currency in which they are paid or by their power to supply the necessaries and comforts of life. * * * And this brief exhibit of the growth and prosperity of the country will give us a level from which to note the increase or decadence that new legislative policies may bring to us. There is no reason why the national influence, power, and prosperity should not observe the same rates of increase that have characterized the past thirty years. We carry the great impulse and increase of these years into the future. There is no reason why in many lines of production we should not surpass all other nations as we have already done in some. There are no near frontiers to our possible development. Retrogression would be a crime.

Such was the condition of our country under Republican administration of protection to American labor and encouragement to American industries. The great force of these utterances consists, not in the fact that they were made by the President of the United States, but because they were true as Holy Writ.

In his message to Congress on the 8th day of August Mr. Cleveland confirms what ex-President Harrison said. Mr. Speaker, I will read what he says:

Our unfortunate financial plight is not the result of untoward events, nor of conditions related to our natural resources, nor is it traceable to any of the afflictions which frequently check national growth and prosperity.

With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side.

Mr. Speaker, what caused this financial distrust and fear to "suddenly spring up on every side?" It could not have been the "robber tariff," for Mr. Cleveland says there was "unusual invitation to safe investment," and with satisfactory assurance to business enterprise." The President, however, unwittingly, in his message, gives the cause:

It may be true—

Says he—

that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing.

I ask gentlemen on the other side of the House, whether there were not in fact just grounds existing for apprehension and distrust? A party that never before had full power intrusted to them—that party had asked "a change of Administration and a change of party, in order that there might be a change of system and a change of methods."

Mr. Speaker, the change did come, and, Oh, my countrymen, what a change! From prosperity to adversity, from riches to poverty, from remunerative wages to starving penury, from employment to idleness, from happiness to misery, from enterprise in business to stagnation in every industry, from the humming spindle to the silent engine, from investments in saving societies by the laborer to wrecked banks and disappointed depositors, from the cheerful (unbegrudging) allowance of well-earned pensions to a mean, despicable scheme to rob the old soldiers of their just dues. Ah, yes, a change had come, from a want of confidence in the Democratic party, "from evils apprehended."

The so-called Sherman law had been in force about two years and a half under a Republican Administration and no panic occurred. Evils were not then apprehended. The Republican party had a proud history, and patriotic leaders in whom the people had confidence. What brought on the panic was the fear the people had that the Democratic party would do what they said they would do if they were placed in power—that they would repeal the McKinley tariff and inaugurate free trade.

Mr. Speaker, while I do not believe the Sherman law was the primary cause of the panic, not withstanding, I will vote for its repeal, for two reasons: First, because the people have been led to believe that it is responsible for the business disturbance, and its repeal will, to some extent, tend to restore confidence; and, secondly, I am not in favor of the Government being compelled to purchase 4,500,000 ounces of silver every month at a loss to the Government of millions of dollars annually.

Now, the people of this country are satisfied with the money they have. The people of my district and of my State are in a position to do equal and exact justice to all sections of our country in the settlement of these troubles that are upon us. They have no prejudices against, nor special favors for, any industry in any section of the country. They are ready to do exact and equal justice to the miner of the West and to the banker and manufacturer of the East.

They want to see that the farmers of the North shall be protected alike with the cotton-growers of the South. They have no disposition to do otherwise. My constituency are equally interested in the prosperity of all the varied industries of our whole country, and favor those laws and policies that will result in the greatest good to the greatest number; and especially are they wedded to the principles of protection to American labor, American skill, American genius, American enterprise, and to the best interests of the American people.

Mr. Speaker, my constituency are not so much disturbed about the money they have in their pockets as they are about how they can honestly by their labor and skill make more.

I hold in my hand a silver dollar that has the United States stamp upon it. I hold in my hand a paper promise that a dollar shall be given the holder for it. I also hold in my hand a coin that I offered to the barber this morning to get shaved, and he said, "No," shaking his head, "I do not want it." And why did he refuse it? Simply because that coin was used eighteen hundred years ago, and, while it bears the stamp of the government that issued it and was the coin of that time, it is worthless to-day because there is no government behind it to redeem it.

The Roman Empire has long since passed away, and that coin which has been carried for twenty-five years as a pocket piece is valueless. On the one side it has the impression of the palm leaf, on the other the burning incense that was intended to carry the thoughts of the holder to Heaven as an indication that he would trust in that money and the Government that issued it.

I hold in my hand a silver dollar issued by this Government, the intrinsic value of which to-day is about 55 cents. But the Government stamp is upon it, which declares it to be "one dollar." And then, as if this were not sufficient security to the holder, the further inscription is added, "In God we trust." When the people have money indorsed by the United States Government, with all its vast resources, developed and undeveloped, "a Nation whose God is the Lord," whose administration is republican, and Ben Harrison its President, then it is the people have implicit confidence in its money and finance, and peace, prosperity, and happiness reign supreme. [Applause.]

No legislation should be had that will demonetize silver; on the other hand, there should be no special legislation in its behalf at the expense of the Government, or to the detriment of other industries. The product of the mines, until it is coined into money, should be regarded in legislation like the product of every other industry in the land; and because silver is used, out of which the Government coins money, is no reason why the silver mine owner, or the workers in them, should have special legislation in their behalf.

They should be placed on equal footing with the owners and workers in the lead mines and other similar industries. Nevertheless, such legislation should be favored that will encourage and foster our silver industry consistent with the general good of the whole people.

In other words, the value of silver should not be artificially enhanced by special legislation and the Government compelled to purchase and store it away in the vaults of the Treasury.

Nor is it to the interest of the country to coin silver bullion into dollars of less intrinsic value than a gold dollar. Bimetallism is what our country needs; my constituents believe in it, the people of Ohio believe in it; they have become wedded to both gold and silver. The Republican platform on which Governor McKinley is a candidate for reëlection declares for it and demands that the currency shall consist of gold, silver, and paper, all of the same purchasing power on a parity with each other. The great majority of the business men of this country believe in this doctrine.

The business interests of this country do not require that the volume of circulating medium be decreased by having gold drive silver out of circulation, nor by having silver drive gold out of circulation, but they do demand both to circulate on an equality which will give every producer for his products and to every workman for his labor a full, sound dollar, whether it be gold, silver, or paper.

Now, Mr. Speaker, it is decreed that silver shall remain as part of our currency. If you will only insure the people sound, honest currency they will be satisfied.

[Here the hammer fell.]

Mr. MEIKLEJOHN. Mr. Speaker, I ask unanimous consent that the time of the gentleman from Ohio be extended for five minutes.

There was no objection.

Mr. HULICK. Mr. Speaker, I thank the gentleman and the House for this courtesy. I will promise not to trespass over the time suggested by my friend.

Mr. Speaker, what should this Congress now and here do in the premises? The answer is plain: repeal the purchasing clause of the so-called Sherman law and put an end to the purchase of silver bullion at an annual loss of millions to the Government, a theory that can not be supported by reason, or defended in practice. The law ought to be repealed (in fact it should never have been enacted) for another reason: the people think it is the cause of all these hard times, and the imaginary is as oppressive as the real cause.

As I was passing out of this Capitol building the other day, a lady nervously asked me "if the Sherman law had been repealed." "No, not yet," I answered. "Well," she said, "I am sorry for that. I don't know what in the world we are all going to do if something ain't done very soon."

Before I left home an Irishman said, "Well, Jedge, when will Congress mate?" "On next Monday at 12 o'clock, Pat." "Well," said he, "do you think they will repale the Sherman law?" I answered I did not know. The Democrats are in control and no telling what they will do. "And, sure," he continued, "I have b en out of work for two months and do you think they will repale it by Saturday night so I can go to work on Monday morning, sure?"

Now, Pat and that nervous little woman are representatives of tens of thousands of just such as they, and nothing will satisfy them but the repeal of that terrible Sherman law. And many actually believe that Senator JOHN SHERMAN was instrumental alone in the passage of that law, and he alone is responsible for all these troublous times. One year ago that same Irishman believed he was being oppressed by the "robber tariff." These are the "apprehended dangers" of which President Cleveland speaks in his message.

To the extent that these fears will be removed, the repeal of this law will do good. And this, with the stopping of the purchase of silver bullion, will justify such action on the part of this Congress.

These may be and doubtless are to a large degree imaginary evils, nevertheless they are as if they were real to the people.

Mr. Speaker, we have all heard of the college students who played a joke on the professor. One student met him, asked him how he felt. "Oh," says he, "I never felt better in my life." The student told him that he looked very pale. Another met him and said, "Why, professor, what is the matter; you look pale; are you sick?" "Well," he said, "I don't feel very well, but I guess there is nothing serious." Another met him and said, "Why, professor, what in the world is the matter; you certainly are sick." "Well," replied the professor, "I am very sick, I don't think I can live long without I get better. Will you send for the doctor while I go home and go to bed." The doctor, who was in the secret, was sent for. With a long face and wise look he felt of the patient's pulse, looked at his tongue, took the condition of respiration, sounded his lungs, and tested his heart, then put hot bricks to his feet, ice bags to his head, mustard plasters on his chest, and gave him a dose of flour pills, with the doctor's benediction upon the remedies. Next morning the professor was fully restored to his normal condition. [Laughter.]

If the repeal of the Sherman law will do as much to restore the people to their normal condition the remedy is worth trying. It is really more of a faith cure than anything else. But, Mr. Speaker, is the repeal of this law all that is to be done now? The President has asked only that. But will the party that is responsible for the legislation in this body think that nothing more is demanded? I address myself to the other side of the House, and say that you can not shift the responsibility.

This side of the Chamber will assist you in all wise measures looking to the restoration of confidence on the part of the people that in the judgment of the Republican minority will accomplish that end. These are questions that "rise above the plane of party politics," as the President says in his message. The Democratic party that elected him will have to heed this injunction and rise above their politics and their party before the people will have confidence in what they do.

A gentleman on the other side asks "What would the Republican party do if it were in power?" I answer, Mr. Speaker, that it would only do as Moses was commanded when he was leading the children of Israel out of bondage. "Stand still and see the glory of the Lord." The Republican party, if it were in power, would have to do nothing. The history and achievements of the Republican party are "known and read of all men." Out of rebellion it brought forth peace, out of chaos it established order, from the curse of slavery it converted four million bondsmen into freemen; out of almost irretrievable bankruptcy and ruin it established one of the best systems of finance known to the nations of the world, from a "wild-cat" currency it gave us the "greenback" currency. Place this party in power in this Government, and distrust and doubt and fear will give way to faith and hope and confidnce, [applause.] And now, with only eight months of Democratic rule, the people of this country are sighing for the good old Republican times, when peace and plenty and happiness reigned. "When the righteous rule the people rejoice; when the wicked reign the people mourn" is as true now as the day Solomon wrote it.

But, Mr. Speaker, I must not digress; one word and I have done.

Let Congress provide for the appointment of a monetary commission. Let it be composed of the very best financial talent to be found in our country, nonpartisan and nonsectional. Let every commercial, agricultural, mechanical, manufacturing, and mining interest of our whole country be represented by men of broad minds and liberal views as to the needs of our people, with favors for none but blessings for all. Let them be authorized to sit during the recess of Congress. Let them take testimony and perfect a financial system that will establish a just and fair ratio between gold and silver, that will meet the demands of commerce and trade, that will develop our mines, and at the same time inspire the people with confidence. Let this commission report to the regular session the results of its deliberations. Congress can then be enabled to intelligently enact such laws as will give stability to our currency, encouragement to financial enterprise and industrial pursuits, and establish a monetary system that will at once command the confidence of our people and challenge the admiration of the world. [Applause.]

Mr. WANGER. Mr. Speaker, keenly appreciating the terrible crisis upon the country and need of effort to lessen so far as we may the distress everywhere prevailing, I am for the passage of the pending bill and the abandonment by the Government of the policy of purchasing silver bullion.

Not that I believe that policy or any provision of the so-called Sherman act are chiefly responsible for the existing panic. The silver-purchasing policy was entered upon in the enactment of the Bland-Allison act, which had the votes of nearly all the then Democratic Senators and members of this House, in 1878, and the Sherman act went into effect July 14, 1890; so that the crisis is too far remote from the legislation to be justly chargeable thereto without most ample proof.

The objects of the Sherman act were most beneficent. They were to give the country a more stable currency than the Bland act provided, afford a market for the entire American silver product, and thereby to steadily appreciate the value of silver until it would be restored commercially to the legal ratio of 16 to 1 with gold. For a brief period it seemed as if these objects were to be attained; but it soon developed that the effect upon the commercial value of silver was injurious, and that metal declined. Yet there was no disturbance of the business of the country, and two and a half years after the passage of the law we were amid improving conditions, apparently on the pathway towards enlarged industrial development and unexampled prosperity.

What then extinguished the fires of industry and stilled the cheering hum of labor? What closed prosperous banking houses and discouraged agriculture and trade? In the uncertainty of what revolution might be wrought in our economic system can be found the first and greatest cause of the pause, the "awful pause," in our onward improving march and the establishment of the conditions for the upheaval following.

Although the silver-purchasing policy and especially the Sher-

man act were the subject of denunciation since their adoption by monometallists for theoretical and partisans for political reasons, so long as our trade with foreign nations was at all favorable to us, our revenues sufficient to meet the requirements of the Government and the gold reserve in the Treasury not seriously encroached upon, the assaults were ineffective and no genuine or general alarm was felt throughout the country.

But when the balance of trade turned largely against us gold was steadily withdrawn from the Treasury and customs duties were paid almost entirely in silver certificates or Treasury notes, so that the Treasury seemed almost defenseless, these conditions uniting with the graver apprehensions that manufacturing interests would suffer in tariff revision, and a perpetually adverse balance of trade and possible deficit in our revenues be occasioned, the hostile criticisms were seriously regarded and the idea became generally prevalent that the silver-purchasing policy left the National Treasury in a deplorably weak condition, and its longer continuance was indefensible.

Any policy which entirely fails of its object should be abandoned. Failing to sustain, much less to appreciate, the price of silver, or to add to the circulating medium, the monthly emittances of notes being greatly below the sum of currency withdrawn from circulation and infinitesimal compared with the contraction of credit, and the country looking for relief from the repeal of the law, it appears a high duty at this juncture of affairs to pass the repeal.

A MEMBER. What then?

Mr. WANGER. Then let us hope your side will show the country that you favor laws for the promotion and not the destruction of the interests of the American people. [Applause.] Then the silver currency of the country, not one dollar of which is destroyed by this repeal bill, will be an element of strength and not of weakness, the lofty purpose of the Government to fulfill to the uttermost its undertakings being unquestionably demonstrated.

Then let us enact the Johnson bill, permitting every holder of Government bonds to receive notes to the amount of bonds deposited, with the privilege of redeeming the bonds, and not to receive interest for a certain period, to prevent unneeded continual charges, and also give the national banks circulating notes to the par value of the bonds deposited by them in the Treasury.

These measures will give immediate relief in the matter of currency. Institutions holding the savings of wage-workers and farmers, which are large holders of Government bonds, as savings banks and trust companies, would be enabled, under the Johnson bill, to promptly pay their depositors who may flock in upon them when labor is unemployed, as, alas, it may be during the coming months. And the increase in the national-bank circulation being immediately available and going to every part of the country would be tenfold more effective than the simple amount of the increase indicates in the confidence it would reestablish in those institutions.

These measures, with the natural trend of events, will speedily terminate the currency famine, cause the money of the country to be "visible currency," and the difficulty will shortly be a redundancy of currency without, it is to be feared, a legitimate demand for it for investment.

It is eloquently contended that we should provide for the free and unlimited coinage of silver; but every objection urged against the Sherman act, which nearly every supporter of the pending amendments denounces and says he only adheres to to secure terms, applies with equal force to those amendments. They continue the declaration of the Sherman act to maintain the parity of all our forms of currency, and therefore make gold the purchasing standard of the world's stock of silver and impose a more than herculean task upon this country and tremendous burden upon labor. We could not uphold the undertaking, and a depreciated currency and broken governmental pledge would be the inevitable result of the adoption of any one of these amendments in the form they are presented.

Bimetallism to be of value to us should be self-sustaining. Under it we should be indifferent about maintaining Treasury or bank reserves in a particular coin and be able to rest confident that fleeing gold was sustaining the parity of gold and silver by meeting an abnormal demand elsewhere created. But the conditions now prevailing absolutely forbid to this country at present an experiment of that kind without other legal restrictions than are here proposed, or the union of other great nations in the policy.

The purchase of silver in certain quantities has driven us further and further from international bimetallism: the unlimited purchase would have no other result than to continue the widening breach, with the added and insuperable objection of the certain dishonor of the nation's troth.

Nothing, it seems certain, can do more to lift us out of the present slough than the measures indicated, together with the unmistakable declaration of purpose by the dominant party in government to continue existing, or, if not that, then to adopt tariff legislation equally or more favorable to the profitable conduct of American farms, industries, trade, and commerce. From this alone can the nation hope for perfect restoration of confidence and business prosperity. And from such restoration the way toward international bimetallism will be vastly promoted.

With large and continuing trade balances in our favor, it will be but a short time until ours shall be the least interested among the great nations in the matter of a single or double standard, and we can then, at the solicitation of those now refusing to unite with us, agree upon a world-wide circulating dual coin currency and secure to American silver a profitable and enduring market. [Applause.]

[Mr. WHEELER of Alabama withholds his remarks for revision. See Appendix.]

Mr. CUMMINGS. I move that the House do now adjourn.

The motion was agreed to; and accordingly (at 10 o'clock and 50 minutes p. m.) the House adjourned.

HOUSE OF REPRESENTATIVES.

SATURDAY, *August 26, 1893.*

The House met at 10 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

SILVER.

The SPEAKER. Under the order, as modified for the further consideration of House bill No. 1, this day is to be devoted to general debate. It was agreed when the order was made that the time in favor of the proposition should be controlled by the gentleman from West Virginia [Mr. WILSON], and the time in opposition to it by the gentleman from Missouri [Mr. BLAND]. The Chair recognizes the gentleman from West Virginia; to whom does he yield?

Mr. WILSON of West Virginia. Mr. Speaker, I yield thirty minutes to the gentleman from Alabama [Mr. CLARKE].

[Mr. CLARKE of Alabama withholds his remarks for revision. See Appendix.]

Mr. WILSON of West Virginia. I yield to the gentleman from Maine [Mr. REED].

Mr. REED. Mr. Speaker, I am not certain of the wisdom of any member of this House, and least of all of my own. I am quite conscious also how difficult it is for anybody to know anything about currency in general, and how especially difficult it is to provide a remedy for a derangement of currency at any particular time. Nevertheless, while I have grave doubts of the wisdom of each individual, including myself, and no doubt whatever of the difficulty of the task, it is a comfort to me to fall back upon a well-established belief in the wisdom of all, even when shown by the decisions of the Congress of the United States.

It may not be an absolutely righteous decision which we shall reach, nevertheless it is a comforting assurance to believe that that decision will be sufficient for the emergency, especially since it is accompanied by the certainty that no other wisdom is possible at the present time. Upon us and the people who are influencing our votes rests the decision of this and of other very important questions.

Crises like the present are not uncommon in the history of the world; indeed, they seem to be essential to human progress, and to arise out of the characteristics of human nature itself. Probably if wise men, now alive, had been consulted in the formation of the nature of mankind there would not have been these fluctuations which now disturb us, and which disfigure the history of the time. If we could have had that perfection of wisdom which is exhibited, so far as I have ever known, only in a greenback oration [laughter], we should have the human race proceeding on the upward grade steadily, without faltering and without relapse.

But, unfortunately, human nature was not framed in that way. Instead of a continuous upward movement, always rising, always going forward, the movement of the human race seems to be a series of upward starts and of falls of almost proportionate length. The general progress has always been onward, but there have been many times when the movement has seemed to be to the rear.

In the history of civilized nations these alternations have not been infrequent. The great rises and the great falls have extended over long periods of time. At intervals there have been minor falls as well as minor upliftings. We seem now to be at

the beginning of one of those declines, the like of which happens after a long period. Unless all indications fail, we are in a situation very much like that which afflicted England in 1793 and in 1825, and which began to afflict us in the year 1873.

After each long period of recuperation something starts the confidence of the human race in itself and the confidence of the nation in itself, and men feel a sudden courage to undertake all enterprises and to indulge in every effort tending to progress. Each one seems to encourage the other. Each enterprise seems to be an assistance to the other. The result is, that for a series of years prosperity seems to increase; men are busy, capital is busy, and prosperity without limit seems to be within the reach of the race and of the nation.

Suddenly, from some cause entirely unanticipated, a doubt is cast upon the reality of the progress which has been made. Something awakens the element of caution in the race or nation, and thereupon, rapidly and steadily, confidence disappears. Men feel that it is necessary to take an exact observation of the situation before resuming strenuous efforts. When that hour arrives there is no possibilty of retreat or of change.

The race or the nation has determined to examine into its condition, and the result is apparent disaster, misfortune, defeat, destruction of industries, and a general paralysis of business and of labor. There is a general liquidation of human affairs. Each man discovers what he is really worth, and the nation finds precisely what its absolute wants and needs are. If the period of prosperity could be expressed in a single word, that word would be confidence; and if the period of adversity, as we call it, could be expressed in a single word, that word would be distrust.

During the period of progress, during the period of increased endeavor, where all capital is employed and every man is at work, confidence reigns supreme. Every man believes in his own success and in the success of his neighbor. Consequently, he is free to take goods and property at the general valuation; and the people who sell property are ready to take the checks and instruments by which property is transferred. When the period of doubt sets in values become uncertain, because it is felt that a readjustment must be had. Checks and evidences of transfer are scrutinized with care, because men who were wealthy yesterday may be poor to-day.

So, also, production ceases because the producer has great doubts whether the production of his mill or his workshop will be capable of sale, and, above all, whether he will gather in the proper payment. How far this element of distrust may go depends upon the seriousness of the previous inflation of values; and after a time, when men find precisely how they are situated themselves, and how their neighbors are placed, there begins slowly to revive the confidence which distinguished the former period, in small measure at first and afterwards in larger measure, until finally we reach another period, where confidence reigns and productiveness is at its utmost.

This alternation between extreme production and production reduced to its lowest terms is something which the philanthropist may regard with horror; but which the man who has observed the history of the world is obliged to regard with tolerance. While these fluctuations occur often in the history of the human race, each one occurs from its own separate and special cause.

In former times they used to be more especially confined to each particular country and were not simultaneous; but modern times have bound the earth together, so that it is impossible for even the greatest nation to disregard the other nations of the earth. The railroad has diminished distance and the telegraph has obliterated time. The ocean steamers plying between the different hemispheres, the trains of cars which sweep across the continents, have made business a far different thing from what it was in the earlier ages.

Without undertaking to give the particulars of the change, it is enough to say that the world, which in the days of Magellan it required three years to circumnavigate, can be circumnavigated to-day in a period of two months. This binding together of the whole world by obliteration of time and distance has bound together the business of the world, and hence these periodic changes occur in greater or less measure throughout the world, not always exactly simultaneous, but always more or less sympathetic.

Nevertheless, in each particular nation the cause is peculiar to itself. Each nation produces its own means of temporary prosperity; also its own causes for temporary depression. The fact that these depressions are nearly simultaneous does not in anyway militate against the suggestions just made. If anyone desires to notice the connection between the different countries, he has only to go back to the crisis which occurred in the year 1890. It was found that there was a great scarcity of money in the United States, so great that under the influence of universal clamor more than forty millions of currency were let loose from the United States Treasury among the people of the United States.

I do not think at the time that anyone here fully comprehended the cause, although some wise men had an inkling of it; but there was felt to be a constant drain of currency, which was taking from us not only the money which we previously had in circulation, but the large sum which I have mentioned from the Treasury of the United States. When the course of events reached its end it was discovered that the great money center of the world, London, the capital of England, had been severely drained by a most tremendous set of enterprises in a distant nation of South America.

The effect of that tremendous call upon the money center of Europe, which resulted in the shaking down of the house which was the synonym, especially in the United States of America, of credit, of enterprise, and of solidity—the house of Baring Brothers—drew upon the resources of the United States with a vigor that no one would have dared to prophecy a year before.

But the United States at that time was sound in every way, and had not yielded to any disposition to inflation; consequently the storm was weathered and we continued upon our career of prosperity and of labor. The country was prosperous because everybody was at work, because capital was thoroughly employed, and all the goods that were produced were consumed and were necessary for the wants of the people.

In the year 1890, from a variety of circumstances, which it is not necessary now to discuss—for the country cares very little to-day whether anybody was or was not to blame for the passage of the Sherman act—conspired to make the passage of that act an absolute necessity. The passage of that act pledged the United States to purchase every month, and issue its value in currency, 4,500,000 ounces of silver.

At the time when that act was passed every patriot sincerely hoped that the expectation of the friends of silver, that that purchase would result in solving the problem of bimetallism for this country and placing silver on a par with gold, would be realized. That the friends of silver entertained that view I can not doubt, because it was expressed to me in terms of the utmost confidence. At the time, the passage of the act caused very little fear on the part even of the wisest; but a series of events, which are so fresh in the memory of every man who hears me that I need not recapitulate them, caused a drain of gold from the United States to Europe.

That drain of gold sounded the alarm to the American people that the period of prosperity through which they had passed, and which was then in existence; which was shown by the employment of capital and the employment of labor, had reached a period of suspicion; a period always reached in such forward movements of the human race, and always to be anticipated, but never in reality anticipated. At no time when any nation in the world has been at one of these periods of prosperity have men in general suspected that the period of prosperity was about to close.

Every man is in the whirl of ambitious effort, carried away by it, swept in the direction of it, and hence does not know what is about to happen. The stroke of the clock which shows that the time of settlement has arrived is always a surprise; and, from the nature of things and of human beings, always will be a surprise.

Last May it became apparent that we had reached a period when a wise and judicious man would be careful to curtail the amount of his obligations. Some wise men had done so beforehand; other wise men had waited until that period. The banks then commenced to examine their collaterals, to call in their loans, and to put themselves in a position of safety, so far as possible. The first element of dissatisfaction and doubt which pressed itself upon the people was the fact that there was a continuous and unaccountable drain of gold.

That drain of gold amounted, in round numbers, to a very great sum, so nearly equalling the amount of the issue under the Sherman law that it seemed almost conclusive that the displacement of currency which was happening was on account of the issue under the Sherman law, because it seemed to be driving out the same proportion of gold which was the equivalent of its own amount. Whether that reasoning was sound or safe or correct is in nowise a matter of discussion. The fact that the feeling existed was sufficient for all the purposes of practical life.

Men felt that it was absolutely necessary, even if that question was a question of doubt, so long as it was a question at all, that they should curtail their enterprises in the future, and that they should put themselves in order for a storm. Then followed what seems to be one of the characteristics of such a period—universal distrust. The first distrust arose from the doubt whether the United States was not rapidly approaching a system which would inevitably result in a silver standard and a low-

ering of the value of the dollar as compared with the gold standard, upon which the United States was then undertaking to base itself.

This has nothing whatever to do with the question of the righteousness of the double standard or of the single standard. The United States at that moment was making gold its standard, and any question as to whether it was to fall or not to a silver standard was a question which instantly aroused the desire of the people to hoard, first gold, then, as the distrust spread, all kinds of money, for we not only began to doubt the Government of the United States and its policy, but also to doubt the solvency—not the present solvency, but the future solvency—of all the institutions of the country.

When suspicion and doubt of that kind once enter the minds of 65,000,000 of people there is no knowing where it will end. That it took serious possession of them is shown by the simple fact that out of the United States banking houses alone one hundred and ninety millions of deposits were drawn by depositors from all parts of the country. How much was drawn out of State banks and out of trust companies, how much has been drawn out of savings banks, no one will ever probably know; but so much has been drawn, so much has been hoarded, so much has been kept out of circulation, that we are suffering to-day all the calamities of a restricted circulation in the midst of an abundant supply of money.

This, then, at the present moment is the situation in which we find ourselves. I have, in thus narrating the outward circumstances which have attended our present position, failed to state what is, after all, according to my judgment, the main underlying cause of the present condition of affairs. At the last election the Democratic party was brought into power by a curious combination of circumstances, as the result of a hundred causes—not with careful and candid deliberation, but as the result, in a large measure, of the apathy of the American people.

The vote shows what I declare, and the recollection of every individual to whom I am speaking can be safely appealed to. While this thing has not been specially manifest during this discussion, while there has been little talk with regard to it, nevertheless the consciousness of this fact underlies our entire situation. I do not intend in alluding to this fact to in anyway refer to party politics. I do not undertake to raise any question as to whether the system of protection is a wise one or not. I do not undertake to dispute the proposition on the part of the Democracy that protection is a tax, wicked and iniquitous. [Laughter.] For the purpose of discussion, and for that purpose only, I am quite free to admit that protection is a fraud, and that virtue resides only in a revenue tariff; but there remains, even if it be admitted that the propositions of the Democratic platform are righteous every one—there remains the fact that the system upon which the manufactures of this country have been regulated for thirty years is threatened with a total change; whether that change is to be for the better or not no man can know.

What the Democratic party purpose to do with the power which is in their hands nobody can say. They do not even know themselves; and hence they are not able to impart it to others. For my part, I do not expect the Democratic party to be utterly bad. [Laughter.] I do not believe they will be permitted to be so if they should so desire. [Applause.] Such is the restraining influence of the people, even after election, that I believe that through all the disguises, through all the masks which this election has thrown over the wishes of the people, nevertheless those wishes will be carried out. But at this present moment no man can know what will be the result of the action of this Congress upon the manufactures of this country.

If the reformation of the tariff were in the hands even of its friends, if a change in the tariff were contemplated by those men who are in favor of the principle of protection instead of in the hands of those who denounce it, I should feel entirely confident that business would be stagnant or remain at a standstill; but when this reformation of the tariff is in the hands of men opposed to the present system, those manufactures of the country which are built upon the present system must necessarily call a halt.

If their goods which they manufacture are to be in competition with the manufactures of other lands, where the cost of production is upon a different basis, where labor is differently rewarded, as a matter of fact no manufacturer in this country will dare to manufacture goods until he knows the basis upon which his labor is to go into the production of his articles of sale. Until that question is settled you may be sure that the manufacturers of this country will never dare to manufacture more than the absolute necessities of the people require.

Prominent among the symptoms of the present condition of affairs is the closing of mills in all parts of the country. The currency question has something to do with that, but that which is of most importance is the uncertainty as to the basis upon which manufactures are to go on. Manufactures to-day are, in no respect, the subjects of chance or of miscalculation. All the elements of cost are so thoroughly understood, all the elements which enter into production are so thoroughly comprehended, that it is impossible for manufactures to go on except upon the basis of small but sure profits.

Unless the manufacturer can see his way directly to that, he has no object in running his mill; and unless in the future he can see that that mill can go on satisfactorily, there is no object on earth for him to continue his manufactures and his organization. Therefore, you may depend upon it, that until the question is settled—until men know the terms upon which they are to employ labor, until they know the terms upon which they are to compete with foreign competitors—no loom will be in motion more than is necessary and no wheel will turn except with the prospect of immediate profit.

I will not undertake to dwell at this present time—for I do not want to confuse the issue—upon those unfortunate parts of the Democratic programme which are at present in abeyance, like the establishment of State banks and other financial measures, which we may possibly have to struggle with. [Laughter.] I can characterize in a single phrase the cause of the present condition of affairs. It is the undiscoverable uncertainty of the future of both the currency questions and the questions of protection and revenue tariff.

It will be seen from what I have said that I do not regard the Sherman act as in itself alone responsible for our present condition of affairs; that I believe that the causes of our present disaster underlie that; that the necessary stoppage of hundreds and thousands of mills all over this country is at the bottom of our disaster. Nevertheless, I do believe that the Sherman act and the accumulation of silver in the Treasury was the earliest indicator of the disaster which we are approaching, and that it has played a part not entirely unfortunate in warning us so that we can be saved from still further misfortune and doubt.

We are now, therefore, in this condition of affairs: We are on a down grade to that period of recuperation, economy, and self-denial which, in some cases, may lead to very grave and serious suffering; for there can be no doubt whatever that the threatening aspect of affairs, while it threatens this country as a whole, capitalists and laborers alike, is more especially, in the future, threatening to the laboring people of the country.

When mills shut down, they shut down because they must ascertain by Democratic legislation what the basis of their future manufactures is to be. If their basis is to be competition with foreign countries upon less favorable terms, they will be obliged to meet those less favorable terms by reducing the cost of manufactures themselves. The cost of manufactures, of the finest kinds especially, is largely in the pay which is given to laboring men.

As the gentleman from Mississippi [Mr. CATCHINGS] has very candidly, and at the same time very accurately, said, the wages of labor have been steadily rising in this country, until they have reached a point unexampled in the history of the world up to this time. If the American manufacturers were to compete alone with each other, it is possible that the standard of wages might be maintained; but if they are to compete with people abroad, where wages are less, where skilled labor is at a much lower price, then there can be no doubt that a reduction of the wages of labor will follow.

Indeed, all over the country there are signs that that will be the case; and there are signs also that the workingmen are recognizing the fact that their labor is one of the elements, the strongest element perhaps, in the cost of production, and that that cost of production can not be measured by any arbitrary standard, but must be measured by the standard of competition. Such being the case, we may expect more or less misfortune to happen to our people.

I do not believe that the Democratic Congress, influenced as it will be by the pressure on the part of the people of the United States, will so revise the tariff that the workingmen will be brought back even to the condition of the workman under the Walker tariff; but that there will be doubts and difficulties and reductions I have not the slightest doubt.

The capitalist has met with his misfortunes. He has seen his stocks, his bonds, his holdings, and he will soon see his real estate, reduced beyond any fear which he entertained a year ago; and in due time will come the reduction of the wages of labor, unless by great good fortune the laboring man, by demonstrations on his part, should show that he understands this question in such a fashion that he will refuse to allow it to be misunderstood by his member of Congress.

Now, in this matter I do not expect to be accused of any party bias, for this does not in anyway involve the question of the propriety or the righteousness of a change in the tariff. Let that be as it may, the very fact that there is a change requires

readjustment all over the country of all the relations of mankind to each other, and such a readjustment can not take place simultaneously with the period of prosperity.

It is evident, then, from what I have said, that two questions must be settled as the indispensable preliminary of our arrival at that period when prosperity will commence again. With the settlement of the question of the tariff I shall undertake to have nothing to do to-day. That will come at its proper time, when people begin to realize that that is the serious matter which underlies this whole situation. For the present we have another question before us, and one which we will have to determine upon its merits.

It is perfectly true that the Democratic party is responsible for whatever occurs in the future and whatever does not occur. They have the President; they have an enormous majority in the House of Representatives, and they have the Senate to themselves. For the first time in thirty years they have been removed from the low level of criticism of the acts of others, and have been lifted to the high level of responsibility and of performance. It could not be expected that they would change their nature in the twinkling of an eye.

Elections might put them into power, but only the lapse of time can give them the proper sense of responsibility. The time will come when the Democratic members of Congress, instead of disputing with each other what the Democratic platform means [laughter], will be disputing with each other as to what the necessities of the country demand. Until that period of responsibility shall fairly rest upon their shoulders, and also afterwards, they can rely upon the assistance of the Republican party in the minority as they have relied upon them in the majority, in the direction of sound government, of responsibility, and of honest administration of affairs. [Applause on the Republican side.]

While we leave the question of tariff to itself, there remains for us to consider the proposition which has been submitted to us by the President of the United States as to the method of dealing with the financial question. The action of the President, and the action of the majority of the Democratic party, acting together, has limited our scope of action. I am sorry that we have not been permitted to exhibit our wisdom in the way of amendments; that we have not been allowed to take the vote of the House as to the various propositions to meet this affair, which would seem satisfactory to us. We are confined to those propositions which the whole Democratic party have finally determined to submit to us.

I shall spend no time in pointing out the contrast between this action on the part of the Democratic party and their claims during the Fifty-first Congress. I shall waste no time in citations showing how the rights of the minority are outraged, according to them, for I recognize now, as I recognized then, the necessity and duty of the party in power assuming the responsibility of its actions. I am only sorry that this question can not be settled, and settled righteously, within the bounds of the Democratic party itself; but, as I know and every man in this country knows, the majority of the Democratic party would decide against the good sense of the nation.

I am very glad for even the poor privilege of recording our votes in the direction of our thoughts and beliefs and ideas. While I am in favor of the repeal of the purchasing clause of the Sherman act, and have always been since the failure of that act to realize the hopes of the men who believed in a silver currency, I do not think that the repeal of that act will be an immediate cause of the revival of the prosperity of this country.

I am in favor of its repeal, however, for two reasons. First, it seems to me to be deeply settled in the public mind, from causes which can be easily understood, that the Sherman law is the cause of the unreasonable hoarding of currency throughout this country. It has been made the foundation of distrust by a variety of causes. The President of the United States deemed it to be his duty, and I make no question with regard to it, in the most public manner to appeal to the last Congress to repeal the Sherman act, announcing in everyway in which he was capable of announcing his belief that the continuance of that act was the forerunner of disaster.

Coming from such a source as that, it is no wonder that the people of foreign countries believed that the danger from the Sherman act was as great as it possibly could be. Then, in addition to that, the bankers who desired to call a halt in the condition of affairs which existed last year, who believed that the time of settlement had arrived, joined in that objection. Then the Democratic papers, scenting out the disaster that was upon us, and being desirous of charging it to some other party than their own, trained all their guns upon the Sherman act.

The Sherman act itself had no defenders. The silver men, although they were glad to get it, stood prepared to declare that it was not what they wanted. Those who had yielded to the demand for that act in the earnest hope that what they desired might turn out to be just and right, were in no condition to defend it at all. It had not answered their hopes. Wherever there is an attack upon one side and no defence on the other there is sure to be a very shining victory. [Laughter.] Hence, the popular mind is so filled with the idea that the existence of the purchasing clause of the Sherman law is an element of disorder, that if we remove it we shall do more to restore confidence than anything we can do in the world.

What would a restoration of confidence in this country mean just now? It would not mean, in my judgment, a revival at once of business prosperity, but it would be a tremendous relief to those who are endeavoring to carry on the business of this country without bankruptcy and disaster. It would, in my judgment, and I do not intend to be in the least degree bigoted with regard to such a matter—I do not pretend to be overconfident that my judgment is right—but, in my judgment it would have such a reassuring effect that we should be temporarily assisted by capital from beyond the seas, and that that very assistance would result in the loosening of hoarded money, which is now to be found in stockings and in every possible receptacle, and the result would be ease of money. And those who are carrying on a sound and safe business would be rescued from the disaster which threatens them, and the country would be saved from many unnecessary failures.

It is sometimes customary here to make remarks indicative of great contempt and hatred of banks and of corporations. I expect during the next year or two to hear a great many such declarations. In this country corporations are sometimes brutal. They are difficult to approach. You can not reason with them, and they must have iron-clad rules, and very few men have dealings with corporations without having their tempers ruffled and their feelings hurt.

Nevertheless, a fundamental purpose and object of all corporations is to gather together the odds and ends of money in such quantities that large business operations can be carried on by wealth which is aggregated out of small sums; and, in the main, large corporations represent little holders. This is especially true with regard to banks; and whatever vituperation may be visited upon those institutions in the future, I say to you now that in my judgment the banks of this country are doing a patriotic and honorable work, and are at this moment the mainstay of this country against failure and future disaster. [Applause.]

If, therefore, this proceeding will relieve them and will give them confidence, if it will send back the depositors to their counters, if it will ease the rates of money, we shall be able to get over this disaster with less harm, less misfortune.

But I am in favor of the repeal of this act for another reason. I am desirous not only of weathering this storm with as few sails blown to pieces as possible, but I am also looking for the upward movement, which is sure to come, and which can only be postponed by bad management and bad actions.

It is sometimes the fashion to be very contemptuous of foreign capital; but it is as sure as the rising of to-morrow's sun that when we take our next upward turn it will be by the aid and assistance not only of the capital of the United States, but of the capital of the whole world. The transaction of borrowing, as I hope to show before I get through, and the practice of lending is not disadvantageous to either party.

When, as I have said, we reach the time for an upward movement, the capital of the whole world should be ready, not for its sake, but for ours, and we should be ready to receive it. Whether the world be right in its doctrines with regard to money or not is a question which I shall not at present undertake to dispute; but to-day, and so far as we can judge in the future, our hold upon the world's capital depends and will depend upon our being in accord with the world as to our views in regard to payment.

Sometimes gentlemen, in their patriotic flights of eloquence, exaggerate even the greatness of the United States of America. It is perfectly true that the United States, under thirty years of Republican rule, has made enormous progress. It is true that our nation is, perhaps, the wealthiest on the face of the earth. It is true that our wealth has increased year by year, and that in the future it will increase still more. Nevertheless, there remains the fact that our country is larger than our wealth: that the possibilities of the United States are a thousand fold in advance of any progress which it has yet made.

There never was a time in the history of the United States when its development required more capital. It has reached that point where its richest treasures can be exploited; and the richest treasures of the land can only be exploited by the assistance of the treasures garnered up in past times in the whole world. When, therefore, we take our next upward rise, one of the greatest assistants which we shall have to develop our new regions will be capital from abroad.

The spare capital of the United States, great as it is, will not be sufficient for our purpose. We therefore ought to put ourselves in such a position that when the time comes we may command the capital of the entire world, for we shall need it. This is by no means a day dream. Within my own lifetime, and under my own eyes, has occurred an example of precisely what I am talking about.

When I first entered Congress years ago I listened to a debate of precisely the same character as that to which I have listened this year. Hardly a new idea has been presented, hardly a new prophecy. There was the same attack upon wealth; there was the same laudation of the poor. Everything seems to me, as I sit and listen to the debate here in the House, as if the tide of time had rolled back and I were sitting here, a new member, listening to the wisdom of fifteen years ago.

Then the object of attack was the resumption of specie payments. Then on every hand men declared, and this Hall resounded with the declaration, that the resumption of specie payments meant the ruin of the debtor and the destruction of the country; that it meant handing it over to England and to the foreigner, and that the poor citizen of the United States was to lie forever prostrate at their feet; and yet I lived to see everyone of those prophecies forgotten, and every man connected with them forgotten, too. [Laughter.]

When specie payments were absolutely and actually resumed do you not remember what a tremendous upward start this country took? Do you not remember how the prices of all property in the country rose? How all property actually increased in value? How men were at work in the fields, in the marts, in the workshops, and everywhere all over the country everything was at the highest pitch of production?

It is because this country has been watered and fructified by the capital of the whole world; and the result at the end of the last census shows what tremendous progress we have made, and that progress has been because the whole world has helped us, has received more or less benefit of it, but we the greatest benefit of all, for all the great works which have been erected by foreign capital remain upon our soil.

So my two reasons for voting for the repeal are, first, that it will restore confidence to the people and in some measure help us out of the first difficulties of our present condition; and second, when the time comes it will assist us on the upward path to the next period of prosperity and of progress.

Now, let me answer, so far as I am able, a few of the objections which have been urged against this repeal. First, it is said that it is a renewed demonetization of silver. On this question of demonetization of silver there has never been a really fair, open, and honest discussion. I do not believe either that the present time is one which will produce such a discussion. The subject has always been approached from the domain of prejudice and passion. There is one element in it which has always excited my disgust and also my astonishment. I have seldom heard the question of silver discussed without some gentleman presenting what he called the "stealthy demonetization of silver."

There is nothing which will arouse the wrath, dissatisfaction, and disgust of the American people like any charge of dishonesty or knavery or trickery in public affairs. The American people do well to be angry if silver was dishonestly demonetized. If any trick, if any game was perpetrated upon the American people, they do well to be angry. It is a false appeal to this sense of honesty and honor and fair play which has caused one of the most stupendous fabrications that has ever existed even in political life.

On every stump, at every hustings, in every city, with loud voice it has been proclaimed, as from a hilltop, that when silver ceased to be a standard of value of the United States, it was done by virtue of a stealthy conspiracy unknown to the American people. It is astonishing that such a statement should have lived so long. It is amazing that a falsehood of that kind should not have been burned out of existence long years ago. The fact about it is, and I have here the RECORD which proves my assertion, that it took three columns of the RECORD (volume 18, 1876, page 288) to even characterize and describe the number of times that it was presented to the American people, the number of times that it was argued before Congress, and the direct declarations of what the purpose of the act was.

Why, I myself have heard a man, an honored member of the House, whose name I will not state, in this very House of Representatives denounce the demonetization of silver as stealthy and "fiendish;" and he himself introduced the bill which did it on the floor of this House, and squarely and openly declared that a double standard was impossible, and that the gold standard was the only thing we could possibly have. [Laughter and applause.]

This thing has been answered so many times that I shall not encumber my discourse with an insertion of proofs. I shall simply content myself with saying that there never was a more open, straightforward discussion since the beginning of time than that by which silver was demonetized, as it is so said, in this country. Here is the Globe, volume 102, page 2306, and pages following, second session of Forty-second Congress, April 9, 1872. Anybody can look at it, and for the second time in my life I make profert of it in open court.

Now, it is said that if we pass this act we shall again demonetize silver. The gentleman from Georgia [Mr. LIVINGSTON] said the other day that there was no man in the House who did not proclaim himself a bimetallist; thereby inferring that those who claimed to be bimetallists and did not vote his way were necessarily persons who were obtaining positions in this world by false pretenses.

I think that he omitted from his mental diagnosis of the case the great fact that the foundation of all disputes is difference of definition. He means by a bimetallist a man who is in favor of two metals if he can have them, but of silver if he can not. Other men may be bimetallists in the sense that they are willing to have both metals if they can, but are unwilling to be put upon a silver basis without knowing it. If he would consider the range between those two definitions, I think he would find that most people are as honest in their desire to be bimetallists as he is himself.

Bimetallism by a single nation does not seem to be possible; bimetallism by all the nations of the world seems to me to be not only possible, but feasible. As I understand it, the object of bimetallism, and the avowed object of monometallism, is to have a stable and presistent standard. The theory of the monometallist is that gold of itself is subject to less fluctuation, to less change than silver, to less fluctuation and change than both gold and silver together.

The theory of the bimetallist is that if two lakes, liable to be disturbed by different causes, can be connected and made to flow into each other interchangeably, they will present a much greater expanse, and any change of level will therefore be much less—the change in each lake being distributed over both.

I can understand this theory as applied to the metallic standards of the world. I can understand that if gold by any accident should be undervalued in any country and driven out of that country, that would send it to the other countries; and the effect of that surplus of gold in the other countries would be to lower the price of gold, and therefore have a tendency to send it back to the original country; in other words, that the effect of the two lakes would be to cause a lesser variation in the level; but when you come to apply that doctrine to a single country, you will perceive at once that it can not be applicable, that the effect of undervaluing one metal will necessarily be to drive that metal out of the country.

You do not have to indulge in any far-fetched theories to understand this. You do not have to discuss the question of the Gresham law at all. All you have to do is to apply yourself to the history of the United States; and the speech of the gentleman from Tennessee [Mr. PATTERSON], a brave and admirable speech, shows conclusively that this country, while it was pretending to be bimetallic in its standard, was never really so; that one metal drove the other out of the country; that the standard was not possible of maintenance as long as there was an overvaluation.

Now, to-day the proposition is that we shall undervalue gold over 40 per cent. If 3 cents on a dollar of undervaluation of silver drove silver out of this country, what will an undervaluation of 40 cents on a dollar do for gold? Does anybody have any question or doubt about it? Not the least. But you say if we undertake to establish a gold standard in this country, first, you will demonetize silver and drive it out of existence; and, second, you will raise the debts which the people owe to some persons unknown, presumably enemies, who ought to be despoiled.

This first charge would be a serious one if it were true. If the adoption of a gold standard destroyed the uses of silver, it would certainly be a very grave misfortune to this country. In the first place, it would destroy a productive industry of this country. For my part, I am never willing to do that. Second, it would destroy an industry which, in my judgment, is of more value to this country than a merely productive industry.

To my belief the regions beyond the Missouri River will one day or other constitute comparatively the great riches of this country. It would not be possible for me to prove this. It would not be possible for me to demonstrate this, perhaps, even to the people who live beyond the Missouri; but I have an abiding faith that such is the case. The wonderful possibilities of their soil has never been appreciated even by themselves. I believe that the settlement and the growth of this country depend greatly upon its mining interests.

I have, therefore, been ready all my life, by duties on lead, and by any action upon the silver question which seemed to me

to be adequate and suitable to promote those industries; and I should be sorry to believe that the maintenance of a gold standard would cause them permanent harm. I do not believe that the maintenance of a gold standard in anyway militates against the reasonable use of silver as a coinage metal. The question whether there is to be a double standard or a single standard is entirely different from the question of the use of silver as money.

We have purchased, and have now in the vaults of the United States Treasury Department, thousands of tons of silver, yet there never has been a moment of time since 1872 when the standard has not been gold; the standard to-day is gold. The repealing of the purchasing clause of the Sherman act, therefore, would not in anyway establish a standard. We are only refusing to establish a different one. The continuance of the purchases under the Sherman act would, in the estimation of the world, be a declaration that we intended to go on with our purchases to such an extent that we would find ourselves upon a silver basis after no great lapse of time.

Now, whatever this country may desire to do—whatever its intentions are for the future—one thing seems to be clear: if the people are to go upon a silver basis they want to know that they are going to do so, and want to do it deliberately. If the plain question were presented to every American citizen whether he desired that this country should be upon a silver basis alone, gold being banished, the great majority of answers would be no. And this ground they would take without abating a jot their determination to coin and use both metals.

The next difficulty which we have to meet is the assertion that by the repeal of the Sherman act we increase the burden of the debt upon the borrower. This would certainly be a very grave misfortune, if it were true. The business of borrowing and the business of lending are alike honorable. Such transactions arise out of the nature of man's needs. Some men prefer a certain gain to the chances of great profit.

Some men are willing to take the chance of the profit and pay the small gain which is necessary in order to obtain the stored-up wealth of another. Men who have money may not have enterprise and brains. Men who have brains and enterprise do not always have money. Borrowing and lending marries money and brains, to the great advancement of the world. If we were to make a law which only related to a single series of transactions, such as now exist in the United States, it might possibly be an advantage to the borrower to have the payment so adjusted that he would have the advantage of the transaction; but when the present race of borrowers is dead, or when the present borrowers have paid their money, there will still be forever a borrowing and lending world.

In order to constitute the transaction of borrowing and lending, the first thing is the lender. Until he is willing to lend, the transaction can not by any possibility take place. The first thing to do is to coax the lender to lend. After that, borrowing is possible, and not until then is it possible.

Hence, laws must be made so as to enable the lender to be satisfied of the certainty of return. If there is any uncertainty with regard to that, before he lends he will demand some advantage which corresponds to that doubt connected with the repayment. Money paid for the use of other money, in the nature of interest, is a different thing from money paid for the use of other money in the nature of a risk.

A man will lend you money for 5 per cent where there is no risk, and it may be he will not lend it to you for a hundred where there is; consequently, if you make your laws in such fashion that the borrower has an advantage in payment, the lender will be sure to demand an advantage in lending, and, generally, such an advantage as will cover all the chances. If you could make a man absolutely sure to-day in any part of the United States that what he loans out would certainly come back to him, you would lower the rate of interest a great many per cent everywhere.

Therefore, any law which is made to reach the case of the lender and the borrower must be made in the spirit of fairness and of justice; and any proposition to a man to lend you money upon one standard to be paid upon another will necessarily be accompanied with such a rate of interest as will make up for the possibility of the lowering of that standard.

Hence, it can not be to the advantage of anybody to have unjust laws made between the borrower and the lender; it is just as essential to the borrower that the transaction should be as fair as it is to the lender.

I do not propose, however, to discuss the debt question at any length. That would be more suitable in a discussion such as may take place when our whole financial system is remodeled. These observations on debtor and creditor I make merely to supplement the admirable statement of the gentleman from Mississippi [Mr. CATCHINGS]. I might go on and discuss the proposition to re-establish the Bland act, but Senator HOAR, in his most excellent speech elsewhere, has shown that that act is worse than the one under which we are now living. Certain it is that had not the decline of the national-bank circulation kept equal pace with the issue of the Bland dollar, that act would have long ago landed us where we are now.

The proposition to lower the ratio I hail as the one good sign of this discussion. To drop from the bigoted determination that 16 to 1 is a heaven-appointed ratio raised up by the Almighty, and proceed even to discuss market values, seems to give some slight hope that when we really undertake anew to reform our financial system we may approach it with some reference to existing conditions and to the facts of the universe. As for the propositions now before us, we can all see that they are untenable. No one believes that we could maintain 20 to 1 any easier than 16 to 1 without the aid of the rest of the world.

What, then, is the pathway of duty? The unconditional repeal. That will either give relief or not. If not, then we must try something else, and the sooner the better. It is a matter of deep regret to all sensible men that we have delayed so long. Men are to-day struggling almost against fate and praying for relief. The banks are strained almost to the point of breaking. It is such a pity that we had to waste so much time in this weary welter of talk.

We stand in a very peculiar position, we Republicans to-day. [Laughter.] The representative of the Democratic party just chosen President of the United States finds himself powerless in his first great recommendation to his own party. Were he left to their tender mercies [laughter] the country would witness the spectacle of the President of its choice overthrown by the party charged with this country's government. What wonder then that he appeals to the patriotism of another party, whose patriotism has never been appealed to in vain? [Applause on the Republican side.]

Never, I say, in vain! The proudest part of the proud record of the Republican party has been its steadfast devotion to the cause of sound finance. When this country was tempted to pay its bonds in depreciated money the Republican party responded with loud acclaim to that noble sentiment of Gen. HAWLEY, that every bond was as sacred as a soldier's grave. It cost us hard fighting and sore struggle, but the credit of this country has no superior in the world. [Applause on the Republican side.] When the same arguments heard to-day were heard fifteen years ago, sounding the praises of a depreciated currency and proclaiming the glories of fiat money, the party of Abraham Lincoln marched steadily towards specie payments and prosperity. [Applause.]

What we were in our days of victory the same are we in our days of defeat—champions of true and solid finance. [Applause.] And when the time comes, as it surely will come, for us to lead this land back to those paths of prosperity and fame which were trodden under Republican rule for so many years, we shall take back with us our ancient glory undimmed by adversity; our ancient honor, unsullied by defeat. [Prolonged applause on the floor and in the galleries.]

Mr. BLAND. I yield thirty minutes to my colleague from Missouri [Mr. DE ARMOND].

Mr. DE ARMOND. Mr. Speaker, if the distinguished gentleman from Maine [Mr. REED], who so ably addressed this House, and has just taken his seat, feels that the Republicans for whom he speaks are in a somewhat awkward position here to-day, I think I may commend to him, as a solace, the fact that the Democrats upon this floor who are acting with him and his cohorts are in a much more awkward situation.

Mr. Speaker, I shall endeavor to address myself to this question as one desiring to do what is right and for the best interests of the country. I shall also address myself to this House as one who believes that the welfare of the country will be promoted in proportion as those who were elected here as Democrats adhere to and carry out the Democratic creed.

Is the silver bullion purchasing clause of the Sherman law responsible for the condition of things which we now have in the country? If it is, then I grant that it should be promptly repealed in order to give needed relief. If it is not, however, the cause of the distrust and distress in the land, then it is unreasonable to hope or believe that relief will come from its repeal. If relief, real or seeming, should come after such repeal, it will be due to the relenting of those who have raised the financial storm, and not to the legislation proposed for calming it.

I have no time upon this occasion to discuss at length the general question of the use of gold and silver as money, nor whether or not this Sherman law is responsible for existing evils, but shall content myself with a hurried view of some suggestions of the other side. It is enough for me to say as preliminary, that I believe not a solitary gentleman who has addressed this House, upon either side, has been bold enough or reckless enough to declare that the Sherman law is responsible for our financial troubles. The most that is claimed in this debate is that it has con-

tributed to them, and the most that has been urged is that sixty-five or seventy millions of American citizens are so panic-stricken, so lost to intelligence, so easily duped that, although this law has not caused their distress, they will accept its repeal as the cure for it.

I have too high an estimate of the constituency who sent me here, and of American citizenship generally, to believe confidence can be restored by any legislative confidence game.

There is deeper meaning and purpose in this repeal bill.

Some gentlemen are brave enough to avow it. The gentleman from Ohio [Mr. HARTER] is one. It is to establish and perpetuate the single gold standard. If that is correct policy, then the Sherman law ought to be unconditionally repealed; otherwise the repeal is only a part of the legislation required. For let me say to friend and foe, that in the light of the message, in the light of current events, in the light of what has been said upon this floor, no man has foundation for any hope that after final action upon this measure there will be further legislation during the life of the present Administration looking to the rehabilitation of silver as a money metal.

This repeal bill could have passed both Houses of Congress the first day of this extraordinary session if it had not been the settled purpose of those who now support it to deny us any legislation for the use of silver as money.

I concede that it is not incumbent upon a Democrat standing loyally by the Chicago platform to insist that all financial legislation must be embraced in one bill. But when by the message—what is in it and what is not in it—when by the arguments made here, by the sense and understanding of the country, we know there will be no legislation by this Congress for the increased use of silver as money unless it comes in conneetion with the repeal of the Sherman law, our course appears plain. We must determine, each for himself, whether we shall hold to the little we have as the only hope of securing something better, or at once surrender all. I am opposed to an unconditional surrender.

To my mind, the man who claims to be a bimetallist, who repeats here the arguments which the true advocates of an enlarged use of silver make, and yet votes for this unconditional repeal bill, is either himself deluded by following incorrect metal processes, or he is not candid in what he says; and his people will find out which it is and hold him to responsibility accordingly.

It is said, Mr. Speaker, that India has taken such action as that, if otherwise there might be hope for increased coinage of silver in this country and increased use of it, that hope must now be abandoned.

But, sir, it is misleading to speak of India taking action. India has taken no action. By decree of a governing council of foreigners, the voiceless millions of India are to be subjected to a change of standard for the purpose of drawing from them, indirectly, larger contributions in tax money. The report of the Herschel commission, a British committee which officially considered the scheme, and from which my colleague [Mr. BLAND] read some passages, abundantly proves this. This report has been published by order of this House as a public document, and I shall not quote at length from it. But note the following:

> The difficulties which the Indian government have in meeting home charges are aggravated by the fact that the fall in exchange has led to claims on the part of their officers, civil and military, who receive salaries in rupees, to some compensation for the loss which they sustain owing to the fall in exchange.
>
> * * * * * * * *
>
> It is further objected to the proposals of the Indian government that they would make the value of the rupee greater than it otherwise would be, and that thereby the burden of Indian taxation would be increased. That part of the revenue which consists of fixed payments would remain unaltered in numerical value, whilst each rupee which the ryot pays would be worth more, and the rupee prices of his products would be less than they would be if silver continued to fall. The argument is no doubt sound, but there are answers to this objection which would have no little weight.
>
> Whether silver is falling or gold rising in value, or both movements are taking place, and whether an appreciating or a depreciating standard is the less open to objection, are questions of great difficulty.

To increase the salaries of salaried officers, to swell the enormous tribute of India to England, to get more from those who can not be made to contribute more directly, because taxation can not be enlarged in form and ingenuity can not invent better means of extortion, the money standard itself is to be changed, and money is to be made more valuable in fact, though the coins retain the old names.

This means the contribution of more labor, a surrender of more of the products of labor, a heavier burden upon the taxpayer, and a larger amount of revenue for those who receive and who eat the revenues. Should we adopt the Indian policy of robbery? I think not.

Mr. Speaker, I defy any man to say that I have not stated truly the reason for the proposed change from the silver to the gold standard in India. The change is not made to promote the welfare of the people; it is not for the good of the people, but to fill faster the coffers of their oppressors. I, for one, would welcome the time when Britain shall extend her empire in comparative justice and mercy, when, in forcing her policies upon an unwilling world, she shall not shed oceans of blood, sufficient to float all her navies.

I am not here to defend the Sherman act, the unconditional repeal of which we are forced to resist or give up silver coinage. But it is not so bad as the annulment of its provisions by those charged with its enforcement. Under the Administration of Mr. Harrison and his Secretary of the Treasury, from the first day, the first hour the law went into effect until that Administration passed out, after the people had weighed it in the balance and found it wanting, the whole purpose was to discredit silver, to beat down the price of silver, and to prepare the way for such legislation as is urged in this bill now before the House. And, as a Democrat, Mr. Speaker, I note with shame and mortification, and say with regret, that the giant intellect of the present Secretary of the Treasury—the distinguished gentleman who once served and presided in this House, and later was a member of the Senate—that the shining intellect of that great man has arisen to no higher financial achievement in his new office than to copy and follow and sanction the obnoxious financial policy of his predecessor.

If the Sherman act had been executed as it should have been executed, if it were executed to-day as it should be executed, that "parity" which the plain people understand would be established and maintained. The United States by law compel every citizen within our borders to receive as money, when tendered in discharge of debts, these silver dollars and the certificates issued upon them. The Government itself accepts them in payment of all debts and demands. Nowhere within the United States of America, except at the counter where the Government pays out the money of the people, as the agent of the people, is this money discredited. The Secretaries of the Treasury have repudiated the truism that the debtor and not the creditor shall determine what kind of lawful money shall be used to discharge a financial obligation This defiance of law and common sense, and common fairness, and common honesty, they call maintaining a parity between gold and silver.

Once, when the last spark of patriotism had apparently been quenched in blood in unhappy Poland, a field marshal of despotic Russia, his sword reeking in blood, his hands red with blood, could send back to the Czar a bulletin announcing that "Peace reigns in Warsaw." With this law disregarded, and the money of the law and of the American people, good enough everywhere and for everybody except the speculator who makes a raid upon the Treasury in order to injure the Government and its credit, unused, discarded, and dishonored at the Treasury, we are complacently told that "parity has been maintained, but at a great strain."

Mr. Speaker, I have a contempt for that sort of parity; I have a contempt for the sham policy which calls it parity.

In the thoughtful and powerful speech just made by the gentleman from Maine [Mr. REED] there is food for reflection, not only for the present but for the future There is in it much that it will be well to think over, and it will be read and studied at the firesides of the people. The gentleman has said that the Sherman act is not responsible for the troubles that are upon us: that distress and financial embarrassment and ruin are to be found everywhere over the globe, in every country under the shining sun. As before stated, I agree with the distinguished gentleman, and all seem to agree with him, that the distress which has visited all the children of the earth can not be attributed to a law of a single nation which provides for the purchase of 4,500,000 ounces of silver per month, and the issuance of silver certificates, which I consider good money, in payment therefor.

I repeat that no Democrat has been able to show, and I predict none will be able to show, good ground for a belief that this purchasing clause of the Sherman act is the cause of present troubles. The Democrats have told the people of this country, over and over for years and years, and told them truly, that the villainous protective tariff has been the great agency in bringing hardship and ruin upon the common people of the land, while vastly and wrongfully increasing the wealth of the favored few. This is the situation in which as a party we find ourselves, and to it the gentleman from Maine [Mr. REED] has adroitly called attention.

I implore my Democratic brethren who are to-day coöperating with the gentlemen from Maine, and with those whom he so ably leads—I beg of you to note what he has just said. While we Democrats have attributed very much of evil to the protective tariff, he says that the condition now prevailing is largely due to fear that we shall endeavor to revise this tariff, as we are pledged to do, as we are in honor bound to do, and as we must do, or sink beneath the contempt of all decent men in all parties.

Democrats who go with the gentleman from Maine for uncon-

ditional repeal, "to restore confidence," will find it far from easy to resist the pressure for a further supposed "restoration of confidence" by a postponement, and perhaps a substantial surrender, of tariff reform.

If you repeal this bullion-purchasing clause of the Sherman act upon the ground taken here by Democrats who claim to be bimetallists, that such action will tend to restore confidence; that while the Sherman law is not the cause of the present troubles, its repeal is a proper tribute to popular alarm and liable to quiet the public mind, do you not stultify yourselves with reference to the tariff question?

Would you not by administering a quack remedy for a real complaint, as the prescription of the great Democratic party, be consenting, in advance, to postpone or abandon tariff reform, to further restore confidence? The gentleman from Maine is not warning you; he is only notifying you of what will be demanded, after you and he and his Republican following shall have beaten the Democracy of the West and South. He says the popular alarm is brought about in the main by the fear of the people that we will tinker with the tariff, and in due time he will lay before you an abundance of such chamber of commerce evidence as influences you now. If you yield and say "We will repeal this Sherman act, not because we believe its repeal will remove the cause of trouble, but because we hope thereby to hoodwink the people into the belief that repeal is a cure," how can you stand for tariff reform when the advisers whom you now heed demand postponement or abandonment?

Or take the other horn of the dilemma: If you insist that the Sherman law is the real author of our troubles, what have you left to say for tariff reform, early or late?

Even now it is said that certain grave and reverend seigniors, Democratic members of the other body of Congress, have suggested that the tariff can be made to wait, can be thrust aside, if the passage of this measure of unconditional repeal can thus be secured. I do not believe that is true; I can not believe it.

But I do believe and realize that there is that sort of association here between the Democrats who are insisting upon unconditional repeal and will hear of nothing in the way of compromise—who offer nothing, suggest nothing, accept nothing—that sort of association or combination, perhaps without words, perhaps without full comprehension on the part of some of them, which will surely cripple the tariff-reformers. When the Republicans shall have lent their valuable aid here upon this bill, these Democrats will help the Republicans to postpone tariff reform. I am apposed to such course. I am in favor of pushing tariff reform. I thought, and still think, that tariff reform should have been taken up in special session last spring.

I am in favor of treating the American people as an intelligent people. I have faith in their intelligence. I believe the men who legislate here upon the theory that the people can be hoodwinked, can be persuaded to take the shadow for the substance, and pretense for sincerity, underestimate and misjudge this great American nation. Those upon the Democratic side who are with the gentleman from Maine on this question will be forced by the irresistible logic of events of their own creation, by the requirements of their new association, to be with him on the other question, and with him they will be, directly or indirectly. They are driving the nails into the coffin of tariff reform. They may be doing it unwittingly; I believe some of them are, but they are doing it just as surely. They are making material for Republican campaigns; they are causing the Democratic masses to distrust, upon the tariff issue as well as upon the financial question, the sincerity of those whom they have chosen to serve them.

I say, and the Democrats who elected us believe, and we taught them to believe, that the greatest agent in bringing hardship and calamity upon the plain people of our land is the protective tariff.

If, as your cure for present ills, you insist upon the unconditional repeal of the silver-purchase clause of the Sherman law, you must admit that that law and not the tariff is the great source of evil, or that you are content to vote as boards of trade suggest or demand.

Your only escape from the full force of this admission, which your vote will fairly imply, is through the confession that your repeal measure is a species of false pretense. In either case, I leave you to the tender care of the gentleman from Maine and his confreres, who will make it very plain to you and to the country that you are in the path of tariff reform as obstructions. If the Sherman law be the great offender, tariff reform is little needed. Or, if the chambers of commerce and boards of trade shall tell you they will lose confidence if tariff reform be not delayed or abandoned, you misguided Democrats are subscribers in advance to their creed.

It is said, sir, that we alone can not venture upon the experiment of the free and unlimited coinage of silver. Assertion goes against assertion. I deny it. Everything that has been said about the greatness and grandeur of this American people, everything that can be said, all that we know, contradicts our adversaries. Our Government is peculiar, and gentlemen who oppose us certainly lose sight of that fact. Here is a government where, if we, the representatives of the people, are true to ourselves and to those who sent us here, the people's voice shall be omnipotent, the people's policy shall prevail. The people are the sovereign.

Silver has been demonetized in Europe. By the people? No. By governments grown hoary in the perpetration and perpetuation of abuses which we denounce. As well might we undertake to conform our governmental plans and policies generally to those of the Old World as to accept tamely dictation from abroad in money matters. A queen and aristocracy ruling in Great Britain, an emperor and aristocracy in Germany, an autocrat in Russia, a little liberty here and a little there, but the people in large part, deprived of popular rights, and in many lands the popular voice completely hushed—it is under such conditions that gold monometallism has been fixed in those countries.

Their governments differ from ours in principles and in traditions, move in a different direction; they block the way of progress in this nineteenth century. In the Old World we do not find models to follow, but examples to shun. Our Republic has shown on many occasions that we can stand alone and make ourselves heard and felt, if need be, against a hostile world. In 1776, when the Declaration of Independence was penned, there were probably doubters and moral cowards and insincere people who whispered in the ears of the immortal signers that the experiment was hazardous; that it was sure to end in ruin; that all the governments of continental Europe, the powerful and the mighty of earth, were conducted upon different principles. The appeal was not heeded. The Declaration was made, the war was carried on. The command was sternly given through fire and smoke and blood, "Get thee behind me, Satan." The die was cast. The battle was won.

The new bark launched upon the sea of national existence has survived every storm, and still rides the waves in triumph. And now, with a century of glorious life and glorious achievements behind us, the pride and the model and the hope, everywhere upon this earth, of those who love free government, we are told here by grave gentlemen, even by members of our own party—a party pledged to the conservation of popular rights; a party a century old, and a century old because it has been true to popular rights—we are told that we can not do what is just, can not even try what is wise and politic because, forsooth, King William of Germany and the Czar of Russia are not with us! [Applause.]

Mr. Speaker, I believe we can make the experiment and make it safely. If I doubted this I would still say try it. The people's representatives should feel, as I have no doubt those heroes felt at Lookout Mountain when they were charging up into the unknown region of cloud and fire and smoke, that whenever the command is given to go and wherever duty calls, the true man should go or die trying to go.

I believe that though we may be leading a forlorn hope for the people, deserted in this hour of need by many elected on the same platform as ourselves, having to combat foes in our own household, seeing our chosen captains falling away and leading toward the enemy's camp—I believe that, with the devoted heroism of that thin line of gray which charged through a veritable "valley of death" at Gettysburg, we should go forward. Those who fall in a righteous cause in the line of duty are nobler in their fall than life and opportunity can ever make such as prolong existence by desertion or surrender. I am willing to dare the experiment. The American people are willing to dare it. The people who sent us here from the South and the West, the plain people, the guardians of whose rights we are now, insist upon trying it.

Mr. Speaker, this question is a sectional question. I bring not here sectionalism; I invoke not here the spirit of schism. But I recognize what is before me. Twenty-seven votes from bond-holding and coupon-clipping New England solid for unconditional repeal. Of the 73 votes from the Middle States, powerful New York and imperial Pennsylvania, with New Jersey and Delaware following, but a solitary one is with us. Shall the South and the West be broken and scattered and defeated in this contest which has been forced upon us? We did not bring it here.

No party ever existed in American politics which went before the American people upon a platform demanding the single gold standard. Scarcely a man in the West or the South, be he the greatest or the best man that ever breathed the breath of life, could have come to this Congress upon such a platform. Not a man from the South or the West, excepting the gentleman from Ohio [Mr. HARTER], brave in the advocacy of what I believe to be errors, but gallant and manly still—not another one, I be-

lieve, came here except upon some platform—none of which I will analyze now for lack of time—demanding the coinage of gold and silver upon equal terms.

Surely this consideration should admonish us to stand firm for the money of the Constitution, gold and silver, and enlarge the circulating medium of this country by pouring into it the silver dollars which ought to be coined under just law, not discriminating against any metal, class or section.

Mr. Speaker, I am the last man who would voluntarily raise a sectional issue. I am the last one who would (except that I am convinced of the absolute propriety of it under the circumstances) appeal to the sentiment of sectionalism. But when I see massed against us all those who represent concentrated wealth, all whose interest it is to make the dollar represent more of property and call for more of toil and sacrifice and hardship; when I see massed upon the one side the great creditor class of this Union, backed by the great creditor class over the water—I have no trouble in determining my alignment as the Representative of a Southwestern constituency.

When Judgment is looking for the path of duty in the dark, Conscience hangs out a lamp.

If I had nothing else to guide me in this matter I could take my course from the fact—a fact that will sink deep into the minds of the people, a fact that nothing can eradicate, a fact that will live through the months and years, a fact that will be potent in the next election and the next and the next—the fact that as you make the dollars scarcer and more valuable you make all other things sink in price and less valuable. You would increase the burdens of those who are burdened, and enlarge the possessions of those who have much already; and I can not go with you, you queerly banded Democrats and Republicans, in your crusade against the people.

Mr. Speaker, there is another phase of this question to which I invite the attention of the House. I may or may not overestimate its importance. It has been urged here that we should go into the scramble for gold—how? That will come by and by—that will come in the proposed issue of gold-bearing bonds. The surest, safest, cheapest way to secure the aid of bondholding Europe in extending the use and upholding the value of silver money is to cling to silver and gold money and coin and use it ourselves. It is said that Europe has grown distrustful of us.

Our own American people, our own sovereign citizens, the noble men by whose votes we occupy our seats here in this Hall, have not grown distrustful of this great Government. They do not doubt the value of any of our United States money. They are willing to accept it and use it, as they are now doing when they can get it, in the daily concerns of life. They only complain that there is not enough of it, and they ask for more. But the capitalists of Europe, they say, who have purchased our bonds, have grown distrustful of us, and, therefore, say our Eastern mentors, we should pass this unconditional repeal bill, not especially to please or relieve the American citizen and taxpayer, but to remove the fears and restore the confidence of the bondholders in New England, New York, Pennsylvania, and beyond the water.

Gentlemen who choose to make laws for that purpose are, of course, their own judges, but for my part, sir, I would feel that I should be beneath the contempt of the humblest and meanest of my constituents if I could forget for one moment that the true object of my being here is to secure as far as I can such action, and raise my voice when I can for such measures as will probably be beneficial to the people of this country.

Sentimental gentlemen may suffer from excessive grief over the doubts and distrust of the owners of Government bonds. I shall not intrude in the winter of their discontent, but shall let my sympathy expend itself upon our American tax-paying citizens. I confess that I would rather do something for the taxpayer than for "those who have invested in our securities." I am for what shall seem to me good, wholesome legislation for the American taxpayer, and shall be willing to leave the unhappy millionaire bondholder to his fate, always remembering that whenever laws are made to suit the creditor they are apt to be hard laws for the debtor.

Nor shall I join the growing procession of the "poor man's" professional friends. What gentleman, in speaking for the gold standard, say for "the poor man" is but a repetition of what the tariff baron has been saying for the same poor man, while try to perpetuate the policy of protection which has made men poor and will keep them in poverty.

Gentlemen say that after adopting the single gold standard we shall be better able to go into the market for gold and to compete for its possession with England and Germany and the other gold-gathering and gold-hoarding monarchies, where the people are voiceless, where money speaks with an authority not resting on the will of the people and absolutely damned by the will of God as the source of power. [Applause.]

Suppose it is true that the bondholders of England and Germany are frightened lest we pay our indebtedness in the money nominated in the bond, as I shall continue to believe we have a legal and moral right to do; and, suppose, further, that we should provide for the coinage of gold and silver, upon equal terms, according to the policy declared in the Chicago platform. Then these foreign bondholders, and the governments which they control, would be interested in entering into such international agreements as would tend to keep our money on a parity, because the United States bonds held by them would be paid in the money of the United States.

If we persist in using both gold and silver upon equal terms our creditors will be interested in the maintenance of the value of our silver coins, for they may be paid in them. But if we rest our finances upon the gold standard, gold will naturally and surely appreciate, and the bondholders will surely get gold from us, for we shall have denied ourselves the use of silver in our dealings with them. Why should they care, then, to help us by means of an international agreement? There would be just one more great nation depending upon gold, and the bondholders would be happy. There would be another nation in the fierce, remorseless struggle for gold, with none but the poor and powerless concerned about turning silver toward the mints. Our people would be still further crushed under the added oppressions of new millionaires, created by act of the American Congress.

But suppose we keep both metals in circulation, and coin both as they come to our mints; suppose, according to our convenience, and not the creditor's choice, we use such money as we have, which means to our people everything that is desirable in finance. Then Europe may join in endeavoring to bring about the rehabilitation of silver; then may the rich men of the Old World be interested in keeping all our money at par; then may come the international agreement for which some gentlemen here seem to long with a longing quite pathetic.

I have said, and all must know, that we are now on a sectional issue, with the Representatives from the Northeast in solid phalanx on the one side. How about the opposing phalanx?

A time may come when in rural Maryland there will be a new meaning to the old familiar line of the song—

The despot's heel is on thy shore, Maryland.

And Maryland may be but a name for the South and West.

With Indiana and Ohio and Illinois and Kentucky rests the fate of this bill.

Oh, for one hour of Hendricks to-day!

One blast upon his bugle horn
Were worth ten Congressmen.

[Laughter.]

Ten is not prophetic accuracy. I yield to the natural inclination toward round numbers. Later on, the yeas and nays will reveal everything.

Oh, for the clarion voice of Allen G. Thurman, and the presence of the grand old man, "The noblest Roman of them all," in this council!

'Tis the sunset of life gives mystic lore,
And coming events cast their shadows before.

In his prime Thurman's vision was clear, and now, with almost mysterious prescience, the old man, in the calm of his retirement from a glorious public career, speaks, as he always spake, for the people!

Oh, for Douglas or Lincoln to speak and vote for Illinois! Oh, for both those giants! for there were giants in those days who rested in the confidence of the people and reflected the popular will.

Mr. Speaker, in kindness of feeling, with regret and with sorrow, I state as my deep conviction that few men from south of the Potomac or west of the Alleghenies who in this Congress are found leagued with the Northeast, forgetting, I fear, their people and the pledges of the past—few of these men will survive the wrath of those who sent them here.

The movement toward the consolidation of the Southern and Western Democracy has just begun. It will acquire impetus. It will go on. It will be resistless. The West has hardly yet awakened to a realization of its vast power, but it will be heard from soon. And the South? The South, traduced, suffering, beaten down—the South, when all things dear to freemen were denied her, when all afflictions and humiliations were heaped upon her, when her rights were memories, when she was robbed and crushed—the South yet remained solid.

Proud, glorious record—the solid South! And, now, what sorrow to the men who have struggled through adversity, the men who have adhered to the Democratic party in all times of trial—what sorrow to them to find in this crucial hour, in this trying time, any Representative from the South breaking away and joining with the representatives of the coupon clippers from New England, to vote for what Wall street demands and the bond-

holders generally desire. The South will view with interest the ground of the new faith of some of her representatives. She will fairly judge motives as well as deeds. If any Representative shall have been found wrong with his eyes open, may God forgive him! I do not know whether the people will. [Applause.]

The man who talks our way and votes the other way is to me a curiosity. He calls himself a bimetallist. He is too modest by at least two syllables. He is a by-and-by metallist. And "The road of By and By leads to the house of Never."

He goes forward by moving backward. He climbs up by sliding down. He turns his back upon the Lord when he prays, and keeps one eye open. Of him and his by-and-by metallism we shall probably say by and by in the language of the Psalmist:

The words of his mouth were smoother than butter, but war was in his heart.

Or admonish him in Emerson's lines:

Go put your creed into your deed,
Nor speak with double tongue.

In Proverbs we read: "The borrower is servant to the lender." I shall not vote to lengthen or harden the service.

Mr. Speaker, upon the average, each Representative in this House is the agent and mouthpiece of more than 180,000 American freemen—men, women, and children. How careful he should be to represent them truly and faithfully.

You might liken the people of each district to an army sleeping upon their arms, weary and worn with marching and fighting. The Representative is doing picket duty. He should not sleep at his post. He should not disturb the camp through causeless fright, nor suffer the foe to surprise the sleepers and destroy them in their confusion.

The people have honored the Representative with their confidence; base he must be if he fails to serve and protect them to the best of his ability. His promises to them are sacred. For the "Well done, thou good and faithful servant," coming from one's constituents, there is no equivalent—it is priceless. Let us stand firm for our people though the heavens fall. [Applause.]

Mr. BLAND. I yield thirty minutes to the gentleman from Illinois [Mr. WILLIAMS].

[Mr. WILLIAMS of Illinois withholds his remarks for revision. See Appendix.]

Mr. ALLEN. Mr. Speaker, most of the gentlemen who have addressed the House in this debate have disclaimed being financiers or political economists. Sir, I am both. [Laughter.] But I insist that I am in no way responsible for the present panic and financial trouble. I have kept my money in circulation [laughter], and any person who doubts this has leave to search my stockings for "hoarded" currency. [Laughter.]

Mr. Speaker, I have been studying the money problem for the last forty years. [Laughter.] When, as a child, I first began to observe, one of the problems that claimed my attention and aroused my budding curiosity was, why people would exchange their good candy and cakes, for these were the commodities of commerce I most desired then [laughter], for little pieces of silver that were neither beautiful to look on nor good to eat or wear.

I soon discovered that while the money for which everybody seemed to be struggling and contending was not desired for the intrinsic qualities in the metal of which it was made, but for the function it performed in the affairs of the human race—I found that by law and common consent it had been made the medium of exchange, and the standard by which values were measured and time contracts liquidated; that it was the yardstick by which the transactions of the human race were measured; that men parted with what they had that was desired by others, and gave their labor and made all sorts of sacrifices to get money, not because they wanted a piece of gold or silver, but because they wanted money which would, in turn, buy them such commodities as they desired and pay such debts as they may have contracted.

It is the important function in the affairs of men performed by money that puts every man in competition with every other man to obtain it, and not the material of which it is made. All sorts of things have been made to perform this function in various ages of the world, and, except as a matter of convenience, it makes but little difference of what material it is made, so long as it can be made to perform its high and important function. And, in my judgment, much of the confusion that has grown up on this question arises from the fact that people fail to discriminate between the money function and the commodity value of the material of which money is made.

Take gold, for instance. Who doubts that it is the coining privilege, the money use of that metal, that gives it its commodity value? Who can give any estimate of what gold would be worth per ounce if it were not for its money use? Then, how absurd to say that nothing but gold shall be coined as money unless its commodity value in the dollar shall equal the commodity value in the gold dollar, a value that has been given it by the special coinage privilege that has been conferred upon it and denied to other metals by governmental action.

Advocates of gold have induced the Government to destroy the parity between the commodity value of gold and silver, denying one the privilege accorded the other, and they now insist that silver shall never be coined again, because of the want of parity thus destroyed. They are unwilling to undo the wrong done to silver. Let us put it back where it was prior to the act of 1873, by which it was demonetized, and then see if it will not take care of itself. The gentleman from New York [Mr. HENDRIX], in his speech the other day in favor of gold monometallism, spoke of the friends of silver going around like a lot of "gibbering idiots" worshiping silver.

Did it ever occur to him that a "gibbering idiot" might worship gold as well as silver?

Mr. Speaker, I suppose it will not be denied, that as money is the measure of values, the amount of money in the world regulates the money value of all the property in the world. That is, money being the standard by which all property is valued, and money being the one thing desired and competed for by everybody, it is therefore more essentially affected by supply than anything else. It therefore follows that the destruction of one-half of the money of the world would destroy half the money value of all property.

It is true the property would have the same inherent value that it had before, but it would have but half the money value. In other words, the property is the same, but the supply of money having been cut off one-half, its value or purchasing power is doubled. Under these conditions a man who had contracted to pay a certain sum of money before one-half the supply had been destroyed, would afterward have to pay twice the amount in money or labor that he contemplated when the debt was contracted, or that he would have had to pay had the volume of money remained the same.

Gold and silver have been the metals mainly used for the coinage of money for many centuries. Certain ratios have been fixed under the coinage acts of the various governments using these metals which have not been exactly the same at all places and all times. But the variations were very slight up to the time the leading nations of the world began to discriminate against the one and in favor of the other. The two metals worked well side by side and performed well the functions assigned to them, until certain classes, whose interest it was to make money scarce and high and give it the largest purchasing power, began to conspire to curtail the supply of money and to contend for the use of a single metal as money.

Their attacks were made sometimes on gold and sometimes on silver; but it was always made on the metal that would, on account of the amount produced at the time, diminish the supply most, until they settled down on gold as the money metal and determined to destroy silver, so far as its future coinage was concerned. I will not attempt to go into the history of just how they have done this; but suffice it to say that in 1816 silver was demonetized in England; that is, it was denied the right of coinage, and in this country the same thing was done in 1873, and has now been done in all the leading nations of the world. I will pass over the methods by which it was accomplished in the United States, but I do say wherever it has been done it was in the interest of and at the dictation of a small minority in numbers of the people, and against the interest and over the protest of four-fifths, if not nine-tenths, of the human race. It may be asked how this could be done.

I answer that, while it was a small minority in numbers that accomplished it, it was nevertheless a very powerful force by means of the great influence exercised by the moneyed classes in legislation. They had their lobbies and their agents, who looked well after their interest, and by many questionable means procured their ends, while the great masses of the people were following their avocations, unmindful of what was taking place until after it was done. We all know that there are a great many people who think that only those who have plenty of money are financiers, and that only financiers should be heeded as to what the financial policy of governments should be.

Now, Mr. Speaker, when the people of free America found out what had been done, they took a hand in the matter themselves and demanded restoration of silver to the position it occupied prior to 1873. This demand was stoutly resisted by what is known as the money power, but finally resulted in the partial restoration of silver in 1878 under what was known as the Bland-Allison act. That gave us limited coinage and was passed over the Presidential veto.

The Bland-Allison law was a compromise measure and not sat-

isfactory to either the friends or opponents of silver. The classes to whom I have referred as the opponents of silver were dissatisfied that silver was recognized at all, and the masses were not satisfied because silver was not fully restored and given the same chance as a money metal that gold enjoyed. The gold monometallists began the efforts for the repeal of the law, but were unsuccessful, and in 1890 we found in each end of the Capitol a majority of the representatives of the people in favor of the free and unlimited coinage of silver, and to checkmate them the Republican majority in both branches coerced the silver Republicans into voting for and passed what the last Democratic national convention denounced as the "cowardly makeshift" known as the "Sherman law."

This law was passed by Republican votes—every Democrat in both branches of Congress voting against it. It repealed the Bland-Allison law of 1878 and provided for the purchasing of 4,500,000 ounces of silver per month at its market price and the issuance of Treasury notes for the same, which added to our circulation from forty to fifty millions of dollars a year. Now, we are called together in extra session and we find the country in the midst of one of the most serious financial panics it ever experienced, and we are told that the Sherman law is responsible for it, and that we must repeal that law without accompanying that repeal with any other act save a declaration in the repealing act which, in effect, declares that all the silver and paper money of the Government outstanding, amounting to nearly $1,000,000,000, shall be redeemable in gold at the pleasure of the holder, with only ninety or one hundred millions of dollars of gold in the Treasury to redeem with!

Mr. Speaker, I will not vote for the unconditional repeal of the Sherman law [applause], and especially for the bill known as the Wilson bill.

I never favored the Sherman law. I voted against it, and standing right where I now stand, I spoke against it at the time of its passage. I did not like it then and I do not like it now, but, sir, it is the only law on our statute books providing for any increase in the volume of our currency, and to remove that without substituting anything in its place would, in my opinion, put us very much in the condition of the negro's cow. I saw a letter here some time ago, written to some friends of mine by the negro man who was left in charge of the home in Mississippi, and among other things he said:

> The cow have been very sick; I give her some medicine, and she are now well of the disease, but I think she will die of the remedy.

[Laughter.]

Mr. Speaker, I am as anxious as any member on this floor to cure the country of the disease, but I do not intend to vote for a remedy that will be worse than the disease itself.

Mr. Speaker, I am no defender of or apologist for the Sherman law. The Republicans who passed it over our protest have abandoned it, and I am not going to the rescue of their bastard offspring. I never favored the purchase and storage of silver bullion and I do not favor it now. I favor silver money, but, sir, I do not believe for a moment that the Sherman law or our silver money is responsible for the distressing financial condition with which we are confronted.

I have not the time to give in detail the causes which have, in my opinion, brought us to this condition, but this depression is worldwide and is affecting the people of all nations, more or less where the Sherman law can have no effect. Besides this, in this country we have been living for many years in the midst of great governmental and individual extravagance. People have overtraded themselves, and pay-day has come. In my judgment one of the most potent causes of this trouble lies in a fact that has been stated here by almost every advocate of monometallism who has spoken in this debate, that is, that 95 per cent of the business of the country is done by checks, drafts, and credits, and they argue that for that reason we do not need much money.

I admit the fact that 95 per cent, or maybe more, of our business transactions are done with drafts, checks, credits, and clearing-house certificates; but I do say that that is a condition which intensifies rather than mitigates such conditions as confront us now. Our whole financial machinery is overloaded with credit. It is top-heavy, and whenever there comes the least distrust, panic and financial disaster is the logical consequence of our present system.

Let me illustrate: At the beginning of this trouble the national, State, and savings banks in this country owed about $5,000,000,000, and they had in their vaults about $500,000,000; about 10 per cent of their liabilities. I can not imagine a condition more fraught with danger of financial disaster. It is well enough while everything moves on smoothly and everybody has confidence and the people are willing to let the banks keep their money and lend it to others; but the very moment distrust sets in, the banks begin to gather in all the money they can get to meet runs made on them by their depositors; distrust widens as money grows scarcer, and people who have money on deposit get uneasy lest the banks will not have it, and they begin to call for their own and lock it up or hide it; and the consequence is that the larger the proportion of credits to the amount of actual money the greater the danger of financial disaster.

When the confidence that supplied the difference between the $500,000,000 and the $5,000,000,000 is shaken, panic and ruin is the necessary result; and this, although used as an argument by those who claim we have more money than is necessary, is, in my opinion, one of the strongest points against their contention. I have tried this scheme of doing 95 per cent of my business on a credit basis [laughter and applause]; but, Mr. Speaker, it does not work well, for now my creditors are clamorous for me to do something to restore confidence. [Great laughter.]

We are told by the advocates of repeal that the cause of this panic is the distrust of our money on account of the purchase and use of silver.

It does seem to me that if there ever was a contention, the untruth of which is clearly demonstrated by the facts, this is one. The very money you say the people are afraid of is the very money they are hoarding. If they thought it bad money they would be getting rid of it instead of hoarding it. The very money they say the people are afraid of is at a premium to-day over gold. No; it is not a want of confidence in the money that is making the trouble; but it is the fear the people have that they can not get their money when they want it that is making the trouble.

In my opinion the opponents of silver, in their anxiety to have the Sherman law unconditionally repealed, have manufactured this panic. I do not charge that all of them intended it, or that any of them intended to make it as bad as it is, but I do believe that, by their predictions of the evils that were coming and their advertisement of the drainage of gold, and the manipulation of some of them of the shipment of gold abroad, in the hope of forcing the repeal of the Sherman law and the sale of gold bonds, they have been the chief factors in destroying public confidence in the financial condition of the country.

They have started a panic they can not control, and now they are appealing to us to take such action as they say will restore confidence and induce the people to put their money back into the banks that they may lend it out at a larger rate of interest than ever. I am squarely at issue with those gentlemen. Several of them who have spoken on the other side of this question have contended that the cause of the trouble is we have got too much money.

There may be too much for those who have money and fixed incomes and money obligations due them, but not for nine-tenths of the people. I also am at issue with those who claim that we have even a sufficient supply of money. I would be willing to-day to submit that question to the voters of this country, feeling assured that at least three-fourths of them would vote with me in favor of an increase of our money circulation. I do not agree with my friend and colleague [Mr. CATCHINGS], who in his very able speech against silver the other day contended that our people in the South were, of all others, least interested in a larger volume of currency. He argued that even a contraction of the currency only affected people who owed long-time debts, and that what indebtedness there was due by our Southern people was on contracts of only a few months duration.

My notion is that the people of my State are largely debtors, and that these debts are made up of balances that have gone over from year to year for many years back, and that the increased value of money, as compared with the value or prices to be obtained for their products or their property is so great that it is almost impossible for a person to make money to pay debts with. If he will go to the records in our counties and see the large number of mortgages given to foreign money lenders, when they would not advance more than two-thirds or one-half the supposed value of the lands when the money was loaned, he will find that many of them have been foreclosed and that many others are ready to be foreclosed, and that the lands will not now pay the mortgage debt. He will then see how appreciating money is serving our people.

He is also mistaken in supposing that our people do not need or want much money in their business transactions. The man he spoke of, who carried his cotton to town and sold it to one man and got an order with which he paid a debt, or got meat from another, is not satisfied with that system. Our farmers who raise cotton like to handle the actual cash, even if they have to put it out. It makes them feel better and richer and restores confidence with them to have money, even temporarily. I have heard gentlemen in this debate talk much of the evils of an inflated currency, but I believe that more of wrong and misery and ruin and cruel oppression has resulted from the contraction

of the supply of money than from any other cause, and I believe the history of the world will bear me out in this statement.

What can be worse than a declining scale of prices? It drives people out of business, causes bankruptcy, checks enterprise, unsettles and destroys confidence, and either brings the world to a standstill or turns it back in the march of progress. I have heard a great deal said here about an "honest dollar." It is a great "fad" here for gentlemen to proclaim their devotion to an honest dollar. I do not know when I have ever witnessed such an exhibition of verbal honesty. [Laughter.] They are very solicitous about an honest dollar for the creditor, but I do not hear much about it for the debtor. If a man owes a debt that he can pay in silver or gold you come along and take away from him the right to pay it in silver by robbing silver of its place as a coin metal and force him to pay it in gold, which is made dear and harder to get by this action, and do this in the name of an honest dollar.

What a mockery! I am no advocate of anything dishonest, but if legislation is to help one or the other, or one class at the expense of the other, is it not better that the weaker, the debtor class, should have the benefit of the legislation? I am, at least, unwilling to restrain all progress for fear some one will have an easier time in paying his obligations than those he owed desired. My information is that the nation that is suffering the least to-day from the depression of the times is France, which country has the largest per capita circulation of money of any country in the world, and the largest amount of silver money as compared with any other country.

With but little more than half the population of the United States, with not one-tenth the ore and nothing like the facility for absorbing money that we have, they have twice as much money as we have and twice as much silver. I am a believer in a much larger circulating medium than we have, and I want to warn gentlemen here to-day that in my judgment the people are going to have it. They are willing to take it now in silver, but if you deprive them of silver and attempt to hold them down to monometallism and the gold standard you may look out for the Greenbackers, who have been so much derided by some of the speakers in this debate. And I say now that I prefer an inflation with greenback paper money to a contraction of the currency. I am not an advocate of silver for silver's sake, but I am contending for more money than the gold standard will give, and I do not think the free coinage of silver would give us too much—at least not for a long time—and then when we get enough we can quit.

Silver and gold have been so long money metals and they have not afforded more money than the world needs in my opinion.

The difficulty of procuring them is a good safeguard against the business being overdone; but if those who are wanting us confined to gold succeed now, in my judgment the people who have been forced to do without silver will after awhile conclude to do without metallic money. We are told we must have a dollar good in every part of the world. Now, Mr. Speaker, I never needed a dollar outside of the United States in my life, and I think most of our people are in the same condition. We do not propose to be externally impoverished in our money supply in order to accommodate people who want a dollar good somewhere else.

I am a great believer in our own country. This lovely land of ours, so boundless in its resources, so salubrious in its climate, so benign in its government, so incalculable in its strength, so matchless in its people—all in all it is the pride and glory of its own people, and the envy and admiration of the rest of the world. With this view of our own America, how humiliating it is to hear it argued here that we are dependent on other nations for a financial system that will make our people independent of the sordid policy of England.

We do not expect to terminate all relations with the outside world by regulating our own financial system. We will have many things they will want and must have; we will send them our wheat, cotton, corn, meat, and other products in exchange for what we get from them if they will not take our money; and I want to dissent right here from the position so much contended for here, that we must so shape our legislation as to attract to our shores foreign money.

Mr. Speaker, I have given the subject much consideration, and my judgment is that people are better off who do business on their own capital. If foreign money comes here it comes to earn dividends and interest, and in times like these it runs away and aggravates our trouble at the very time we need it most.

I want plenty of American money for Americans. [Applause.] Why is it that England insists on the single gold standard? Now, is it because England is the creditor nation of the world, and she desires just what creditor classes generally desire—a dearer money returned than she let out? Mr. Gladstone in a speech of few months ago, speaking of the international monetary conference at Brussels, made use of the following language:

> Why continue the conference? What necessity is there for England to send any more commissioners? We do not intend to have anything but the gold standard: we are the creditor people of the world, and we want money to have the highest purchasing capacity, the largest quantity of which can be put in the smallest bulk.

This states the whole case in a nutshell. Now, the trouble with us is that New York and the East occupy to us just the same position England occupies to the rest of the world. They constitute the creditor classes in this country, and they are interested just as Mr. Gladstone said England was, and want money to have the highest purchasing and smallest debt-paying power. I have had some requests from boards of trade and other commercial bodies to vote for the unconditional repeal of the Sherman bill, but I prefer to respond to what I believe to be the interest and wishes of the great body of the people who sent me here to represent them. I came here determined to give my vote for every practical measure that was offered me for increasing the currency.

I will vote, when I have a chance, for the repeal of the 10 per cent tax on State banks. I will vote for the free coinage of silver at the ratio of 16 to 1, and for every other measure looking to an increase of the currency except that of giving increased facilities to national banks. I have never fought national banks. I expected when I came here to vote for a liberal policy towards them, but I have become convinced that they are a dangerous power in this land and that they have determined to control the finances and financial policy of this country in their own interest, and I am against them, and I propose to fight them. If I had the time I could give many good reasons why I have arrived at this conclusion. I believe it is a power the people must destroy or it will destroy the people.

I think most of the great metropolitan papers are in their pay, and I see many other signs of their corrupting power. I want to give you an additional reason why some of the people who are urging this repeal should not be gratified. It just proves what I have said about the methods resorted to for the destruction of silver. Now, this is the honest confession of Mr. WALKER, who is a leading Republican light on finance, in his speech for repeal on the floor of this House the other day. He said:

> That the purchase clause of the silver law of July 14, 1890, is a menace to the best economic conditions of our people and ought to be at once repealed is practically unanimously agreed to by all. None see its uneconomic provisions or are more earnest to wipe them from the statute books than those who framed it. They see them now no more clearly than they did on the day they framed it and secured its passage.

Gentlemen, that is an awful acknowledgment by the gentleman from Massachusetts and a terrible arraignment of the Republican party. I have said a good many hard things about the party, but I never said anything that was as hard as that. I never said that they foresaw this ruin that has now overtaken us, that has prostrated every industry of the country, in order to get rid of silver. He gives the reason for its enactment. He goes on to say:

> It was framed and passed to repeal the far worse Bland-Allison act of 1878, and to break up and defeat the free-coinage forces of 1890; to be itself destroyed, after having done its work, which is already accomplished. It now stands as the last fortress of error, in which are massed all the forces of unsound financial theories. When its walls are leveled to the ground the enemies of sound money, who were skillfully allured within its walls in 1890, will be dispersed, never again to win another strategic position.

There, Mr. Speaker, is the opinion of the gentleman from Massachusetts. The gentleman from Maine [Mr. REED] spoke to-day in much more bitter and severer language than I am able to command of finesse in legislation by which the people are unduly deprived of something that they esteem as worth something to them. But here one of the framers, promoters, and advocates of the Sherman law says it was—

> framed and passed to repeal the far worse Bland-Allison act of 1878, and to break up and defeat the free-coinage forces of 1890.

In other words, the walls that protected silver were to be torn down and the friends of silver will never again obtain a strategic position in this country.

Gentlemen, there is a great deal of truth in it, and I admire the candor of the gentleman who has the manhood to come up here and tell how it was done. Those of you who think it is your duty to help them tear down the walls upon us go with them; but I tell you, gentlemen, for one I am not willing to do it. [Applause.] I am a rebel by nature against oppression and wrong. [Applause.] I do not propose to be driven or bullied into doing that which, in my humble judgment, is a bad thing for the great mass of people who have sent me here as their representative.

Mr. Speaker, I have made many speeches against the financial policy of the Republican party. I have made a great impression on my audience when I have denounced their policies and practices. [Laughter.] I know of many of my Democratic friends over here who have achieved some of their

greatest victories in denouncing in thunder tones the "deep damnation" of the "taking off" of silver by the Republican party. I did the same thing, but I meant and believed in what I said. Now, I find some of the loudest-mouthed Democratic orators—some who always supposed they were real and devoted friends of silver—making speeches here, the only logic of which is that the best the Republicans could have done and the only wise thing they could do was to demonetize silver; and if I occupied the position of a good many of my friends over here on this side of the House, I should get up now and make an apology to the Republican party for having denounced it. [Laughter.]

There is a story that I once told in this House, but as the personnel of the House has changed a good deal since then, and as the story seems very appropriate to this occasion, I may venture to tell it again for the benefit of some of my friends here who are in such thorough accord with the Republican financial policies now, although they have secured their own election and the success of their party by denouncing those policies in the past. Two of my constituents were candidates for the office of county treasurer of Alcorn County. One of them had held the office for two terms and the other was running against him in opposition to the third term. This man who was running for the office the first time followed his competitor all over that county denouncing the proposition to elect a man to office for a third term.

The people indorsed him and he was elected in opposition to the third-term candidate. He held the office himself for two terms and the election was approaching. The time was coming when he must get out of office himself or go back on the platform upon which he had been elected. The situation was serious. [Laughter.] He came to town one morning and said, "Boys, have any of you seen anything of Beech Mitchell?" Beech Mitchell was the man whom he had beaten. They told him that Beech was in town. "Well," said he, "I want to see him; I feel that I owe him an apology. [Laughter.] Four years ago I ran against him for the office of treasurer in this county and I beat him on the third-term issue. I had heard this talk about Grant and the third term and I thought the third-term principle was all wrong. At that time I had never reflected very much about the question, but since that time I have thought about it a good deal, and when you come to apply that principle to the office of county treasurer there is not a thing in the world in it, and I thank God I have the manhood when I see I am wrong to acknowledge it." [Great laughter.]

And now, my friends, those of you who received compliments from the distinguished gentleman from Maine [Mr. REED] to-day, and those who have been lauded for bravery and acumen in this debate, everyone of you who has been going around the country denouncing the Republican party for its financial policy and the ruin and the wreck it wrought on the country by its policies all the time, you ought like my friend, when you find you are wrong, have the courage to get up here and say you apologize humbly to the Republican party. [Laughter and applause.] Mr. Speaker, I never believed I was wrong, and I do not believe it yet.

We have heard a great deal of oral bimetallism from the anti-silver men in this debate. They are going to kill silver to get bimetallism. When I see these gentlemen who say that they are advocates of bimetallism traveling along the same road with men who admit that they are advocates of monometallism, I can not help but believe that somebody is on the wrong road, and I think that the friends of monometallism know just where they are going.

But we are told, Mr. Speaker, that we are going very wrong about this matter because the President of the United States has marked out a different programme for us, and the gentlemen who occupy a position antagonistic to the one I occupy to-day are set down now as the friends of the Administration. Why, Mr. Speaker, I would have to retract a great deal more than any of these gentlemen who have retracted their views on silver, if I were not a friend of the Administration. Why, I helped to make the Administration. [Laughter.] I have made more speeches and more good speeches [laughter] and bragged more on the Administration! [Laughter.] Why, in a private conversation between my friend PATTERSON and myself last winter, after the election, it was mutually conceded by both of us that we had done more to bring about his election than any other two men in the country. [Laughter.]

Why, we are getting into a pretty position here, if these gentlemen's ideas are correct—if the men who favor the repeal are the only friends of the Administration. Just think of it! The gentleman from Maine [Mr. REED] and the gentleman from Iowa [Mr. HENDERSON] and the gentleman from Michigan [Mr. BURROWS] the friends of the Administration, and all of us fellows kept out in the cold! [Laughter.] Why, gentlemen, do you know what it is that gave President Cleveland such a hold upon the affections of the American people? It was the fact that he had backbone and the courage of his convictions. [Applause.] I would like to know what sort of an estimate he puts upon gentlemen here in the House who can give no other reason for their change of front than that the Administration wants it. [Laughter and applause.]

Mr. Speaker, a conversation I had with the President one time, in one of our long, pleasant interviews [laughter], when he said to me that the Democrats were not like the Republicans; that they could not be controlled and hurled as a mass, but that the Democrats were men of independent thought, and that was what made a great party. [Loud applause.]

Why, gentlemen talk about breaking up, by reason of my exercising my convictions, the long-standing intimacy between the President and myself. You can not do it. [Great laughter.]

My good friend from New York [Mr. CUMMINGS] got a little off the other day and gave some of the Southern Democrats a little lecture about having put Grover Cleveland on them, and now "we must take our medicine." We put him on you as President, and then we elected ourselves here as members of Congress. [Applause and loud laughter.] I think, Mr. Speaker, that we had better have another bill or two introduced here—one to restore a parity between the executive and legislative branches of the Government [great laughter and applause], and then another to restore a parity of backbone to some great men. [Laughter.] No, sir; I know that I could pay the President no greater compliment than to imitate him by doing, in my official capacity here as a Representative of a district in Mississippi, just what the dictates of my conscience direct me to do. I know, I am sure, that will meet his approval, and if it would not, gentlemen, I would have to take back many thousands of the good things I have said about him. [Laughter and applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. ALLEN. What a pity I have not an hour longer. [Great laughter.]

[Mr. COCKRAN withholds his remarks for revision. See Appendix.]

Mr. BLAND. Mr. Speaker, the gentleman from New York, whose financial theories evidently emanated from the manipulations of the Stock Exchange and in the dismal retreats of Wall street, if he had only come to that great country, come there whence he tells us the agricultural products are shipped abroad for the purpose of bringing to this country the gold to sustain the public credit—if he would go with me and hear the people discussing these financial questions he would readily understand why it is that the gentleman from New York and myself so radically differ.

Mr. Speaker, it is true, as the gentleman stated, that it is the product of the soil of this country to which the financiers of this country look for the purpose of bringing back the hoarded gold of Europe, so as to maintain our present financial system, a system under which the gentleman failed to tell us the difficulties the farmers labor under in performing this patriotic service. He did not tell us, Mr. Speaker, that by the financial policy of this Government and that of England and Germany, there has been a "corner" upon gold. And when I speak of that, Mr. Speaker, I do so not only as a Representative on this floor, but from the best opinion of financiers the world over, that the legislation of this country, England, and Germany has made a practical "corner" upon the gold of the world.

As gold is forced up all else is forced down.

The farmer—who has to maintain public credit with wheat at 40 or 50 cents a bushel, with cotton and all exports forced down in like proportion—the farmer cries aloud against your gold standard being put upon his neck.

And as long as gold, by means of the legislation of this and other countries, is cornered by the financial institutions of this country they are in a position to exact from the farmers of the South and the West their own price for this cornered gold.

The gentleman from New York [Mr. COCKRAN] speaks of bimetallism as if it had never been maintained in any country, and if dogmatic statements enforced by physical vigor in this House amount to an argument, I must accord to the gentleman from New York the credit of having made an able argument on that question. But all of his dogmatic statements are in the face of history and of truth. We have stated upon this floor, sir, that France maintained a bimetallic standard for over seventy years. That is a matter of public history and all the authorities upon this subject, and especially all bimetallists and all who desire the restoration of silver, admit that there was no difficulty in keeping an equality between gold and silver coin until that bimetallic system of France was dislocated and coinage suspended.

When was it that we had a gold and silver question in this country, and when did such a question arise in other countries? Not until France suspended the coinage of silver had we any silver question here at all. The only object of all your mone-

tary commissions has been to do what? To restore silver to where it was before the free coinage of silver in France was suspended. In all our history, Mr. Speaker, gold and silver circulated throughout the world at a practical parity ever since the establishment of the French ratio, and in all our history since that time silver the world over has maintained practically the price at the French mint regulating the difference between gold and silver.

The gentleman cites some authorities here, for temporary use, to show that gold at one time in some particular quarter of the world was a little above the par of silver at the French mint, or *vice versa*, just such instances as we have seen in our own country since this panic began where the gold dollar and the silver dollar and the greenback dollar have all been at a premium. Such instances do not disprove the general proposition. The gentleman had the hardihood to challenge me to show where any country with the bimetallic standard had gold and silver in circulation.

Why, Mr. Speaker, I have here Atkinson on Bimetallism in Europe. He is supposed to be a gold-standard advocate, yet he gives the coinages at the French mint beginning with the years 1851 and to 1850, and we find that in 1851 France coined of gold, in round numbers, 269,000,000 francs, and 59,000,000 of silver for legal tender; in 1852, 27,000,000 of gold and 71,000,000 of silver. in 1853, 312,000,000 of gold and 20,000.000 of silver; and, coming down to 1870 France coined 55,000,000 of gold and 53,000,000 of silver, and in 1871, 50,000,000 of gold and 4,0 0,000 of silver.

This record does not go back beyond 1851, but down to the time when France suspended the coinage of silver we find that both gold and silver were coined at the French mint at the ratio of 15½ to 1. Now, what about the ratios? They were, in 1851, 15.35; in 1852, 15.42, and, taking the whole period from 1852 to 1871, they range along about 15½.

Now, Mr. Speaker, in confirmation of the statement that France was enabled to coin the two metals freely at the ratio fixed at the mint, I will have read again a statement which I had read in this House some days ago.

The Clerk read as follows:

Nor does it appear to us *a priori* unreasonable to believe that the existence in the Latin Union of a bimetallic system with the ratio of 15½ fixed between the two metals, should have been capable of keeping the market price of silver steady at approximately that ratio.

The view that it could affect the market price to the extent to which there was a demand for it for currency purposes in the Latin Union, or to which it was actually taken to the mints of this country is, we think, faultless.

The fact that the owner of silver could, in the last resort, take it to the mints and have it converted into coin which would purchase commodities at the ratio of 15½ silver to 1 of gold would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point.

Mr. BLAND. Mr. Speaker, as I stated in my former remarks in this House, that proposition was advanced by the six gold monometallists of Great Britain in the royal commission of 1888. While dissenting as to the propriety of England adopting bimetallism, proposed by the other six, who were bimetallists, they agreed that France did maintain the fixed relation at 15½ practically the world over by coining both gold and silver at that ratio: upon the principle that France being a nation of sufficient wealth, all her wealth was offered to the markets of the world for gold and silver—silver at 15½ to gold at 1—and that no matter where in the world the silver was it could be brought to the French mints and coined and exchanged for French commodities at that ratio; that no matter in what quarter of the globe the holder had his silver, he could dispose of it at the value fixed by the French mints, less the cost of transportation.

And, Mr. Speaker, the small differences between gold and silver which appeared in the gentleman's statistics, in some localities, is accounted for by the cost of transportation or exchange. So that when the gentleman challenges me on this floor to produce an instance in all history where any nation has maintained the bimetallic standard, I produce it here: I show the proof; and if all the propositions and statistics of the gentleman are as fallacious as this, his whole argument falls to the ground. I have accepted the gentleman's challenge, and I dare him, if he is present, to contradict what I say. I believe, however, he has fled from the field and I suppose given up his argument, especially on this question.

Now, Mr. Speaker, I propose to discuss for a moment the propositions immediately under consideration, as presented in the bill offered by the gentleman from West Virginia. I suppose every member has read it and it is not necessary for me to have it read now. It does not propose the repeal of the Sherman law. And when we are appealed to on this side of the House to support the proposition, upon the declaration that it is in conformity to our platform, I reply no; the platform demanded the repeal of the Sherman law, not simply of the purchasing clause.

This bill, instead of repealing the Sherman law, proposes to leave that law standing—all except that part requiring the purchase of silver bullion. And what part is to be left standing? That portion of the Sherman law which gives to the Secretary of the Treasury the authority to redeem the notes issued in purchase of this bullion in gold at his discretion, "it being," according to the language of the Sherman law, "the established policy of the Government to keep the two metals at a parity." I heard it stated on the floor during this debate—I heard it said to-day by the gentleman from Alabama [Mr. CLARKE]—that I had denounced the Sherman law on this floor as the "murder of silver." And why did I so denounce it? Because, as I pointed out at the time, the notes issued for the purchase of silver bullion would not be redeemed in standard silver dollars, but in gold, so that we would no longer have a paper dollar redeemed with a dollar coined from the bullion, but the strain of redemption would be placed upon gold alone.

And this very objection which the Democrats in this House made to the Sherman law—the very objection which I made to the measure when I first met it in conference—that the notes would, by hostile administrative construction be redeemed not in the dollars coined from the bullion but in gold, this fundamental objection applies to the law as it stands unrepealed to-day. More than that, Mr. Speaker; the Wilson bill goes still further; it not only leaves this portion of the Sherman law in full operation and effect, but in the closing paragraph it declares that all the silver dollars and certificates—I believe all the different certificates issued by the Government—must be redeemed in gold. That is what it means, if it means anything. So that in a declaration which is to accompany this repeal of the purchasing clause of the Sherman law we are asked to go further and declare by a new enactment to be placed upon the statute book that all the silver in this country and everything issued upon it must be redeemed in gold. And yet gentlemen say that this bill is a measure to repeal the Sherman law.

If we can place upon that bill an amendment providing for the free coinage of silver and the issuing of silver certificates, as the bill offered by myself proposes, we shall render nugatory the Sherman law and that portion of this bill which provides for gold redemption, because the silver certificates issued in pursuance of the law of 1878 and the certificates which will be issued under the bill which I have offered will be issued upon the silver dollar, will be redeemable in silver dollars, and gold will have nothing to do with them.

The first proposition, Mr. Speaker, is to coin the standard silver dollar at the ratio of 16 to 1. That will be the first proposition voted upon when we come here next Monday. It provides for continuing the coinage of the standard silver dollar of 412½ grains of standard silver, which is to be a legal tender for all debts, public and private, and on which silver certificates may be issued redeemable in silver dollars and receivable for all public debts and dues. Should the ratio of 16 to 1 fail, then the ratios of 17 to 1, 18 to 1, 19 to 1, and 20 to 1 are to be voted upon successively.

Upon the question of the ratio I am in favor of coining at the present ratio, because all the money of the world in circulation to-day in countries having gold and silver coinage, as in the Latin Union, is at the ratio of about 15½ to 1. Here $3,000,000,000 of silver money is in circulation to-day at about that ratio. In adjusting the ratio, while it might be proper under other conditions and circumstances to take into consideration the difference in the bullion value of the two metals, yet in the present condition of things, when all admit that it is hostile legislation which has caused the divergence between the two metals, and when it is thoroughly understood that the ratio of the world is about 15½ to 1, I see no reason whatever for changing our ratio.

Taking the production of gold and silver for the last one hundred years (I have statistics which I will print with my remarks), we find what state of facts? That at the ratio of 15½ to 1 there has been a uniform production during the last hundred years of about the same amount of silver and the same amount of gold—something over $5,000,000,000 of gold and $5,000,000,000 of silver, amounting to over $10,000,000,000 altogether since 1792. Thus we see that the ratio of production for one hundred years has been about 15½ to 1, corresponding with the ratio of coinage in the different countries of the world and the ratio in which gold and silver are in circulation. And, what is more to the point in this discussion, we find that notwithstanding for the last hundred years there has been a production of over $10,000,000,000 of gold and silver, yet one-third of that amount has gone into use in the arts.

We have only about $7,000,000,000 of the two metals in circulation, and there have been over $3,000,000,000 that have gone into other uses. It is claimed to-day by authorities most accepted in this country that the production of gold, the annual output and

considerably more of it, is going into the arts year by year, and that nothing will be left to replenish the circulating medium.

Now, sir, we have some remarkable statistics given and which have been furnished in this discussion. In the first place the Secretary of the Treasury in a statement published in the newspapers a short time before the convening of Congress, as an argument why the Sherman law should be repealed, insists that we, by the purchase of silver bullion, had lost about $10,000,000. We have a statement here from the Secretary of the Treasury, in answer to a resolution of inquiry of the House of August 19, 1893, requesting the Secretary of the Treasury to furnish the House with the amount of bullion purchased and the other matters relating to it. The Secretary says:

The number of ounces of silver bullion purchased under the act of July 14, 1890, from August 13, 1890, to August 16, 1893, inclusive, was 161,521,000 fine ounces, costing $151,669,000.

The highest price paid was 120⅛ cents per ounce, August 20, 1890, and the lowest price was on the 4th day of July, 1893, as shown by this statement of the Secretary. Now, the amount of bullion purchased was 161,000,000 of fine ounces in round numbers, costing $150,000,000 in Treasury notes. One hundred and sixty-one millions of fine ounces of silver will coin $208,362,090. The cost is $150,115,985. So that there has been a gain upon the coinage value of $58,000,000 to the Government of the United States instead of a loss of $10,000,000, as contended for by the Secretary of the Treasury.

Now, Mr. Speaker, when the Secretary of the Treasury undertakes to discourage the idea of coining at the ratio of 20 to 1 he insists that it will occasion a loss to the Government of about $77,000,000 in the recoinage of the standard dollar, and about $17,000,000 in the recoinage of the subsidiary coins. How is that loss arrived at? By the purchase of new bullion. It seems to me, sir, that it is a poor rule that does not work both ways. If the Government to-day will lose $77,000,000 by recoining the standard silver dollar, how can the Secretary of the Treasury contend that the Government has lost $10,000,000 in purchasing bullion which if coined into dollars would show a gain of $58,000,000 to the Government and people?

But the bill proposes a change of ratio from 16 to 1 to 17, or 18, or 19, or 20 to 1, and does not propose to recoin the standard silver dollar. There is no necessity for the recoinage of the standard silver dollar in any event. Nor will the standard silver dollar be disturbed by an amendment to be offered to that bill. The first proposition is to coin freely the standard silver dollar of 412½ grains, and in the bill it is denominated the standard silver dollar. But when we depart from the standard silver dollar and change the ratio, then the amendment does not propose to coin a standard silver dollar, but simply to coin a dollar, regarding it as merely a tentative and temporary proposition.

It is to coin a silver dollar at the ratio that may be fixed on, and not the standard dollar. That, I repeat, is not disturbed by any amendment. That is left just where it is, with the standard silver dollar at the old ratio and the old dollar. They are in circulation to-day at par, and if we coin the silver at a new ratio of 20 to 1, then the standard silver dollar will still circulate at par. It will not be exported. It will remain to do duty for domestic purposes. If we coin at 20 to 1 and, as we contend, restore the parity between silver and gold bullion, wherever there is a call for the export of silver the 20 to 1 dollar will be exported and the standard dollar will remain. The 20 to 1 will be exported at the value given to it, however, by our mints, and not at the value that speculators in bullion may put upon it in the London market or in other markets.

There are two hostile forces on this floor in all this money question. It is not confined alone to the silver question, and gentlemen must sooner or later array themselves on one side or the other. What are the propositions to be submitted for the issuing of money by the people of this country? The free coinage of silver at any ratio fixes the amount that the people of the country shall issue from their own mints, their own money, and not to be issued by banking institutions. Now, so far as the Sherman bill is concerned, that does issue money to the people, not farming it out to the banks; it issues the Treasury note, it issues the greenback; and what harm does the silver do in the Treasury, I would ask?

When we come down to the real proposition, the merits of the question, while the Sherman law is not in conformity with bimetallism, and looks to a gold redemption—not being in any sense of the word a good silver law—yet it issues greenbacks to the extent of $40,000,000 or $50,000,000 and puts them in circulation, and every ounce of bullion purchased and put into the Treasury, whether it be worth 60 or 70 cents an ounce, is that much wealth and property to stand behind the greenback in the place of gold if the silver is coined. There is no loss about it.

And we hear that this legislation is to be followed by something else. The gentleman from New York [Mr. COCKRAN], who completed his magnificent refutations of the facts of history by appealing in his peroration to us about the glories of the nation and all that, has gone off, I suppose, to receive the congratulations of his friends; but I want him if he is here within the sound of my voice to hear this statement, that I will prove, that these theories which he announces and the system he advocates will be voted against by himself before he is many days or years older. He has contended that we have a redundancy of currency, and hence we ought to repeal the Sherman law.

The theory of the gentleman is based on the assumption that the circulating medium of the country has outgrown the demands of trade and commerce and has become redundant, and not that our disturbed financial situation caused the panic which we have to-day. And yet if the gentleman votes against the issuing of greenbacks or legal-tender notes, he will vote, in my opinion—watch the record—to give to the national banks the power to issue circulating notes to the full value of their bonds, which will put in circulation immediately something like $200,000,000; that, Mr. Speaker, he will advocate a policy looking to the further issuing of bonds, taking the tax off of the circulation of national banks and making it easy by that system to issue money almost without limit. He will vote to take from the masses of the people of this country the right to issue their own money of their own Government and turn it over to the monopolists of Wall street and Lombard street. There is no consistency in his argument. None whatever.

So, Mr. Speaker, we have these two systems to meet. It has been a fight in this House ever since the currency question has been up for consideration, ever since 1878. The proposition has been, Shall the people, by the Government, command the issuing of the money themselves, and issue it from the mints and the Treasury, or will the whole power of the Government in that regard be surrendered to banking corporations and individuals?

I claim to represent that part of the Democratic party, and I believe it is a large majority, that agree with the opinions of Jackson and Benton that the Government should issue its own money and should never farm it out to the banks. That has been Democracy ever since I knew what Democracy meant. There is an admission on all hands that there must be more money put in circulation. Schemes are devised for this purpose, and all who propose to demonetize silver insist on national-bank issues; to farm out to banking corporations the right to issue the money of the people, to take it from the people and the people's Government and the people's representatives and confide it to men or corporations, who, for the purpose of extorting this legislation from Congress, have locked up the money of the people, and they are now locking it up and telling us in so many words they will not let it out unless they get what they want from Congress. I desire to have read in this connection the following editorial taken from a recent issue of New York Evening Post.

We hear a great many reports from Washington to the effect that the Senate is firm against any repeal of the silver-purchase law. We advise the public to attach little importance to the state of mind which prevails at the present moment in the Senate or among the Senators' constituents. The medicine of the silver crisis is still working and the pangs which it produces will become more acute as time goes on. One calamity will come thundering after another until the only possible remedy is applied. Banks will fail, railroads will default, manufactories will close, workingmen will lose their situations, there will be a shortage of money for crop-moving, affairs will grow steadily worse, until the mind cure is effected. Senators may roar against capitalists till the crack of doom without opening the pocketbook of one of them. In fact, the louder they roar the tighter will those pocketbooks be closed. Nor will the time ever again come when money can be obtained with the customary ease so long as that silver law stands unrepealed. Hence we repeat that the frame of mind that the Senate may be in at the present time is no index of what it may be two weeks hence. There is dynamite enough in the financial situation to burst the Senate and both political parties.

Now, Mr. Speaker, that purports to have been taken from the New York Evening Post, a paper which we all know is a gold advocate, and printed in a reputable newspaper in St. Louis—the Republic; and the extract, as quoted, advises the banking interests of this country to do what to-day in my country is thought robbery—"Your money or your life." "You must give to me the power to issue money and stop the issuing of silver or any money of the Government, or I will throttle your industries."

Mr. Speaker, I can only reply to a proposition of that character as was replied once by a Missourian, more distinguished than any citizen since that time. I ask the Clerk to read.

The Clerk read as follows:

Mr. B. addressed himself to the West—the great, the generous, the brave, the patriotic, the devoted West. It was the selected field of battle. There the combined forces, the national republicans, and the national republican bank were to work together and fight together. The holy allies understand each other. They are able to speak in each other's names, and to promise and threaten in each other's behalf. For this campaign the bank created its debt of thirty millions in the West; in this campaign the associate leaders use that debt for their own purposes. Vote for Jackson! and suits,

judgments, and executions shall sweep, like the besom of destruction, throughout the vast region of the West! Vote against him! and indefinite indulgence is basely promised! The debt itself, it is pretended, will, perhaps, be forgiven; or, at all events, hardly ever collected. Thus, an open bribe of thirty millions is virtually offered to the West; and, lest the seductions of the bribe may not be sufficient on one hand, the terrors of destruction are brandished on the other! "Wretched, infatuated men!" cried Mr. B., "do you think the West is to be bought? Little do they know of the generous sons of that magnificent region! Poor, indeed, in point of money, but rich in all the treasures of the heart. Rich in all the qualities of freemen and republicans! Rich in all the noble feelings which look with equal scorn upon a bribe or threat. The hunter of the West, with moccasins on his feet and hunting shirt drawn around him, would repel with indignation the highest bribe that the bank could offer him. The wretch," said Mr. Benton with a significant gesture, "who dared to offer it, would expiate the insult with his blood!"

Mr. BLAND. Mr. Speaker, that is from Mr. Benton's Thirty Years' View, as uttered by him in the United States Senate in the great contest between the Democratic party and the national-banking interests in those days, where he says that the national banks at that time had loaned money in the West. They had at that time, as they have to-day, money loaned throughout the whole West. They were seeking a reëstablishment of the bank charter, and in order to defeat the election of Gen. Jackson, who was opposed to the banks, according to the statement of Benton, they had unblushingly promised the West to furnish them with money in case they voted against Jackson, and would bankrupt them if they voted for him.

Now, here are the banking institutions of this country positively locking up the money of the people in order to extort legislation from Congress. Why, in the other end of the Capitol I understand that they had a resolution asking the Secretary of the Treasury whether the national banks had been violating the laws of the Government by locking up money that had been placed by depositors and intrusted to their keeping, and that they had refused to pay it out.

Mr. HENDRIX. Will the gentleman allow me to ask him a question?

Mr. BLAND. Certainly.

Mr. HENDRIX. If the national banks are locking up the money, will the gentleman explain why they are paying 6 per cent on $37,000,000 on clearing-house certificates, and 6 per cent on many millions of dollars?

Mr. BLAND. Clearing-house certificates! A matter of convenience between banks! They are not money. Strong banks holding weak ones, and probably to aid in holding real money are using certificates. There is no disputing the fact, Mr. Speaker, for it is known all over the West that the banks in the West can not send a draft on New York, and the Western banks and the Western people will not be paid except in your checks, which are not money; and it is a notorious fact in the West, and all over this country, that this thing has been done for the purpose of weakening the Western banks and to bring the pressure of the Western people on the members of this House.

Mr. WARNER. Will the gentleman allow me to ask him a question?

Mr. BLAND. Certainly.

Mr. WARNER. Does not the last report of the Comptroller of the Currency show that the New York banks have paid out in cash to the banks of the South and West until their reserve is lower than that of any part of the country, the South and West included?

Mr. BLAND. No, sir; I deny it.

Mr. WARNER. Does the gentleman deny the fact or deny the official report that shows it?

Mr. BLAND. I deny, Mr. Speaker, that it is a fact that New York banks have paid to the banks of the South and the West money.

Mr. WARNER. Does not the gentleman know that the New York banks have reduced their resources in order to meet the demands made on them from the South and the West until the amount of reserve in their hands is now lower than the reserve in the banks of the South and the West?

Mr. BLAND. Oh, Mr. Speaker——

Mr. WARNER. It is a plain question, and the gentleman knows the answer.

Mr. BLAND. I want to answer the question.

I say, Mr. Speaker, the gentleman can put his statistics as he chooses, but it is a notorious fact that money on deposit in New York belonging to the people of the South and West can not be drawn upon their checks.

Mr. HENDRIX. Why?

Mr. SNODGRASS. Because they will not pay it.

Mr. HENDRIX. Because they have not got the money to pay it. They would be glad to pay it if they could.

Mr. SNODGRASS. Well, it is our money and they ought to have it. [Laughter.]

Mr. BLAND. Why, sir, the Evening Post, of New York, which we all know represents the banking institutions and the gold interest, advised these banks to do this very thing. The gentleman from New York [Mr. COCKRAN] who last addressed us claimed that when we adjourned last spring the country was in a prosperous condition. Well, sir, if it was why did gentlemen representing these corporate institutions, the Northern Pacific Railroad, and the stock-jobbing operations of New York generally, come here, and why did they urge the repeal of the Sherman law? If we were then in a prosperous condition, why should that law have been repealed? Why was a vote taken in the House on the proposition to repeal it? Why did those same parties come and demand of Congress and of the Secretary of the Treasury an issue of bonds? But we are told that the Sherman law is a bad silver law. I agree to that; but is that the reason of their opposition to it? Do they oppose the Sherman law because it is a bad silver law, or because it is a silver law? We have invited them to join with us for the purpose of enacting some law upon the silver question better than this Sherman law. Gentlemen say that so far as the Democratic party is concerned in its platform it never promised this country bimetallism. Well, sir, it did promise this country coinage of gold and silver without discrimination.

Mr. SNODGRASS. On the same terms.

Mr. BLAND. On the same terms.

A MEMBER. And the use of both as standard money metals.

Mr. BLAND. And the use of both as standard money metals. Mr. Speaker, in all the arguments that have been made throughout the country by these gentlemen they have claimed that they would be willing to vote for a free-coinage bill if we would increase the ratio, though now when we propose to leave the old ratio and go to 20 to 1 they do not agree to that; they make no counter-proposition; they make no response except to say that they will not vote for any ratio.

Well, sir, so far as I am personally concerned, they can reject our offers. They can reject the compromises that we have offered upon this question, but for myself I say—and I believe I speak the sentiments of a majority of the people that sent me here—we will never offer you another compromise. [Applause.] We will demand the old dollar and you can go with us on that basis, or you can separate and go where you please. [Laughter and applause.] You have promised a compromise; you have professed to advocate heretofore the free coinage of silver if you could have it on fair terms. We have offered you a compromise and you have spurned it.

Now, I repeat, you can go your way and we will go ours, and when it comes to the total destruction of silver in this country by the repeal of this law, it will be you who will make the division which the gentleman from New York seems to deplore, though if he does deplore it why does he undertake to compromise on this question and come to the majority of Democrats here instead of joining with the Republicans? Mr. Speaker, it is whispered around this Capitol that in the end the people of the country who placed the Democratic party in power are to be betrayed and deceived. We expected a different result upon the silver question. We find, however, nearly a solid Republican vote acting in harmony with the minority of the Democrats against free coinage at any ratio, and by an almost solid Republican vote and the minority of the Democratic party in this House the majority are to be voted down on all propositions for silver coinage, and that is to be called Democratic policy! I repudiate it. It is not Democratic policy. It is Republican policy.

It is whispered further, Mr. Speaker, that although the people expected tariff reform, and though one of the main issues in the campaign, the main issue above all others was the reform of the tariff, yet the very parties who are pushing this bill for the destruction of silver are whispering it around softly in the ears of their Republican allies that the tariff is not to be disturbed very soon. We shall be asked to adjourn without taking up a tariff-reform measure, and when we do take it up the same howl that is heard now against the coinage of silver will be heard again. "You can not disturb the tariff now; the country is in a panic, just beginning to rally from its depression; if you undertake to disturb the tariff at this time you will renew and continue the panic." Yes, sir, all the indications up to this time point to the fact that the money plutocracy of this country and the tariff barons are in a combination to defeat the will of the people as expressed at the polls last November. [Applause.]

And now when factories are turning men out of employment, when the banks are hoarding their money and the people hoarding theirs for fear the banks will get it and hoard it for them or squander it, in the midst of distress and distrust, we are asked to abandon the Democratic party and its platform on the money question, as well as also on the tariff question, practi-

cally. Why, sir, I venture the prediction that Democrats on this side of the House—not all of them, but most of them from the East—when it comes to a reform of the tariff will insist on what? On the West giving free material while protection of the manufactured products of the East is continued. They will insist that there must be but a little cut; that we are in a panic, that business is depressed all over the country, and that we must not touch the tariff in any thorough way.

Now, Mr. Speaker, with the $500,000,000 raised to-day by the Federal Government for its annual expenditures, and with money to be contracted to the single gold basis, you propose to saddle upon the laboring people in this country this annual burden with this contracted currency. This means commodities falling all the time. You may cut your tariff 15 or 20 per cent and yet your money is going up at the rate of 5 or 10 per cent a year. How long will it be before it will take more wheat and cotton, more of the products of the soil, to pay the tariff under your reduced rates than it takes to pay it now? For it is the products of the soil that go to other countries where they have a corner on gold—where, before we can get the gold, we must pay the demands of the people who have a corner upon it.

Gentlemen tell us that to restore silver to free coinage at any of the ratios named will expel all the gold we have; in other words, that an act for the free coinage of silver would be tantamount to an act prohibiting the coinage of gold. Well, sir, suppose that such an act should throw upon the markets of the world six hundred millions of gold at once, where would it go? Would not that have some effect in breaking the corner on gold? Would not that have the effect to vastly cheapen gold and increase the prices of commodities sold in Europe for gold? Would not that make it easier for the farmer to procure the gold to maintain the gold standard here?

Suppose that $500,000,000 or $600,000,000 of gold were thrown into the gold-using countries, where we sell our farm products; it would raise prices there in proportion to the amount of gold addition to their currency; it would raise prices probably one-third; and instead of our wheat bringing 50, 60, or 70 cents a bushel, it would bring $1 a bushel; and there would be a corresponding rise in the price of cotton and all our export commodities.

Yet, sir, in order to maintain the gold corner in this country and others, we are asked to demonetize silver, to contract the currency, and to reduce prices so as to enable those who own the gold and have a corner on it to buy our commodities, I suppose, at their own prices, and to saddle upon the labor of this country all the expenditures of the Government, amounting to $500,000,000 annually, by tariff laws, and all the interest on your public and private debts, the burden of tariff payments in gold, and all the public expenditures—the burden of maintaining the gold standard in this country—the burden of competing for gold with the impoverished people of Europe, who in Germany are ruled to-day by the military and who in England are to-day out of employment to the number of 500,000.

The gentleman from New York referred to the high rate of wages which the people are getting in this country. Those who are unable by strikes to maintain their wages are, I suppose, drawing them to-day at the usual rates; but I dare say there are a million of working people who are getting nothing. For months past, although it is claimed we have been prosperous, there has been trouble in the labor market; there have been strikes from time to time. The fact that a man gets a dollar a day as wages now when we are on a gold standard does not prove that he would not get $1.50 a day if we were on the bimetallic standard. When gentlemen say there has been no fall in wages I deny it.

But, sir, wages ought to be measured by the efficiency of the workman. The wages of the American workingman are higher than wages elsewhere because the product of his labor is worth more than the product of labor elsewhere, and therefore higher wages are paid here than in other countries.
